Document Submittal Form

Instructions: This form should be completed and included with any document submitted to the Response and Remediation Program, Response Development Units 1 – 3, that is greater than 25 pages in length or that contains paper sizes larger than 11"x17". This includes Release Notifications and documents related to Hazardous Site Inventory and Voluntary Remediation Program sites. Contact Brownfield Unit staff for Brownfield submittal guidelines. Your cooperation helps to ensure that documents are filed correctly, completely, and efficiently.

Name of Document: March 2017 VRP Progress Report

Date of Document: March 15, 2017

Site Name: Cessna Aircraft Company GA1 Facility

Site ID Number: NA

Document Submittal Checklist. Please certify that the submittal includes the following by checking each box as appropriate. Items 1 – 3 should be checked / included / certified for each submittal:

- 1. One paper copy of the document (double-sided is preferred)
- 2. Two compact discs (CDs), each containing an electronic copy of the document as a single, searchable, Portable Document Format (PDF) file. Only one CD is needed for Release Notifications. CDs should be labeled at a minimum with the following: 1) Name of Document, 2) Date of Document, 3) Site Name, and 4) Site Number. Any scanned images should have a resolution of at least 300 dpi and should be in color if applicable.
- 3. The electronic copies are complete, virus free, and identical to the paper copy except as described in Item 4 below.
- 4. (Optional) To reduce the size of the paper copy, certain voluminous information has been omitted from the paper copy and is included only with the electronic copies:
 - laboratory data sheets
 - manifests
 - other: NA

I certify that the information I am submitting is, to the best of my knowledge and belief, true, accurate, and complete.

Subject: March 2017 Semi-Annual Voluntary Remediation Program Progress Report
Cessna Aircraft Company – Tax Parcel 112 003 002
Columbus, Muscogee County, Georgia

Dear Mr. Metzger:

This Progress Report documents the activities completed for the Cessna Aircraft Company facility in Columbus, Georgia from September 2016 through February 2017. This reporting schedule follows that prescribed by the Georgia Environmental Protection Division (EPD) in a letter dated September 27, 2016. This Progress Report includes the following:

- Work Performed This Period;
- Work Anticipated for the Next Period;
- Schedule; and
- Professional Certification.

On behalf of Cessna Aircraft Company, CDM Smith is in the process of preparing a Voluntary Remediation Plan (Plan) and intends to submit the Plan within the next two months. The Plan will include:

- A summary of site investigation activities completed to date
- An updated Site Conceptual Model
- A Focused Feasibility Study to evaluate the best alternative for mitigating off-property volatile organic compound (VOC) migration
- A vapor intrusion and mitigation evaluation including Vapor Intrusion Screening Level Calculator results
- A soil remediation evaluation

Mr. Jason Metzger

March 15, 2017

Page 2

- Proposed Risk Reduction Standards
- A proposed corrective action
- An implementation schedule

Considering that the Plan is expected to be submitted soon and contain the information noted above, this information is not presented in this progress report. Note that site investigation activities and results were previously described in the Voluntary Investigation and Remediation Plan Report submitted to EPD on March 24, 2016 as part of Cessna's VIRP Application. Additional investigations have not been conducted since except as outlined below.

Work Performed This Period

The following activities were performed during the current reporting period:

- Semi-annual groundwater monitoring
- Soil vapor extraction (SVE) system design and installation
- Voluntary Remediation Plan development

These activities are described further below.

Semi-Annual Groundwater Monitoring

As noted in EPD's VIRP acceptance letter, semi-annual groundwater sampling is required to monitor groundwater conditions. The first semi-annual groundwater monitoring event was conducted on February 1, 2017. A February 2017 Groundwater Monitoring Summary report is provided as **Attachment A**.

SVE System Design and Installation

CDM Smith completed design for an SVE system within the current site building in August 2016. The system is designed to depressurize and remove soil gas from underneath the floor slab, thus limiting any vapor intrusion into the existing building currently being used for warehouse space. The design consisted of four SVE wells and three vapor monitoring points, as shown on **Figure 1**. **Figure 2** details the conveyance and exhaust pipes, and **Figure 3** details the SVE blower system.

Proposals were requested from three construction companies, and Kemron Environmental Services was selected to complete SVE system installation. Construction was completed in accordance with the design, and initial startup and testing was performed in January 2017. Full-scale operation began on February 1, 2017. Startup sampling was also performed on February 1st and results are presented in **Attachment B**.

Mr. Jason Metzger

March 15, 2017

Page 3

In mid to late February, the SVE system experienced periods of intermittent operation where the system would shut down for an unknown reason. Troubleshooting was performed, and the issue was related to amperage demand from the blower. The problem was corrected and the SVE system has operated continuously since February 22nd.

Voluntary Remediation Plan

As noted above, CDM Smith is currently drafting the Plan with submittal planned to EPD within the next two months.

Work Anticipated for the Next Period

The following activities are planned for the next reporting period (March 2017 through August 2017):

- The Plan will be finalized and submitted to EPD for review;
- The second semi-annual groundwater monitoring event of 2017 will occur in August; and
- Operation and maintenance will be performed for the new SVE system.

Schedule

A detailed corrective action implementation schedule will be presented in the Plan. Semi-annual groundwater monitoring and progress reports will continue to be prepared.

Professional Certification

Attachment C contains the professional certification and summary of incurred professional engineer and geologist hours for the period from September 1, 2016 through February 28, 2017.

If you have any questions regarding this Progress Report, please do not hesitate to contact me at (423) 771-4495.

Sincerely,

A handwritten signature in blue ink that reads "Andrew Romanek".

Attachment A
1st 2017 Semi-Annual Groundwater Monitoring Report

1st 2017 Semi-Annual Groundwater Monitoring Report

Cessna Aircraft Company GA1 Facility Columbus, Muscogee County, Georgia

The Georgia Environmental Protection Division (EPD) accepted this site into Georgia's Voluntary Remediation Program (VRP) on September 27, 2016, and approved the Voluntary Investigation and Remediation Plan (VIRP) and VRP application dated March 24, 2016. EPD's acceptance and approval conditions currently require semi-annual groundwater monitoring and reporting. This report fulfills the first 2017 semi-annual reporting requirement.

Monitoring Program Description

The groundwater monitoring well network consists of eleven wells (**Figure A-1**). Water level measurements are recorded from all wells. Groundwater samples for laboratory analyses are collected from nine wells. Monitoring well GW-8 is not sampled because of its shallow depth and MW-1A is not sampled because it is upgradient and historically below the reporting level. The groundwater samples are analyzed for volatile organic compounds. CDM Smith has identified three zones of hydrogeologic interest at the site, as summarized below.

- Unit A – Unconsolidated coastal plain sediments and recent alluvium. The upper 20-25 feet is interbedded sand, silty sand, and silty clay. The lower portion of Unit A is permeable sand and permeable sand and gravel to a depth of approximately 30-35 feet below land surface (bls).
- Unit B – Piedmont saprolite. Unit B is below Unit A at depths ranging from approximately 30-35 feet bls and ranges in thickness from less than 1 foot up to 15 feet. Unit B is primarily silt.
- Unit C – Piedmont biotite gneiss bedrock. The bedrock depth ranges from approximately 30 feet to 45 feet bls. One boring, MW-3C, has been completed into bedrock and the rock was dense biotite gneiss with few fractures.

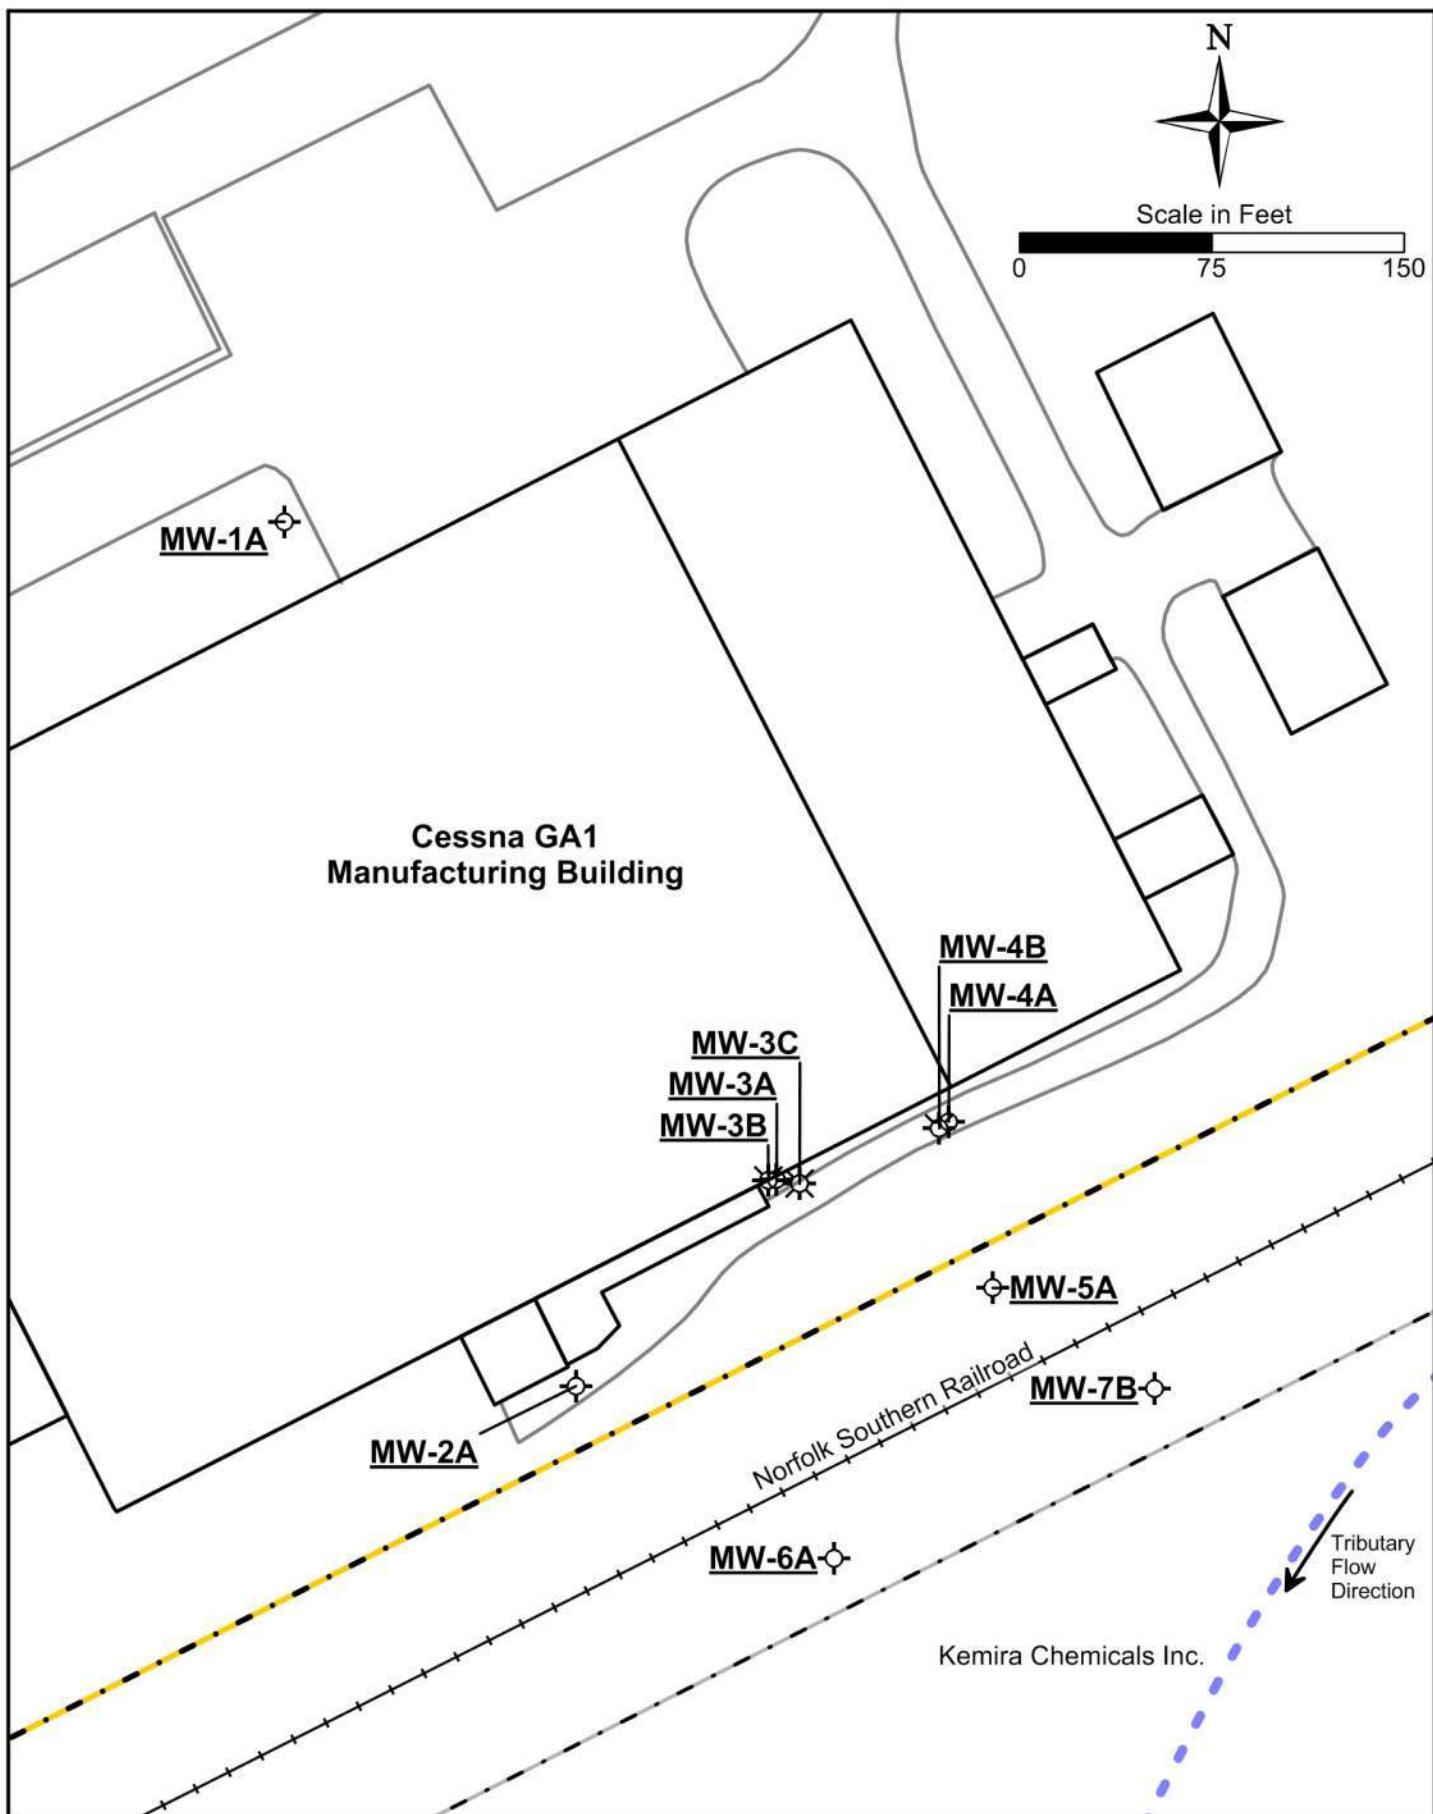

Results

Sampling for this event was completed on February 1, 2017. The water level records are summarized in **Table A-1** and the groundwater analytical results are summarized in **Table A-2**. The well purge records are in **Attachment A-1** and the full laboratory reports are in **Attachment A-2**.

Conclusions

Figure A-2 includes a potentiometric surface map prepared for combined Units A and B and shows the current trichloroethene (TCE) concentrations with the estimated extent of TCE exceeding the risk reduction standards reported in 2016 VIRP. The groundwater flow direction is southeast and consistent with previous events. The TCE extent in groundwater is also consistent with the 2016 mapping. However, TCE was detected for the first time in the upper bedrock well, MW-3C, at 12 ug/L. CDM Smith assumes that this well was equilibrated with formation groundwater during the previous sampling.

TEL: (404) 720-1380
FAX: (404) 467-4130

RE: Cessna

Dear Andrew Romanek:

Order No: 1702103

Analytical Environmental Services, Inc. received 11 samples on 2/1/2017 5:10:00 PM for the analyses presented in following report.

No problems were encountered during the analyses. Additionally, all results for the associated Quality Control samples were within EPA and/or AES established limits. Any discrepancies associated with the analyses contained herein will be noted and submitted in the form of a project Case Narrative.

AES's accreditations are as follows:

- NELAC/Florida State Laboratory ID E87582 for analysis of Non-Potable Water, Solid & Chemical Materials, and Drinking Water Microbiology, effective 07/01/16-06/30/17.
- NELAC/Louisiana Agency Interest No. 100818 for or analysis of Non-Potable Water and Solid & Chemical Materials, effective 07/01/16-06/30/17.
- NELAC/Texas Certificate No. T104704509-16-6 for or analysis of Non-Potable Water and Solid & Chemical Materials, effective 03/01/16-02/28/17.
- AIHA-LAP, LLC Laboratory ID: 100671 for Industrial Hygiene samples (Organics, Metals, PCM Asbestos, Gravimetric), Environmental Lead (Paint, Soil, Dust Wipes, Air), and Environmental Microbiology (Fungal) Direct Examination, effective until 09/01/17.

Ioana Pacurar
Project Manager

1st 2017 SVE System Monitoring Report

1st 2017 Semi-Annual SVE System Monitoring Report

Cessna Aircraft Company GA1 Facility Columbus, Muscogee County, Georgia

The Georgia Environmental Protection Division (EPD) accepted this site into Georgia's Voluntary Remediation Program (VRP) on September 27, 2016, and approved the Voluntary Investigation and Remediation Plan (VIRP) and VRP application dated March 24, 2016. As part of Cessna's voluntary remediation efforts, a soil vapor extraction (SVE) system was installed beneath the building to mitigate volatile organic compounds (VOCs) in soil gas from potentially migrating into the building. The SVE system began operation on February 1, 2017. This report summarizes the SVE system monitoring data for the first 2017 semi-annual reporting period.

SVE System Description

The SVE system consists of four SVE wells and three vapor monitoring points (**Figure B-1**). The SVE wells are 2-inch diameter PVC and screened from 5 to 15 feet below the floor slab. The vapor monitoring points are small diameter tubes that are sealed and extend beneath the floor slab. The extracted vapors are carried in PVC piping from floor level up to the roof rafters and then to the exterior wall and down to ground level to the SVE blower located on the exterior of the building. System monitoring is performed quarterly.

Results

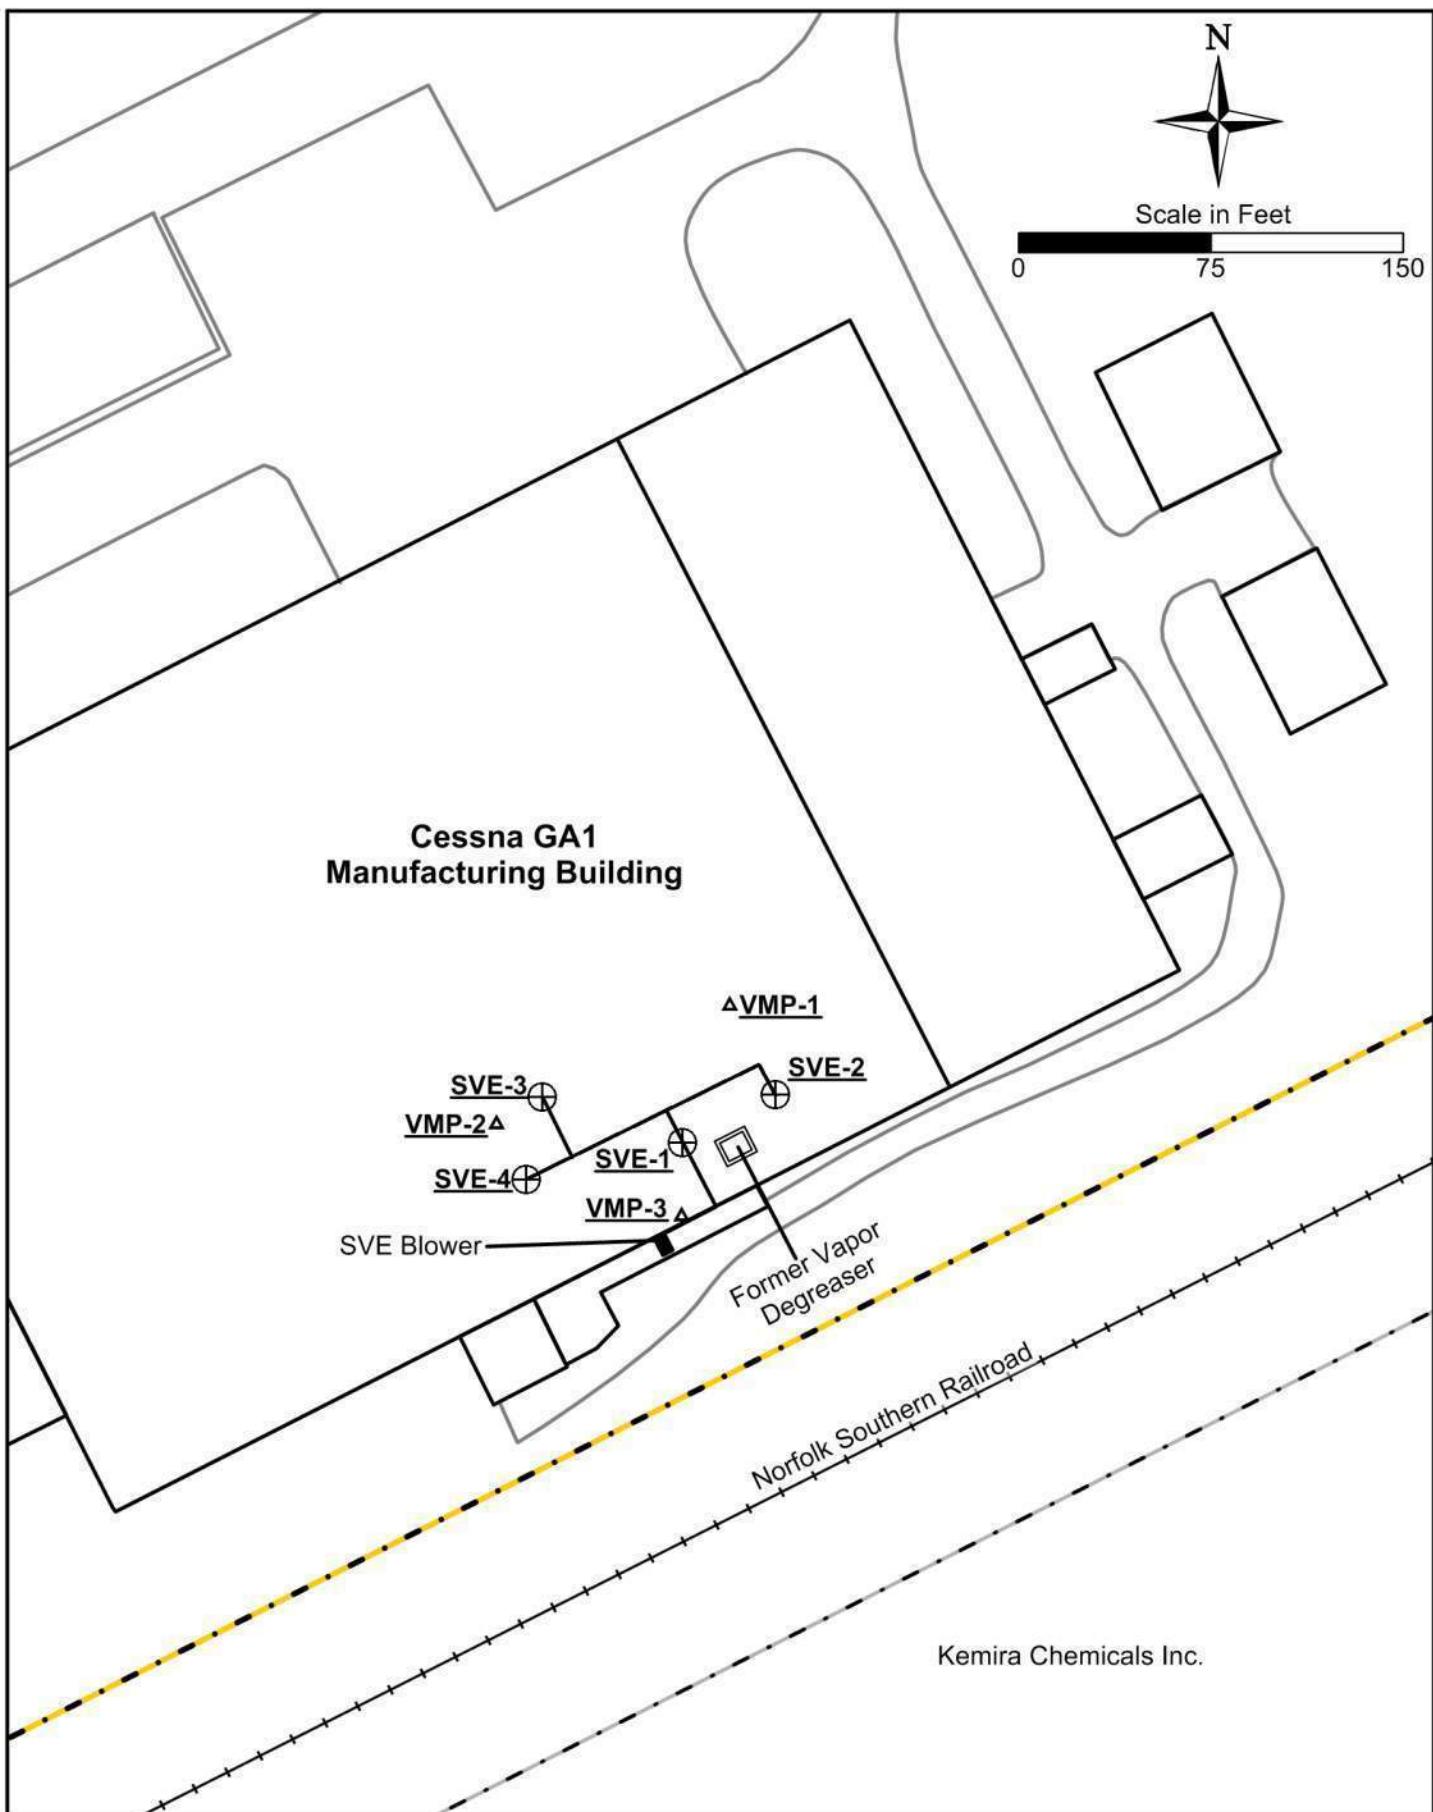

SVE well sampling was completed prior to system installation and again on the first day of system operation following approximately one hour of operation. The analytical results for each SVE well are summarized in **Table B-1** through **Table B-4**. The combined flow at the SVE discharge is sampled to calculate emission rates (**Table B-5**). The full laboratory reports are in **Attachment B-1**. After one hour of system operation, the following vacuum measurements were recorded from the vapor monitoring points.

- VMP-1 – 2.5 Inches of water
- VMP-2 – 3.7 Inches of water
- VMP-3 – 0.04 Inches of water

Conclusions

The measured vacuums indicate that the system is capable of creating a negative pressures beneath the floor slab, which should reduce or eliminate sub-slab vapor intrusion into the building. The laboratory analyses show that trichloroethene is the dominant VOC in soil gas and it was the highest at SVE-1, which is the SVE well nearest the former vapor degreaser location. Four additional VOCs exceeded the EPA's Vapor Intrusion Screening Level (VISL) for soil gas. The output from the VISL Calculator are in **Attachment B-2**. The combined discharge from the system after one hour of operation was below the applicable permitting requirements and this discharge is expected to decline rapidly with continued operation.

Qualifiers

Air - GC/MS VOA

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation **These commonly used abbreviations may or may not be present in this report.**

□	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Narrative

CASE NARRATIVE

Client: CDM Smith, Inc.

Project: Cessna

Report Number: 200-34029-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

RECEIPT

The samples were received on 06/17/2016; the samples arrived in good condition.

During the canister pressure check performed upon receipt, it was observed that samples SVE-1 and SVE-3 were received at an elevated residual vacuum level. The associated flow controllers were evaluated upon receipt and were found to be outside the acceptable flow range as compared to the original set flow rate. The client was contacted, and the laboratory was instructed to proceed with the analysis with the addition of makeup air.

VOLATILE ORGANIC COMPOUNDS

Samples SVE-1, SVE-3, SVE-4 and SVE-2 were analyzed for Volatile Organic Compounds in accordance with EPA Method TO-15. The samples were analyzed on 06/23/2016.

Samples SVE-1[10.1X], SVE-3[10.2X], SVE-4[34.6X] and SVE-2[14200X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

After printing this label:

1. Use the 'Print' button on this page to print your label to your laser or inkjet printer.
 2. Fold the printed page along the horizontal line.
 3. Place label in shipping pouch and affix it to your shipment so that the barcode portion of the label can be read and scanned.
- Warning:** Use only the printed original label for shipping. Using a photocopy of this label for shipping purposes is fraudulent and could result in additional billing charges, along with the cancellation of your FedEx account number.
- Use of this system constitutes your agreement to the service conditions in the current FedEx Service Guide, available on fedex.com. FedEx will not be responsible for any claim in excess of \$100 per package, whether the result of loss, damage, delay, non-delivery, misdelivery, or misinformation, unless you declare a higher value, pay an additional charge, document your actual loss and file a timely claim. Limitations found in the current FedEx Service Guide apply. Your right to recover from FedEx for any loss, including intrinsic value of the package, loss of sales, income interest, profit, attorney's fees, costs, and other forms of damage whether direct, incidental, consequential, or special is limited to the greater of \$100 or the authorized declared value. Recovery cannot exceed actual documented loss. Maximum for items of extraordinary value is \$1,000, e.g. jewelry, precious metals, negotiable instruments and other items listed in our ServiceGuide. Written claims must be filed within strict time limits, see current FedEx Service Guide.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	Lab does not accept radioactive samples.
The cooler's custody seal, if present, is intact.	True	707994
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	N/A	Thermal preservation not required.
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	Thermal preservation not required.
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	N/A	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

8	5841	-29.9	-29.9	-29.9	0	(2) Pressure readings must be at least 24 hours apart.				
9						If time frame was not met, the PM must authorize shipment of canister:				
10						PM Authorization:				
11										
12						Signature _____ Date _____				

¹ Batch Certification: The reading is taken on the "batch" canister and this value is used as the initial pressure for all canisters in the batch.

²To calculate Adjusted Initial Pressure, subtract Final BP from Initial BP and add the result (positive or negative) to the initial pressure reading.

³To calculate Difference, subtract the Adjusted Initial Pressure from the Final Pressure (See Acceptance Criteria)

Clean Canister Certification Analysis & Authorization of Release to Inventory

Inventory Level 1: Individual Canister Certification Only. Certified clean to RLs listed in laboratory SOP for LLTO15.

Inventory Level 2: Individual or Batch Certification. Certified clean to 0.04 ppbv.

Inventory Level 3: Individual or Batch Certification. Certified clean to 0.20 ppbv.

Inventory Level 4: Individual or Batch Certification. Certified clean following procedures and RLs listed in laboratory SOP NJDEP-LLTO15.

Inventory Level Limited Use: Canisters may only be used for certain projects.

3200 Windy Hill
Atlanta GA 30339

TEL: (770) 952-8643
FAX: (770) 952-9893

RE: Cessna

Dear Andrew Romanek:

Order No: 1702105

Analytical Environmental Services, Inc. received 5 samples on 2/1/2017 5:10:00 PM for the analyses presented in following report.

No problems were encountered during the analyses. Additionally, all results for the associated Quality Control samples were within EPA and/or AES established limits. Any discrepancies associated with the analyses contained herein will be noted and submitted in the form of a project Case Narrative.

AES' certifications are as follows:

-NELAC/Florida Certification number E87582 for analysis of Air & Emissions for Volatile Organics effective 07/01/16-06/30/17.

These results relate only to the items tested. This report may only be reproduced in full.

If you have any questions regarding these test results, please feel free to call.

Sincerely,

Ioana Pacurar
Project Manager

Case Narrative

Volatiles Organic Compounds Analysis by Method TO-14/15:

Due to sample matrix, samples 1702105-001A, -002A, -003A, -004A required dilution during preparation and/or analysis resulting in elevated reporting limits.

Sample Receipt Checklist for Air Canisters

Client CDM

Work Order Number 1702105

Checklist completed by Mayer 2/1/17

Signature

Date

Carrier name: FedEx UPS Courier Client US Mail Other _____

Shipping container in good condition?	Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> Not Present <input type="checkbox"/>
Custody seals intact on shipping container?	Yes <input type="checkbox"/> No <input type="checkbox"/> Not Present <input checked="" type="checkbox"/>
Chain of custody present?	Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>
Chain of custody signed when relinquished and received?	Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>
Chain of custody agrees with sample labels?	Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>
Field data sheets present?	Yes <input type="checkbox"/> No <input checked="" type="checkbox"/>
Sample containers intact?	Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>

If no, explain: _____

All samples received within holding time?	Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>
Was TAT marked on the COC?	Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>
Proceed with Standard TAT as per project history?	Yes <input type="checkbox"/> No <input type="checkbox"/> Not Applicable <input checked="" type="checkbox"/>
All canisters received per Bottle Order issued?	Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>

See Case Narrative for resolution of the Non-Conformance.

VISL Calculator Output

EPA-OLEM VAPOR INTRUSION ASSESSMENT
Vapor Intrusion Screening Level (VISL) Calculator Version 3.5.1 (May 2016 RSLs)

The primary objective of risk-based screening is to identify sites or buildings unlikely to pose a health concern through the vapor intrusion pathway. Generally, at properties where subsurface concentrations of vapor-forming chemicals (e.g., groundwater or "near source" soil gas concentrations) fall below screening levels (i.e., VISLs), no further action or study is warranted, so long as the exposure assumptions match those taken into account by the calculations and the site fulfills the conditions and assumptions of the generic conceptual model underlying the screening levels. In a similar fashion, the results of risk-based screening can help the data review team identify areas, buildings, and/or chemicals that can be eliminated from further assessment. The generic conceptual model underlying these screening levels is described in OSWER Publication 9200.2-154 (OSWER Technical Guide for Assessing and Mitigating the Vapor Intrusion Pathway From Subsurface Vapor Sources to Indoor Air) (EPA 2015; Section 6.5).

Parameter	Symbol	Value	Instructions
Exposure Scenario	Scenario	Commercial	Select residential or commercial scenario from pull down list
Target Risk for Carcinogens	TCR	1.00E-05	Enter target risk for carcinogens
Target Hazard Quotient for Non-Carcinogens	THQ	0.1	Enter target hazard quotient for non-carcinogens
Average Groundwater Temperature (°C)	Tgw	19.4	Enter average of the stabilized groundwater temperature to correct Henry's Law Constant for groundwater target concentrations

CAS		Does the chemical meet the definition for volatility? (HLC>1E-5 or VP>1)	Does chemical have inhalation toxicity data? (IUR and/or RfC)	Is Chemical Sufficiently Volatile and Toxic to Pose Inhalation Risk Via Vapor Intrusion from Soil Source?	Is Chemical Sufficiently Volatile and Toxic to Pose Inhalation Risk Via Vapor Intrusion from Soil Source?	Target Indoor Air Conc. @ TCR = 10E-06 or THQ = 0.1	Target Sub-Slab and Exterior Soil Gas Conc. @ TCR = 10E-06 or THQ = 0.1	Target Ground Water Conc. @ TCR = 10E-06 or THQ = 0.1	Is Target Ground Water Conc. < MCL? Professional Certification

Professional Certification

I certify under penalty of law that this report and all attachments were prepared by me or under my direct supervision in accordance with the Voluntary Remediation Program Act (O.C.G.A. Section 12-8-101, et seq.). I am a professional engineer / professional geologist who is registered with the Georgia State Board of Registration for Professional Engineers and Land Surveyors / Georgia State Board of Registration for Professional Geologists and I have the necessary experience and am in charge of the investigation and remediation of this release of regulated substances.

Furthermore, to document my direct oversight of the Voluntary Remediation Plan development, implementation of corrective action, and long term monitoring, I have attached a monthly summary of hours invoiced and description of services provided by me to the Voluntary Remediation Program participant since the previous submittal to the Georgia Environmental Protection Division.

The information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

Andrew Romanek
