Comments:

I am a landowner with property on the Fall Line. We have 1600 feet that front the Ogeechee River in Hancock County. I appreciate the need for jobs in this area, but I worry about the environmental impact on the water table by the deep wells that will provide water during drought seasons. I also am quite concerned about the effects of pollution upon the ecosystem of the thousands of acres of woodland in this area. The Ogeechee River, 20 years ago, was the only unpolluted river in Georgia. For a minimal economic gain, implementing this plan might create far more damage than benefits.

Comments:

No one argues that plant Washington will bring jobs directly and indirectly, but are these the jobs we want to bring to Georgia? Is coal the type of energy we want in Georgia?

Georgia needs to diversify its energy portfolio and coal is not the only answer to energy and job needs. The environment and health risks Plant Washington will exacerbate are not worth ~~the~~ unnecessary ~~the paycheck~~ it to me, as a Georgian.

Washington County should not have to choose between their health and a paycheck.

The EPD must be proactive in protecting Georgians not reactive.

My health and the health of my family is not for sale. I do not support this plant and I hope the EPD will concur.

I Just want air to breath
I have a lung disease
My water is mine, not
anyone else's to take
I am also concerned about the
heat the plant will throw off.
We are on the fault line - Earthquake

Comments:

I would like more info on this situation - I know we need more jobs, more power - I don't think that Plant Washington may be the answer. I would like to be able to breathe and have drinking water. I have asthma + COPD.

Comments:

The Robust Redhorse an endangered fish lives in the Oconee. the DNR is currently dumping thousands of tons of gravel in various locations for nesting. 16,000,000 gallons/day will negate all these efforts if sucked out not to mention the returned toxic water of warmer temps

Violates Endangered Species ACT

Comments:

16 million gallons of water withdrawn a day is unacceptable today and unexcusable in a state only recently ~~recover~~ recovering from a drought.

EPD has set ~~regulation~~ limits on ~~the~~ pollutants ~~emissions~~ emitted from this proposed plant. We don't need regulations to control new sources of pollution & toxins, we need to NOT create them.

I think we need to hold the quality & quantity of our aquatic systems in higher value. This plant will not only affect Washington County but much of GA. I maybe a tourist but & in my opinion, more can be offered to Washington County & GA than coal.

~~No one~~ ~~st~~ We do need to put Georgians back to work, but no one should have to compromise their health or the health of their family for a job.

This is the 21st Century not only do we have the knowledge to →

provide clean jobs we have the power and technology to do it. Now lets bring it home and put the people to work.

The EPD should not ~~return~~ reform the ~~limitations~~ regulations of ~~on~~ pollutants but reform the ~~sources~~ sources. of pollutants.

The cost of reactive measures may be more than this county or Georgia can bear.

CLEAN COAL is

OXYMORONIC!

Clean Jobs!
Clean Air!
Clean Water!

Thank you EPD for taking our comments into consideration. Please do not issue a permit for this coal plant.

Shanell Davis.
