Visual Description:	Moist, brownish yellow soil cement mix		

Hydraulic Conductivity of Saturated Porous Materials Using a Flexible Wall Permeameter by ASTM D5084

Constant Volume

Sample Type:	Intact	Permeant Fluid:	De-aired Distilled water
Orientation:	Vertical	Cell #:	9/15

Sample Preparation: Placed into permeameter at as-received density and moisture content.

Assumed Specific Gravity: 2.55

Parameter	Initial	Final
Height, in	1.94	1.94
Diameter, in	3.02	3.02
Area, in^2	7.16	7.16
Volume, in^3	13.9	13.9
Mass, g	378	386
Bulk Density, pcf	104	106
Moisture Content, %	42.2	45.1
Dry Density, pcf	72.8	72.8
Degree of Saturation, %	91	97

B COEFFICIENT DETERMINATION

Cell Pressure, psi:	94.92	Increased Cell Pressure, psi:	99.99	Cell Pressure Increment, psi:	5.07
Sample Pressure, psi:	84.91	Corresponding Sample Pressure, psi:	89.64	Sample Pressure Increment, psi:	4.72
				B Coefficient:	0.93

FLOW DATA

Date	Trial #	Pressure, psi		Manometer Readings			Elapsed Time, sec	Gradient	Permeability K, cm/sec	Temp, °C	R_t	Permeability K @ 20 °C, cm/sec

WET / DRY TESTING

SUMMARY OF TEST RESULTS

PROJECT: Macon AGL
PROJECT No.: SH0578
START DATE: 8/18/2015
TRACKING CODE: A300

SAMPLE No. (Test): CH22-(20)-20150718-06
SAMPLE No. (Control): CH22-(20)-20150718-06C
SAMPLE DESCRIPTION: 30 Day

INITIAL SPECIMEN CONDITIONS	TEST		CONTROL	
1. BULK UNIT WEIGHT	106.0	pcf	107.1	pcf
2. DRY UNIT WEIGHT	73.9	pcf	74.7	pcf
3. MOISTURE CONTENT	43.39	%	43.39	%

TEST RESULTS	TEST		CONTROL	
1. MAX VOLUMETRIC CHANGE*	-3.6	%	-8.2	%
2. TOTAL MASS LOSS	0.03	%	0.01	%
3. RELATIVE MASS LOSS	0.02	%		

* A positive value denotes expansion and a negative value denotes shrinkage.

Memorandum

Environmental Resources Management

To: AGLC Team

From: ERM

File number: 0176740

Date: November 23, 2015

Subject: Assessment of Wet/Dry Testing

Macon Site Introduction

Atlanta Gas and Light Company (AGLC) is currently performing an ISS remedy at the Former Macon Manufactured Gas Plant (MGP) site (Site), located northwest of 6th Street and is referred to as the Western Portion MGP, within the City of Macon, Bibb County, Georgia.

On January 14, 2015, AGLC and EPD signed and executed Consent Order EPD-VRP-12, providing for transition of the Site from regulation under HSRA to the Voluntary Remediation Program (VRP) in which EPD acknowledged acceptance to the VRP on May 21, 2015. On October 14, 2014 the VIRP was submitted proposing a remedy to conduct in-situ solidification of the MGP residuals at the Site.

Background

On May 18, 2015, ERM began implementation of the remedy as described in the VIRP. The remedy for this Site includes excavation and ISS. As part of ongoing Quality Assurance (QA) program, ERM has been collecting samples at a frequency of one sample per 1000 cubic yards of mass stabilized. Three performance criteria for assessing the in-situ solidification (ISS) remedy at the site were selected. The performance goals for these tests were defined in the 2015 Corrective Action Plan (CAP), which has been approved by the Georgia EPD, as follows:

- Permeability (ASTM D 5084-00) $<1 \times 10^{-6}$ cm/sec
- Unconfined Compressive Strength (ASTM D 1633-00) >50 psi; and
- Wet/Dry Loss (ASTM D 4843) <10 percent (12 cycles)

All of the permeability and UCS tests have passed the performance criteria to date. Six (6) wet/dry test samples have failed the QC testing program. The failure of six wet/dry samples is unexpected, given that the testing results for permeability and UCS for these samples (and all samples tested to date) have exceeded the performance criteria by a significant margin.

To evaluate the possible causes of the wet/dry failures, the geology, the mix design, operational parameters and lab data were evaluated and compared. The information below summarizes this evaluation.

Geology

Geologic units identified at the Mulberry Street and Western Portion MGP Sites consists of fill material; unconsolidated alluvial deposits; sandy clays of the Tuscaloosa Formation; a clayey to silty saprolite; and granitic gneiss bedrock (Williams, 2000; RETEC, 2006). The fill material is comprised of a heterogeneous mixture of sand, silt, clay, and gravel and is encountered from the ground surface to depths ranging from approximately 0.2 to 15 ft. bgs. The alluvial deposits underlying the fill material generally grade downward from sandy clays and clayey sands, to silty sands, further to sands and gravelly sands (RETEC, 2006). The alluvial deposits overlie the Cretaceous-age Tuscaloosa Formation (where present) and the older, underlying saprolite. The Tuscaloosa Formation is generally found west and north of 6th Street and tapers off in the western/northwestern portion of the Mulberry Street MGP Site. The Tuscaloosa is encountered from 5 to 23 feet bgs and thickness ranges from approximately 3.5 to 11 ft. (ENSR, 2008). The saprolite encountered at the Site is generally clayey silt characterized by relict foliation and structures associated with the parent igneous and metamorphic rock. The thickness of the saprolite at the Site ranges from 6.5 to 30 feet (RETEC, 2006; ENSR, 2008). The saprolite contact, as determined from review of historic boring logs and cross-sections, generally dips downward from southwest to northeast.

Design

As part of the remedy ERM selected two mix designs. These mix designs were vetted via a treatability study to determine its efficacy. Both mix designs were incorporated into the remedy with Mix Design 1 used for the less contaminated perimeter columns and Mix Design 2 used for the more contaminated interior columns. Below is the mix designs used during the different remedies at the Macon site.

Table 1 Mix Design Comparison

Reagent	2002 ISS Mix Design	2009* ISS Mix Design	2015 ISS Mix Design 1	2015 ISS Mix Design 2
Cement	1.5%	2.8%	1.5%	2.5%
Slag	4.5%	4.2%	4.5%	4.5%
Bentonite	0.5%	0.5%	0.5%	0.5%

*This was adjusted from 75/25 to 60/40 at the outset of the project. There was some trouble with the initial set of columns setting up to the anticipated strength.

As shown in Table 1 the mix designs are consistent across all the work performed on the Macon site and does not appear that the mix design is contributing to the failed wet/dry results.

Operational Parameters

ERM has been collecting the operational data supplied by Geo Solutions, Inc. (GSI) the contractor supplying the ISS services. A number of parameters are used to ensure that

each ISS column is being installed consistent with the design (expand with design title and date). The most important parameters are dosage rates as found in Table 1 and number of column passes, for this work 3 passes was required in the design. The operational parameters for the QA samples can be found in Table 2.

Table 2 Operational Parameters for Wet/Dry Failed Samples

Column ID /Sample #	Sample Status	Mix Design	Cement	Slag	Bentonite	Total	Mixing Stroke
BS13-(20)-20150724-15	Failed	1	1.70%	5.00%	0.60%	7.20%	3
S21-(15)-20150819-32	Failed	1	1.50%	4.60%	0.50%	6.60%	3
X020-5-20150820-33	Failed	1	1.50%	4.50%	0.50%	6.50%	3
CC25-10-20150829-39	Failed	2	2.60%	4.60%	0.50%	7.70%	3
BV-26-5-20150901-40	Failed	2	2.50%	4.49%	0.50%	7.49%	3
BK21-10-20150903-42	Failed	2	2.50%	4.50%	0.50%	7.50%	4
AZ18-5-20150909-43	Failed	2	2.50%	4.50%	0.50%	7.50%	3

As shown in Table 2, both the number of passes and the dosage rate for each additive meets either the Mix 1 or Mix 2 design parameters. The operational parameters met the mix design criteria for the columns that failed the wet-dry analysis, therefore the wet-dry failure was not due to an out-of-specification mix.

QA Summary

A total of 55 samples have been submitted to Kemron Environmental Services, Inc. (Kemron) for the testing listed above. To date, all 56 samples have passed the performance criteria for permeability and UCS. For the wet/dry testing, 43 samples have been completed, with the remaining 13 tests in progress. Thirty-six (36) of the 43 samples completed have passed. Seven (7) of the completed wet/dry samples have failed. As mentioned before, the failure of the wet/dry samples is unexpected, given that the results for all permeability and UCS samples exceed the performance criteria by a significant margin.

The samples include both Mix 1 and Mix 2, and range in depth from 5 to 20 feet. As all other samples with these mixes and depths have passed, the mix ratios and/or depths do not appear to be contributing to the wet/dry failures.

The permeability and UCS sample results for the failed columns are within range of the site averages for the same parameters. Thus, the columns with wet-dry failure are not correlated with out of range permeability or UCS results. It should be noted that the averages were determined from the values reported by Kemron, which represent testing results of three to 28-day cure samples. Table 3 below summarizes this evaluation.

Table 3 – QC Test Comparisons

Column Number (Sample No.)	Sample Depth	Sample Date	Mix No.	Reagent Addition (%)	W/C Ratio	UCS (psi)	Perm. K (cm/sec)

Criterion						50	1.00E-6

Laboratory and Field Observations

To further evaluate the issues, ERM consulted with Kemron laboratory personnel who are familiar with the work and reported on the observations of the Macon geotechnical samples being sent to the lab for evaluation. Kemron is the geotechnical laboratory used for the work at the Macon project and has worked on the previous Macon projects. A summary of the findings can be found below:

- The cylinders, with one exception, sample CM27-15-20150828-38, have been well-mixed when received at the Kemron lab; this sample subsequently passed all performance criteria.

- There is an obvious color difference between some of the samples, with the tan color significantly more prevalent than the brown color. This color difference is due to soil

differences on site and not changes in the reagent mix designs. According to Kemron, the failures do not correlate with sample color change.

- Kemron observed discernible clumps of gray clay in an untreated sample that was predominately a rust brown color and coarser-grained than other soils collected from the site. This was similar to the observations in the field which had occasional clumps of gray clay in the material that was pressed through a 1/2 –inch screen prior to placement in sample cylinders.

Latest Regulatory Guidance

An effective decrease in the hydraulic conductivity of the solidified mass in relation to the surrounding media is the single most important feature of the solidification process to ensure long-term protection of groundwater by preventing groundwater contact with contaminants. The USEPA provides guidance that solidified soils shall achieve a hydraulic conductivity of less than 10^{-6} cm/s and a compressive strength of 50 psi (USEPA, 1993). Hydraulic conductivity results for the columns installed thus far have met or exceeded the performance standards by 2-3 orders of magnitude. Strength results have been observed in the 75-680 psi range for confirmatory samples at the site. Both metrics are considerably surpassing typical solidification parameters as seen in most applications.

The latest consensus document developed by both industry and regulators is the Interstate Technology and Regulatory Council (ITRC) Guidance Document published in July 2011 lists the Key Performance Parameters for S/S-Treated Materials as unconfined compressive strength, permeability and leaching. No discussion is given to wet-dry cycling ASTM D4843 as a key performance indicator.

The wet/dry test is a difficult metric for ISS evaluation, given it does not represent the confined nature of the columns in the ground. Method D4843 is aggressive for a low strength material such as a soil mix and is typically run as a comparative test. The samples are set in water and the expansive forces of swelling clays are not restrained in any manner, which is contrary to what happens below grade in an ISS mass. Further, the test is designed for concrete that has more cohesion and overall strength (4000 psi versus 50 psi) under the testing conditions than the expansive soils would have.

Obligations in the CAP

The QA obligations in the CAP indicate that adjacent column data (collected or archived) will be used to assess performance and develop corrective actions if warranted. The attached figure shows the location of the failed wet/dry tests, the location of completed wet/dry tests that have passed, and the wet/dry tests that are in progress.

In general, four of the seven failed wet/dry samples are located internal to the ISS mass. That is, there are ISS columns which pass the wet/dry testing on all sides. In each case where an internal ISS column failed the wet/dry test (8/29, 9/1, 9/3, and 9/9), ERM has collected wet/dry samples from surrounding columns and these have resulted in passing QC tests.

There are, however, 3 locations of failed wet/dry tests that are located at the perimeter of the ISS mass (7/24, 8/19, and 8/20). In these instances there are also adjacent test locations which have passed the wet/dry testing procedure, however, due to their location on the perimeter, do not have passing results on one side.

Conclusions

- The columns that failed the wet-dry test met the operational parameters in the specifications and are not specifically related to ISS performance.
- To date all samples (including those that failed the wet/dry) have exceeded the primary QA requirements for ISS (permeability and UCS).
- Four (4) of the seven (7) failed wet/dry test locations are internally located columns that have adjacent samples that pass the wet/dry test on all sides. Three (3) of the samples are around the perimeter which do not have adjacent samples.
- The presence of localized expansive clays on site may be impacting the results of the wet/dry testing.
- Based on literature the wet/dry testing is a performance factor rather than an operational parameter and is less critical than the UCS and permeability for predicting ISS effectiveness.

Corrective Actions

Based on the evaluation of the wet/dry failures and the requisite ISS performance, the following recommendations have been implemented at the site.

1. Increase mix design dosage rate to 8 % (3.75% cement, 3.75 % GGBFS and 0.5% bentonite) for all remaining columns (started 10/23/2015).

2. Remix all perimeter columns that failed initial wet/dry QC testing to the historic low groundwater elevation with the 8% mix.

3. Collect and analyze duplicates for the failed QA samples after 56 day and/or 90 day cure times to evaluate the strengthening of the samples during the curing process.

4. Continue wet/dry testing as part of the site QA program and continue to monitor results.

Subject: Quality Control Testing for Former MGP Site, Macon, GA
AGL Resources, HSI Site 10511
EPD Consent Order EPD-VRP012

Dear Mr. Collins:

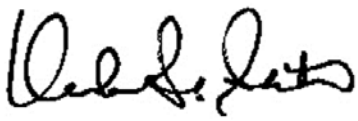
As we discussed at the project site on August 30, 2015, ERM is proposing to modify the leachability testing for the above referenced site. The VIRP (dated October 14, 2014) and Groundwater CAP (as Addendum C) indicated that one sample/1,000 CY of stabilized material would be collected and analyzed using ANS 16.1 leach methodology. Upon further evaluation, and a review of the historical leaching tests from the adjacent Macon MGP ISS site, it is clear that this frequency of testing is excessive and does not provide a higher degree of reliability for decision making regarding the long term groundwater quality at the site. The following testing program/frequency will meet the data quality objectives (e.g. sufficient quality for input into the groundwater evaluations, including modeling):

- One sample/5000 cy for ANS 16.1
- One sample/5000 cy for LEAF 1315

We will provide an update on the status of the leachability testing in the first semi-annual progress report to be submitted by November 21, 2015. We will begin implementing the proposed leaching program/frequency on August 28, 2015.

In addition, permeability testing conducted on the initial confirmation samples from full-scale activities at the AGL Macon, GA site indicate that the treated materials exhibit extremely low permeability values as much as 3 orders of magnitude less permeable than the 1 x 10-6 cm/sec standard. Because of the low permeability rates exhibited in the samples, testing is not able to proceed in a reasonable timeframe using the standard ASTM 5084 method. This standard requires that a minimum of four (4) valid readings should be obtained. A valid reading is one that A) exhibits a reading of at least 0.5 ml. of water passing through the sample, B) has an influent to effluent ratio of 1.0 plus or minus 0.25, and C) where each reading is within 25% of the average of the four (4) valid readings.

Permeability testing of several treated site specimens is requiring 3 to 4 working days to achieve a single valid result as outlined by ASTM. As such, completing a single complete permeability test is taking up to four weeks. Due to the rate of on-going site treatment activities and scheduled testing of the confirmation samples at multiple cure dates, the potential for delayed testing results has become evident due to the amount of time required to perform permeability testing in strict accordance with the ASTM method. To prevent delays, the following changes are being implemented:



For samples which exhibit extremely low permeability rates (a sample which does not achieve a valid ASTM permeability reading within 24 hours of sample permeability testing);

1) One (1) permeability reading, instead of the 4 readings outlined in the ASTM method, which exhibits permeability value 2 orders of magnitude slower than the site treatment criteria, will be considered sufficient to show a passing sample.
2) A reading of at least 0.2 milliliters of movement, rather than the 0.5 ml outlined in the ASTM, will be considered a valid reading if the influent and effluent ratios fall within the ASTM requirements.

By making these modifications to the ASTM 5084 test method the time required to show a passing numerical permeability value will be greatly reduced and delays in the testing schedule will likely be averted, while still showing that the achieved permeability is < requisite standard.

If you have any questions do not hesitate to contact me at 678-486-2752.

Sincerely,

Hunter S. Sartain, P.E.

Re: Final Letter Report of Confirmation Testing
ERM Project No. 176740
KEMRON Project No. SH0578

Dear Mr. Rivera:

Enclosed, please find the testing results for samples received between July 16, 2015 and February 23, 2016 for confirmation testing. All analytical testing was performed by Analytical Environmental Services (AES) located in Atlanta, GA.

This letter report includes the summary tables, supporting laboratory data and the sample chain of custodies. The following methods were completed for selected samples:

Unconfined Compressive Strength – ASTM D2166
Hydraulic Conductivity – ASTM D5084
Wet/Dry Durability – ASTM D4843
Leachability – ANSI 16.1
Leachability – EPA LEAF Method 1315

KEMRON Environmental Services, Inc. appreciates this opportunity to provide laboratory services to ERM. If you have any questions, or require additional information, please contact me at (404) 636-0928.

Sincerely,

KEMRON Environmental Services, Inc.

RE: Macon Remediation

Dear Nic Vrey: Order No: 1507058

Analytical Environmental Services, Inc. received 7 samples on 7/1/2015 10:45:00 AM for the analyses presented in following report.

No problems were encountered during the analyses. Additionally, all results for the associated Quality Control samples were within EPA and/or AES established limits. Any discrepancies associated with the analyses contained herein will be noted and submitted in the form of a project Case Narrative.
AES' certifications are as follows:
-NELAC/Florida Certification number E87582 for analysis of Environmental Water, soil/hazardous waste, and Drinking Water Microbiology, effective 07/01/15-06/30/16.
-AIHA-LAP, LLC Laboratory ID: 100671 for Industrial Hygiene samples (Organics, Inorganics), Environmental Lead (Paint, Soil, Dust Wipes, Air), and Environmental Microbiology (Fungal) Direct Examination, effective until 09/01/15.

These results relate only to the items tested. This report may only be reproduced in full.

If you have any questions regarding these test results, please feel free to call.

Case Narrative

Volatile Organic Compounds Analysis by Method 8260B:

Percent recovery for the internal standard compound Pentafluorobenzene on sample 1507058-005 A was outside control limits biased low due to suspected matrix interference. All other internal standard recoveries were within control limits.

Percent recoveries for the internal standard compound 1,4-Dichlorobenzene-d4 on samples 1507058-001A, -003A, and -006 A were outside control limits biased low due to suspected matrix interference. All other internal standard recoveries were within control limits.

PAH Analysis by Method 8270D SIM:

Due to sample matrix, samples 1507058-001C, -002C, -003C and -006C required dilution during analysis resulting in elevated reporting limits.

Sample/Cooler Receipt Checklist

Client ERM Work Order Number 1507058

Checklist completed by JamB 7/1/15
Signature Date

Carrier name: FedEx ✓ UPS __ Courier __ Client __ US Mail __ Other _____

Shipping container/cooler in good condition? Yes ✓ No __ Not Present __

Custody seals intact on shipping container/cooler? Yes __ No __ Not Present ✓

Custody seals intact on sample bottles? Yes __ No __ Not Present ✓

Container/Temp Blank temperature in compliance? (0°≤6°C)* Yes ✓ No __

Cooler #1 3.2 Cooler #2 _____ Cooler #3 _____ Cooler #4 _____ Cooler#5 _____ Cooler #6 _____

Chain of custody present? Yes ✓ No __

Chain of custody signed when relinquished and received? Yes ✓ No __

Chain of custody agrees with sample labels? Yes ✓ No __

Samples in proper container/bottle? Yes ✓ No __

Sample containers intact? Yes ✓ No __

Sufficient sample volume for indicated test? Yes ✓ No __

All samples received within holding time? Yes ✓ No __

Was TAT marked on the COC? Yes ✓ No __

Proceed with Standard TAT as per project history? Yes __ No __ Not Applicable ✓

Water - VOA vials have zero headspace? No VOA vials submitted __ Yes ✓ No __

Water - pH acceptable upon receipt? Yes ✓ No __ Not Applicable __

Adjusted? _____ Checked by JB

Sample Condition: Good ✓ Other(Explain) _____

(For diffusive samples or AIHA lead) Is a known blank included? Yes __ No ✓

See Case Narrative for resolution of the Non-Conformance.

* Samples do not have to comply with the given range for certain parameters.

RE: Macon Remediation

Dear Nic Vrey: Order No: 1507905

Analytical Environmental Services, Inc. received 8 samples on 7/10/2015 10:30:00 AM for the analyses presented in following report.

No problems were encountered during the analyses. Additionally, all results for the associated Quality Control samples were within EPA and/or AES established limits. Any discrepancies associated with the analyses contained herein will be noted and submitted in the form of a project Case Narrative.
AES' certifications are as follows:
-NELAC/Florida Certification number E87582 for analysis of Environmental Water, soil/hazardous waste, and Drinking Water Microbiology, effective 07/01/15-06/30/16.
-AIHA-LAP, LLC Laboratory ID: 100671 for Industrial Hygiene samples (Organics, Inorganics), Environmental Lead (Paint, Soil, Dust Wipes, Air), and Environmental Microbiology (Fungal) Direct Examination, effective until 09/01/15.

These results relate only to the items tested. This report may only be reproduced in full.

If you have any questions regarding these test results, please feel free to call.

Case Narrative

PAH Analysis by Method 8270D SIM:

Due to sample matrix, sample 1507905-001A, -003A required dilution during preparation and/or analysis resulting in elevated reporting limits.

Volatile Organic Compounds Analysis by Method 8260B:

Percent recovery for the internal standard compound 1,4-Dichlorobenzene-d4 on samples 1506905-004A, & -005A was outside control limits biased low due to suspected matrix interference. All other internal standard recoveries were within control limits.

Sample/Cooler Receipt Checklist

Client ERM Work Order Number 1507905

Checklist completed by Jan B 7/10/15
Signature Date

Carrier name: FedEx ✓ UPS __ Courier __ Client __ US Mail __ Other _____

Shipping container/cooler in good condition? Yes ✓ No __ Not Present __

Custody seals intact on shipping container/cooler? Yes __ No __ Not Present ✓

Custody seals intact on sample bottles? Yes __ No __ Not Present ✓

Container/Temp Blank temperature in compliance? (0°≤6°C)* Yes ✓ No __

Cooler #1 3.4° Cooler #2 _____ Cooler #3 _____ Cooler #4 _____ Cooler#5 _____ Cooler #6 _____

Chain of custody present? Yes ✓ No __

Chain of custody signed when relinquished and received? Yes ✓ No __

Chain of custody agrees with sample labels? Yes ✓ No __

Samples in proper container/bottle? Yes ✓ No __

Sample containers intact? Yes ✓ No __

Sufficient sample volume for indicated test? Yes ✓ No __

All samples received within holding time? Yes ✓ No __

Was TAT marked on the COC? Yes ✓ No __

Proceed with Standard TAT as per project history? Yes __ No __ Not Applicable ✓

Water - VOA vials have zero headspace? No VOA vials submitted __ Yes ✓ No __

Water - pH acceptable upon receipt? Yes ✓ No __ Not Applicable __

Adjusted? _____ Checked by JB

Sample Condition: Good ✓ Other(Explain) _____

(For diffusive samples or AIHA lead) Is a known blank included? Yes __ No ✓

See Case Narrative for resolution of the Non-Conformance.

* Samples do not have to comply with the given range for certain parameters.

RE: Macon Remediation

Dear Nic Vrey: Order No: 1507B75

Analytical Environmental Services, Inc. received 11 samples on 7/15/2015 8:10:00 AM for the analyses presented in following report.

No problems were encountered during the analyses. Additionally, all results for the associated Quality Control samples were within EPA and/or AES established limits. Any discrepancies associated with the analyses contained herein will be noted and submitted in the form of a project Case Narrative.
AES' certifications are as follows:
-NELAC/Florida Certification number E87582 for analysis of Environmental Water, soil/hazardous waste, and Drinking Water Microbiology, effective 07/01/15-06/30/16.
-AIHA-LAP, LLC Laboratory ID: 100671 for Industrial Hygiene samples (Organics, Inorganics), Environmental Lead (Paint, Soil, Dust Wipes, Air), and Environmental Microbiology (Fungal) Direct Examination, effective until 09/01/15.

These results relate only to the items tested. This report may only be reproduced in full.

If you have any questions regarding these test results, please feel free to call.

PROJECT INFORMATION

PROJECT NAME: Macon Remediation

PROJECT #: 0176740

SITE ADDRESS: Macon, GA

SEND REPORT TO: Vic.Virgo@ERM.com

INVOICE TO: (IF DIFFERENT FROM ABOVE)

QUOTE #: PO#:

RECEIPT

Total # of Containers: 41

Turnaround Time Request

- ○ Standard 5 Business Days
- ○ 2 Business Day Rush
- ○ Next Business Day Rush
- ○ Same Day Rush (auth req.)
- ◎ Other 3 Day TAT

STATE PROGRAM (if any): ____

E-mail? Y / N; Fax? Y / N

DATA PACKAGE: I II III IV

SPECIAL INSTRUCTIONS/COMMENTS:

SHIPMENT METHOD

OUT / / VIA:

IN / / VIA:

(CLIENT) FedEx UPS MAIL COURIER GREYHOUND OTHER ____

SAMPLES RECEIVED AFTER 3PM OR ON SATURDAY ARE CONSIDERED RECEIVED THE NEXT BUSINESS DAY. IF TURNAROUND TIME IS NOT INDICATED, AES WILL PROCEED WITH STANDARD TAT OF SAMPLES. SAMPLES ARE DISPOSED 30 DAYS AFTER REPORT COMPLETION UNLESS OTHER ARRANGEMENTS ARE MADE.

MATRIX CODES: A = Air GW = Groundwater SE = Sediment SO = Soil SW = Surface Water W = Water (Blanks) DW = Drinking Water (Blanks) O = Other (specify) WW = Waste Water

PRESERVATIVE CODES: H+I = Hydrochloric acid + ice I = Ice only N = Nitric acid S+I = Sulfuric acid + ice S/M+I = Sodium Bisulfate/Methanol + ice O = Other (specify) NA = None

White Copy - Original; Yellow Copy - Client

Client: ERM-Southeast
Project: Macon Remediation
Lab ID: 1507B75

Case Narrative

Sample Receiving Nonconformance:

Preserved soil vial in accordance with Method 5035 was not received for sample 1507B75 -007A. Vial 2 of 3 only had the sodium bisulfate liquid inside, no soil. Preserved soil vials were prepared at the laboratory from the sample jar.

Volatile Organic Compounds Analysis by Method 8260B:

Percent recovery for the internal standard compound 1,4-Dichlorobenzene-d4 on samples 1507B75-005A, -006A,& -007 A was outside control limits biased low due to suspected matrix interference. All other internal standard recoveries were within control limits.

Semi-Volatile Organics Analysis by Method 8270D SIM:

Matrix spike and matrix spike duplicate analyses were not performed with Batch 210332 due to insufficient sample volume.

Sample/Cooler Receipt Checklist

Client ERM Work Order Number 1507B75

Checklist completed by Tanya Delles 7/15/15
Signature Date

Carrier name: FedEx __ UPS __ Courier __ Client ✓ US Mail __ Other _____

Shipping container/cooler in good condition? Yes ✓ No __ Not Present __

Custody seals intact on shipping container/cooler? Yes __ No __ Not Present ✓

Custody seals intact on sample bottles? Yes __ No __ Not Present ✓

Container/Temp Blank temperature in compliance? (0°≤6°C)* Yes ✓ No __

Cooler #1 3.8°C Cooler #2 _____ Cooler #3 _____ Cooler #4 _____ Cooler#5 _____ Cooler #6 _____

Chain of custody present? Yes ✓ No __

Chain of custody signed when relinquished and received? Yes ✓ No __

Chain of custody agrees with sample labels? Yes __ No ✓

Samples in proper container/bottle? Yes ✓ No __

Sample containers intact? Yes ✓ No __

Sufficient sample volume for indicated test? Yes ✓ No __

All samples received within holding time? Yes ✓ No __

Was TAT marked on the COC? Yes ✓ No __

Proceed with Standard TAT as per project history? Yes __ No __ Not Applicable ✓

Water - VOA vials have zero headspace? No VOA vials submitted __ Yes ✓ No __

Water - pH acceptable upon receipt? Yes ✓ No __ Not Applicable __

Adjusted? _____ Checked by Tanya

Sample Condition: Good ✓ Other(Explain) _____

(For diffusive samples or AIHA lead) Is a known blank included? Yes __ No ✓

See Case Narrative for resolution of the Non-Conformance.

* Samples do not have to comply with the given range for certain parameters.

RE: AGL Macon Remediation

Dear Nic Vrey: Order No: 1507F75

Analytical Environmental Services, Inc. received 7 samples on 7/20/2015 7:30:00 AM for the analyses presented in following report.

No problems were encountered during the analyses. Additionally, all results for the associated Quality Control samples were within EPA and/or AES established limits. Any discrepancies associated with the analyses contained herein will be noted and submitted in the form of a project Case Narrative.
AES' certifications are as follows:
-NELAC/Florida Certification number E87582 for analysis of Environmental Water, soil/hazardous waste, and Drinking Water Microbiology, effective 07/01/15-06/30/16.
-AIHA-LAP, LLC Laboratory ID: 100671 for Industrial Hygiene samples (Organics, Inorganics), Environmental Lead (Paint, Soil, Dust Wipes, Air), and Environmental Microbiology (Fungal) Direct Examination, effective until 09/01/15.

These results relate only to the items tested. This report may only be reproduced in full.

If you have any questions regarding these test results, please feel free to call.

Case Narrative

Sample Receiving Nonconformance:

SVOCs analysis was indicated on the Chain of Custody for sample "Trip Blank". However, only vials were received. As a result SVOCs could not be reported. Only VOCs were reported.

Volatile Organic Compounds Analysis by Method 8260B:

Percent recovery for the internal standard compound 1,4-Dichlorobenzene-d4 on sample 1507F75-002 A was outside control limits biased low due to suspected matrix interference. All other internal standard recoveries were within control limits.

Sample/Cooler Receipt Checklist

Client ERM Work Order Number 1507F75

Checklist completed by Jason B 7/20/15
Signature Date

Carrier name: FedEx __ UPS __ Courier __ Client ✓ US Mail __ Other _____

Shipping container/cooler in good condition? Yes ✓ No __ Not Present __

Custody seals intact on shipping container/cooler? Yes __ No __ Not Present ✓

Custody seals intact on sample bottles? Yes __ No __ Not Present ✓

Container/Temp Blank temperature in compliance? (0°≤6°C)* Yes ✓ No __

Cooler #1 3.2° Cooler #2 _____ Cooler #3 _____ Cooler #4 _____ Cooler#5 _____ Cooler #6 _____

Chain of custody present? Yes ✓ No __

Chain of custody signed when relinquished and received? Yes ✓ No __

Chain of custody agrees with sample labels? Yes ✓ No __

Samples in proper container/bottle? Yes ✓ No __

Sample containers intact? Yes ✓ No __

Sufficient sample volume for indicated test? Yes ✓ No __

All samples received within holding time? Yes ✓ No __

Was TAT marked on the COC? Yes ✓ No __

Proceed with Standard TAT as per project history? Yes __ No __ Not Applicable ✓

Water - VOA vials have zero headspace? No VOA vials submitted __ Yes ✓ No __

Water - pH acceptable upon receipt? Yes ✓ No __ Not Applicable __

Adjusted? _____ Checked by _____

Sample Condition: Good ✓ Other(Explain) _____

(For diffusive samples or AIHA lead) Is a known blank included? Yes __ No ✓

See Case Narrative for resolution of the Non-Conformance.

* Samples do not have to comply with the given range for certain parameters.

RE: AGL Macon

Dear Nic Vrey: Order No: 1508H98

Analytical Environmental Services, Inc. received 11 samples on 8/20/2015 10:45:00 AM for the analyses presented in following report.

No problems were encountered during the analyses. Additionally, all results for the associated Quality Control samples were within EPA and/or AES established limits. Any discrepancies associated with the analyses contained herein will be noted and submitted in the form of a project Case Narrative.
AES' certifications are as follows:
-NELAC/Florida Certification number E87582 for analysis of Environmental Water, soil/hazardous waste, and Drinking Water Microbiology, effective 07/01/15-06/30/16.
-AIHA-LAP, LLC Laboratory ID: 100671 for Industrial Hygiene samples (Organics, Inorganics), Environmental Lead (Paint, Soil, Dust Wipes, Air), and Environmental Microbiology (Fungal) Direct Examination, effective until 09/01/17.

These results relate only to the items tested. This report may only be reproduced in full.

If you have any questions regarding these test results, please feel free to call.

Case Narrative

Sample 1508H98-008 requests cyanide on the coc but no container was received in the lab. A portion of the 1L amber was preserved and used for the analysis.

Semi Volatile Organic Analysis by Method 8270D SIM:

Acenaphthene, Acenaphthylene, Fluorene, Naphthalene, Phenanthrene values for the QC samples 1508H92-012BMS/MSD are "E" qualified indicating estimated values over linear calibration range due to the level of target analyte present in the unspiked sample.

Sample/Cooler Receipt Checklist

Client ERM Work Order Number 1508H98

Checklist completed by Jason B 8/21/15
Signature Date

Carrier name: FedEx ✓ UPS __ Courier __ Client __ US Mail __ Other _____

Shipping container/cooler in good condition? Yes ✓ No __ Not Present __

Custody seals intact on shipping container/cooler? Yes __ No __ Not Present ✓

Custody seals intact on sample bottles? Yes __ No __ Not Present ✓

Container/Temp Blank temperature in compliance? (0°≤6°C)* Yes ✓ No __

Cooler #1 3.2° Cooler #2 _____ Cooler #3 _____ Cooler #4 _____ Cooler#5 _____ Cooler #6 _____

Chain of custody present? Yes ✓ No __

Chain of custody signed when relinquished and received? Yes ✓ No __

Chain of custody agrees with sample labels? Yes ✓ No __

Samples in proper container/bottle? Yes ✓ No __

Sample containers intact? Yes ✓ No __

Sufficient sample volume for indicated test? Yes ✓ No __

All samples received within holding time? Yes ✓ No __

Was TAT marked on the COC? Yes ✓ No __

Proceed with Standard TAT as per project history? Yes __ No __ Not Applicable ✓

Water - VOA vials have zero headspace? No VOA vials submitted __ Yes ✓ No __

Water - pH acceptable upon receipt? Yes ✓ No __ Not Applicable __

Adjusted? _____ Checked by JB

Sample Condition: Good ✓ Other(Explain) _____

(For diffusive samples or AIHA lead) Is a known blank included? Yes __ No ✓

See Case Narrative for resolution of the Non-Conformance.

* Samples do not have to comply with the given range for certain parameters.

RE: AGL Macon Remediation

Dear Nic Vrey: Order No: 1509B11

Analytical Environmental Services, Inc. received 5 samples on 9/12/2015 11:35:00 AM for the analyses presented in following report.

No problems were encountered during the analyses. Additionally, all results for the associated Quality Control samples were within EPA and/or AES established limits. Any discrepancies associated with the analyses contained herein will be noted and submitted in the form of a project Case Narrative.
AES' certifications are as follows:
-NELAC/Florida Certification number E87582 for analysis of Environmental Water, soil/hazardous waste, and Drinking Water Microbiology, effective 07/01/15-06/30/16.
-AIHA-LAP, LLC Laboratory ID: 100671 for Industrial Hygiene samples (Organics, Inorganics), Environmental Lead (Paint, Soil, Dust Wipes, Air), and Environmental Microbiology (Fungal) Direct Examination, effective until 09/01/17.

These results relate only to the items tested. This report may only be reproduced in full.

If you have any questions regarding these test results, please feel free to call.

Sample/Cooler Receipt Checklist

Client ERM-SE Work Order Number 1509B11

Checklist completed by [signature] 9/10/15
Signature Date

Carrier name: FedEx ✓ UPS __ Courier __ Client __ US Mail __ Other _____

Shipping container/cooler in good condition?	Yes ✓	No __	Not Present __
Custody seals intact on shipping container/cooler?	Yes __	No __	Not Present ✓
Custody seals intact on sample bottles?	Yes __	No __	Not Present ✓
Container/Temp Blank temperature in compliance? (0°≤6°C)*	Yes ✓	No __	

Cooler #1 4.0 Cooler #2 _____ Cooler #3 _____ Cooler #4 _____ Cooler#5 _____ Cooler #6 _____

Chain of custody present?	Yes ✓	No __
Chain of custody signed when relinquished and received?	Yes ✓	No __
Chain of custody agrees with sample labels?	Yes ✓	No __
Samples in proper container/bottle?	Yes ✓	No __
Sample containers intact?	Yes ✓	No __
Sufficient sample volume for indicated test?	Yes ✓	No __
All samples received within holding time?	Yes ✓	No __
Was TAT marked on the COC?	Yes ✓	No __
Proceed with Standard TAT as per project history?	Yes __	No __ Not Applicable ✓
Water - VOA vials have zero headspace?	No VOA vials submitted __	Yes ✓ No __
Water - pH acceptable upon receipt?	Yes ✓	No __ Not Applicable __

Adjusted? _____ Checked by _____

Sample Condition: Good ✓ Other(Explain) _____

(For diffusive samples or AIHA lead) Is a known blank included? Yes __ No ✓

See Case Narrative for resolution of the Non-Conformance.

* Samples do not have to comply with the given range for certain parameters.

Client: ERM-Southeast
Project Name: AGL Macon Remediation

RE: AGL Macon Remediation

Dear Nic Vrey: Order No: 1509M23

Analytical Environmental Services, Inc. received 12 samples on 9/25/2015 10:25:00 AM for the analyses presented in following report.

No problems were encountered during the analyses. Additionally, all results for the associated Quality Control samples were within EPA and/or AES established limits. Any discrepancies associated with the analyses contained herein will be noted and submitted in the form of a project Case Narrative.
AES' certifications are as follows:
-NELAC/Florida Certification number E87582 for analysis of Environmental Water, soil/hazardous waste, and Drinking Water Microbiology, effective 07/01/15-06/30/16.
-AIHA-LAP, LLC Laboratory ID: 100671 for Industrial Hygiene samples (Organics, Inorganics), Environmental Lead (Paint, Soil, Dust Wipes, Air), and Environmental Microbiology (Fungal) Direct Examination, effective until 09/01/17.

These results relate only to the items tested. This report may only be reproduced in full.

If you have any questions regarding these test results, please feel free to call.

Date: 2-Oct-15

Client: ERM-Southeast
Project: AGL Macon Remediation
Lab ID: 1509M23

Case Narrative

Volatile Organic Compounds Analysis by Method 8260B:

Percent recovery for the internal standard compound 1,4-Dichlorobenzene-d4 on sample 1509M23-003 A was outside control limits biased low due to suspected matrix interference. All other internal standard recoveries were within control limits.

Sample/Cooler Receipt Checklist

Client ERM Work Order Number 1509M23

Checklist completed by _____ 9/25/15
Signature Date

Carrier name: FedEx ✓ UPS __ Courier __ Client __ US Mail __ Other _____

Shipping container/cooler in good condition? Yes ✓ No __ Not Present __

Custody seals intact on shipping container/cooler? Yes __ No __ Not Present ✓

Custody seals intact on sample bottles? Yes __ No __ Not Present ✓

Container/Temp Blank temperature in compliance? (0°≤6°C)* Yes ✓ No __

Cooler #1 3.1° Cooler #2 _____ Cooler #3 _____ Cooler #4 _____ Cooler#5 _____ Cooler #6 _____

Chain of custody present? Yes ✓ No __

Chain of custody signed when relinquished and received? Yes ✓ No __

Chain of custody agrees with sample labels? Yes ✓ No __

Samples in proper container/bottle? Yes ✓ No __

Sample containers intact? Yes ✓ No __

Sufficient sample volume for indicated test? Yes ✓ No __

All samples received within holding time? Yes ✓ No __

Was TAT marked on the COC? Yes ✓ No __

Proceed with Standard TAT as per project history? Yes __ No __ Not Applicable ✓

Water - VOA vials have zero headspace? No VOA vials submitted __ Yes ✓ No __

Water - pH acceptable upon receipt? Yes ✓ No __ Not Applicable __

Adjusted? _____ Checked by _____

Sample Condition: Good ✓ Other(Explain) _____

(For diffusive samples or AIHA lead) Is a known blank included? Yes __ No ✓

See Case Narrative for resolution of the Non-Conformance.

* Samples do not have to comply with the given range for certain parameters.

RE: Macon Remediation

Dear Nic Vrey: Order No: 1509P65

Analytical Environmental Services, Inc. received 3 samples on September 29, 2015 4:34 pm for the analyses presented in following report.

No problems were encountered during the analyses. Additionally, all results for the associated Quality Control samples were within EPA and/or AES established limits. Any discrepancies associated with the analyses contained herein will be noted and submitted in the form of a project Case Narrative.
AES' certifications are as follows:
-NELAC/Florida Certification number E87582 for analysis of Environmental Water, soil/hazardous waste, and Drinking Water Microbiology, effective 07/01/15-06/30/16.
-AIHA-LAP, LLC Laboratory ID: 100671 for Industrial Hygiene samples (Organics, Inorganics), Environmental Lead (Paint, Soil, Dust Wipes, Air), and Environmental Microbiology (Fungal) Direct Examination, effective until 09/01/17.

These results relate only to the items tested. This report may only be reproduced in full.

If you have any questions regarding these test results, please feel free to call.

Case Narrative

Sample Receiving Nonconformance:

For sample TB-11-20150929-01, one vial was received broken.

PAH Analysis by Method 8270D SIM:

Matrix spike and matrix spike duplicate analyses were not performed with Batch 213684 due to insufficient sample volume.

Sample/Cooler Receipt Checklist

Client ERM Work Order Number 1509P65

Checklist completed by [signature] 9/29/15
Signature Date

Carrier name: FedEx __ UPS __ Courier __ Client ✓ US Mail __ Other _____

Shipping container/cooler in good condition? Yes ✓ No __ Not Present __

Custody seals intact on shipping container/cooler? Yes __ No __ Not Present ✓

Custody seals intact on sample bottles? Yes __ No __ Not Present ✓

Container/Temp Blank temperature in compliance? (0°≤6°C)* Yes ✓ No __

Cooler #1 2.7 Cooler #2 _____ Cooler #3 _____ Cooler #4 _____ Cooler#5 _____ Cooler #6 _____

Chain of custody present? Yes ✓ No __

Chain of custody signed when relinquished and received? Yes ✓ No __

Chain of custody agrees with sample labels? Yes ✓ No __

Samples in proper container/bottle? Yes ✓ No ✓ MTals 10als

Sample containers intact? Yes __ No ✓

Sufficient sample volume for indicated test? Yes ✓ No __

All samples received within holding time? Yes ✓ No __

Was TAT marked on the COC? Yes ✓ No __

Proceed with Standard TAT as per project history? Yes __ No __ Not Applicable ✓

Water - VOA vials have zero headspace? No VOA vials submitted __ Yes ✓ No __

Water - pH acceptable upon receipt? Yes __ No ✓ Not Applicable __

Adjusted? AD Checked by AD

Sample Condition: Good __ Other(Explain) 1 of 2 TB vials broken

(For diffusive samples or AIHA lead) Is a known blank included? Yes __ No ✓

See Case Narrative for resolution of the Non-Conformance.

* Samples do not have to comply with the given range for certain parameters.

RE: AGL Macon Remediation

Dear Nic Vrey: Order No: 1510946

Analytical Environmental Services, Inc. received 5 samples on October 10, 2015 10:30 am for the analyses presented in following report.

No problems were encountered during the analyses. Additionally, all results for the associated Quality Control samples were within EPA and/or AES established limits. Any discrepancies associated with the analyses contained herein will be noted and submitted in the form of a project Case Narrative.
AES' certifications are as follows:
-NELAC/Florida Certification number E87582 for analysis of Environmental Water, soil/hazardous waste, and Drinking Water Microbiology, effective 07/01/15-06/30/16.
-AIHA-LAP, LLC Laboratory ID: 100671 for Industrial Hygiene samples (Organics, Inorganics), Environmental Lead (Paint, Soil, Dust Wipes, Air), and Environmental Microbiology (Fungal) Direct Examination, effective until 09/01/17.

These results relate only to the items tested. This report may only be reproduced in full.

If you have any questions regarding these test results, please feel free to call.

Case Narrative

Sample Receiving Nonconformance:

For sample 1510946-001, one 4 once jar was received broken. Sufficient sample remains proceed with the analysis.

Volatile Organic Compounds Analysis by Method 8260B:

Percent recovery for the internal standard compound 1,4-Dichlorobenzene-d4 on sample1510946-003 A was outside control limits biased low due to suspected matrix interference. All other internal standard recoveries were within control limits.

Sample/Cooler Receipt Checklist

Client ERM-Ft Collins Work Order Number 1510946

Checklist completed by Miriam Ramirez 10/10/15
Signature Date

Carrier name: FedEx ✓ UPS __ Courier __ Client __ US Mail __ Other _____

Shipping container/cooler in good condition? Yes ✓ No __ Not Present __

Custody seals intact on shipping container/cooler? Yes __ No __ Not Present ✓

Custody seals intact on sample bottles? Yes __ No __ Not Present ✓

Container/Temp Blank temperature in compliance? (0°≤6°C)* Yes ✓ No __

Cooler #1 3.6°C Cooler #2 _____ Cooler #3 _____ Cooler #4 _____ Cooler#5 _____ Cooler #6 _____

Chain of custody present? Yes ✓ No __

Chain of custody signed when relinquished and received? Yes ✓ No __

Chain of custody agrees with sample labels? Yes ✓ No __

Samples in proper container/bottle? Yes ✓ No __

Sample containers intact? Yes __ No ✓

Sufficient sample volume for indicated test? Yes ✓ No __

All samples received within holding time? Yes ✓ No __

Was TAT marked on the COC? Yes ✓ No __

Proceed with Standard TAT as per project history? Yes __ No __ Not Applicable ✓

Water - VOA vials have zero headspace? No VOA vials submitted __ Yes ✓ No __

Water - pH acceptable upon receipt? Yes ✓ No __ Not Applicable __

Adjusted? _____ Checked by _____

Sample Condition: Good __ Other(Explain) 1/2 four ounce jars received broken 1510946-001

(For diffusive samples or AIHA lead) Is a known blank included? Yes __ No ✓

See Case Narrative for resolution of the Non-Conformance.

* Samples do not have to comply with the given range for certain parameters.

RE: Macon Remediation

Dear Nic Vrey: Order No: 1510Q67

Analytical Environmental Services, Inc. received 6 samples on 10/29/2015 10:20:00 AM for the analyses presented in following report.

No problems were encountered during the analyses. Additionally, all results for the associated Quality Control samples were within EPA and/or AES established limits. Any discrepancies associated with the analyses contained herein will be noted and submitted in the form of a project Case Narrative.
AES' certifications are as follows:
-NELAC/Florida Certification number E87582 for analysis of Environmental Water, soil/hazardous waste, and Drinking Water Microbiology, effective 07/01/15-06/30/16.
-AIHA-LAP, LLC Laboratory ID: 100671 for Industrial Hygiene samples (Organics, Inorganics), Environmental Lead (Paint, Soil, Dust Wipes, Air), and Environmental Microbiology (Fungal) Direct Examination, effective until 09/01/17.

These results relate only to the items tested. This report may only be reproduced in full.

If you have any questions regarding these test results, please feel free to call.

Sample/Cooler Receipt Checklist

Client ERM Work Order Number 1510Q67

Checklist completed by _____ 10/29/15
Signature Date

Carrier name: FedEx ✓ UPS __ Courier __ Client __ US Mail __ Other _____

Shipping container/cooler in good condition? Yes ✓ No __ Not Present __

Custody seals intact on shipping container/cooler? Yes __ No __ Not Present ✓

Custody seals intact on sample bottles? Yes __ No __ Not Present ✓

Container/Temp Blank temperature in compliance? (0°≤6°C)* Yes ✓ No __

Cooler #1 3.6 Cooler #2 _____ Cooler #3 _____ Cooler #4 _____ Cooler#5 _____ Cooler #6 _____

Chain of custody present? Yes ✓ No __

Chain of custody signed when relinquished and received? Yes ✓ No __

Chain of custody agrees with sample labels? Yes ✓ No __

Samples in proper container/bottle? Yes ✓ No __

Sample containers intact? Yes ✓ No __

Sufficient sample volume for indicated test? Yes ✓ No __

All samples received within holding time? Yes ✓ No __

Was TAT marked on the COC? Yes ✓ No __

Proceed with Standard TAT as per project history? Yes __ No __ Not Applicable ✓

Water - VOA vials have zero headspace? No VOA vials submitted __ Yes ✓ No __

Water - pH acceptable upon receipt? Yes ✓ No __ Not Applicable __

Adjusted? _____ Checked by _____

Sample Condition: Good ✓ Other(Explain) _____

(For diffusive samples or AIHA lead) Is a known blank included? Yes __ No ✓

See Case Narrative for resolution of the Non-Conformance.

* Samples do not have to comply with the given range for certain parameters.

RE: AGL Macon

Dear Nic Vrey: Order No: 1511D28

Analytical Environmental Services, Inc. received 2 samples on November 13, 2015 9:10 am for the analyses presented in following report.

No problems were encountered during the analyses. Additionally, all results for the associated Quality Control samples were within EPA and/or AES established limits. Any discrepancies associated with the analyses contained herein will be noted and submitted in the form of a project Case Narrative.
AES' certifications are as follows:
-NELAC/Florida Certification number E87582 for analysis of Environmental Water, soil/hazardous waste, and Drinking Water Microbiology, effective 07/01/15-06/30/16.
-AIHA-LAP, LLC Laboratory ID: 100671 for Industrial Hygiene samples (Organics, Inorganics), Environmental Lead (Paint, Soil, Dust Wipes, Air), and Environmental Microbiology (Fungal) Direct Examination, effective until 09/01/17.

These results relate only to the items tested. This report may only be reproduced in full.

If you have any questions regarding these test results, please feel free to call.

Client ERM-SE Work Order Number 1511Da8

Checklist completed by [signature] 11-13-15
Signature Date

Carrier name: FedEx ✓ UPS __ Courier __ Client __ US Mail __ Other _____

Shipping container/cooler in good condition? Yes ✓ No __ Not Present __

Custody seals intact on shipping container/cooler? Yes __ No __ Not Present ✓

Custody seals intact on sample bottles? Yes __ No __ Not Present ✓

Container/Temp Blank temperature in compliance? (0°≤6°C)* Yes ✓ No __

Cooler #1 3.3°C Cooler #2 _____ Cooler #3 _____ Cooler #4 _____ Cooler#5 _____ Cooler #6 _____

Chain of custody present? Yes ✓ No __

Chain of custody signed when relinquished and received? Yes ✓ No __

Chain of custody agrees with sample labels? Yes ✓ No __

Samples in proper container/bottle? Yes ✓ No __

Sample containers intact? Yes ✓ No __

Sufficient sample volume for indicated test? Yes ✓ No __

All samples received within holding time? Yes ✓ No __

Was TAT marked on the COC? Yes ✓ No __

Proceed with Standard TAT as per project history? Yes __ No __ Not Applicable ✓

Water - VOA vials have zero headspace? No VOA vials submitted ✓ Yes __ No __

Water - pH acceptable upon receipt? Yes __ No __ Not Applicable ✓

Sample Condition: Good ✓ Adjusted? _____ Checked by _____
Other(Explain) _____

(For diffusive samples or AIHA lead) Is a known blank included? Yes __ No ✓

See Case Narrative for resolution of the Non-Conformance.

* Samples do not have to comply with the given range for certain parameters.

RE: Macon Remediation

Dear Nic Vrey: Order No: 1512B34

Analytical Environmental Services, Inc. received 2 samples on 12/11/2015 1:31:00 PM for the analyses presented in following report.

No problems were encountered during the analyses. Additionally, all results for the associated Quality Control samples were within EPA and/or AES established limits. Any discrepancies associated with the analyses contained herein will be noted and submitted in the form of a project Case Narrative.
AES' certifications are as follows:
-NELAC/Florida Certification number E87582 for analysis of Environmental Water, soil/hazardous waste, and Drinking Water Microbiology, effective 07/01/15-06/30/16.
-AIHA-LAP, LLC Laboratory ID: 100671 for Industrial Hygiene samples (Organics, Inorganics), Environmental Lead (Paint, Soil, Dust Wipes, Air), and Environmental Microbiology (Fungal) Direct Examination, effective until 09/01/17.

These results relate only to the items tested. This report may only be reproduced in full.

If you have any questions regarding these test results, please feel free to call.

Sample/Cooler Receipt Checklist

Client EKM Work Order Number 1512B34

Checklist completed by _____ 12/11/15
Signature Date

Carrier name: FedEx __ UPS __ Courier __ Client __ US Mail __ Other _____

Shipping container/cooler in good condition?	Yes ✓	No __	Not Present __
Custody seals intact on shipping container/cooler?	Yes __	No __	Not Present ✓
Custody seals intact on sample bottles?	Yes __	No __	Not Present ✓
Container/Temp Blank temperature in compliance? (0°≤6°C)*	Yes ✓	No __	

Cooler #1 3.5 Cooler #2 _____ Cooler #3 _____ Cooler #4 _____ Cooler#5 _____ Cooler #6 _____

Chain of custody present?	Yes ✓	No __
Chain of custody signed when relinquished and received?	Yes ✓	No __
Chain of custody agrees with sample labels?	Yes ✓	No __
Samples in proper container/bottle?	Yes ✓	No __
Sample containers intact?	Yes ✓	No __
Sufficient sample volume for indicated test?	Yes ✓	No __
All samples received within holding time?	Yes ✓	No __
Was TAT marked on the COC?	Yes ✓	No __
Proceed with Standard TAT as per project history?	Yes __	No __ Not Applicable ✓
Water - VOA vials have zero headspace?	No VOA vials submitted __	Yes ✓ No __
Water - pH acceptable upon receipt?	Yes ✓	No __ Not Applicable __

Adjusted? _____ Checked by _____

Sample Condition: Good ✓ Other(Explain) _____

(For diffusive samples or AIHA lead) Is a known blank included? Yes __ No ✓

See Case Narrative for resolution of the Non-Conformance.

* Samples do not have to comply with the given range for certain parameters.

PRESENT ON SITE	REMARKS

To: Geo-Solutions, Inc.

THE FOLLOWING WAS NOTED:

The GEC rep was on site today, as requested, to observe and test fill placement on Mulberry St area. The soil was placed in 8" loose lifts. Spread with a Deere 650k dozer and compacted with a Hamm 2307 sheepfoot roller. There were 3 lifts placed and 6 tests total with 6 tests showing they meet project spec of 95% compaction.

PRESENT ON SITE: Tim Croft	REMARKS

To: Geo-Solutions, Inc.

THE FOLLOWING WAS NOTED:

On this date this GEC Rep was on site, as requested, to perform density test on lift 19 at Mulberry Street. Also, cooked out moisture on site due to high moisture content of 19.3 percent. This GEC Rep's recommendation is to scarfy area up to allow to dry back and retest at a later date. See the field density report for locations and test results.

DATE	PROJECT NO.
12/12/15	150678.230
PROJECT: Macon Former MGP Site Remediation #11-046	
LOCATION: Macon, Ga	
CONTRACTOR: Geo-Solutions, Inc.	MILEAGE
WEATHER	TEMP
PRESENT ON SITE	REMARKS

To: _____

_____

THE FOLLOWING WAS NOTED:

The GEC rep was on site today, as requested, to observe and test fill placement on Mulberry Street on the East side of the road way. There were 3 lifts placed about 8".
The lift was spread with a Deere DZ1375 dozer and compacted with a Hamm VR-2 sheepfoot roller. There were 8 tests taken and met project specifications.

1.0 INTRODUCTION

Environmental Resources Management (ERM) has prepared this semiannual groundwater monitoring report on behalf of Atlanta Gas Light Company (AGLC). This report summarizes results of the semiannual groundwater-monitoring event for bedrock wells and select alluvium wells conducted in April 2016 at the former manufactured gas plant (MGP) site in Macon, Georgia (Site). The Site includes property formerly owned by AGLC and previously used for MGP operations, property formerly owned by AGLC but not used for MGP operations, surrounding and nearby parcels not owned by AGLC, and city right-of-way (ROW). The Site is divided between "on-site" areas for the former AGLC property where historical MGP operations were located and "off-site" areas for properties that were not part of the former MGP operations. The Site location map (Figure B1-1) shows the setting of the AGLC property within the City of Macon, Bibb County, Georgia and the Site layout map (Figure B1-2) shows the locations of groundwater monitoring wells and other Site features.

The volatile organic compounds (VOCs) and semi-volatile organic compounds (SVOCs) on the Constituents of Interest (COI) list (Table B1-1) were updated based on correspondence received from the EPD dated January 17, 2012 to include the list of constituents listed in Table 2-1 of the January 2004 Compliance Status Report (CSR). The January 17, 2012 correspondence also requested that the COI list be followed until COI delineation to background and certification of the Western Portion to the applicable risk-reduction standard (RRS) is completed and documented by submittal of an updated CSR, at which time a revised COI list may be established.

An interim groundwater level-gauging event was performed on March 3, 2016 to monitor for changes in groundwater elevations, gradients, or apparent flow directions immediately following corrective actions in the Western Portion (Figure B1-2). The April 2016 monitoring event for bedrock groundwater was conducted in accordance with the *Bedrock Groundwater Monitoring Plan* (BGMP) [Appendix I of the *Voluntary Investigation Remediation Plan* (VIRP)] submitted to the Georgia Environmental Protection Division (EPD) on October 14, 2014 and the schedule included as Table 3-1 in the *1st Semiannual Progress Report* submitted to EPD in November 2015.

As discussed in AGLC's August 13, 2013 letter and agreed to by EPD in a comment letter dated August 22, 2013 (correspondence included as Appendix B1), sampling of alluvium groundwater wells was discontinued until the completion of remedial activities in the Western Portion of the

Site, with the exception of three alluvium wells (MW-15, MW-101, and MW-102) to monitor the plume on the Macon Urban Development Authority (MUDA) Type 5 parcel. . The Western Portion corrective action activities were initiated in May 2015 in accordance with the *Western Portion and MW-101 Area Groundwater Corrective Action Plan Addendum* (Appendix C of the 2014 VIRP).

At the time of the April 2016 sampling event, corrective actions in the Western Portion of the Site were in the final stages, with final restoration activities in progress across the Site. Due to ongoing Site restoration, activities and the expectation that the aquifer had not yet reached stable conditions following disturbances associated with the corrective actions a limited sampling event was conducted for alluvium wells in April 2016:

- Three alluvium monitoring wells (MW-15, MW-101, and MW-102) were sampled to monitor the plume on the MUDA Type 5 parcel;
- Five alluvium wells (MW-08, MW-10, MW-105, MW-107, and MW-400) were sampled downgradient of the corrective actions performed on the Western Portion to monitor initial changes from pre-corrective action conditions; and
- Five alluvium wells (MW-12R, MW-14I, MW-21, MW-28, and MW-104) were sampled in the Eastern Portion downgradient of the original in situ solidification (ISS) mass to assess whether alluvium groundwater in the area remains below detection limits for benzene and naphthalene.

A return to the complete proposed alluvium-monitoring program is planned for August 2016 (Table B1-2). Bedrock groundwater monitoring will be conducted in August 2016 in accordance with Table B1-3).

2.0 BACKGROUND

Historical investigations and corrective actions have been detailed in Corrective Action Plan (CAP) and CAP Addendum documents, site investigation and characterization reports, feasibility study reports, remedial action completion reports and semiannual groundwater monitoring reports previously submitted to EPD. In addition, a comprehensive summary of significant activities was provided in the 2014 VIRP.

2.1 GROUNDWATER MONITORING AND EVALUATION STUDIES

The annual bedrock groundwater monitoring and evaluation event was conducted in April 2016 in general accordance with the 2014 BGMP. A limited alluvium groundwater-sampling event was conducted in April 2016 in general accordance with the *Alluvial Groundwater Monitoring Work Plan* (AGMWP) [Appendix H of the *Western Portion and MW-101 Area Groundwater Corrective Action Plan Addendum*] submitted to EPD on October 14, 2014 as Appendix C of the VIRP. This section of the report describes procedures used for groundwater sampling, analytical analyses, quality assurance/quality control (QA/QC), and management of investigation-derived wastes. Groundwater samples were collected either using the low-flow/low-volume method with a peristaltic or bladder pump.

2.2 SCOPE OF WORK

The March 2016 groundwater level gauging event and the April 2016 annual monitoring events included the following tasks:

2.2.1 Field Tasks

- Groundwater level gauging;
- Monitoring for the presence of non-aqueous phase liquid (NAPL);
- Groundwater sampling (April 2016 annual monitoring event only); and
- Waste management.

2.2.2 Reporting Tasks

- Tabulation of groundwater elevations;
- Tabulation of laboratory analytical results for COI (April 2016 annual monitoring event only);

- Preparation of alluvium groundwater elevation maps and bedrock groundwater flow potential maps;
- Evaluation of groundwater flow in the alluvium and bedrock aquifers;
- Evaluation of analytical results relative to Type 2 and Type 4 RRS (April 2016 annual monitoring event only); and
- Preparation of isoconcentration maps for benzene and naphthalene (April 2016 annual monitoring event only).

2.3 GROUNDWATER MONITORING NETWORK

The network of monitoring wells was developed over a series of investigations to determine on-site and off-site groundwater impacts. The annual event (February) represents the event with the greater number of wells to be sampled and the semiannual event (August) includes a subset of these wells. The above schedule differs from the initial proposed schedule in the AGMWP but is consistent with historical events. The schedule was altered from the proposed schedule in the AGMWP due to changes in the final corrective action schedule. The alluvium groundwater monitoring well network is included as Table B1-2, the bedrock groundwater-monitoring network is included as Table B1-3, and locations of existing monitoring wells are shown on Figure B1-2.

Monitoring of the full alluvium well sampling list provided in Table B1-2 has been suspended until completion of the Western Portion remedy (monitoring of MW-15, MW-101 and MW-102 has continued during remedy implementation to evaluate conditions on the MUDA property), however, groundwater samples were collected from additional alluvium wells during the April 2016 sampling event to document conditions near completion of the remedy implementation.

The select alluvium wells chosen to be sampled during the April 2016 sampling event were based on their location relative to the corrective action, location along MUDA property boundary, and downgradient of site near off-site bedrock impacts. Thirteen alluvium wells were selected:

MW-08	MW-10	MW-12R	MW-14I
MW-15	MW-21	MW-28	MW-101
MW-102	MW-104	MW-105	MW-107
MW-400			

It was determined that analytical data for these locations could be useful to monitor conditions at the conclusion of the Western Portion remedy implementation. Final restoration activities were still in progress at the

time of sampling, and it is likely that conditions at the Site may not have yet reached post-remediation equilibrium.

Alluvium monitoring wells MW-21, MW-26, and MW-28 were proposed to be decommissioned in the AGMWP; however, these wells have been updated in Table B1-2 to gauge only. All wells will be assessed for decommissioning following modelling, and once selection of point of demonstration (POD) wells have been approved.

2.4 GROUNDWATER SAMPLING AND ANALYSIS

During the initial groundwater-gauging task performed during each semiannual sampling event, the condition of each well was noted, including the concrete surface seal, outer casing, inner expandable well cap, and lock. Any well caps or locks that were damaged or missing were noted and catalogued to be replaced by ERM. All wells were gauged with an oil-water interface meter to assess whether NAPL was present. Measurable DNAPL was detected in monitoring well MW-111D and MW-309D, while DNAPL blebs were observed in sediment attached to the probe tip in MW-302D in April 2016. A summary of DNAPL monitoring activities is included in Section 4.2.2.

Before collection of groundwater samples, each well was purged using low-flow/low-volume techniques conducted in accordance with ERM's standard operating procedures, which are based on technical guidelines from U.S. Environmental Protection Agency (USEPA) Region 4 Science and Ecosystem Support Division Operating Procedures March 2013 (SESD Operating Procedures), *Low-Flow (Minimal Drawdown) Ground-Water Sampling Procedures* (Puls and Barcelona, 1995), and *Ground-Water Sampling Guidelines for Superfund and RCRA Project Managers* (Yeskis and Zavala, 2002). The purpose of purging the well is to draw fresh formation water into the well so that the samples are representative of the portion of the aquifer surrounding the well. In wells where excessive drawdown occurred (> 0.3 feet), the method of purging the well was switched to a minimum of three well volumes at which point the well was sampled upon stabilization, or following removal of a maximum of five well volumes, unless well volume was over 10 gallons. Wells with greater than 10 gallons of purge volume, which also exhibit drawdown of greater than 0.3 feet were still purged using low-flow/low-volume techniques due to the excessive amount of volume needed to purge by switching methods.

Field documentation of groundwater quality measurements included pH, conductivity, temperature, dissolved oxygen (DO), oxidation-reduction potential (ORP), and turbidity. Field parameter values and corresponding purge volumes were recorded on groundwater sampling forms. Copies of

these forms for the April 2016 sampling event are included in Appendix B-2.

Groundwater samples from the April 2016 event were analyzed for all COI (Table B1-1). Analytical Environmental Services (Georgia Certification ID 800) performed the analyses.

2.5 *QUALITY CONTROL/QUALITY ASSURANCE SAMPLES*

Field quality control (QC) samples were collected and analyzed to document the accuracy and precision of the laboratory. QC samples included:

- Trip Blanks. One trip blank accompanied each cooler containing VOC samples sent to the laboratory. Trip blanks were analyzed to determine if any contaminants were introduced while samples were stored or while in transit to the laboratory. Trip blanks were analyzed for VOCs on the COI list only.
- Field Duplicates. Two alluvium well field duplicates (MW-15 and MW-101) and three bedrock well field duplicates (MW-110D, MW-204D, and MW-304D) were collected during the April 2016 sampling event. Duplicates were collected to determine the precision of groundwater sample analysis and the variability of collection procedures.
- Matrix Spikes and Matrix Spike Duplicates. Matrix Spike and Matrix Spike Duplicate (MS/MSD) sample sets were collected from MW-102 (alluvium) and MW-300D (bedrock) during the April 2016 sampling event, as part of the laboratory analytical batch QC.

2.6 *MANAGEMENT OF INVESTIGATION DERIVED WASTE*

All liquid wastes generated from sampling activities (i.e., purge water and decontamination water) were placed in on-site labeled high-density polyethylene (HDPE) storage tanks for storage prior to proper disposal. Personal protective equipment and other trash was placed in bags, and deposited in solid waste containers.

3.0 GROUNDWATER MONITORING RESULTS

This section summarizes results from the April 2016 sampling event, including alluvium and bedrock groundwater flow and elevations, groundwater analytical results, quality control/quality assurance, and data validation. An initial groundwater-gauging event was conducted on March 3, 2016 to monitor changes to groundwater flow following corrective actions, and determine the conditions of monitoring wells after remediation activities. Results, including alluvium and bedrock groundwater flow and elevations, are summarized below.

3.1 GROUNDWATER FLOW AND ELEVATIONS

Groundwater elevation data derived from water level measurements collected on March 3 and April 4, 2016 for the alluvium and bedrock wells are presented in Tables B3-1 and B3-2, respectively. Alluvium groundwater elevation maps for March 3 and April 4, 2016 are presented on Figure B3-1 and Figure B3-2, respectively. Hydraulic potential in shallow bedrock maps for March 3 and April 4, 2016 are presented on Figure B3-3 and Figure B3-4, respectively.

During the March 3, 2016 gauging event and the April 2016 sampling event, all alluvium groundwater wells were inspected and the groundwater levels and total depths were gauged and recorded, with the following exceptions:

Alluvium wells within the footprint of ISS mass that were abandoned[i]

AMW-3	AMW-4	AMW-5	AMW-7
AMW-8	AMW-10	MW-9	MW-201
MW-202	MW-204	MW-206	MW-207

Alluvium wells within the footprint of completed corrective actions that were destroyed

- AMW-1 was fully excavated during removal of the holder
- AMW-9 was destroyed during restoration activities while final Site grading was performed.

[i] All alluvium wells within the footprint of the ISS mass were abandoned during ISS installation. The entire casing and screen intervals were over drilled and grouted as part of the installation of the ISS column.

Alluvium wells that were covered by debris from excavation and could not be located

AMW-2 (March)	MW-07	MW-08 (March)	MW-25
MW-205 (March)	MW-108		

Additional alluvium wells that could not be located

- MW-23 – covered with gravel and located in low lying area often under standing water following rainfall events;
- MW-26 – located in area overgrown with vegetation, and potentially covered with soil

Since the April 2016 sampling event, all alluvium wells not located during the event have been uncovered and located, or are in process of being repaired, except for MW-25. MW-25 is located in the shallow excavation footprint (expanded during remediation) and potentially covered by debris. AGLC will attempt to uncover MW-25 and repair as necessary prior to the August 2016 sampling event.

Groundwater elevation data derived from water level measurements collected on March 3 and April 4, 2016 for the alluvium wells is presented in Table B3-1. No NAPL was detected in any of the alluvium wells during either event.

Prior to soil remediation and ISS, groundwater flow in the alluvial aquifer was generally in an easterly direction. Based on the March and April 2016 data, alluvium groundwater continues to flow in an easterly direction toward the Ocmulgee River, but around the ISS mass (Figure B3-1 and Figure B3-2, respectively). Seepage velocity in the alluvial aquifer was estimated from the product of hydraulic conductivity and horizontal hydraulic gradient (calculations in Appendix B-3) divided by effective porosity. The hydraulic conductivity and effective porosity from the GW CAP-A were used to estimate the seepage velocity. Based on these parameters, the alluvial seepage velocity is approximately 0.42 ft/day in March and 0.64 ft/day in April 2016 in the Western Portion and approximately 0.30 ft/day in March and 0.26 ft/day in April 2016 in the Eastern Portion (see Table B3-3 for calculations).

During the March 3, 2016 gauging event and April 2016 sampling event, all bedrock groundwater wells were inspected and the groundwater levels were gauged and recorded, with the following exceptions:

- MW-09D, MW-115D, and MW-303D were located in the ISS footprint and were abandoned prior to initiation of corrective actions;

- MW-25D was located within the shallow excavation footprint (expanded during remediation) and was covered by debris;

- MW-26D could not be located during the March 2016 event due to overgrown vegetation in the area; however, the well was located during the April 2016 event; and

- MW-301D was not gauged during the March 2016 event.

AGLC will attempt to recover MW-25D and repair as necessary prior to the August 2016 sampling event.

DNAPL thickness was also recorded where detected. Groundwater elevation data and DNAPL thickness derived from water level measurements collected on March 3, 2016 and April 4, 2016 for the bedrock wells is presented in Table B3-2.

Accessible groundwater in bedrock such as that underlying the Macon MGP Site is limited to fractures and groundwater flow and dissolved constituent transport is typically dominated by the orientation of the primary fracture system. Geophysical investigations have demonstrated primary fractures in bedrock at the Site are oriented to the east and southeast. The inferred (or apparent) bedrock groundwater flow directions for data collected in March and April 2016 are presented on Figure B3-3 and Figure B3-4, respectively. The hydraulic potential measured in shallow bedrock wells decreases toward the east and southeast, as shown on Figures B3-3 and B3-4. Groundwater gradients calculated based on the hydraulic potential indicate groundwater movement in bedrock is generally parallel to the fracture orientations.

Since fractured bedrock aquifers are inherently anisotropic and heterogeneous, calculation of seepage, velocity may not be representative using bulk porosity estimates. However, a range of porosity estimates may provide bounds on the expected seepage velocity of the bedrock aquifer. Multiple seepage velocities were calculated using porosity estimates from the literature and by solving three three-point problems for different areas of the Site. The seepage velocities are presented in Table B3-3. The calculated range of seepage velocity in the bedrock aquifer at the Western Portion of the Site was between 0.041 and 3.2 ft/day and at the Eastern Portion of the Site between 0.044 and 3.5 ft/day in March 2016. The calculated range of seepage velocity in the bedrock aquifer at the Western Portion of the Site was between 0.035 and 2.8 ft/day and at the

Eastern Portion of the Site between 0.042 and 3.4 ft/day in April 2016 (sees Table B3-3 for seepage velocity calculations and Appendix B-3 for 3-point gradient calculations).

3.2 *GROUNDWATER ANALYTICAL RESULTS*

Analytical results for alluvium and bedrock monitoring wells sampled in April 2016 are summarized in Tables B3-4 and B3-5, respectively. These results were compared to Type 4 RRS for monitoring wells in the City ROW, on-site, or in an industrial use area and Type 2 RRS for wells offsite and/or in a residential use area. Concentrations from monitoring wells MW-21, MW-28, MW-24D, MW-26D, and MW-112D are compared to Type 2 RRS. Detected concentrations of benzene and naphthalene exceeding the Type 4 RRS are shaded on Tables B3-4 and B3-5.

The spatial distribution of benzene and naphthalene is shown in Figure B3-5 for alluvium wells sampled in April 2016. Only benzene contours are included on Figure B3-5 as no naphthalene concentrations were detected above Type 4 RRS during the April 2016 sampling event. The spatial distribution of benzene and naphthalene in bedrock in April 2016 is shown on Figures B3-6 and B3-7, respectively.

Sampling forms are included in Appendix B-2, bedrock hydraulic potential calculation figures are included in Appendix B-3, copies of the laboratory analytical reports are provided in Appendix B-4, and data validation reports are attached in Appendix B-5. A complete summary of historical analytical data collected for the groundwater-monitoring program (since 2001) is provided in Appendix B-6. Benzene and naphthalene concentration and groundwater elevation trend graphs for bedrock monitoring wells are provided in Appendix B-7.

3.2.1 *Alluvium Groundwater Analytical Results*

Analytical results for groundwater samples collected from alluvium monitoring wells were compared to applicable RRS, and are presented in Table B3-4. The interim groundwater sampling event was performed in April 2016 to monitor for any potential plume migration off the Type 5 property (MW-15, MW-101, and MW-102), to assess initial results downgradient of the footprint of corrective actions at the Western Portion MGP (MW-08, MW-10, MW-105, MW-107, and MW-400), and to assess whether alluvium groundwater concentrations are still below detection limits downgradient of the Eastern Portion ISS mass (MW-12R, MW-14I, MW-21, MW-28, and MW-104). Thirteen alluvium monitoring wells were sampled during the post-remediation April 2016 sampling event, as noted above, this was a reduced list from the annual alluvial monitoring normally scheduled in February. Alluvium groundwater sampling events

will resume in August 2016 with the prior schedule (semiannual sampling events in August and annual events in February).

3.2.1.1 *Volatile Organic Compound Results*

The distribution of benzene in alluvial monitoring wells sampled in April 2016 is displayed in Figure B3-5. Benzene was detected at concentrations above the Type 4 RRS (nine µg/L) in groundwater samples collected from only one alluvium monitoring well (MW-400) in the April 2016 sampling event. Detected benzene concentrations ranged from 6.5 µg/L (MW-101) to 11 µg/L (MW-400). Both alluvial monitoring wells with benzene detections are located on MUDA property; therefore, the detected concentrations of individual VOCs are compared only to Type 4 RRS.

3.2.1.2 *Semi-Volatile Organic Compound Results*

Naphthalene concentrations in alluvium groundwater during the April 2016 sampling event ranged from 0.79 µg/L (MW-107) to 14 µg/L (MW-101). Naphthalene was not detected at a concentration above the Type 4 RRS (20 µg/L) in groundwater samples collected from any alluvium monitoring well during the April 2016 sampling event. The distribution of naphthalene in alluvial monitoring wells sampled in April 2016 is displayed in Figure B3-5. Each alluvial monitoring well with SVOC detections is located in the City ROW or on-site; therefore, the detected concentrations of individual SVOCs are compared only to Type 4 RRS.

3.2.1.3 *Inorganic Compound Results*

Unfiltered alluvial groundwater samples were analyzed for inorganic COI (Table B1-1). No inorganic COI concentrations were detected in excess of the applicable Type 4 RRS in samples collected during the April 2016, or August 2015 groundwater sampling events (Table B3-4).

3.2.2 ***Bedrock Groundwater Analytical Results***

Analytical results for groundwater samples collected from bedrock monitoring wells were compared to applicable Type 2 and 4 RRS, and are presented in Table B3-5.

Twenty-six bedrock monitoring wells were sampled during the annual April 2016 sampling event. MW-111D and MW-309D were not sampled due to detections of 1.4 feet and 1.5 feet of DNAPL, respectively during the April 2016 groundwater level gauging. A summary of DNAPL

monitoring and recovery efforts at MW-111D and MW-309D completed during this reporting period are included in Section 2.3 of the *2nd Semiannual Progress Report*.

3.2.2.1 *Volatile Organic Compound Results*

During the April 2016 sampling event, benzene was detected in groundwater above the applicable RRS in samples collected from 11 bedrock monitoring wells:

Type 2 RRS (5 µg/L)
- MW-24D

Type 4 RRS (9 µg/L)
- MW-12DRR
- MW-12DD
- MW-110D
- MW-200DR
- MW-204D
- MW-205D
- MW-302DD
- MW-305D
- MW-306D
- MW-308D

Benzene concentrations ranged from 15 µg/L (MW-12DD) to 14,000 µg/L (MW-305D) in April 2016. The distribution of benzene in bedrock wells sampled in April 2016 is shown on Figure B3-6. Benzene was the only BTEX analyte detected above its respective RRS in bedrock groundwater samples collected during the April 2016 sampling event, with the exception of toluene, which was detected at MW-305D (6,900 µg/L) above the Type 4 RRS (1,100 µg/L).

3.2.2.2 *Semi-Volatile Organic Compound Results*

Naphthalene was detected above the applicable Type 4 RRS of 20 µg/L in samples collected from eight bedrock monitoring wells during the April 2016 sampling event:

- MW-12DRR
- MW-110D
- MW-204D
- MW-205D
- MW-301D
- MW-302DD
- MW-305D
- MW-306D

Naphthalene was detected in MW-205DD, MW-307D, and MW-308D at concentrations below Type 4 RRS. Naphthalene concentrations ranged from 0.87 µg/L (MW-308D) to 4,900 µg/L (MW-205D) in April 2016. The distribution of naphthalene in bedrock wells sampled in April 2016 is shown on Figure B3-7. No other SVOCs were detected above their respective RRS in bedrock groundwater samples collected during the April 2016 sampling events.

3.2.2.3 *Inorganic Compound Results*

Unfiltered bedrock groundwater samples were analyzed for inorganic COI (Table E1-1). All inorganic COI were below applicable RRS during the April 2016 sampling event, except for cadmium (0.0521 mg/L) in MW-300D which was above the applicable Type 4 RRS of 0.051 mg/L. (Table B3-5).

3.4 *QUALITY ASSURANCE, QUALITY CONTROL, AND DATA VALIDATION*

All field QA/QC data, and at least 10 percent of the VOC, SVOC, and inorganic data presented in the analytical reports were reviewed by ERM's data validation expert. Laboratory analytical reports for all samples are provided in Appendix B-4, and the data validation reports for VOC, SVOC, and inorganic data are included in Appendix B-5. These data were reviewed in accordance with the USEPA Contract Laboratory Program National Functional Guidelines for Organic/Inorganic Data Review, Level 2 Evaluation [2008, 2011].

As shown in Appendix B-5, ERM performed a data validation review of sample order numbers 1604559 and 1604772 for the April 2016 alluvium-sampling event, which included the following parent and duplicate samples:

DUP-01-20160406-01	MW-15-20160406-01
DUP-02-20160407-01	MW-101-20160407-01

ERM performed a data validation review of sample order numbers 1604558, 1604772, and 1604944 for the April 2016 bedrock-sampling event, which included the following parent and duplicate samples:

DUP-01-20160407-01	MW-110D-20160407-01
DUP-02-20160406-01	MW-304D-20160406-01
DUP-03-20160407-01	MW-204D-20160407-01

The following items were included in the data validation review:

- Surrogate recoveries
- Relative percentage difference of primary/field duplicate samples
- Field and laboratory blank contamination
- Holding times, sample receipt conditions, dilution factors, chains of custody
- Trip blanks
- Sample duplicates

Two alluvium and three bedrock field duplicates were collected during the April 2016 sampling event (see above) to determine the precision of

the groundwater sample analysis and collection. As shown in Appendix B-5, the duplicate sample results received from the laboratory correlated well with those from parent samples with the following exceptions:

- MW-110: chrysene and naphthalene
- MW-204D: naphthalene

All other relative percent difference (RPD) calculations showed differences of less than 30% between parent and duplicate sample.

Due to poor naphthalene correlation by method 8260 SIM in primary/duplicate sample sets for bedrock wells, naphthalene results were reported by methods 8270 SIM and GC/MS (Appendix B-5). The higher of the concentration values from the 8270 methods are included in the Table B3-5 and in the report.

Two MS/MSD sample sets were collected in April 2016 as part of the laboratory analytical batch QC. The MS/MSD samples were collected to assess matrix interference and reliability of the analytical processes and equipment. The samples were collected from MW-102 and MW-300D in April 2016. All results for the MS/MSD QC samples were within the laboratory-established limits.

4.0 DISCUSSION OF GROUNDWATER SAMPLING OBJECTIVES

This section provides an evaluation of the results of the groundwater sampling events conducted in the context of variability and concentration trends over the past four years as they relate to the monitoring objectives defined in the BGMP and interim alluvium objectives prior to and during active remedy implementation

4.1 ALLUVIUM GROUNDWATER

4.1.1 Document that the Plume is not Migrating off the MUDA Type 5 Property

Results from monitoring wells MW-15, MW-101, and MW-102 were used to assess whether the alluvium groundwater plume may be migrating off the MUDA Type 5 property located at 137 Mulberry Street.

- MW-101 is located adjacent former ISS mass on the MUDA property and historically has had impacts. Both benzene and naphthalene concentration were below Type 4 RRS during the April 2016 sampling event.

- MW-15 and MW-102 are located hydraulically downgradient of MW-101 along the property boundary. Both wells have historically had concentrations below detection limits for organic COI. No organic COI were detected in either well during the April 2016 sampling event.

Results from April 2016 sampling event do not indicate that the alluvium groundwater plume on the MUDA property is currently migrating off the Type 5 property.

4.1.2 Collect Data Downgradient of the Footprint of Corrective Actions at the Western Portion MGP to Monitor Changes

Results from monitoring wells MW-08, MW-10, MW-105, MW-107, and MW-400 sampled in April 2016 were used to assess groundwater concentrations in wells downgradient of the newly completed ISS footprint (final restoration activities still in progress). Concentrations of VOCs were below detection limits in four of the five wells. Concentrations of benzene were detected in MW-400 (see Table B3-4) at a concentration slightly above Type 4 RRS (9 ug/l) at 11 µg/L compared to below detection limits in the baseline event conducted in April 2015. MW-400 is located southeast of the new ISS footprint along the southwestern boundary of the MUDA property along Mulberry Street. No SVOCs were detected above Type 4 RRS in any of the five wells. AGLC will continue to

monitor MW-400 to evaluate groundwater quality conditions in this well in future events.

4.1.3 Monitor Alluvium Groundwater Data Hydraulically Downgradient of the Eastern Portion ISS Mass to Assess Whether Concentrations Remain Below RRS

MW-12R, MW-14I, MW-21, MW-28, and MW-104 were sampled during the April 2016 sampling event to assess whether alluvium groundwater downgradient of the Eastern Portion ISS mass remains below Type 2 / Type 4 RRS. No COI in any of the five wells were detected at concentrations exceeding their respective RRS during the April 2016 sampling event. Furthermore, no organic COI have exceeded applicable RRS in any of the above alluvium monitoring wells since MW-12R had a naphthalene concentration detected above the Type 4 RRS in February 2010.

4.1.4 Detect Changes in Environmental Conditions

The groundwater flow directions and seepage velocities for the March 2016 gauging event and the April 2016 monitoring event were compared with previous reports to identify any changes. The flow direction in the alluvium aquifer has historically been to the east. Alluvium groundwater flow during the March and April 2016 events were predominantly towards the east. The calculated horizontal hydraulic gradient for the alluvium was 0.0220 ft/ft at the Western Portion of the Site and 0.0159 ft/ft at the Eastern Portion of the Site during the March 2016 gauging event. The calculated horizontal hydraulic gradient for the alluvium was 0.0339 ft/ft at the Western Portion of the Site and 0.0138 ft/ft at the Eastern Portion of the Site during the April 2016 event.

During the August 2013 event, the calculated hydraulic gradient in the alluvium aquifer at the Site was 0.0309 ft/ft (calculated for the Western Portion and MUDA property. The alluvium groundwater gradients in the Western portion of the site in March and April 2016 were consistent with August 2013 event. Compared to previous events, no significant variations in groundwater flow direction or calculated gradient are noted.

No changes in environmental conditions were detected at the Site based on the evaluation of groundwater flow direction and seepage velocity.

4.2 BEDROCK GROUNDWATER

4.2.1 Perimeter Well Monitoring

Data from perimeters wells (including MW-22D, MW-23D, MW-26D, MW-27D, MW-112D, and MW-113D) were evaluated to assess any changes in the nature and extent of the bedrock groundwater quality. Evaluation of the results from the April 2016 monitoring event showed that there are no concentration trends resulting in values exceeding groundwater standards in previously unimpacted wells.

4.2.2 Monitor for DNAPL accumulation

The first vacuum enhanced fluid recovery (VEFR) event was performed in February 2011 to remove DNAPL in MW-111D. There have been three subsequent events performed in September 2013 (MW-111D and MW-302D), May 2015 (MW-111D), and August 2015 (MW-111D, MW-309D and SW-1).

DNAPL accumulation of greater than 0.5 feet (as stated in the VIRP) in any well will trigger a vacuum enhanced fluid recovery (VEFR) event. Each well is checked for DNAPL as part of the groundwater level gauging activities during groundwater sampling events. Results of monitoring activities at MW-111D, MW-302D, MW-305D, and MW-309D, locations where DNAPL has primarily been observed during previous events for the November 22, 2015 through May 21, 2016 period are summarized below.

MW-302D

MW-302D had trace DNAPL observed in sediment adhering to the probe tip following gauging during the April 2016 sampling event. No DNAPL was observed during the March 2016 gauging event. The monitoring well was not included in any VEFR events in this period.

MW-111D

The following table provides a summary of DNAPL thickness monitoring and DNAPL recovery efforts during this reporting period.

MW-111D		
Date	**Event**	**Observations – DNAPL Thickness**
March 3, 2016	Interim Gauging Event	0.68 ft
April 4, 2016	Semiannual Monitoring	1.4 ft

MW-309D

The following table provides a summary of DNAPL thickness monitoring and DNAPL recovery efforts during this reporting period at MW-309D.

MW-309D		
Date	**Event**	**Observations - DNAPL Thickness**
March 3, 2016	Interim Gauging Event	1.5 - 7 ft
April 4, 2016	Semiannual Monitoring	1.5 - 7 ft

Thickness of DNAPL estimated. Range was difficult to determine due to density, conductivity, and emulsification of the DNAPL in the monitoring well

4.2.3 *Detect Changes in Environmental Conditions*

The groundwater flow directions and seepage velocities for the March 2016 gauging event and the April 2016 monitoring event were compared with previous reports to identify any changes. The flow direction in the bedrock aquifer has historically been to the east. Bedrock groundwater flow during the March and April 2016 events were predominantly towards the east. The calculated horizontal hydraulic gradient for the bedrock was 0.0178 ft/ft at the Western Portion of the Site and 0.0194 ft/ft at the Eastern Portion of the Site during the March 2016 gauging event. The calculated horizontal hydraulic gradient for the bedrock was 0.0152 ft/ft at the Western Portion of the Site and 0.0185 ft/ft at the Eastern Portion of the Site during the April 2016 event.

During the August 2015 event, the calculated hydraulic gradient in the bedrock aquifer at the Western and Eastern Portions of the Site was 0.0352 ft/ft and 0.0211 ft/ft, respectively. The bedrock groundwater gradients in the Western portion of the site in March and April 2016 were lower than the during the August 2015 event. The bedrock groundwater gradient in the Eastern Portion of the site in March and April 2016 were slightly lower than in August 2015. Compared to previous events, no significant variations in groundwater flow direction or calculated gradient are noted in the Eastern Portion. The calculated gradient in the Western Portion appears to be about half that measured during the August 2015 event. AGLC will continue monitoring to assess if the excavation, ISS remediation and Site regrading has affected the groundwater gradient in the bedrock aquifer in the Western Portion.

COI concentrations in bedrock groundwater for the April 2016 event were compared with historical concentrations for consistency. No changes in environmental conditions were detected at the Site based on the evaluation of groundwater flow direction, seepage velocity, and background conditions.

4.2.4 *Detect New Releases (or other sources) of Contaminants to the Environment*

Background monitoring well MW-22D continued to have no detections of organic COI. Background well MW-25D was covered during over-excavation activities during corrective action implementation in the Western Portion, and was not accessible. AGLC will attempt to uncover and rehabilitate the well before the next sampling event.

4.2.5 *Demonstrate the Effectiveness of Institutional Controls*

The qualifying properties associated with the former Macon MGP Site consist of: an AGLC-owned parcel located at 306 Terminal Avenue; parcels owned by Macon Bibb County Urban Development Authority (MUDA) located at 137 Mulberry Street and 122 Walnut Street (and an unnumbered utility parcel on 6th Street); parcels owned by the City of Macon; and parcels owned by Norfolk Southern Railroad (undefined addresses or parcel identifiers). Agreements have been reached with the MUDA, City of Macon and Norfolk Southern and institutional controls will be implemented as needed to conform to VRP rules. In the event additional affected properties are identified through ongoing groundwater investigations, AGLC will notify EPD and revise the VIRP accordingly via semiannual progress reports.

Institutional controls that will be placed on qualifying properties will likely include the restriction of groundwater use. Although controls are not yet in place for all potential qualifying properties, a visual inspection was performed during the April 2016 sampling event for the existence of private wells. No evidence of private wells or shallow groundwater use was observed on any of the neighboring properties.

4.2.6 *Document Attainment of Remediation Objectives*

COI data trends were evaluated to assess whether concentrations were decreasing, increasing or stable and to verify the plume was not expanding. Monitoring wells with COI impacts are discussed below. Historical groundwater monitoring results are summarized in Appendix B-6 and concentration trend graphs for the bedrock wells with COI impacts are included in Appendix B-7.

Well	COI	Observations
MW-12DRR	Benzene, naphthalene	Benzene concentrations have decreased from 460 µg/L in August 2013 to 340 µg/L in August 2014 to 250 µg/L in August 2015 to 96 µg/L in April 2016. The reduction from 2013 to 2016 concentrations represents a reduction of 79%. Naphthalene concentrations have decreased from 1,400 µg/L in August 2013 to 1,000 µg/L in August 2014 to 550 µg/L in August 2015 to 260 µg/L in April 2016. The reduction from 2013 to 2016 concentrations represents a reduction of 81%.
MW-12DD	Benzene, naphthalene	Benzene from the April 2016 sampling event (15 µg/L) decreased from the February 2015 sampling (44 µg/L). Benzene concentrations remain well below the historic high (1,800 µg/L, September 2002). The naphthalene concentration during the sampling event was below detection limits. Overall concentration trends for benzene and naphthalene appear to be decreasing.
MW-24D	Benzene, naphthalene	Benzene concentrations were detected at 100 µg/L in April 2016, after a history of low concentrations to below detection limits. Naphthalene concentrations returned to below detection limits in April 2016, after a couple of detections above Type 2 RRS (August 2014 and August 2015 sampling events). MW-24D will be sampled during the August 2016 semiannual event as scheduled, and the concentration trends will continue to be evaluated. Investigations are planned to assess whether corrective actions or well installation activities performed along the right-of-way of 7th Street may be affecting groundwater concentrations in the well.
MW-110D	Benzene, naphthalene	Benzene concentrations in April 2016 were the lowest since well installation, and naphthalene concentrations have generally been decreasing. The August 2015 naphthalene concentration of 1,600 µg/L represents a 76% reduction from the highest concentration of 6,800 µg/L (August 2010).

Well	COI	Observations
MW-200DR	Benzene, naphthalene	Benzene concentrations in April 2016 (29 µg/L) decreased slightly from the benzene concentration detected in August 2015 (36 µg/L). Naphthalene concentrations had a spike in February 2013 (2,300 µg/L), but have been below detection limits for the last four monitoring events.
MW-205D	Benzene, naphthalene	No observable trends.
MW-206D, MW-207D	Benzene, naphthalene	Concentrations have been below detection limits for five consecutive events at MW-206D and MW-207D.
MW-301D	Benzene, naphthalene	Benzene was below detection limits during the April 2016 sampling event. Benzene concentrations show an overall decreasing trend from the historical high of 270 µg/L in April 2011. Although naphthalene concentrations increased in April 2016 (81 µg/L) compared to the 2015 events (below detection limits), the overall trend appears to be decreasing from the historical high in April 2012 (3,500 µg/L)
MW-302D	Benzene, naphthalene	Benzene and naphthalene concentrations during the April 2016 event were below detection limits and well below the benzene and naphthalene concentration highs of 550 µg/L and 300 µg/L, respectively in February 2014
MW-305D, MW-306D, MW-307D, MW-308D MW-309D	Benzene, naphthalene	Not sampled a sufficient number of times to perform trend analyses. Concentration trends will be evaluated once sufficient data have been collected.

Monitoring of alluvium and bedrock groundwater monitoring wells at the Site will continue in accordance with schedules presented in Tables B2-1 and B2-2, respectively.

5.0 CONCLUSIONS

The following conclusions are derived from the data and analyses presented in this report:

Alluvium

- The alluvium groundwater plume on the MUDA property has not migrated off-site and appears to be stable or decreasing.

- Of the five alluvium wells sampled to assess groundwater downgradient of the new ISS mass, only MW-400 showed an increase from baseline (April 2015) conditions. Benzene in the MW-400 was slightly above Type 4 RRS in April 2016 compared to below detection limits in April 2015. The well will continue to be monitored for trends as groundwater returns to ambient conditions following corrective action completion.

- There were no COI exceedances in the five wells sampled hydraulically downgradient of the Eastern Portion ISS mass. Shallow groundwater remains below RRS downgradient of the MUDA property.

Bedrock

- No organic COI were detected in bedrock wells located at the hydraulically downgradient periphery of the bedrock groundwater monitoring network during the April 2016 sampling event.

- Bedrock groundwater concentration trends appear to be stable or decreasing in bedrock wells, with the exception of MW-24D, where concentrations have recently fluctuated. Continued monitoring and assessment will provide additional data to assess conditions.

- During March and April 2016, DNAPL was measured in MW-111D and MW-309D. DNAPL accumulation of greater than 0.5 feet in both wells triggered a VEFR event, which is scheduled to occur in May or June 2016. DNAPL accumulation monitoring and recovery efforts will continue during the next monitoring period.

- Background monitoring wells MW-22D continues to have no detections for organic COI. Background well MW-25D was covered

during corrective actions and will be reinstalled if it cannot be located and rehabilitated.

General Site Conditions

- The bedrock groundwater gradient in the western portion of the Site was approximately half-historical trends in the March and April gauging events. The hydraulic gradient will continued to monitored to assess where corrective actions performed (ISS and regrading of the Site) in the area have had any effect on the hydraulic gradient. No other changes in environmental conditions were detected at the Site based on the evaluation of groundwater flow direction, seepage velocity, and background conditions.

- No previously undetected, groundwater constituents were observed in alluvium or bedrock wells in April 2016. Detections were consistent with historical results at the Site.

- A visual inspection of the neighboring properties where institutional controls are in place or are anticipated to be implemented in the future was performed during the April 2016 sampling event for the existence of private wells. No evidence of private wells or shallow groundwater use were observed on these properties.

The next sampling event will include the alluvium and bedrock groundwater well network as shown in Table B1-2 and Table B1-3. The next sampling event is scheduled for August 2016 (semiannual groundwater event).

Notes:

Created By: EKY

Checked By: NGV

AMSL - Above Mean Sea Level

BTOC - Below Top of Casing

All depths to water are listed in feet below top of casing (BTOC).

All casing and groundwater elevations are listed in feet above mean sea level (AMSL).

CNL - Could not locate

NM - Not Measured

* - Groundwater level measured on April 8, 2016

** - Groundwater level measured on April 11, 2016

RE: Proposed Corrective Action Plan (CAP) Schedule Modifications
Former Macon MGP Site, HSI # 10511
Macon, Bibb County, Georgia

Dear Mr. Brownlee,

Atlanta Gas Light Company (AGL) and Georgia Power Company (GPC) appreciate meeting with you and Mr. Kevin Collins on July 8, 2013, regarding the above-referenced site. This letter is intended to summarize the meeting, AGL and EPD agreements, and provide specifics regarding the upcoming deliverables and work activities planned at the site.

In the meeting, GPC and AGL presented data collected at the site needed for the CAP/Basis of Design Work Plan (BDWP). Those data were to be used for the CAP submittal targeted for submission to EPD by August 16, 2013. However, due to additional data needs, identification and ongoing negotiations with property owners who are stakeholders for the CAP remedy selection and implementation, AGL provided the justification in the meeting for additional time needed to prepare the CAP/BDWP.

Additionally, due to the complexities of the groundwater units (specifically the bedrock groundwater), AGL requested and EPD agreed to separate the bedrock groundwater from the soil, source material, and Alluvium groundwater. Thus, two separate CAPs will be submitted for this site: (1) Soil, Source Material, and Alluvium Groundwater CAP; and (2) Bedrock Groundwater CAP.

Based on the discussions described above in this letter , AGL requested and EPD agreed to an extension for submittal of the Soil, Source Material, and Alluvium Groundwater CAP (hereinafter the "Alluvium Groundwater CAP") and the Bedrock Groundwater CAP which are now due February 18, 2014 and October 14, 2014, respectively. Further details on schedule and deliverables are provided within this letter and attachments.

Third Party Access

As we discussed in the meeting, access to third party owned property has been an ongoing effort. To resolve access to the largest piece of property to be addressed in the Alluvium Groundwater CAP, AGL purchased the former General Steel property located along Terminal Avenue. The contact negotiations for this parcel took quite a while for a 2.83 acre vacant piece of property, but as of July 31, 2013, AGL is now the owner. Also, several parcels along Terminal Avenue and Mulberry Street were sold to a new owner in July 2013. Thus, we had been dealing for many years with one owner only to be handed off to start anew with another owner. This new owner has been cooperative; however, he needed time and discussion to familiarize himself with the situation. AGL is engaged with the other stakeholders (City of Macon, Norfolk Southern Railroad, and Macon Urban Development Authority) regarding access in order to complete the data gaps that exist based on the investigation completed in the last six months. The estimated extent of proposed remedial actions and the relationship to adjacent landowners is set forth on Figure 1. Once the additional investigations needed to prepare the corrective action plans are completed, AGL will meet with each of these landowners to discuss and obtain approval of the applicable corrective action for their property.

Site Activities - Completed and Planned

During the months of December 2012 through February 2013, AGL obtained access agreements with the various landowners mentioned above to conduct further soil and groundwater investigation. As we discussed in our meeting, and which will be presented in detail in the CAP, after three rounds of soil sampling which took place from March 2013 through June 2013, and after a total of 93 soil sample locations, additional soil sampling is still needed to complete the delineation of the MGP impacts. Data gaps remain regarding the extent of source material and dissolved phase impacts along the fringe areas of the contaminant plume and the MW-101 area. Figure 2 presents the schedule of the historical efforts that have been completed and proposed activities to be completed. AGL is proceeding with collecting the additionally needed data (See Figure 3 for sample locations) from these areas in order to capture these impacts within the Corrective Action Plan.

During the last six months, two temporary and three permanent shallow ground water wells were installed to complete delineation in the Alluvium. However, after the most recent groundwater monitoring event, additional temporary wells are planned on the property located on Sixth Street and Mulberry Street along Sixth Street.

Bedrock Groundwater

During the July 2013 meeting, AGL and GPC provided data and information to show the complexity of the bedrock groundwater characterization due to fractured flow hydrogeology. In order to obtain the necessary data to address EPD comments and to have sufficient data to evaluate and develop a bedrock groundwater strategy, a phased approach to bedrock groundwater data collection has been developed. AGL's responses to EPD's comments dated January 17, 2012 (EPD Comments to the FFS and Groundwater Monitoring Reports) and April 4, 2013 (EPD Comments to 2012 Groundwater Monitoring Reports), have been presented in Table 1.

During the Bedrock Groundwater *Phase 1*, three (3) bedrock wells were installed to facilitate bedrock characterization, and one (1) bedrock well, MW-23D, was located and therefore not replaced (See Figure 4). Additionally, groundwater levels in eleven (11) wells were monitored continuously for a period of 41 days at the site. This effort assists with understanding water level responses to rainfall. The 11 wells monitored included four (4) shallow and seven (7) bedrock wells to determine the interaction between these two units. These data were used to define well location selection for Phase 2 wells.

For the Bedrock Groundwater *Phase 2*, six (6) additional bedrock monitoring wells will be installed to address both the technical needs of the project and outstanding EPD comments. Locations of these proposed bedrock wells are shown in Figure 4, with rationale associated with each provided in Table 2. The proposed schedule of these activities is presented in Figure 5.

Based on our current understanding, AGL is considering the installation of bedrock pilot test wells in conjunction with the Phase 2 bedrock wells. The bedrock pilot test is intended to evaluate an applicable technology. Details will be provided to EPD under separate cover, along with a UIC permit application. AGL also plans to further evaluate the value and need for a pilot test at this time, and will communicate with EPD if there is any change to the proposed activities. A schedule of the proposed pilot test activities is presented in Figure 5. Additional long term data logging information also will be collected during this phase of the project. Once the pilot test has been completed and the Phase 2 bedrock wells have been installed and sampled, AGL will develop a long term bedrock groundwater strategy that will be presented in the CAP.

OM&M Program

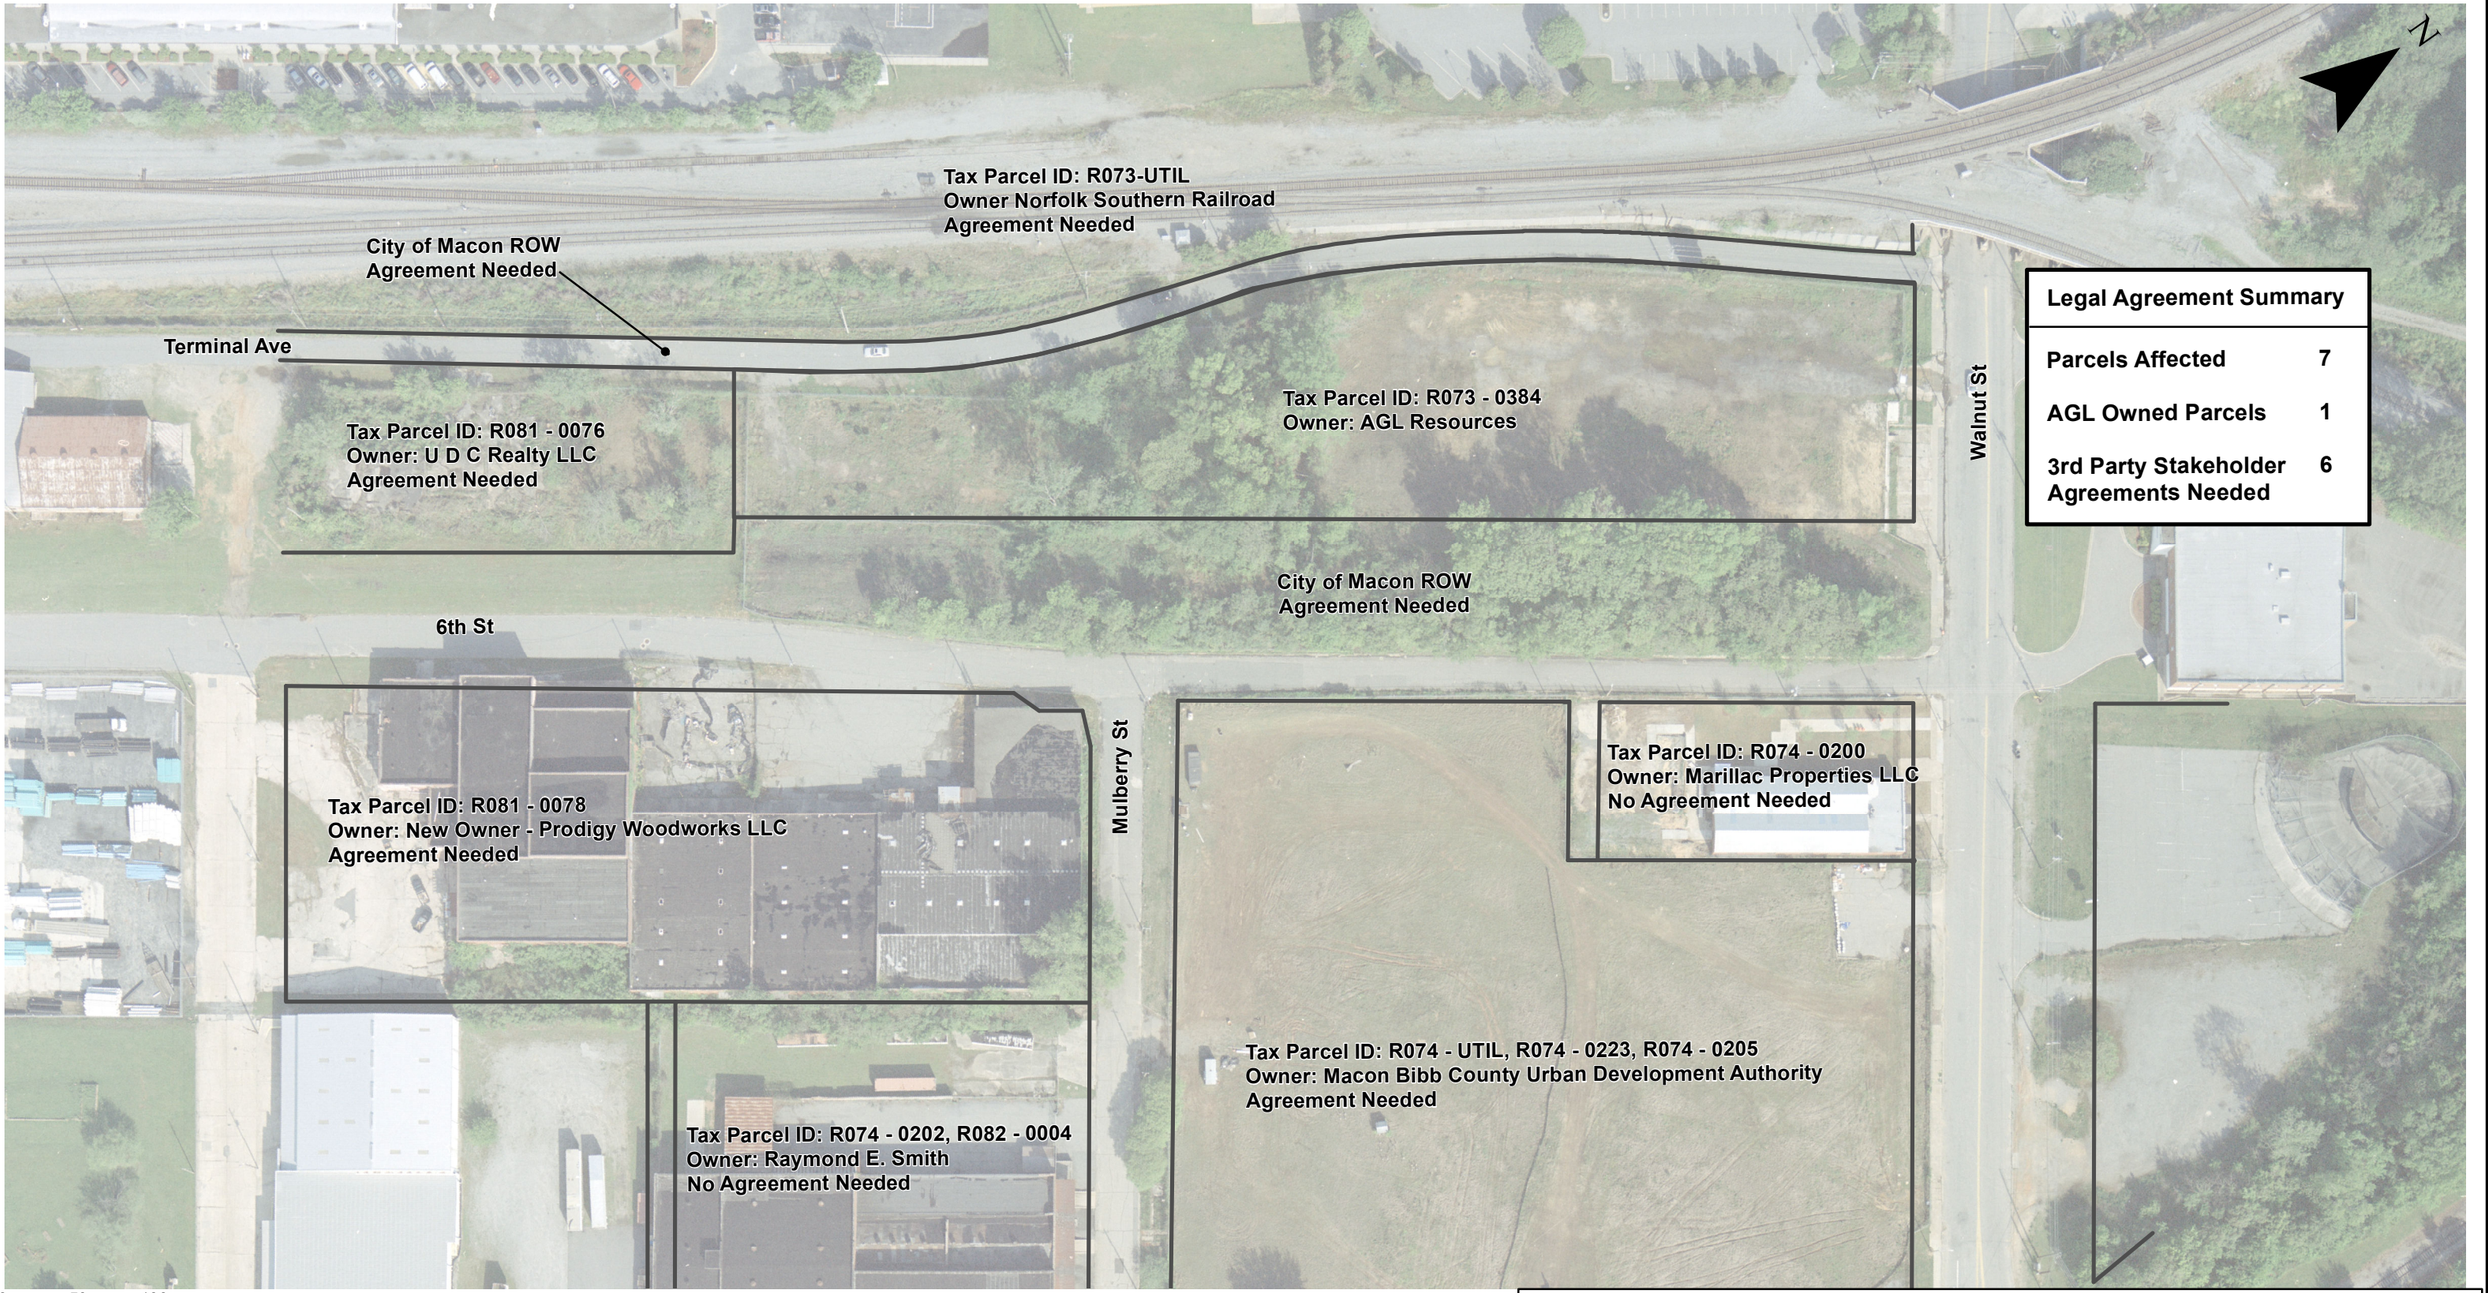
Finally, as recommended by EPD in the July 2013 meeting, AGL has reviewed the current OM&M program which was designed to monitor the previous Remedial Action MNA. Due to the ongoing bedrock evaluations and the additional remedial actions planned in the Western portion of the MGP site, AGL proposes to revise the current OM&M program to better meet the existing and future data needs. An overview of proposed changes to the groundwater monitoring program is set forth on Table 3. Briefly, the semi-annual event scheduled for August will continue as planned and will include ten (10) new alluvium wells proposed for semi-annual sampling in the future. Following

completion of the semi-annual sampling event, a semi-annual groundwater monitoring report will be submitted in October 2013 as currently scheduled.

AGL proposes that additional sampling of alluvial wells be postponed until after the ISS/excavation remedy has been completed at the site. Samples will be collected semi-annually as shown on Table 3 and the results will be submitted in annual Corrective Action Effectiveness Reports. AGL will continue its bedrock groundwater sampling program as needed to support pilot test effectiveness evaluation and bedrock CAP data needs. In order to optimize reporting efforts, bedrock groundwater results will be submitted in the bedrock CAP.

If you have any questions, please call me at (404) 584-3719. Thank you for your assistance.

Sincerely,



Greg Corbett, P.E.
Director, Environmental Services

Table 1
Summary of EPD Comments and Responses
AGL Resources Former MGP Site
Macon, Georgia

April 4, 2013 EPD Correspondence	
Comment	***Response***
1. The Type 1-4 risk reduction standards provided within the October 31, 2012 cover letter are acceptable for use at the above-referenced site	Agreed. The approved RRS will be incorporated for future use.
2. Please include the results for the following wells in Appendix D, Historical Data Summary: MW-8D, MW-21, MW-206, and MW-207	Agreed. These data were provided in the most recent Semi-Annual GW Report, dated April 30, 2013.
3. Please provide an explanation for the elevated pH levels currently or formerly identified at monitoring well locations MW-112D, MW-115D, MW-12DD, and MW-12DR.	AGL is continuing to evaluate the potential cause of the elevated pH in these wells. AGL contends at this time that the sporadic elevated pH in 4 wells, compared to the number of wells present onsite does not or should not be a technical roadblock to the submission of the CAPs planned for the site.
4. According to the Quality Control/Assurance Section of the groundwater monitoring reports, multiple disparities have been noted among the analytical results for the duplicate samples. Please provide an explanation for the continued identification of these sampling and analysis disparities, and/or provide documentation of any assessment and modification measures that have been or are to be completed to resolve identified problems with the sampling and analysis procedures.	Sampling has been performed using low-flow/low-volume purging techniques based on guidelines from the Field Branches Quality System and Technical Procedures, US-EPA, Region 4, SESD (USEPA, 2013). A new analytical laboratory has been retained and any on-going discrepancies will be evaluated and explained in future reports.
January 17, 2010 EPD Correspondence	
Comment	***Response***
1) EPD concurs with the planned groundwater and soil delineation activities to be conducted during the implementation of the corrective action for the Western Portion area onto the Norfolk-Southern property. However, as noted in AGLC's 2011 FFS cover letter, more specific details associated with the delineation sample locations must be included in the CAP Addendum. Please ensure to include groundwater horizontal delineation activities to the west/southwest of AMW-1, and vertical delineation activities in the areas of MW-303D, MW-302D, and MW-205D as part of the planned investigation and corrective action activities. In addition, please ensure that the confirmation samples for soil delineation are analyzed with detection limits set at or below the established risk reduction standards (RRS). Should access to the Western Portion investigation area not be granted prior to the planned date of implementing the investigation and corrective action activities, please provide EPD with documentation of all efforts made to gain access in accordance with the Consent Orde EPD- HSR-227.	AGL has completed delineation activities for alluvium groundwater, as presented in Figure 7 of this correspondence (data to be provided in CAP). The request to install wells to complete vertical delineation at MW-205D and MW-302D was conducted, as shown in Figure 8 of this correspondence. Soil has been delineated with current COI list, using adequate detection limits to confirm compliance with RRS. numerous ongoing stakeholder negotiations are being conducted and documented by Kazmarek Mowrey Cloud Laseter LLP (KMCL).
2) Please include additional figures, or revise the existing figures, to illustrate the lateral and vertical extent of compliance with the applicable RRS concentratio for each constituents of interest (COI), including specific soil and groundwater concentrations at all monitoring points. In addition, this figure(s) should clearly illustrate the distinction between the established Type 5 RRS areas and the Type 1-4 RRS areas for the established site and the surrounding parcels, including any right-of-ways and streets.	Agreed. The CAP will provide figures requested, as needed.
3) According to Section 7.2 of the April 2011 FFS, the corrective action for groundwater for the Western Portion and remaining MW-101 area for the Eastern Portion will consist of the removal or ISS of the source materials in soil and continued assessment through groundwater monitoring. EPD recommends that AGLC temporarily expand the dewatering, treatment and disposal activities associated with the excavation activities in an effort to further reduce the concentrations of Coifs in the alluvial and bedrock groundwater. Please include the design details associated with this additional component of the groundwater corrective action in the CAP Addendum.	AGL is evaluating the cost/benefit of conducting the dewatering efforts during the remedial action and will incorporate the approach if sufficient benefits warrant the use of expanded dewatering.
4) According to the April 2011 FFS, the COIs for soil were based on the April 2006 [Groundwater] Corrective Action Plan Addendum. Considering that the area designated as the "Western Portion" investigation area was related to a separate, older manufactured gas plant, please revise this COI list for both soil and groundwater to include, at a minimum, the constituents listed in Table 2-1 of the January 2004 Compliance Status Report (CSR). A revised COI list may be established once the delineation to background and certification to the applicable risk reduction standards (RRS), listed in Tables 9-2 through 9-4 of the January 2004 CSR, has been completed and documented by the submittal of an updated CSR.	Agreed. All new investigation data has utilized the Table 2-1 January 2004 CSR COIs.
5) According to the existing groundwater CAP for the area downgradient of the ISS mass, now termed the "Eastern Portion", AGLC was to implement a 2-year post ISS monitoring period for the bedrock groundwater contamination area, which began in April of 2010. Based on the results of the above referenced groundwater monitoring reports, concentrations of COIs in the bedrock groundwater still remain well above the established RRS and there is now confirmed source materials (DNAPL) in two wells in this area. Therefore, EPD requests that AGLC utilize the data gathered from this post ISS groundwater monitoring to develop the remedy for the bedrock groundwater impacts in the area downgradient of the ISS mass and include the necessary groundwater CAP modifications in the scheduled CAP Addendum submittal.	AGL presents its technical approach for Bedrock Groundwater, based on recent information, in this correspondence.

6) According to the April 2011 Report, Enhanced Fluid Recovery (EFR) was completed at monitoring well location MW-111(D) as an interim corrective measure to address the presence of dense non-aqueous-phase liquid (DNAPL) identified at this monitoring location. While a subsequent gauging of this monitoring location soon after the EFR event did not detect DNAPL, the more recent results from the October 2011 Report have indicated that DNAPL has once again been detected at this monitoring location and MW-302D as well. As noted in Comment #5 above, additional corrective measures will be needed to address the remnant source material and associated dissolved phase bedrock groundwater plume in this area. The CAP Addendum should include a proposed schedule of activities to characterize and delineate the extent of the DNAPL plume and associated groundwater impacts.	AGL continues to monitor the DNAPL in MW-111(D) routinely and deploys EFR once the product thickness reaches 0.5 feet. Phase 2 Bedrock wells (see Bedrock Groundwater Schedule and Figure 8 Bedrock Well locations) are planned to complete DNAPL delineation and associated Groundwater impacts.
7) Previous comments requested confirmation of the presence of the DNAPL detected in monitoring well MW-23D as indicated by the October 2009 Pre-ISS Baseline Report. However, according to the above referenced Semiannual Groundwater Monitoring Reports, monitoring well MW-23D could not be located during the 2010 and 2011 monitoring events and the presence of DNAPL at this monitoring location could not be confirmed. Should monitorin well MW-23D not be located and sampled during the next scheduled monitoring event(s), additional groundwater assessment activities may be required.	MW-23D has been located, inpsected, integrity evaluated, redeveloped, and sampled. DNAPL is not present and dissolved phase COIs are below background. The historical "indication" that DNAPL was present in this well is in error. AGL intends to continue to collect data and monitor this well semi-annually (See Table 3).
8) Please ensure that the following technical and clerical issues are addressed during future report submittals: a. Please include the results for the following wells in Appendix D, Historical Data Summary: MW-8D, MW-21, MW-206, MW-206D, and MW-207. b. Please provide an explanation for the elevated pH levels consistently identified at monitoring locations MW-112D, MW-115D, MW-12DD, and MW-12DR. c. Please ensure that monitoring well MW-206D is added to the quarterly monitoring schedule in Table 2-1. d. Please revise the naphthalene concentration for soil boring CB-4 to (17,000) for Figure 4 in Appendix A of the April 2011 FFS. In addition, please note that according to the RRS listed in Tables 9-2 through 9-4 of the January 2004 CSR, the Type 4 RRS for total xylenes in soil 0-2' was indicated as 1,600 mg/kg, and the Type 4 RRS for lead in groundwater was indicated as 0.015 mg/L. e. Please include the measured NAPL thickness detected in the monitoring wells either in Table 3-2, or a separate table. f. Please note that according to the sampling logs for almost all of the new shallow assessment monitoring wells (AMW) from the August 2011 groundwater sampling event, the wells were purged dry and appear to have retained a high turbidity prior to sampling. EPD recommends that during the next sampling event, for wells that continue to retain a high turbidity (>10 NTUs) and poor recharge prior to sampling that these monitoring wells be redeveloped prior to the next monitoring event. g. Please note that groundwater monitoring well MW-12DR has not had a sufficient enough recharge to allow for sampling during the past four quarterly monitoring events. Please include recommendations for the future use of this well as it factors into the proposed modifications to the groundwater corrective action for this area. h. According to the Quality Control/Assurance section of both 2011 groundwater monitoring reports, multiple disparities have been noted among the analytical results for the duplicate samples. Should these disparities continue to be noted for future monitoring reports, evaluation and modification of current sampling procedures may be required.	a. Agreed. See comment 2 of April 2013 Correspondence above. b. See comment 3 response of April 2013 correspondence above. c. Agreed. Completed. d. Agreed. These data will be accurately reflected in the CAP. e. Agreed and completed in the Semi-Annual Reports. f. Agreed. Completed. g. Agreed. Well has been abandoned and reinstalled. h. Agreed. See comment 4 of April 2013 Correspondence above.

Table 2
Groundwater Monitor Well Installation Rationale
Atlanta Gas Light Company
Former Manufactured Gas Plant
Macon, GA

Well ID	Hydraulic Unit Monitored	Estimated Target Drilling Depth (feet)	Well Type	Estimated Screened Depth (feet)	Well Purpose/Function					EPD Comment
					Horizontal Delineation to Background	Vertical Delineation to Background	Delineate DNAPL	Post-Remediation Performance Monitoring	Replacement Well	
Initial Phase										
AMW-11[1]	Alluvial Aquifer	18	Type II	8 to 18	X					Addresses EPD Comment 1 in the 01/17/12 letter to include groundwater horizontal delineation activities to the west/southwest of alluvial well AMW-1.
AMW-12	Alluvial Aquifer	18	Type II	8 to 18	X					Addresses groundwater horizontal delineation to background to the west/southwest of alluvial well AMW-6.
AMW-13[1] (Background)	Alluvial Aquifer	18	Type II	8 to 18	X					Addresses groundwater horizontal delineation to background to the northwest of alluvial well AMW-1, AMW-2 and MW-205.
MW-12DRR	Bedrock Water bearing Fractures	49	Type III	42 to 49			X	X	X	Addresses EPD Comment 8g in the 01/17/12 letter to include recommendations for future use of MW-12DR (which had not had groundwater recharge for >1yr.) as it factors into the proposed modifications to the groundwater corrective action for this area.
MW-23DR	Bedrock Water bearing Fractures	36	Type III or Open Corehole	23 to 36					X	MW-23DR will not be installed. ERM has located MW-23D and validated the well integrity.
MW-205DD	Deep Bedrock Water-bearing Fractures	100	Type III or Open Corehole	90 to 100		X				Addresses EPD Comment 1 in the 01/17/12 letter to include groundwater vertical delineation activities in the area of bedrock well MW-205D.
MW-302DD	Deep Bedrock Water-bearing Fractures	100	Type III or Open Corehole	90 to 100		X				Addresses EPD Comment 1 in the 01/17/12 letter to include groundwater vertical delineation activities in the area of bedrock well MW-302D.
Secondary Phase (Tentative Well Locations)										
MW-304D	Bedrock Water bearing Fractures	70	Type III or Open Corehole	50 to 70			X	X		Addresses EPD Comment 6 in the 01/17/12 letter to characterize and delineate the extent of the DNAPL plume. MW-304D will replace MW-301D expected to be destroyed during remediation.
MW-305D	Bedrock Water bearing Fractures	70	Type III or Open Corehole	50 to 70			X			Addresses EPD Comment 6 in the 01/17/12 letter to characterize and delineate the extent of the DNAPL plume.
MW-306D	Bedrock Water bearing Fractures	60	Type III or Open Corehole	40 to 60	X		X			Bedrock delineation well located on the City Park right-of-way southeast of the ISS area, which fills in data gap between MW-24D and MW-112D. Addresses EPD Comment 6 in the 01/17/12 letter to characterize and delineate the extent of the DNAPL plume.
MW-307D	Bedrock Water bearing Fractures	50	Type III or Open Corehole	30 to 50			X			Addresses EPD Comment 6 in the 01/17/12 letter to characterize and delineate the extent of the DNAPL plume.
MW-308D	Bedrock Water bearing Fractures	50	Type III or Open Corehole	30 to 50	X					Bedrock delineation well located on the City right-of-way east of the ISS area and hydraulically downgradient of MW-310D along a secondary-fracture orientation.
MW-309D[2] (Background)	Bedrock Water bearing Fractures	70	Type III or Open Corehole	50 to 70	X					Bedrock delineation well located on the north side of the railroad upgradient of ISS mass to be installed in the Western portion of the Site.
Post Remediation										
MW-310D	Bedrock Water bearing Fractures	70	Type III or Open Corehole	50 to 70				X		Bedrock well to be installed as part of a nested pair downgradient of the ISS mass to be installed in the Western Portion of the Site and upgradient of the ISS mass on the Eastern portion. Will replace MW-09D.
MW-310DD[3]	Deep Bedrock Water-bearing Fractures	100	Type III or Open Corehole	90 to 100		X				Addresses EPD Comment 1 in the 01/17/12 letter to include groundwater vertical delineation activities in the area of bedrock well MW-303D.
MW-07D[4] (Tentative)	Bedrock Water bearing Fractures	70	Type III or Open Corehole	50 to 70	X					Bedrock delineation well located near intersection of 7th St. and Mulberry Ave. as part of a nested pair with MW-07.

Notes:

[1]AMW-11 and AMW-13 (along with MW-25) will serve as hydraulically upgradient alluvial background wells

[2]MW-309D (along with MW-25D) will serve as hydraulically upgradient bedrock background wells

[3]EPD requested vertical delineation in the area of MW-303D; however, the location is within the ISS footprint. MW-310DD will provide vertical delineation in the Western portion of the Site immediately downgradient of the ISS mass.

[4]Installation of MW-07D dependent on sample results from MW-304D. If MW-304D concentration results are below Type 4 RRS, MW-07D will not be installed.

Type II = Single cased monitor well.

Type III = Double cased monitor well.

Optimization of Groundwater Monitoring Network
Atlanta Gas Light Company
Former Manufactured Gas Plant Site
Macon, Georgia

Monitoring Well I.D.	Hydrogeologic Unit	Screened Interval ft bgs	Existing Program	Proposed Program	Rationale
AMW-1	Alluvium	9.7 - 19.7	Semi-annual Sampling	Semi-annual Sampling	Establishes Background to WSW
AMW-2	Alluvium	4.6 - 14.6	Semi-annual Sampling	Semi-annual Sampling	Establishes Background to North
AMW-3	Alluvium	5.7 - 15.7	Semi-annual Sampling	Abandon	Well is within planned remediation footprint.
AMW-4	Alluvium	11.3 - 21.3	Semi-annual Sampling	Abandon	Well is within planned remediation footprint.
AMW-5	Alluvium	12.7 - 22.7	Semi-annual Sampling	Abandon	Well is within planned remediation footprint.
AMW-6	Alluvium	11 - 21	Semi-annual Sampling	Semi-annual Sampling	Establishes Background to S and SW
AMW-7	Alluvium	8.1 - 18.1	Semi-annual Sampling	Abandon	Well is within planned remediation footprint.
AMW-8	Alluvium	8.2 - 18.2	Semi-annual Sampling	Abandon	Well is within planned remediation footprint.
AMW-9	Alluvium	8.4 - 18.4	Semi-annual Sampling	Semi-annual Sampling	RRS compliance to N and NNE
AMW-10	Alluvium	18.4 - 28.4	Semi-annual Sampling	Abandon	Well is within planned remediation footprint.
AMW-11	Alluvium	5 - 15	New Well	Semi-annual Sampling	Establishes Background to WSW of remediation footprint
AMW-12	Alluvium	10 - 20	New Well	Semi-annual Sampling	Establishes Background to SSW of remediation footprint
AMW-13	Alluvium	10 - 20	New Well	Semi-annual Sampling	Establishes Background to West of remediation footprint
MW-07	Alluvium	5 - 15.5	Gauge Only	Semi-annual Sampling	RRS compliance to south of MW-101
MW-08	Alluvium	9 - 19	Gauge Only	Semi-annual Sampling	RRS compliance to SW of MW-101 and ESE of remediation footprint
MW-09	Alluvium	8 - 13	Semi-annual Sampling	Abandon	Well is within planned remediation footprint.
MW-10	Alluvium	7.5 - 17.5	Gauge Only	Gauge Only	Other wells define background in this direction
MW-11	Alluvium	5 - 12	Annual Sampling	Annual Sampling	Establishes background North of ISS mass and NE of Western Portion
MW-12R	Alluvium	4.5 - 14.5	Annual Sampling	Annual Sampling	Establishes background NW of ADGISSM
MW-14	Alluvium	3 - 15	Annual Sampling	Annual Sampling	Establishes background to East
MW-15	Alluvium	3 - 14.5	Annual Sampling	Annual Sampling	Establishes background to SE of MW-101
MW-21	Alluvium	3 -10	Gauge Only	Abandon	Other wells (MW-14) define background in this direction
MW-23	Alluvium	5 - 20	Annual Sampling	Gauge Only	Other wells (MW-104) define background in this direction
MW-25	Alluvium	10 -25	Annual Sampling	Annual Sampling	Establishes Background to North of remediation footprint
MW-26	Alluvium	5 - 20	Gauge Only	Abandon	Other wells define background in this direction
MW-28	Alluvium	2 - 17	Gauge Only	Abandon	Other wells define background in this direction
MW-101	Alluvium	5 - 15	Semi-annual Sampling	Abandon	Well is within planned remediation footprint.
MW-102	Alluvium	5 - 10	Semi-annual Sampling	Annual Sampling	Establishes background to East of MW-101
MW-103	Alluvium	10 - 20	Annual Sampling	Annual Sampling	Establishes background to NE of remediation footprint
MW-104	Alluvium	5 - 20	Annual Sampling	Gauge Only	No shallow impacts in this area of the site
MW-105	Alluvium	15 - 25	Gauge Only	Gauge Only	No shallow impacts in this area of the site
MW-106	Alluvium	9 - 19	Gauge Only	Gauge Only	Other wells (MW-11) define background in this direction
MW-107	Alluvium	8 - 18	Gauge Only	Gauge Only	Other wells (MW-11) define background in this direction
MW-108	Alluvium	10 - 20	Annual Sampling	Annual Sampling	Monitor COI concentrations south of planned remediation footprint
MW-109	Alluvium	13.5 - 23.5	Annual Sampling	Semi-annual Sampling	Monitor COI concentrations south of planned remediation footprint
MW-201	Alluvium	10 - 20	Semi-annual Sampling	Abandon	Well is within planned remediation footprint.
MW-202	Alluvium	10 - 20	Gauge Only	Abandon	Well is within planned remediation footprint.
MW-203	Alluvium	10 - 20	Semi-annual Sampling	Well Destroyed	Well Destroyed and was located within planned remediation footprint
MW-204	Alluvium	13 - 23	Semi-annual Sampling	Annual Sampling	Establishes background to NNE of remediation footprint
MW-205	Alluvium	14 - 29	Semi-annual Sampling	Semi-annual Sampling	RRS compliance to NW - replace if destroyed during remedy
MW-206	Alluvium	16 - 31	Gauge Only	Gauge Only	Other wells (AMW-9 and MW-204) define background in this direction
MW-207	Alluvium	15 - 30	Gauge Only	Abandon	Well is within planned remediation footprint.
MW-12IR	Intermediate	11 - 21	Semi-annual Sampling	Annual Sampling	Establishes Background in Intermediate Zone
MW-14I	Intermediate	19 - 24	Annual Sampling	Annual Sampling	Establishes background to East in intermediate zone
MW-104I	Intermediate	15 - 20	Annual Sampling	Gauge Only	No shallow impacts in this area of the site
MW-08D*	Bedrock	38 - 53	Gauge Only	Annual Sampling	Establishes background SSW of MW-301D.
MW-09D*	Bedrock	46.5 - 56.5	Semi-annual Sampling	Abandon	Well is within planned remediation footprint.
MW-12DRR	Bedrock	42 - 52	New Well	Semi-annual Sampling	Monitor COI concentration trends for pilot test effectiveness
MW-22D*	Bedrock	44 - 66	Gauge Only	Gauge Only	No historical exceedances of background
MW-23D*	Bedrock	23 - 35.8	Recently Located	Semi-annual Sampling	Establishes Background to NNE of ADGISSM
MW-24D*	Bedrock	30.5 - 40.5	Annual Sampling	Annual Sampling	Establishes Background to SSE of ADGISSM and East of MW-302D
MW-25D*	Bedrock	50 - 57.5	Semi-annual Sampling	Gauge Only	No historical exceedances of background
MW-26D*	Bedrock	31 - 42	Gauge Only	Gauge Only	Other wells define background in this direction
MW-27D*	Bedrock	43.5 - 48.5	Gauge Only	Gauge Only	Other wells define background in this direction
MW-108D*	Bedrock	48.5 - 58.5	Annual Sampling	Annual Sampling	Establishes Background in Bedrock south of remediation footprint and ESE of MW-303D
MW-110D*	Bedrock	28 - 33	Semi-annual Sampling	Semi-annual Sampling	Monitor COI concentration trends for pilot test effectiveness
MW-111D*	Bedrock	32.8 - 46.5	Semi-annual Sampling	Semi-annual Sampling	Monitor DNAPL and COI concentration trends for pilot test effectiveness
MW-112D*	Bedrock	25.7 - 35.2	Semi-annual Sampling	Annual Sampling	Establishes background to east of ADGISSM
MW-113D*	Bedrock	29.5 - 39.5	Semi-annual Sampling	Annual Sampling	Establishes Background to ENE of ADGISSM
MW-114D*	Bedrock	45 - 55.3	Gauge Only	Gauge Only	Other wells define background in this direction
MW-115D*	Bedrock	45.5 - 55.5	Semi-annual Sampling	Abandon	Well is within planned remediation footprint.
MW-200DR*	Bedrock	27.5 - 41.5	Semi-annual Sampling	Semi-annual Sampling	Monitor COI concentration trends for pilot test effectiveness
MW-204D*	Bedrock	30.5 - 47.5	Gauge Only	Gauge Only	Other wells will evaluate pilot test effectiveness in this area
MW-205D*	Bedrock	28 - 43	Semi-annual Sampling	Semi-annual Sampling	Monitor COI concentration trends for pilot test effectiveness
MW-206D*	Bedrock	30.95 - 45.95	Semi-annual Sampling	Semi-annual Sampling	RRS compliance to east of ADGISSM
MW-207D*	Bedrock	31.6 - 46.6	Semi-annual Sampling	Annual Sampling	RRS compliance to NW of MW-110D
MW-300D	Bedrock	33 - 42.5	New Well	Annual Sampling	Establishes background to NW of main bedrock plume
MW-301D	Bedrock	36-46	New Well	Semi-annual Sampling	Monitor COI concentrations in Bedrock near MW-101
MW-302D	Bedrock	35-45	New Well	Semi-annual Sampling	Monitor COI concentrations in Bedrock east of MW-101
MW-303D	Bedrock	54-64	New Well	Semi-annual Sampling	Monitor COI concentrations in Bedrock until well is destroyed during remedy
MW-304D	Bedrock	TBD	Proposed Well	Semi-annual Sampling	Future inclusion tbd based upon laboratory analytical results
MW-305D	Bedrock	TBD	Proposed Well	Semi-annual Sampling	Future inclusion tbd based upon laboratory analytical results
MW-306D	Bedrock	TBD	Proposed Well	Semi-annual Sampling	Future inclusion tbd based upon laboratory analytical results
MW-307D	Bedrock	TBD	Proposed Well	Semi-annual Sampling	Future inclusion tbd based upon laboratory analytical results
MW-308D	Bedrock	TBD	Proposed Well	Semi-annual Sampling	Future inclusion tbd based upon laboratory analytical results
MW-309D	Bedrock	TBD	Proposed Well	Semi-annual Sampling	Future inclusion tbd based upon laboratory analytical results
MW-12DD	Deep Bedrock	92.5 - 97.5	Semi-annual Sampling	Semi-annual Sampling	Vertical delineation of deep bedrock/monitor pilot test effectiveness
MW-27DD*	Deep Bedrock	105 - 115	Gauge Only	Gauge Only	No impacts in bedrock in this area based on historical results of MW-27D and MW-27DD
MW-205DD	Deep Bedrock	90-100	New Well	Semi-annual Sampling	Vertical delineation of deep bedrock near MW-205
MW-302DD	Deep Bedrock	70-100	New Well	Semi-annual Sampling	Vertical RRS compliance near MW-302D

Existing Program	**Proposed Program (includes 10 new wells)**
20 semi-annual	24 semi-annual (existing wells)
24 annual	18-annual
	6 - Second Phase Wells are proposed for Semiannual Sampling for 1 year following installation

Re: 2013 Groundwater Monitoring Report
Former Macon MGP Site, HSI # 10511
Macon, Bibb County, Georgia

Dear Mr. Corbett:

The Georgia Environmental Protection Division (EPD) has received Atlanta Gas Light Company's (AGLC) August 13, 2013, "Proposed Corrective Action Plan Schedule Modifications" correspondence, and the April 30, 2013, Semi-Annual Groundwater Monitoring Report, prepared by ERM, on behalf of AGLC for the above referenced site. After completing a review of the above referenced documents, EPD has prepared the following comments:

- According to the August 2013 correspondence (Table 3), a number of wells have been proposed for abandonment as part of the revisions to the site related OM&M Plan. EPD does not have any objections to the recommended modifications to the groundwater monitoring schedule at this time. However, EPD does not concur with the recommendation to abandon any monitoring wells until we have had the opportunity to review the revised Corrective Action Plan(s) (CAP) and Basis of Design Work Plan.

EPD concurs with the proposed CAP Schedule Modifications, and will defer further soil and groundwater compliance comments for the site until the receipt of the above referenced CAP documents and the Basis of Design Work Plan, which are scheduled to be submitted by no later than February 18, 2014, for the Soil, Source Material, and Alluvium Groundwater CAP, and October 14, 2014 for the Bedrock Groundwater CAP. In accordance with Conditions 7-10 of Consent Order EPD-HSR-227, EPD hereby incorporates the above referenced compliance schedule and associated submittal dates as part of the Order. Please note that the above referenced April 2013 Report will be placed in the HSI #10511 facility file for public review. If you have any questions, please contact Mr. Kevin Collins at (404) 463-0530.

Sincerely,

David Brownlee
Unit Coordinator
Response and Remediation Program

(1) - Do not measure depth to bottom of well until after purging and sampling to reduce resuspending fines that may be resting on the well bottom.
(2) - Purge rate to be 0.5 lpm or less.
(3) - Sampling rate to be 0.25 lpm or less.
(4) - Field parameter measurements to be recorded every 3 to 5 minutes.
(5) - Stabilization criteria based on three most recent consecutive measurements.
(6) - Monitor DTW every 5 min. Well drawdown to be 0.3 ft or less. Purge/sampling rate to be lowered as necessary to keep drawdown below 0.3 ft.
(7) - DO is not a stabilization criterion for the "Groundwater sampling" SESD Standard Operating Procedure.
(8) - ORP is not a stabilization criterion for the "Groundwater sampling" SESD Standard Operating Procedure.

Stabilizing Criteria[3]	+/- 1°C	+/- 3%	+/- 10% (see note below)[7]	+/- 0.1 unit	+/- 10 mV (see note below)[8]	+/- 10% or <10 NTUs	(see note below)[4]	(see note below)[5]	

(1) - Do not measure depth to bottom of well until after purging and sampling to reduce resuspending fines that may be resting on the well bottom.
(2) - Purge rate to be 0.5 lpm or less.
(3) - Sampling rate to be 0.25 lpm or less.
(4) - Field parameter measurements to be recorded every 3 to 5 minutes.
(5) - Stabilization criteria based on three most recent consecutive measurements.
(6) - Monitor DTW every 5 min. Well drawdown to be 0.3 ft or less. Purge/sampling rate to be lowered as necessary to keep drawdown below 0.3 ft.
(7) - DO is not a stabilization criterion for the "Groundwater sampling" SESD Standard Operating Procedure.
(8) - ORP is not a stabilization criterion for the "Groundwater sampling" SESD Standard Operating Procedure.

RE: AGL Macon

Dear Adria Reimer: Order No: 1604558

Analytical Environmental Services, Inc. received 18 samples on April 7, 2016 1:45 pm for the analyses presented in following report.

No problems were encountered during the analyses. Additionally, all results for the associated Quality Control samples were within EPA and/or AES established limits. Any discrepancies associated with the analyses contained herein will be noted and submitted in the form of a project Case Narrative.
AES's accreditations are as follows:
-NELAC/Florida State Laboratory ID E87582 for analysis of Non-Potable Water, Solid & Chemical Materials, and Drinking Water Microbiology, effective 07/01/15-06/30/16.
-NELAC/Louisiana Agency Interest No. 100818 for or analysis of Non-Potable Water and Solid & Chemical Materials, effective 07/01/15-06/30/16.
-NELAC/Texas Certificate No. T104704509-16-6 for or analysis of Non-Potable Water and Solid & Chemical Materials, effective 03/01/16-02/28/17.
-AIHA-LAP, LLC Laboratory ID: 100671 for Industrial Hygiene samples (Organics, Inorganics), Environmental Lead (Paint, Soil, Dust Wipes, Air), and Environmental Microbiology (Fungal) Direct Examination, effective until 09/01/17.

Case Narrative

Semi-Volatile organics Analysis by Method 8270D:

Percent recovery for the surrogate spiking compound 2-Fluorobiphenyl on QC sample LCS-222389 was outside control limits biased high. All other surrogate recoveries were within control limits.

Sample/Cooler Receipt Checklist

Client ECM-SE Work Order Number 1604558

Checklist completed by Manan Kumar 4/7/2016
Signature Date

Carrier name: FedEx __ UPS __ Courier ✓ Client __ US Mail __ Other _____

Shipping container/cooler in good condition? Yes ✓ No __ Not Present __

Custody seals intact on shipping container/cooler? Yes __ No __ Not Present ✓

Custody seals intact on sample bottles? Yes __ No __ Not Present ✓

Container/Temp Blank temperature in compliance? (0°≤6°C)* Yes ✓ No __

Cooler #1 1.9° Cooler #2 2.3° Cooler #3 3.1° Cooler #4 4.2° Cooler#5 3.9° Cooler #6 _____

Chain of custody present? Yes ✓ No __

Chain of custody signed when relinquished and received? Yes ✓ No __

Chain of custody agrees with sample labels? Yes ✓ No __

Samples in proper container/bottle? Yes ✓ No __

Sample containers intact? Yes ✓ No __

Sufficient sample volume for indicated test? Yes ✓ No __

All samples received within holding time? Yes ✓ No __

Was TAT marked on the COC? Yes ✓ No __

Proceed with Standard TAT as per project history? Yes __ No __ Not Applicable ✓

Water - VOA vials have zero headspace? No VOA vials submitted __ Yes ✓ No __

Water - pH acceptable upon receipt? Yes ✓ MS 4/7/16 No ✓ Not Applicable __

Adjusted? MS Checked by, MP

Sample Condition: Good ✓ Other(Explain) _____

(For diffusive samples or AIHA lead) Is a known blank included? Yes __ No ✓

See Case Narrative for resolution of the Non-Conformance.

* Samples do not have to comply with the given range for certain parameters.

RE: AGL - Macon

Dear Adria Reimer: Order No: 1604559

Analytical Environmental Services, Inc. received 17 samples on April 7, 2016 1:45 pm for the analyses presented in following report.

No problems were encountered during the analyses. Additionally, all results for the associated Quality Control samples were within EPA and/or AES established limits. Any discrepancies associated with the analyses contained herein will be noted and submitted in the form of a project Case Narrative.
AES's accreditations are as follows:
-NELAC/Florida State Laboratory ID E87582 for analysis of Non-Potable Water, Solid & Chemical Materials, and Drinking Water Microbiology, effective 07/01/15-06/30/16.
-NELAC/Louisiana Agency Interest No. 100818 for or analysis of Non-Potable Water and Solid & Chemical Materials, effective 07/01/15-06/30/16.
-NELAC/Texas Certificate No. T104704509-16-6 for or analysis of Non-Potable Water and Solid & Chemical Materials, effective 03/01/16-02/28/17.
-AIHA-LAP, LLC Laboratory ID: 100671 for Industrial Hygiene samples (Organics, Inorganics), Environmental Lead (Paint, Soil, Dust Wipes, Air), and Environmental Microbiology (Fungal) Direct Examination, effective until 09/01/17.

PROJECT INFORMATION

PROJECT NAME: AGL - Macon

PROJECT #:

SITE ADDRESS: AGL - Macon -

SEND REPORT TO: Adria Reiner

INVOICE TO: (IF DIFFERENT FROM ABOVE) Same as Report

QUOTE #: PO#:

RECEIPT

Total # of Containers:

Turnaround Time Request
- (●) Standard 5 Business Days
- ( ) 2 Business Day Rush
- ( ) Next Business Day Rush
- ( ) Same Day Rush (auth req.)
- ( ) Other

STATE PROGRAM (if any):

E-mail? Y / N; Fax? Y / N

DATA PACKAGE: I II III IV

SPECIAL INSTRUCTIONS/COMMENTS:
EPA - 8260B
EPA - 8270C
EPA - 6010B / EPA - 7470A
EPA - 9012A

SHIPMENT METHOD

OUT / / VIA:

IN / / VIA:

CLIENT FedEx UPS MAIL COURIER

GREYHOUND OTHER

SAMPLES RECEIVED AFTER 3PM OR ON SATURDAY ARE CONSIDERED RECEIVED THE NEXT BUSINESS DAY. IF TURNAROUND TIME IS NOT INDICATED, AES WILL PROCEED WITH STANDARD TAT OF SAMPLES.
SAMPLES ARE DISPOSED 30 DAYS AFTER REPORT COMPLETION UNLESS OTHER ARRANGEMENTS ARE MADE.

MATRIX CODES: A = Air GW = Groundwater SE = Sediment SO = Soil SW = Surface Water W = Water (Blanks) DW = Drinking Water (Blanks) O = Other (specify) WW = Waste Water

PRESERVATIVE CODES: H+I = Hydrochloric acid + ice I = Ice only N = Nitric acid S+I = Sulfuric acid + ice S/M+I = Sodium Bisulfate/Methanol + ice O = Other (specify) NA = None

White Copy - Original; Yellow Copy - Client

Client: ERM-Southeast
Project: AGL - Macon
Lab ID: 1604559

Case Narrative

Sample Receiving Nonconformance:

One of the two vials for sample 1604559-003A was received with headspace present as signified by >1/4 inch bubble present. The lab proceeded with analysis using the vial without headspace.

Semi-Volatile organics Analysis by Method 8270D:

Percent recovery for the surrogate spiking compound 2-Fluorobiphenyl on QC sample LCS-222389 was outside control limits biased high. All other surrogate recoveries were within control limits.

Sample/Cooler Receipt Checklist

Client EPM-Fe Work Order Number 1604559

Checklist completed by Mwami Rawat 4/7/2016
Signature Date

Carrier name: FedEx __ UPS __ Courier ✓ Client __ US Mail __ Other _____

Shipping container/cooler in good condition? Yes ✓ No __ Not Present __

Custody seals intact on shipping container/cooler? Yes __ No __ Not Present ✓

Custody seals intact on sample bottles? Yes __ No __ Not Present ✓

Container/Temp Blank temperature in compliance? (0°≤6°C)* Yes ✓ No __

Cooler #1 1.9° Cooler #2 2.3° Cooler #3 3.1° Cooler #4 4.2° Cooler#5 _____ Cooler #6 _____

Chain of custody present? Yes ✓ No __

Chain of custody signed when relinquished and received? Yes ✓ No __

Chain of custody agrees with sample labels? Yes ✓ No __

Samples in proper container/bottle? Yes ✓ No __

Sample containers intact? Yes ✓ No __

Sufficient sample volume for indicated test? Yes ✓ No __

All samples received within holding time? Yes ✓ No __

Was TAT marked on the COC? Yes ✓ No __

Proceed with Standard TAT as per project history? Yes __ No __ Not Applicable ✓

Water - VOA vials have zero headspace? No VOA vials submitted __ Yes __ No ✓ (MM 4/7/16)

Water - pH acceptable upon receipt? Yes ✓ No __ Not Applicable __

Adjusted? _____ Checked by MP

Sample Condition: Good ✓ Other(Explain) _____

(For diffusive samples or AIHA lead) Is a known blank included? Yes __ No ✓

See Case Narrative for resolution of the Non-Conformance.

* Samples do not have to comply with the given range for certain parameters.

RE: AGL - Macon

Dear Adria Reimer: Order No: 1604771

Analytical Environmental Services, Inc. received 13 samples on 4/8/2016 11:10:00 AM for the analyses presented in following report.

No problems were encountered during the analyses. Additionally, all results for the associated Quality Control samples were within EPA and/or AES established limits. Any discrepancies associated with the analyses contained herein will be noted and submitted in the form of a project Case Narrative.
AES's accreditations are as follows:
-NELAC/Florida State Laboratory ID E87582 for analysis of Non-Potable Water, Solid & Chemical Materials, and Drinking Water Microbiology, effective 07/01/15-06/30/16.
-NELAC/Louisiana Agency Interest No. 100818 for or analysis of Non-Potable Water and Solid & Chemical Materials, effective 07/01/15-06/30/16.
-NELAC/Texas Certificate No. T104704509-16-6 for or analysis of Non-Potable Water and Solid & Chemical Materials, effective 03/01/16-02/28/17.
-AIHA-LAP, LLC Laboratory ID: 100671 for Industrial Hygiene samples (Organics, Inorganics), Environmental Lead (Paint, Soil, Dust Wipes, Air), and Environmental Microbiology (Fungal) Direct Examination, effective until 09/01/17.

Case Narrative

Volatiles Organic Compounds Analysis by Method 8260B:

Due to sample matrix, sample 1604771-003A required dilution during preparation and/or analysis resulting in elevated reporting limits.

Semivolatile Organic Compounds Analysis by Method 8270D:

Report revised on 4/28/2016 to include Naphthalene. Naphthalene results for samples 1604771-001A,002A,003A,004A,005A,006A,007A,008A,009A & 010A are "E" qualified indicating an estimated value over linear calibration range and/or estimated due to the calibration verification exceeding method requirements. Naphthalene results provided for supoprting information purposes as per client's instructions.

Sample/Cooler Receipt Checklist

Client ERM Work Order Number 1604771

Checklist completed by Christ Jost 4-8-16
Signature Date

Carrier name: FedEx __ UPS __ Courier ✓ Client __ US Mail __ Other _____

Shipping container/cooler in good condition? Yes ✓ No __ Not Present __

Custody seals intact on shipping container/cooler? Yes __ No __ Not Present ✓

Custody seals intact on sample bottles? Yes __ No __ Not Present ✓

Container/Temp Blank temperature in compliance? (0°≤6°C)* Yes ✓ No __

Cooler #1 2.7°C Cooler #2 2.4°C Cooler #3 3.2°C Cooler #4 _____ Cooler#5 _____ Cooler #6 _____

Chain of custody present? Yes ✓ No __

Chain of custody signed when relinquished and received? Yes ✓ No __

Chain of custody agrees with sample labels? Yes ✓ No __

Samples in proper container/bottle? Yes ✓ No __

Sample containers intact? Yes ✓ No __

Sufficient sample volume for indicated test? Yes ✓ No __

All samples received within holding time? Yes ✓ No __

Was TAT marked on the COC? Yes ✓ No __

Proceed with Standard TAT as per project history? Yes __ No __ Not Applicable ✓

Water - VOA vials have zero headspace? No VOA vials submitted __ Yes ✓ No __

Water - pH acceptable upon receipt? Yes __ No ✓ Not Applicable __

Adjusted? CJ Checked by CJ

Sample Condition: Good ✓ Other(Explain) _____

(For diffusive samples or AIHA lead) Is a known blank included? Yes __ No ✓

See Case Narrative for resolution of the Non-Conformance.

* Samples do not have to comply with the given range for certain parameters.

RE: AGL-Macon

Dear Adria Reimer: Order No: 1604772

Analytical Environmental Services, Inc. received 5 samples on April 8, 2016 11:10 am for the analyses presented in following report.

No problems were encountered during the analyses. Additionally, all results for the associated Quality Control samples were within EPA and/or AES established limits. Any discrepancies associated with the analyses contained herein will be noted and submitted in the form of a project Case Narrative.
AES's accreditations are as follows:
-NELAC/Florida State Laboratory ID E87582 for analysis of Non-Potable Water, Solid & Chemical Materials, and Drinking Water Microbiology, effective 07/01/15-06/30/16.
-NELAC/Louisiana Agency Interest No. 100818 for or analysis of Non-Potable Water and Solid & Chemical Materials, effective 07/01/15-06/30/16.
-NELAC/Texas Certificate No. T104704509-16-6 for or analysis of Non-Potable Water and Solid & Chemical Materials, effective 03/01/16-02/28/17.
-AIHA-LAP, LLC Laboratory ID: 100671 for Industrial Hygiene samples (Organics, Inorganics), Environmental Lead (Paint, Soil, Dust Wipes, Air), and Environmental Microbiology (Fungal) Direct Examination, effective until 09/01/17.

Sample/Cooler Receipt Checklist

Client ERM Work Order Number 1604772

Checklist completed by Christ Ghat 4-8-16
Signature Date

Carrier name: FedEx __ UPS __ Courier ✓ Client __ US Mail __ Other _____

Shipping container/cooler in good condition? Yes ✓ No __ Not Present __

Custody seals intact on shipping container/cooler? Yes __ No __ Not Present ✓

Custody seals intact on sample bottles? Yes __ No __ Not Present ✓

Container/Temp Blank temperature in compliance? (0°≤6°C)* Yes ✓ No __

Cooler #1 2.1°C Cooler #2 _____ Cooler #3 _____ Cooler #4 _____ Cooler#5 _____ Cooler #6 _____

Chain of custody present? Yes ✓ No __

Chain of custody signed when relinquished and received? Yes ✓ No __

Chain of custody agrees with sample labels? Yes ✓ No __

Samples in proper container/bottle? Yes ✓ No __

Sample containers intact? Yes ✓ No __

Sufficient sample volume for indicated test? Yes ✓ No __

All samples received within holding time? Yes ✓ No __

Was TAT marked on the COC? Yes ✓ No __

Proceed with Standard TAT as per project history? Yes __ No __ Not Applicable ✓

Water - VOA vials have zero headspace? No VOA vials submitted __ Yes ✓ No __

Water - pH acceptable upon receipt? Yes ✓ No __ Not Applicable __

Adjusted? _____ Checked by CJ

Sample Condition: Good ✓ Other(Explain) _____

(For diffusive samples or AIHA lead) Is a known blank included? Yes __ No ✓

See Case Narrative for resolution of the Non-Conformance.

* Samples do not have to comply with the given range for certain parameters.

Client: ERM-Southeast
Project Name: AGL-Macon
Workorder: 1604772

RE: AGL Macon

Dear Adria Reimer: Order No: 1604944

Analytical Environmental Services, Inc. received 4 samples on 4/12/2016 10:15:00 AM for the analyses presented in following report.

No problems were encountered during the analyses. Additionally, all results for the associated Quality Control samples were within EPA and/or AES established limits. Any discrepancies associated with the analyses contained herein will be noted and submitted in the form of a project Case Narrative.
AES's accreditations are as follows:
-NELAC/Florida State Laboratory ID E87582 for analysis of Non-Potable Water, Solid & Chemical Materials, and Drinking Water Microbiology, effective 07/01/15-06/30/16.
-NELAC/Louisiana Agency Interest No. 100818 for or analysis of Non-Potable Water and Solid & Chemical Materials, effective 07/01/15-06/30/16.
-NELAC/Texas Certificate No. T104704509-16-6 for or analysis of Non-Potable Water and Solid & Chemical Materials, effective 03/01/16-02/28/17.
-AIHA-LAP, LLC Laboratory ID: 100671 for Industrial Hygiene samples (Organics, Inorganics), Environmental Lead (Paint, Soil, Dust Wipes, Air), and Environmental Microbiology (Fungal) Direct Examination, effective until 09/01/17.

Case Narrative

Sample Receiving Nonconformance:

For sample "MW-26D-20160411-01" for SVOCs analysis, one of the two 1-Liter amber glass bottles was received broken, and no sample remained for analysis. The second of the two amber glass bottles was received with a broken lid, and only approximately 1/4Liter remained in the bottle. Per Adria Reimer via email 4/13/2016 11:25am, SVOCs analysis was not performed for sample "MW-26D-20160411-01" and Naphthalene was reported via method 8260 for Volatile Organic Compounds analysis.

Volatile Organic Compounds Analysis by Method 8260B:

Due to sample matrix, sample 1604944-002A required dilution during preparation and/or analysis resulting in elevated reporting limits.

Sample/Cooler Receipt Checklist

Client EEM-DE Work Order Number 1604944

Checklist completed by [signature] 4/12/2016
Signature Date

Carrier name: FedEx ✓ UPS __ Courier __ Client __ US Mail __ Other _____

Shipping container/cooler in good condition? Yes ✓ No __ Not Present __

Custody seals intact on shipping container/cooler? Yes __ No __ Not Present ✓

Custody seals intact on sample bottles? Yes __ No __ Not Present ✓

Container/Temp Blank temperature in compliance? (0°≤6°C)* Yes ✓ No __

Cooler #1 0.6 Cooler #2 _____ Cooler #3 _____ Cooler #4 _____ Cooler#5 _____ Cooler #6 _____

Chain of custody present? Yes ✓ No __

Chain of custody signed when relinquished and received? Yes ✓ No __

Chain of custody agrees with sample labels? Yes ✓ No __

Samples in proper container/bottle? Yes ✓ No __

Sample containers intact? Yes __ No ✓

Sufficient sample volume for indicated test? Yes __ No ✓

All samples received within holding time? Yes ✓ No __

Was TAT marked on the COC? Yes ✓ No __

Proceed with Standard TAT as per project history? Yes __ No __ Not Applicable ✓

Water - VOA vials have zero headspace? No VOA vials submitted __ Yes ✓ No __

Water - pH acceptable upon receipt? Yes ✓ No __ Not Applicable __

Sample Condition: Good ✓ Adjusted? 4+2+4p Checked by CJ

Other(Explain) one broken amber received, one amber with broken cap

(For diffusive samples or AIHA lead) Is a known blank included? Yes __ No ✓

See Case Narrative for resolution of the Non-Conformance.

* Samples do not have to comply with the given range for certain parameters.

ERM Analytical Data Validation Checklist

Project Name: AGLC/Macon	Laboratory: Analytical Environmental Services, Inc.
Project Reference: 0176740	Sample Matrix: Aqueous
ERM Project Phase Number: 13	Sample Start Date: 4/4/2016
Date Validated: 4/28/2016	Sample End Date: 4/8/2016

Sample Analyzed: Approximately ten percent (10%) of the samples collected were chosen for validation. The following samples within Order No: 1604599 & 1604772 were validated. For a full list of the samples collected, see the sample submittal summary above.

MW-15-20160406-01	DUP-01-20160406-01
MW-101-20160407-01	DUP-02-20160407-01

Parameters Analyzed: Volatile Organic Compounds (Benzene, Toluene, Ethylbenzene, Total Xylenes and carbon disulfide) by SW-846 Method 8260B, Low Level Semi-Volatile Organic Compounds and SIM Polynuclear Aromatic Hydrocarbons by SW-846 Method 8270D, Metals (Antimony, Arsenic, Barium, Beryllium, Cadmium, Chromium, Copper, Lead, Nickel and Zinc) by SW-846 Method 6010C, Mercury by SW-846 Method 7470A, and Cyanide by SW-846 Method 9014.

Laboratory Order No: 1604599, 1604771, 1604772

PRECISION, ACCURACY, METHOD CONFORMANCE, AND COMPLETENESS ASSESSMENT

Precision:	**X**	Acceptable	Unacceptable	WFV	Initials

Comments: Laboratory precision was evaluated using laboratory control samples (LCSs), laboratory duplicates, and matrix spike duplicates (MSDs). Evaluation of duplicates was done using the Relative Percent Difference (RPD). The RPD is defined as the difference between two duplicate sample results divided by the mean, and expressed as a percent. Overall, laboratory and field sampling precision were acceptable.

Accuracy:	**X**	Acceptable	Unacceptable	WFV	Initials

Comments: Accuracy is a measure of the system bias. Laboratory accuracy was evaluated using blanks, matrix spikes (MSs), LCSs, and surrogate recoveries. Overall, laboratory accuracy was acceptable.

Method Compliance:	**X**	Acceptable	Unacceptable	WFV	Initials

Comments: Method compliance was evaluated using holding times, internal standard recoveries, and surrogate recoveries. Overall method compliance was acceptable.

Completeness:	**X**	Acceptable	Unacceptable	WFV	Initials

Comments: Completeness is a percentage expression of the ratio of total acceptable data points to the total possible data points. No data points were rejected; all data are usable with some usable with qualification. For the sample data validated, no data points were rejected. The data set was 100% complete.

ERM Analytical Data Validation Checklist (Continued)

EVALUATION CRITERIA CHECK						
Data validation flags used in this review only include those used by the laboratory: BRL Below reporting limit **Only bolded comments required qualification.** The other comments are of interest, but qualification of the results was not necessary.						
1. Did the laboratory identify any nonconformances related to the analytical results?	**X**	Yes		No	WFV	Initials
Explanation: The laboratory identified the following nonconformance in the case narratives for the samples validated.						
Volatile Organic Compounds Analysis by Method 8260B: Due to sample matrix, sample 1604944-002A required dilution during preparation and/or analysis resulting in elevated reporting limits. Due to sample matrix, sample 1604771-003A required dilution during preparation and/or analysis resulting in elevated reporting limits.						
2. Were samples Chain-of Custody (COC) forms complete?	**X**	Yes		No	WFV	Initials
Comments: Chains-of-Custody were complete and correct;						
3. Were all the analyses requested for the samples on the COCs completed by the laboratory?	**X**	Yes		No	WFV	Initials
Comments: All analyses requested for the samples on the COCs were completed by the laboratory.						
4. Were samples received in good condition and at appropriate temperature?	**X**	Yes		No	WFV	Initials
Comments: Samples were received in good condition and at appropriate temperature.						
5. Were the requested analytical methods in compliance with WP/QAPP, permit, or COC?	**X**	Yes		No	WFV	Initials
Comments: Requested analytical methods were in compliance with COC forms. Additionally, the test results in the validated report meet all NELAP requirements for parameters for which accreditation is required or available.						
6. Were detection limits in accordance with WP/QAPP, permit, or method?	**X**	Yes		No	WFV	Initials
Comments: Results were reported down to the practical quantitation limits.						
7. Do the laboratory reports include only those constituents requested to be reported for a specific analytical method?	**X**	Yes		No	WFV	Initials
Comments: The laboratory reported the requested constituents.						
8. Were the sample holding times met?	**X**	Yes		No	WFV	Initials
Comments: All sample holding times were met.						
9. Were correct concentration units reported?	**X**	Yes		No	WFV	Initials
Comments: Organic results were reported in µg/L and inorganics in mg/L						
10. Were the reporting requirements for flagged data met?	**X**	Yes		No	WFV	Initials
Comments: No data was flagged during the April 2016 sampling event.						
11. Were laboratory blank samples free of target analyte contamination?	**X**	Yes		No	WFV	Initials
Comments: Target analytes were not detected in blanks.						

ERM Analytical Data Validation Checklist (Continued)

12. Were trip blank, field blank, and/or equipment rinse blank samples free of target analyte contamination?	**X**	Yes		No	WFV	Initials
Comments: Trip blanks were free of analytes.						
13. Were instrument calibrations within method control limits?	**X**	Yes		No	WFV	Initials
Comments: The initial calibrations were within control limits.						
14. Were surrogate recoveries within control limits?	**X**	Yes		No	WFV	Initials
Comments: Surrogate recoveries were within laboratory QC limits.						
15. Were laboratory control sample recoveries within control limits?	**X**	Yes		No	WFV	Initials
Comments: The LCS recoveries were within control limits.						
16. Were matrix spike recoveries within control limits?	**X**	Yes		No	WFV	Initials
Comments: All matrix spike recoveries were within control limits						
17. Were duplicate RPDs and/or serial dilution %Ds within control limits?	**X**	Yes		No	NGV	Initials
Comments: RPDs for MS/MSDs, laboratory duplicate samples and LCS/LCSDs met QC criteria for all target compounds/analytes for the samples validated.						
18. Were organic system performance criteria met?	**X**	Yes		No	NGV	Initials
Comments: All GC/MS internal standards were within method criteria for the samples validated.						
19. Were internal standards within method criteria for GS/MS sample analyses?	**X**	Yes		No	NGV	Initials
Comments: All GC/MS internal standards were within method criteria for the samples validated.						
20. Were inorganic system performance criteria met?	**X**	Yes		No	NGV	Initials
Comments: Inorganic system performance criteria were met for the samples validated.						
21. Were blind field duplicates collected? If so, discuss the precision (RPD) of the results.	**X**	Yes		No	WFV	Initials
Comments: The largest RPD vaule that was recorded between the parent samples and the field duplicates was 15%						
22. Were qualitative criteria for organic target analyte identification met?	**X**	Yes		No	WFV	Initials
Comments: All qualitative criteria for organic target analyte identification were met.						
23. Were 100% of the EDD concentrations and reporting limits compared to the hardcopy data reports?	**NA**	Yes	**NA**	No	WFV	Initials
Comments: The EDD is not routinely reviewed as part of the data validation process.

ERM Analytical Data Validation Checklist

Project Name: AGLC/Macon	Laboratory: Analytical Environmental Services, Inc.
Project Reference: 0176740	Sample Matrix: Aqueous
ERM Project Phase Number: 052	Sample Start Date: 4/5/2016
Date Validated: April 28, 2016	Sample End Date: 4/11/2016

Sample Analyzed: Approximately ten percent (10%) of the samples collected were chosen for validation. The following samples within Order No: 1502E13 & 1502F52 were validated. For a full list of the samples collected, see the sample submittal summary above.

MW-110D-20160407-01	DUP-01-20160407-01
MW-304D-20160406-01	DUP-01-20160406-01
MW-204D-20160407-01	DUP-03-20160407-01

Parameters Analyzed: Volatile Organic Compounds (Benzene, Toluene, Ethylbenzene, Total Xylenes and carbon disulfide) by SW-846 Method 8260B, Low Level Semi-Volatile Organic Compounds and SIM Polynuclear Aromatic Hydrocarbons by SW-846 Method 8270D, Metals (Antimony, Arsenic, Barium, Beryllium, Cadmium, Chromium, Copper, Lead, Nickel and Zinc) by SW-846 Method 6010C, Mercury by SW-846 Method 7470A, and Cyanide by SW-846 Method 9014.

Laboratory Order No: 1604558, 1604771, 1604772, 1604944

PRECISION, ACCURACY, METHOD CONFORMANCE, AND COMPLETENESS ASSESSMENT

Precision:	**X**	Acceptable		Unacceptable	WFV	Initials

Comments: Laboratory precision was evaluated using laboratory control samples (LCSs), laboratory duplicates, and matrix spike duplicates (MSDs). Field sampling precision was evaluated using field duplicates. Evaluation of duplicates was done using the Relative Percent Difference (RPD). The RPD is defined as the difference between two duplicate sample results divided by the mean, and expressed as a percent. Overall, laboratory and field sampling precision were acceptable.

Accuracy:	**X**	Acceptable		Unacceptable	WFV	Initials

Comments: Accuracy is a measure of the system bias. Laboratory accuracy was evaluated using blanks, matrix spikes (MSs), LCSs, and surrogate recoveries. Overall, laboratory accuracy was acceptable.

Method Compliance:	**X**	Acceptable		Unacceptable	WFV	Initials

Comments: Method compliance was evaluated using holding times, internal standard recoveries, and surrogate recoveries. Overall method compliance was acceptable.

Completeness:	**X**	Acceptable		Unacceptable	WFV	Initials

Comments: Completeness is a percentage expression of the ratio of total acceptable data points to the total possible data points. No data points were rejected; all data are usable with some usable with qualification. For the sample data validated, no data points were rejected. The data set was 100% complete.

EVALUATION CRITERIA CHECK

Data validation flags used in this review only include those used by the laboratory:

BRL	Below reporting limit

ERM Analytical Data Validation Checklist (Continued)

Only bolded comments required qualification. The other comments are of interest, but qualification of the results was not necessary.						
1. Did the laboratory identify any nonconformances related to the analytical results?	**X**	Yes		No	WFV	Initials
Explanation: The laboratory identified the following nonconformance in the case narratives for the samples validated.						
Semi-Volatile organics Analysis by Method 8270D: Percent recovery for the surrogate spiking compound 2-Fluorobiphenyl on QC sample LCS-222389 was outside control limits biased high. All other surrogate recoveries were within control limits.						
For sample "MW-26D-20160411-01" for SVOCs analysis, one of the two 1-Liter amber glass bottles was received broken, and no sample remained for analysis. The second of the two amber glass bottles was received with a broken lid, and only approximately 1/4Liter remained in the bottle. Per Adria Reimer via email 4/13/2016 11:25am, SVOCs analysis was not performed for sample "MW-26D-20160411-01" and Naphthalene was reported via method 8260 for Volatile Organic Compounds analysis.						
Volatile Organic Compounds Analysis by Method 8260B: Due to sample matrix, sample 1604771-003A required dilution during preparation and/or analysis resulting in elevated reporting limits. Due to sample matrix, sample 1604944-002A required dilution during preparation and/or analysis resulting in elevated reporting limits.						
2. Were samples Chain-of Custody (COC) forms complete?	**X**	Yes		No	WFV	Initials
Comments: Chains-of-Custody were complete and correct;						
3. Were all the analyses requested for the samples on the COCs completed by the laboratory?	**X**	Yes		No	WFV	Initials
Comments: All analyses requested for the samples on the COCs were completed by the laboratory.						
4. Were samples received in good condition and at appropriate temperature?	**X**	Yes		No	WFV	Initials
Comments: Samples were received in good condition and at appropriate temperature.						
5. Were the requested analytical methods in compliance with WP/QAPP, permit, or COC?	**X**	Yes		No	WFV	Initials
Comments: Requested analytical methods were in compliance with COC forms. Additionally, the test results in the validated report meet all NELAP requirements for parameters for which accreditation is required or available.						
6. Were detection limits in accordance with WP/QAPP, permit, or method?	**X**	Yes		No	WFV	Initials
Comments: Results were reported down to the practical quantitation limits.						
7. Do the laboratory reports include only those constituents requested to be reported for a specific analytical method?	**X**	Yes		No	WFV	Initials
Comments: The laboratory reported the requested constituents.						
8. Were the sample holding times met?	**X**	Yes		No	WFV	Initials
Comments: All sample holding times were met.						
9. Were correct concentration units reported?	**X**	Yes		No	WFV	Initials
Comments: Organic results were reported in µg/L and inorganics in mg/L						
10. Were the reporting requirements for flagged data met?	**X**	Yes		No	WFV	Initials
Comments: No data was flagged during the April 2016 sampling event.						
11. Were laboratory blank samples free of target analyte contamination?	**X**	Yes		No	WFV	Initials
Comments: Target analytes were not detected in blanks.						

ERM Analytical Data Validation Checklist (Continued)

12. Were trip blank, field blank, and/or equipment rinse blank samples free of target analyte contamination?	**X**	Yes		No	WFV	Initials
Comments: Trip blanks were free of analytes.						
13. Were instrument calibrations within method control limits?	**X**	Yes		No	WFV	Initials
Comments: The initial calibrations were within control limits.						
14. Were surrogate recoveries within control limits?	**X**	Yes		No	WFV	Initials
Comments: Surrogate recoveries were within laboratory QC limits.						
15. Were laboratory control sample recoveries within control limits?	**X**	Yes		No	WFV	Initials
Comments: The LCS recoveries were within control limits.						
16. Were matrix spike recoveries within control limits?	**X**	Yes		No	WFV	Initials
Comments: All matrix spike recoveries were within control limits						
17. Were duplicate RPDs and/or serial dilution %Ds within control limits?	**X**	Yes		No	WFV	Initials
Comments: RPDs for MS/MSDs, laboratory duplicate samples and LCS/LCSDs met QC criteria for all target compounds/analytes for the samples validated.						
18. Were organic system performance criteria met?	**X**	Yes		No	WFV	Initials
Comments: All GC/MS internal standards were within method criteria for the samples validated.						
19. Were internal standards within method criteria for GS/MS sample analyses?	**X**	Yes		No	WFV	Initials
Comments: All GC/MS internal standards were within method criteria for the samples validated.						
20. Were inorganic system performance criteria met?	**X**	Yes		No	WFV	Initials
Comments: Inorganic system performance criteria were met for the samples validated.						
21. Were blind field duplicates collected? If so, discuss the precision (RPD) of the results.	**X**	Yes		No	WFV	Initials
Duplicate Sample No. DUP-01-20160407-01	Primary Sample No.	MW-110D-20160407-01				
Duplicate Sample No. DUP-01-20160406-01	Primary Sample No.	MW-304D-20160406-01				
Duplicate Sample No. DUP-03-20160407-01	Primary Sample No.	MW-204D-20160407-01				
Comments: RPD's exceeded the 30% advisory limit for variation between primary and duplicate for the samples as bolded in following page						
22. Were qualitative criteria for organic target analyte identification met?	**X**	Yes		No	NGV	Initials
Comments: All qualitative criteria for organic target analyte identification were met.						
23. Were 100% of the EDD concentrations and reporting limits compared to the hardcopy data reports?	**NA**	Yes	**NA**	No	WFV	Initials
Comments: The EDD is not routinely reviewed as part of the data validation process.

Notes:
*Highest RRS equals Type 1 RRS; therefore, the cleanup goal becomes the Type 1 RRS for this chemical.
Only those constituents that are MGP-related and HSRA-regulated are reported on this table.
Values are listed with the laboratory- or equipment-reported number of significant digits, which varies between different sets of constituents.
Exceeds Type 2 RRS (only indicated for off-site wells)
Exceeds Type 4 RRS

Notes:
*Highest RRS equals Type 1 RRS; therefore, the cleanup goal becomes the Type 1 RRS for this chemical.
Only those constituents that are MGP-related and HSRA-regulated are reported on this table.
Values are listed with the laboratory- or equipment-reported number of significant digits, which varies between different sets of constituents.
Exceeds Type 2 RRS (only indicated for off-site wells)
Exceeds Type 4 RRS

Notes:
*Highest RRS equals Type 1 RRS; therefore, the cleanup goal becomes the Type 1 RRS for this chemical.
Only those constituents that are MGP-related and HSRA-regulated are reported on this table.
Values are listed with the laboratory- or equipment-reported number of significant digits, which varies between different sets of constituents.
Exceeds Type 2 RRS (only indicated for off-site wells)
Exceeds Type 4 RRS

Notes:
*Highest RRS equals Type 1 RRS; therefore, the cleanup goal becomes the Type 1 RRS for this chemical.
Only those constituents that are MGP-related and HSRA-regulated are reported on this table.
Values are listed with the laboratory- or equipment-reported number of significant digits, which varies between different sets of constituents.
Exceeds Type 2 RRS (only indicated for off-site wells)
Exceeds Type 4 RRS

Notes:
*Highest RRS equals Type 1 RRS; therefore, the cleanup goal becomes the Type 1 RRS for this chemical.
Only those constituents that are MGP-related and HSRA-regulated are reported on this table.
Values are listed with the laboratory- or equipment-reported number of significant digits, which varies between different sets of constituents.
Exceeds Type 2 RRS (only indicated for off-site wells)
Exceeds Type 4 RRS

Appendix B-6a
Summary of Alluvium Groundwater Analytical Data
November 2001 through April 2016
Atlanta Gas Light Company
Former Manufactured Gas Plant Site
Macon, Georgia

Notes:
*Highest RRS equals Type 1 RRS; therefore, the cleanup goal becomes the Type 1 RRS for this chemical.
Only those constituents that are MGP-related and HSRA-regulated are reported on this table.
Values are listed with the laboratory- or equipment-reported number of significant digits, which varies between different sets of constituents.
Exceeds Type 2 RRS (only indicated for off-site wells)
Exceeds Type 4 RRS

Appendix B-6a
Summary of Alluvium Groundwater Analytical Data
November 2001 through April 2016
Atlanta Gas Light Company
Former Manufactured Gas Plant Site
Macon, Georgia

Notes:
*Highest RRS equals Type 1 RRS; therefore, the cleanup goal becomes the Type 1 RRS for this chemical.
Only those constituents that are MGP-related and HSRA-regulated are reported on this table.
Values are listed with the laboratory- or equipment-reported number of significant digits, which varies between different sets of constituents.
Exceeds Type 2 RRS (only indicated for off-site wells)
Exceeds Type 4 RRS

Appendix B-6a
Summary of Alluvium Groundwater Analytical Data
November 2001 through April 2016
Atlanta Gas Light Company
Former Manufactured Gas Plant Site
Macon, Georgia

Notes:
*Highest RRS equals Type 1 RRS; therefore, the cleanup goal becomes the Type 1 RRS for this chemical.
Only those constituents that are MGP-related and HSRA-regulated are reported on this table.
Values are listed with the laboratory- or equipment-reported number of significant digits, which varies between different sets of constituents.
Exceeds Type 2 RRS (only indicated for off-site wells)
Exceeds Type 4 RRS

Appendix B-6a
Summary of Alluvium Groundwater Analytical Data
November 2001 through April 2016
Atlanta Gas Light Company
Former Manufactured Gas Plant Site
Macon, Georgia

Notes:
*Highest RRS equals Type 1 RRS; therefore, the cleanup goal becomes the Type 1 RRS for this chemical.
Only those constituents that are MGP-related and HSRA-regulated are reported on this table.
Values are listed with the laboratory- or equipment-reported number of significant digits, which varies between different sets of constituents.
Exceeds Type 2 RRS (only indicated for off-site wells)
Exceeds Type 4 RRS

Appendix B-6a
Summary of Alluvium Groundwater Analytical Data
November 2001 through April 2016
Atlanta Gas Light Company
Former Manufactured Gas Plant Site
Macon, Georgia

Notes:
*Highest RRS equals Type 1 RRS; therefore, the cleanup goal becomes the Type 1 RRS for this chemical.
Only those constituents that are MGP-related and HSRA-regulated are reported on this table.
Values are listed with the laboratory- or equipment-reported number of significant digits, which varies between different sets of constituents.
Exceeds Type 2 RRS (only indicated for off-site wells)
Exceeds Type 4 RRS

Appendix B-6a
Summary of Alluvium Groundwater Analytical Data
November 2001 through April 2016
Atlanta Gas Light Company
Former Manufactured Gas Plant Site
Macon, Georgia

Notes:
*Highest RRS equals Type 1 RRS; therefore, the cleanup goal becomes the Type 1 RRS for this chemical.
Only those constituents that are MGP-related and HSRA-regulated are reported on this table.
Values are listed with the laboratory- or equipment-reported number of significant digits, which varies between different sets of constituents.
Exceeds Type 2 RRS (only indicated for off-site wells)
Exceeds Type 4 RRS

2-Methylphenol	µg/L	780	5,100	< 20	< 10	< 1.9	< 10	< 10
4-Methylphenol	µg/L	78	510	< 20	< 10	< 1.9	< 10	< 10
Naphthalene	µg/L	20*	20*	< 2.0	< 0.50	< 0.19	< 10	< 10
Phenanthrene	µg/L	470	3,100	< 2.0	< 0.050	< 0.19	< 10	< 10
Phenol	µg/L	9,390	61,000	< 9.9	< 10	< 0.97	< 10	< 10
Pyrene	µg/L	1,000*	3,100	< 2.0	< 0.050	< 0.19	< 10	< 10
Laboratory Results - Inorganic Constituents								
Antimony	µg/L	6.3	40	< 20	< 20.0	< 20	< 40	< 40
Arsenic	µg/L	50*	50*	< 20	< 50.0	< 20	< 50	< 50
Barium	µg/L	2,000	7,200	120	64.9	82	115	115
Beryllium	µg/L	31	200	< 4.0	< 10.0	< 4.0	--	--
Cadmium	µg/L	7.8	51	< 5.0	40.3	< 5.0	--	--
Chromium	µg/L	100	310	< 10	< 10.0	< 10	< 10	< 10
Copper	µg/L	630	4,100	< 20	< 10.0	< 20	< 10	< 10
Lead	µg/L	15*	15*	< 10	< 10.0	< 10	< 10	< 10
Nickel	µg/L	100	2,000	< 40	< 20.0	< 40	< 20	< 20
Zinc	µg/L	4,700	31,000	< 20	< 20.0	< 20	< 20	< 20
Mercury	µg/L	2*	2*	< 0.20	< 0.20	< 0.20	< 0.5	< 0.5
Total Cyanide	µg/L	310	2,000	< 10	< 10.0	< 10	< 10	< 10

Notes:
*Highest RRS equals Type 1 RRS; therefore, the cleanup goal becomes the Type 1 RRS for this chemical.
Only those constituents that are MGP-related and HSRA-regulated are reported on this table.
Values are listed with the laboratory- or equipment-reported number of significant digits, which varies between different sets of constituents.
Exceeds Type 2 RRS (only indicated for off-site wells)
Exceeds Type 4 RRS

Notes:
bdl - below detection limt
-- = Type 2 and Type 4 RRS are not applicable to or were not calculated for these parameters.
*Highest RRS equals Type 1 RRS; therefore, the cleanup goal becomes the Type 1 RRS for this chemical.
Only those constituents that are MGP-related and HSRA-regulated are reported on this table.
Values are listed with the laboratory- or equipment-reported number of significant digits, which varies between different sets of constituents.
Exceeds Type 2 RRS (only indicated for off-site wells)
Exceeds Type 4 RRS

Notes:
*Highest RRS equals Type 1 RRS; therefore, the cleanup goal becomes the Type 1 RRS for this chemical.
** Samples collected for dissolved gases were misplaced during shipment; therefore, they were not analyzed.
*** No readings due to faulty meter.
Only those constituents that are MGP-related and HSRA-regulated are reported on this table.
Values are listed with the laboratory- or equipment-reported number of significant digits, which varies between different sets of constituents.
Exceeds Type 2 RRS (only indicated for off-site wells)
Exceeds Type 4 RRS

Appendix B-6a
Summary of Alluvium Groundwater Analytical Data
November 2001 through April 2016
Atlanta Gas Light Company
Former Manufactured Gas Plant Site
Macon, Georgia

Notes:
*Highest RRS equals Type 1 RRS; therefore, the cleanup goal becomes the Type 1 RRS for this chemical.
Only those constituents that are MGP-related and HSRA-regulated are reported on this table.
Values are listed with the laboratory- or equipment-reported number of significant digits, which varies between different sets of constituents.
Exceeds Type 2 RRS (only indicated for off-site wells)
Exceeds Type 4 RRS

Notes:
*Highest RRS equals Type 1 RRS; therefore, the cleanup goal becomes the Type 1 RRS for this chemical.
Only those constituents that are MGP-related and HSRA-regulated are reported on this table.
Values are listed with the laboratory- or equipment-reported number of significant digits, which varies between different sets of constituents.
Exceeds Type 2 RRS (only indicated for off-site wells)
Exceeds Type 4 RRS

Appendix B-6a
Summary of Alluvium Groundwater Analytical Data
November 2001 through April 2016
Atlanta Gas Light Company
Former Manufactured Gas Plant Site
Macon, Georgia

Notes:
*Highest RRS equals Type 1 RRS; therefore, the cleanup goal becomes the Type 1 RRS for this chemical.
Only those constituents that are MGP-related and HSRA-regulated are reported on this table.
Values are listed with the laboratory- or equipment-reported number of significant digits, which varies between different sets of constituents.
Exceeds Type 2 RRS (only indicated for off-site wells)
Exceeds Type 4 RRS

Appendix B-6a
Summary of Alluvium Groundwater Analytical Data
November 2001 through April 2016
Atlanta Gas Light Company
Former Manufactured Gas Plant Site
Macon, Georgia

Notes:
*Highest RRS equals Type 1 RRS; therefore, the cleanup goal becomes the Type 1 RRS for this chemical.
Only those constituents that are MGP-related and HSRA-regulated are reported on this table.
Values are listed with the laboratory- or equipment-reported number of significant digits, which varies between different sets of constituents.
Exceeds Type 2 RRS (only indicated for off-site wells)
Exceeds Type 4 RRS

Notes:
*Highest RRS equals Type 1 RRS; therefore, the cleanup goal becomes the Type 1 RRS for this chemical.
Only those constituents that are MGP-related and HSRA-regulated are reported on this table.
Values are listed with the laboratory- or equipment-reported number of significant digits, which varies between different sets of constituents.
Exceeds Type 2 RRS (only indicated for off-site wells)
Exceeds Type 4 RRS

Appendix B-6a
Summary of Alluvium Groundwater Analytical Data
November 2001 through April 2016
Atlanta Gas Light Company
Former Manufactured Gas Plant Site
Macon, Georgia

Notes:

*Highest RRS equals Type 1 RRS; therefore, the cleanup goal becomes the Type 1 RRS for this chemical.

Only those constituents that are MGP-related and HSRA-regulated are reported on this table.

Values are listed with the laboratory- or equipment-reported number of significant digits, which varies between different sets of constituents.

Exceeds Type 2 RRS (only indicated for off-site wells)

Exceeds Type 4 RRS

Notes:
*Highest RRS equals Type 1 RRS; therefore, the cleanup goal becomes the Type 1 RRS for this chemical.
Only those constituents that are MGP-related and HSRA-regulated are reported on this table.
Values are listed with the laboratory- or equipment-reported number of significant digits, which varies between different sets of constituents.
Exceeds Type 2 RRS (only indicated for off-site wells)
Exceeds Type 4 RRS

Notes:
*Highest RRS equals Type 1 RRS; therefore, the cleanup goal becomes the Type 1 RRS for this chemical.
Only those constituents that are MGP-related and HSRA-regulated are reported on this table.
Values are listed with the laboratory- or equipment-reported number of significant digits, which varies between different sets of constituents.
Exceeds Type 2 RRS (only indicated for off-site wells)
Exceeds Type 4 RRS

Appendix B-6b
Summary of Bedrock Groundwater Analytical Data
November 2001 through April 2016
Atlanta Gas Light Company
Former Manufactured Gas Plant Site
Macon, Georgia

Notes:

*Highest RRS equals Type 1 RRS; therefore, the cleanup goal becomes the Type 1 RRS for this chemical.

Only those constituents that are MGP-related and HSRA-regulated are reported on this table.

Values are listed with the laboratory- or equipment-reported number of significant digits, which varies between different sets of constituents.

Exceeds Type 2 RRS (only indicated for off-site wells)

Exceeds Type 4 RRS

Notes:
*Highest RRS equals Type 1 RRS; therefore, the cleanup goal becomes the Type 1 RRS for this chemical.
Only those constituents that are MGP-related and HSRA-regulated are reported on this table.
Values are listed with the laboratory- or equipment-reported number of significant digits, which varies between different sets of constituents.
Exceeds Type 2 RRS (only indicated for off-site wells)
Exceeds Type 4 RRS

Appendix B-6b
Summary of Bedrock Groundwater Analytical Data
November 2001 through April 2016
Atlanta Gas Light Company
Former Manufactured Gas Plant Site
Macon, Georgia

Notes:
*Highest RRS equals Type 1 RRS; therefore, the cleanup goal becomes the Type 1 RRS for this chemical.
Only those constituents that are MGP-related and HSRA-regulated are reported on this table.
Values are listed with the laboratory- or equipment-reported number of significant digits, which varies between different sets of constituents.
Exceeds Type 2 RRS (only indicated for off-site wells)
Exceeds Type 4 RRS

Appendix B-6b
Summary of Bedrock Groundwater Analytical Data
November 2001 through April 2016
Atlanta Gas Light Company
Former Manufactured Gas Plant Site
Macon, Georgia

Notes:
*Highest RRS equals Type 1 RRS; therefore, the cleanup goal becomes the Type 1 RRS for this chemical.
Only those constituents that are MGP-related and HSRA-regulated are reported on this table.
Values are listed with the laboratory- or equipment-reported number of significant digits, which varies between different sets of constituents.
Exceeds Type 2 RRS (only indicated for off-site wells)
Exceeds Type 4 RRS

Appendix B-6b
Summary of Bedrock Groundwater Analytical Data
November 2001 through April 2016
Atlanta Gas Light Company
Former Manufactured Gas Plant Site
Macon, Georgia

Notes:
E - Estimated value
*Highest RRS equals Type 1 RRS; therefore, the cleanup goal becomes the Type 1 RRS for this chemical.
Only those constituents that are MGP-related and HSRA-regulated are reported on this table.
Values are listed with the laboratory- or equipment-reported number of significant digits, which varies between different sets of constituents.
Exceeds Type 2 RRS (only indicated for off-site wells)
Exceeds Type 4 RRS

Notes:
*Highest RRS equals Type 1 RRS; therefore, the cleanup goal becomes the Type 1 RRS for this chemical.
Only those constituents that are MGP-related and HSRA-regulated are reported on this table.
Values are listed with the laboratory- or equipment-reported number of significant digits, which varies between different sets of constituents.
Exceeds Type 2 RRS (only indicated for off-site wells)
Exceeds Type 4 RRS

Appendix B-6b
Summary of Bedrock Groundwater Analytical Data
November 2001 through April 2016
Atlanta Gas Light Company
Former Manufactured Gas Plant Site
Macon, Georgia

Notes:
*Highest RRS equals Type 1 RRS; therefore, the cleanup goal becomes the Type 1 RRS for this chemical.
Only those constituents that are MGP-related and HSRA-regulated are reported on this table.
Values are listed with the laboratory- or equipment-reported number of significant digits, which varies between different sets of constituents.
Exceeds Type 2 RRS (only indicated for off-site wells)
Exceeds Type 4 RRS

Appendix B-6b
Summary of Bedrock Groundwater Analytical Data
November 2001 through April 2016

Notes:
*Highest RRS equals Type 1 RRS; therefore, the cleanup goal becomes the Type 1 RRS for this chemical.
Only those constituents that are MGP-related and HSRA-regulated are reported on this table.
Values are listed with the laboratory- or equipment-reported number of significant digits, which varies between different sets of constituents.
Exceeds Type 2 RRS (only indicated for off-site wells)
Exceeds Type 4 RRS

Appendix B-6b
Summary of Bedrock Groundwater Analytical Data
November 2001 through April 2016
Atlanta Gas Light Company
Former Manufactured Gas Plant Site
Macon, Georgia

Notes:

*Highest RRS equals Type 1 RRS; therefore, the cleanup goal becomes the Type 1 RRS for this chemical.

Only those constituents that are MGP-related and HSRA-regulated are reported on this table.

Values are listed with the laboratory- or equipment-reported number of significant digits, which varies between different sets of constituents.

Exceeds Type 2 RRS (only indicated for off-site wells)

Exceeds Type 4 RRS

Notes:
*Highest RRS equals Type 1 RRS; therefore, the cleanup goal becomes the Type 1 RRS for this chemical.
Only those constituents that are MGP-related and HSRA-regulated are reported on this table.
Values are listed with the laboratory- or equipment-reported number of significant digits, which varies between different sets of constituents.
Exceeds Type 2 RRS (only indicated for off-site wells)
Exceeds Type 4 RRS

Appendix B-6b
Summary of Bedrock Groundwater Analytical Data
November 2001 through April 2016
Atlanta Gas Light Company
Former Manufactured Gas Plant Site
Macon, Georgia

Notes:
*Highest RRS equals Type 1 RRS; therefore, the cleanup goal becomes the Type 1 RRS for this chemical.
Only those constituents that are MGP-related and HSRA-regulated are reported on this table.
Values are listed with the laboratory- or equipment-reported number of significant digits, which varies between different sets of constituents.
Exceeds Type 2 RRS (only indicated for off-site wells)
Exceeds Type 4 RRS

Notes:

*Highest RRS equals Type 1 RRS; therefore, the cleanup goal becomes the Type 1 RRS for this chemical.

Only those constituents that are MGP-related and HSRA-regulated are reported on this table.

Values are listed with the laboratory- or equipment-reported number of significant digits, which varies between different sets of constituents.

Exceeds Type 2 RRS (only indicated for off-site wells)

Exceeds Type 4 RRS

Appendix B-6b
Summary of Bedrock Groundwater Analytical Data
November 2001 through April 2016
Atlanta Gas Light Company
Former Manufactured Gas Plant Site
Macon, Georgia

Notes:
*Highest RRS equals Type 1 RRS; therefore, the cleanup goal becomes the Type 1 RRS for this chemical.
Only those constituents that are MGP-related and HSRA-regulated are reported on this table.
Values are listed with the laboratory- or equipment-reported number of significant digits, which varies between different sets of constituents.
Exceeds Type 2 RRS (only indicated for off-site wells)
Exceeds Type 4 RRS

Notes:

*Highest RRS equals Type 1 RRS; therefore, the cleanup goal becomes the Type 1 RRS for this chemical.

Only those constituents that are MGP-related and HSRA-regulated are reported on this table.

Values are listed with the laboratory- or equipment-reported number of significant digits, which varies between different sets of constituents.

Exceeds Type 2 RRS (only indicated for off-site wells)

Exceeds Type 4 RRS
