Manny Patel – Unit Manager
Katie Gregory – Environmental Engineer

BACKGROUND

On June 30, 2016, WestRock CP, LLC (hereafter WestRock) submitted an application for an air quality permit to construct and operate a flexographic printing facility. The facility is located at 600 Riverside Parkway, Building A in Lithia Springs, Georgia, Douglas County. The new facility will be housed in an existing building. The proposed project will include a nine-color flexographic press for the manufacture of preprint linerboard. The preprint linerboard is then shipped off-site and manufactured into corrugated cardboard for boxes and other packaging. There is also a flexographic printing plate processor with a solvent recovery system and associated storage tanks.

On August 22, 2016, the Division issued a Preliminary Determination stating that the facility described in Application No. 23884 should be approved. The Preliminary Determination contained a draft Air Quality Permit for the construction and operation of the facility.

The Division requested that WestRock place a public notice in a newspaper of general circulation in the area of the proposed facility notifying the public of the proposed construction and providing the opportunity for written public comment. Such public notice was placed in *The Douglas County Sentinel* (legal organ for Douglas County) on August 28, 2016. The public comment period expired on September 27, 2016.

During the comment period, no comments were received from the U.S. EPA region IV, the facility, and the general public.

On September 21, 2016 WestRock obtained and retired 50 tons of VOC offsets through purchase of Emission Reduction Credit (ERC) from PrintPack. Draft Condition 2.4 is deleted as the requirement has been satisfied prior to the issuance of this permit.

A copy of the final permit is included in Appendix A.
