AIR PROTECTION BRANCH

Comments:

This letter is in Response to the Public Hearing, held by the Air Protection Branch of Ga. EPD; 17 January 2012. Wrens, Ga. pertaining to Issue above. I am vehemently opposed to the approval of a permit! It is hard to imagine the volume of gasses needed to weigh a ton. Multiply that by 1100, then add to that another 167,000 tons of greenhouse gasses! It's mind boggling — As the control systems age, these emissions increase. Please Veto this Permit! Consider also, the volume of natural gas used to boil away 350 gallons of water — per minute — The pellets produced will be used to force Oil from the ground in N. Dakota, which is then shipped overseas to the highest bidder. The end results being; Contamination of our Streams, fouling of our air and a total waste of our natural resources! This is a sacrifice too great to ask; for Nothing in Return

OVER

There are 4 or 5 elderly people who live within ½ mile of the proposed project. Will they have to leave their life-long home to keep from choking to death on this stuff?

Please, do Not issue a permit for this proposed operation!

Sincerely,

Ralph C. Burke
