## **GROUNDWATER SCIENTIST STATEMENT**

---

I certify that I am a qualified ground water scientist who has received a baccalaureate or post-graduate degree in the natural sciences or engineering, and have sufficient training and experience in ground water hydrology and related fields, as demonstrated by state registration and completion of accredited university courses, that enable me to make sound professional judgments regarding groundwater monitoring and contaminant fate and transport. I further certify that this Progress Report was prepared by me or by a subordinate working under my direction.

# 1 INTRODUCTION

---

## 1.1 Summary

This Voluntary Remediation Program (VRP) Progress Report is submitted on behalf of IPTV-B-C14, LLC (IPTV) for the former TLC Cleaners (the Site). The purpose of this Progress Report is to describe the activities conducted since the Voluntary Investigation and Remediation Plan (VIRP) was submitted in October 2014 and to discuss planned activities for the next reporting period.

## 1.2 Background

The former TLC Cleaners tenant space (the Facility) is the western-most tenant space located in the New Market Center shopping center, Cobb County Parcel ID 16124400330, which is located at 2060 Lower Roswell Road in Marietta, Georgia and is 4.805 acres. A Site Location Map is included as Figure 1 (all figures are included in the Figures attachment), and a USGS Topographic Map is included as Figure 2. Figure 3A is a Site Plan showing the Site features, and Figure 3B is a Site Plan showing the layout of the Facility.

The Site was undeveloped until 1973 when construction of the current building was initiated and has been used as a shopping center since development. The shopping center is currently occupied by a restaurant, a grocer, a physical fitness facility, and a church. The Facility and the adjacent tenant space are currently vacant. The Facility had been occupied by a dry cleaning business from as early as 1989 until vacated in early 2015.

As shown on Figure 3B, the dry cleaning machines and drum storage were located toward the front of the Facility near a floor drain. The floor drain connected to a drain line which ran to the back of the Facility to a four foot deep sump, or grit trap, where solids could settle, allowing the water to continue to the sanitary sewer line. Based on the soil and groundwater data, the source of the soil and groundwater impact appears to be the dry cleaning operations with the highest soil concentrations at the base of the grit trap.

## 2 VRP PROJECT MANAGEMENT

---

### 2.1 Professional Geologist Oversight

This Progress Report includes a certification by Justin Vickery, P.G., the Professional Geologist specified in the VIRP. Appendix A contains a monthly summary of hours invoiced by the P. G.

### 2.2 Milestone Schedule

A milestone schedule is included in Appendix B.

### 2.3 Conceptual Site Model Update

No data was collected during the reporting period that would significantly alter the CSM. The CSM may be updated in future Progress Reports as additional data becomes available.

# 3 CONSTITUENTS OF CONCERN AND RISK REDUCTION STANDARDS

---

## 3.1 Constituents of Concern

PCE and PCE daughter compounds are considered constituents of concern for this Site. PCE has been detected at various concentrations in several of the soil samples beneath and around the Facility. PCE daughter compounds, including trichloroethene (TCE) and cis-1,1-dichloroethene (cis-DCE), have been detected at lower concentrations in a few of these samples. Other PCE daughter compounds, including trans-1,2-dichloroethene (trans-DCE), 1,1-dichloroethene (1,1-DCE), and vinyl chloride, have not been detected but are still considered constituents of concern due to the possibility of future detections.

Other constituents, including 4-methyl-2-pentanone, acetone, toluene, xylenes, and p-cymene, have also been detected in soil. These constituents are addressed in this report; however, these are not considered constituents of concern and will not be addressed in future reports for the following reasons.

- 4-Methyl-2-pentanone was detected in only one soil sample in December 2014. This compound is derived from acetone, which is a common laboratory contaminant. The reported concentration was 0.220 milligrams per kilogram (mg/kg), which is an order of magnitude below the Type 1 Risk Reduction Standard (RRS) of 3.3 mg/kg.
- Acetone was detected in three soil samples in December 2014 at concentrations ranging from 0.070 mg/kg to 0.073 mg/kg, orders of magnitude below the Type 1 RRS of 400 mg/kg. Acetone at these concentrations is likely a laboratory contaminant.
- Toluene and xylenes were detected in soil samples in 1999 at depths of 8.5-10 feet below the ground surface (ft-bgs) and 13.5-15 ft-bgs. Based on recent groundwater investigations, these samples were likely collected below the water table, which was encountered between 6 ft-bgs and 8.5 ft-bgs in these areas. Because these constituents were not detected in any of the 2014 or 2015 soil samples in and around the Facility, it does not appear that these detection are related to the release at the Facility. Additionally, the toluene and xylenes detection of 0.010 mg/kg and 0.012 mg/kg are orders of magnitude below the Type 1 RRSs of 100 mg/kg and 1,000 mg/kg, respectively.
- P-cymene was detected in one soil sample in 2013. P-cymene is not regulated under the HSRA.

For groundwater, in addition to PCE and PCE daughter compounds, chloroform was detected in one sample at 2.3 micrograms per liter ( $\mu\text{g}/\text{L}$ ), which is lower than the Type 1 RRS of 80  $\mu\text{g}/\text{L}$ . Chloroform is a byproduct of the chlorination process of municipal-supplied potable water, and the chloroform detection in the groundwater sample was likely due to potable water entering the

groundwater via a water leak or seepage through cracks in the floor slab. Chloroform is therefore not considered a constituent of concern.

## 3.2 Risk Reduction Standards

Soil and groundwater RRSs have been calculated for constituents of concern including PCE, TCE, cis-DCE, trans-DCE, 1,1-DCE, and vinyl chloride. The RRS calculation tables are included in Appendix C, and summary tables are shown below.

**Table A**  
**Groundwater Risk Reduction Standards**

Analyte	Type 1 RRS mg/L	Type 2 RRS mg/L	Residential RRS mg/L	Type 3 RRS mg/L	Type 4 RRS mg/L	Non- Residential RRS mg/L

# 4 RECENTLY COMPLETED ACTIVITIES

---

## 4.1 Overview

This section discusses activities conducted after the submittal of the October 2014 VIRP, including assessments of soil gas, soil, and groundwater. Boring logs and well construction information for borings and well installations conducted by EPS is included in Appendix D. Laboratory analytical reports for this reporting period are included in Appendix E.

## 4.2 Soil Gas Assessment

### 4.2.1 December 2014 Field Investigation

On December 17, 2014, three shallow (sub-slab) soil gas samples (SG-1 through SG-3) were collected immediately beneath the floor slab in the former cleaners: one near the front floor drain, one near the grit trap, and one in the central portion of the Facility (Figure 4). Vapor sampling probes were installed on December 16, 2014 by drilling through the concrete slab and into the surficial soil beneath the slab. The probe was then set just below the slab, a sand pack was placed around the probe, and tubing extended from the probe to just below the ground surface. A threaded valve was installed on the top of the tubing and the hole in the slab was sealed.

Once the seal had cured, a helium leak test was performed to determine the integrity of the seal. An enclosure was placed on top of the sealed floor slab and saturated with helium gas. Soil gas was then extracted from the vapor probe and scanned with a hand-held helium meter to determine if a leak was present. A significant positive reading would indicate that air above the floor slab was being drawn into the vapor probe through a poor seal or through a porous/cracked concrete slab. None of the leak tests conducted resulted in a positive reading on the helium meter.

The soil gas samples were collected from the vapor probes using laboratory-supplied negatively pressurized 400 milliliter (mL) Summa canisters. The samples were labeled, logged under standard chain of custody procedures, shipped to H&P Mobile Geochemistry in Carlsbad, CA, and analyzed by US EPA Compendium Method TO-15.

Sample locations are shown on Figure 4 and a summary of the sampling results is included in Table 1. Each of the soil gas samples had detections of PCE, ranging from 5,500 micrograms per cubic meter ( $\mu\text{g}/\text{m}^3$ ) in SG-3 to 68,000  $\mu\text{g}/\text{m}^3$  in SG-1. No PCE daughter compounds were detected. Freon-12 (dichlorodifluoromethane) was detected in SG-1 at 810  $\mu\text{g}/\text{m}^3$ . Freon-12 is used as a refrigerant and is not associated with PCE.

## 4.3 Soil Assessments

### 4.3.1 December 2014 Field Investigation

Once soil gas sampling was completed, soil sampling was conducted on December 17, 2014 inside the Facility (Figure 5). Twelve soil borings (SB-2 through SB-12, including SB-9S and SB-9D) were advanced using hand auger methods to depths ranging from 2 ft-bgs to 12 ft-bgs, and 22 soil samples were collected from discrete intervals. Soils were logged for lithology and field screened with a photoionization detector (PID) for the presence of volatile organic compounds (VOCs). The field screening showed elevated PID measurements (PID readings are provided on the boring logs) in several of the borings with the highest being in SB-12 located adjacent to the grit trap.

Soil samples were collected from varying depths for VOC analysis using Method 5035 by pushing laboratory supplied plastic syringes directly into the recovered soil. For each sample, similar amounts of soil were placed into each of three 40-mL glass vials: one preserved with methanol and two preserved with sodium bisulfate. In addition, a 2-oz. glass jar was filled for soil moisture analysis. The soil samples were labeled, placed on ice in a cooler, logged under standard chain-of-custody procedures, and hand delivered to Analytical Environmental Services, Inc. (AES) for laboratory analysis of VOCs by EPA Method 8260B.

Sample locations are shown on Figure 5 and a summary of the sampling results is included in Table 2A. PCE was detected in all 22 samples collected with three of the samples being detected above the Type 4 RRS of 55 mg/kg. Trichloroethene (TCE) and 1,2-cis-dichloroethene (cis-DCE) were detected at concentrations below their Type 1 RRSs. No samples were collected from borings SB-6 and SB-7 due to shallow boring refusal.

The highest PCE detection was 14,000 (mg/kg) at a depth of 5 ft-bgs in SB-12, located adjacent to the grit trap. Vertically, PCE concentrations decrease to 9.9 mg/kg at a depth of 12 ft-bgs in SB-12. Horizontally, PCE concentrations decrease to 38 mg/kg and 18 mg/kg in SB-10, 5 ft-bgs and 10 ft-bgs, respectively, located only a few feet from SB-12. Additionally, within 3-5 ft horizontally from SB-12 in all directions, PCE drops below 10 mg/kg. The distribution of PCE in the vadose zone is similar to what is expected from a point source release (i.e. the grit trap).

### 4.3.2 February 2015 Field Investigation

Due to the results of the soil sampling conducted in December 2014, a second soil sampling event was performed on February 10 and 11, 2015 with seventeen soil borings (SB-13 through SB-29) advanced from discrete intervals from inside the Facility and the adjacent vacant space (Figure 5) to depths varying from 8 ft-bgs to 12 ft-bgs. From these borings, 33 soil samples were collected and analyzed. Soils were logged for lithology and field screened with a PID for the presence of VOCs. The field screening showed elevated PID measurements in several of the borings with the highest being in SB-17, located near the grit trap.

Soil samples were collected in the same manner as described in Section 4.3.1. The samples were labeled, placed on ice in a cooler, logged under standard chain-of-custody procedures, and hand delivered to AES for VOC analysis by EPA Method 8260B.

Sample locations are shown on Figure 5 and a summary of the sampling results is included in Table 2A. PCE was detected in 32 of the 33 samples, with none of the detections exceeding the Type 4 RRS of 55 mg/kg. Looking at the combination of the December 2014 and the February 2015 sampling results, PCE concentrations are highest near the grit trap and exponentially decrease with increasing distance from the grit trap. This type of distribution is what would be expected from a point source release (i.e., the grit trap). In February 2015, TCE and cis-DCE were again detected at concentrations below the Type 1 RRSs. Soil samples were collected from SB-14, SB-17, and SB-19 and held by the laboratory pending analysis of nearby samples, and were not analyzed due to the results of the nearby samples.

#### 4.3.3 May 2015 Field Investigation

On May 7, 2015, two soil borings (SB-30 and SB-31) were advanced to the south of the Facility using direct push methods to collect samples to determine the site specific organic carbon content of the soil. The borings were each advanced to a depth of 8 ft-bgs, and a sample was collected from each boring at 7 ft-bgs. These samples were collected in unpreserved glass jars, placed on ice in a cooler, logged under standard chain-of-custody procedures, and hand delivered to AES for total organic carbon (TOC) analysis by EPA Method 9060A.

Boring locations are shown on Figure 5. TOC sampling results are summarized on Table 2B. The samples collected from SB-30 and SB-31 had TOC concentrations of 626 mg/kg and 1060 mg/kg, respectively. These results were used in the RRS calculations.

#### 4.3.4 July 2015 Field Investigation

On July 6, 2015, three soil borings (SB-32 to SB-34) were advanced inside the Facility using direct push methods to collect samples to determine the site specific leachability. Soil cores were screened with a PID to determine the presence of VOCs. Soil samples were collected at pre-determined depths of 2 ft-bgs and 10 ft-bgs at each location for total VOC analysis and Synthetic Precipitation Leaching Procedure (SPLP) VOC analysis. The samples were analyzed for PCE and PCE daughter compounds since the December 2014 and February 2015 sampling results confirmed that no other VOCs are attributed to the release. This information was used to develop the leachability input into the RRS calculations.

Samples for total VOC analysis were collected as described in Section 4.3.1. SPLP samples were collected in unpreserved glass containers. The samples were labeled, placed on ice, logged under standard chain of custody procedures, and hand delivered to AES for analysis of VOCs by EPA Method 8260B and SPLP tumbling by EPA Method 1312.

Boring locations are shown on Figure 5. A summary of the total vs. TCLP results are summarized in Table 2C. PCE, cis-DCE, and TCE were detected in the total VOC samples, but PCE was the only compound detected in the SPLP VOC analysis. PCE was detected in all six of the total VOC soil samples at concentrations ranging from 2.5 mg/kg to 55 mg/kg, it was detected in five of the six samples subjected to the SPLP tumbling at concentrations ranging from 0.0053 mg/L to 0.049 mg/L. The highest total PCE detection (55 mg/kg) that resulted in a leachable (SPLP) PCE detection below a concentration that would cause groundwater to exceed a Type 4 RRS was

selected as the leachability input for the soil screening level (SSL) portion of the RRS calculations. This resulted in a PCE soil Type 2 RRS of 29 mg/kg and a PCE soil Type 4 RRS 55 mg/kg.

## 4.4 Groundwater Assessments

### 4.4.1 May 2015 Piezometer Installation

On May 7, 2015, three piezometers (PZ-1 through PZ-3) were installed to the southeast, south, and southwest of monitoring well MW-1 to determine the groundwater flow direction. The locations of the piezometers are shown on Figure 6.

The piezometers were installed using direct push methods by advancing the borings to 20 ft-bgs. Soil cores were logged for lithology (boring logs and well completion details are provided in Appendix D) and field screened with a PID for the presence of VOCs. Each piezometer was constructed with 10 ft of 1-inch diameter PVC well casing and 10 ft of 1-inch diameter, 0.010-inch slotted, PVC screen. Within each boring, a sand pack was installed around the screened interval from the bottom of the screen to 2 ft above the top of the screen. A minimum of 2 ft of bentonite was placed on top of the sand pack and hydrated. The remainder of the borehole annulus was filled with grout. Flush-mounted well vaults were set and well pads were constructed at each piezometer.

On May 8, 2015, the piezometers were developed by bailing until the water was free of visible sediment. Turbidity readings were then collected to attempt to bring the turbidity down to less than 10 Nephelometric Turbidity Units (NTUs). After 30 to 40 wells volumes were removed, turbidity in all three piezometers remained above 20 NTUs; however, well development was deemed sufficiently complete given the excessive water volumes removed. Well development logs are included in Appendix F.

### 4.4.2 May 2015 Potentiometric Surface Map

On May 22, 2015, groundwater depths were gauged in the four on-site wells (MW-1, PZ-1, PZ-2, and PZ-3). The tops-of-casing were surveyed and groundwater elevations were calculated (Table 4). Figure 6 is a potentiometric surface map showing a groundwater flow direction to the east-southeast.

### 4.4.3 May 2015 Groundwater Sampling

Prior to determining the groundwater flow direction, it was anticipated that the groundwater flow was to the south-southeast towards nearby residential properties and that additional monitoring wells would need to be installed near the southern property boundary of the Site. However, since groundwater flow was determined to be to the east-southeast, on May 22, 2015, the four existing wells (MW-1, PZ-1, PZ-2, and PZ-3), two of which are in the groundwater flow path, were sampled for VOCs to determine the location, if any, of additional monitoring wells. Prior to sampling, the wells were purged using low flow/low volume methods. A peristaltic pump was used to purge the wells, and the intake of the Teflon-lined tubing was placed within the screened

interval. The wells were purged until geochemical parameters were stable for three consecutive readings. Well purge forms are included in Appendix F.

Groundwater samples were collected by capturing the water in the tubing prior to the pump and pouring the water from the tubing into 40-mL glass vials preserved with hydrochloric acid. The samples were labeled, placed on ice, logged under standard chain of custody procedures, and hand delivered to AES for VOC analysis by EPA Method 8260B.

PCE was detected in MW-1 at a concentration of 19 µg/L. PCE was not detected in the three piezometers. The sampling results are summarized in Table 3 and on Figure 6.

# 5 PLANNED ACTIVITIES FOR NEXT REPORTING PERIOD

---

## 5.1 Assessment

No additional soil assessment is planned since soils are delineated to the Type 2 RRS.

No additional groundwater assessment is planned for the next reporting period. In accordance with Georgia Code O.C.G.A § 12-8-107(g)(2), a participant in the Voluntary Remediation Program

*“shall not be required to perform corrective action or to certify compliance for groundwater if the voluntary remediation property was listed on the [Hazardous Site Inventory] inventory as a result of a release to soil exceeding a reportable quantity for soil but was not listed on the inventory as a result of a release to groundwater exceeding a reportable quantity, and if the participant further demonstrates to the director at the time of enrollment that a release exceeding a reportable quantity for groundwater does not exist at the voluntary remediation property; and the groundwater protection requirements for soils shall be based on protection of the established point of exposure for groundwater as provided under this part.”*

This Site would not have listed on the inventory as a result of a release to groundwater exceeding a reportable quantity. Therefore, no additional groundwater assessment for groundwater compliance purposes is planned.

Groundwater is flowing to the east-southeast, as determined using the monitoring well and the piezometers, instead of flowing to the south-southeast towards the residential properties as previously assumed. Therefore, the off-site residential vapor intrusion exposure pathway is not considered complete. Additional on-site vapor intrusion assessment may be conducted in conjunction with the installation of the vapor mitigation system as described in Section 5.3.

## 5.2 Soil Remediation

The footprint of PCE-impacted soil (Figure 4) above the Type 4 RRS lies within the immediate vicinity of the grit trap, with minor PCE detections in other areas of the Facility and the southwestern portion of the adjacent tenant space. Various soil remedial approaches were considered.

- Soil vapor extraction was not selected based on the potential longevity of the approach.
- Soil injection was not selected based on the clayey nature of the soil making contact with the soils outside of the injection boring difficult.
- Soil excavation along with oxidation via gravity infiltration is the selected remedial approach.

Comprehensive excavation of all PCE-impacted soil in the vicinity of the grit trap is technically impracticable as costly structural support of the building footers, which are expected to be 6-feet below the floor slab, would be required. Therefore, EPS is proposing a “hot spot” soil excavation. The planned excavation layout is shown on Figure 7. The goal of the excavation is to remove soils which exceed a Type 4 RRS and to significantly reduce the overall mass of the PCE in the vadose zone.

An area of 50 square feet will be excavated to depths of 6-8 feet below the floor slab (the achievable excavation depth will be determined by structural considerations of the building footers (i.e., soils bearing the load of the footers will not be disturbed) and will differ at varying distances from the footers). The excavated soil will be treated by mixing it with a 10% sodium permanganate solution. Once the soil can be handled as non-hazardous waste, it will be placed into roll-off boxes for off-site disposal in a Subtitle D landfill. Sodium permanganate solution will also be poured into the bottom of the excavation and allowed to infiltrate into the underlying soil. The excavation will be backfilled with gravel to the base of the floor slab, and the floor will be reinstalled. As discussed in the next section, piping will be placed within the gravel for vapor mitigation purposes.

The floor drain pipe, which runs from the area of the former dry cleaning machines to the grit trap, will be excavated along with the surrounding soils. A 2-foot wide section of floor slab will be saw-cut and removed from the entire length of the drain pipe. The excavated soil will be treated with a 10% sodium permanganate solution to assure it can be disposed of as non-hazardous waste. The excavation will be backfilled as described in Section 5.3.

### 5.3 Vapor Intrusion Mitigation

Sub-slab soil gas samples collected beneath the Facility had elevated PCE concentrations. A sub-slab depressurization system will be installed to minimize the potential for PCE vapors to migrate from beneath the floor slab into the building interior. The planned piping layout for the system is shown on Figure 7. The system will include two sections of piping.

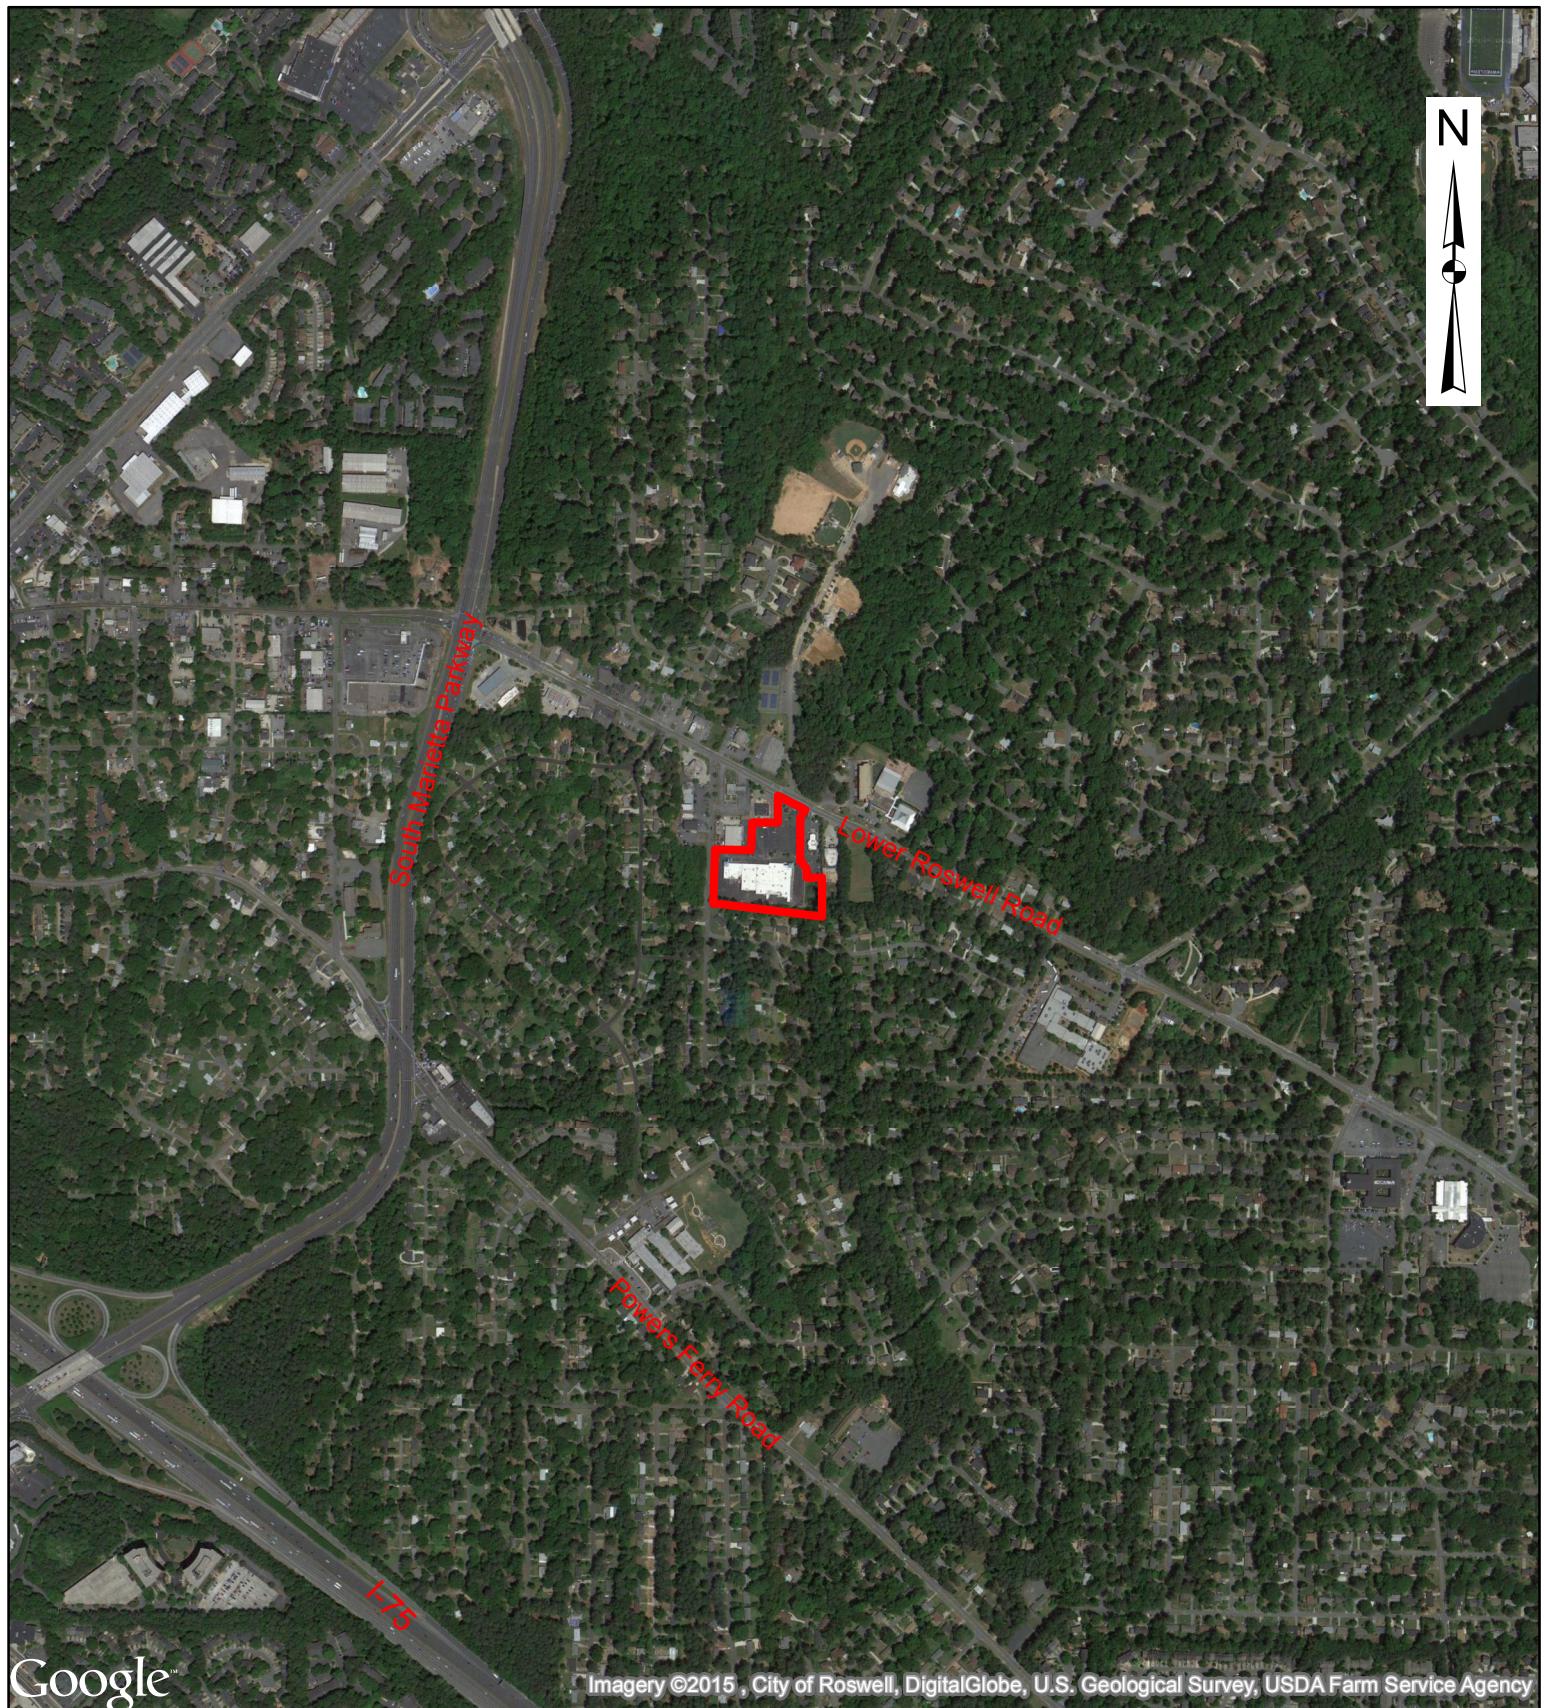

- One section of the system will be installed in place of the existing floor drain line, which runs from the former drum storage area to the grit trap. During the demolition activities associated with the soil excavation, the concrete slab on top of the floor drain line will be cut and removed, and the drain line will be excavated. Slotted pipe will be installed in the trench excavation. The pipe will be surrounded with a gravel pack, and the floor slab will be re-poured on top of the gravel. The piping will extend beneath the slab to the exterior of the back wall of the building.
- The second section of the system will include a pipe placed beneath the new floor slab from the gravel backfill of the 50 square foot soil excavation area to the exterior of the back wall.

These two sections of pipe will be connected, and a single line will be run vertically upwards along the exterior wall to the approximate height of the roof. An inline fan will be installed to create a negative pressure beneath the floor slab. Once the system is operational, vacuum readings will be collected from several locations around the piping system to determine the spatial influence of the

system. Adjustments or additions to the system may be considered depending on the results of the vacuum readings.

## **TABLES**

**Table 1.**  
**Sub-Slab Soil Gas Analytical Results**  
**TLC Cleaners**  
**Marietta, Georgia**

Sample Location	Sample Date	Freon-12 ( $\mu\text{g}/\text{m}^3$ )	PCE ( $\mu\text{g}/\text{m}^3$ )
Residential (Non-Carcinogenic) TSSSGC		3,500	1,400
Residential (Carcinogenic) TSSSGC		N/A	360*
Non-Residential (Non-Carcinogenic) TSSSGC		15,000	5,800
Non-Residential (Carcinogenic) TSSSGC		N/A	15,667**
SG-1	12/17/14	810	68,000
SG-2	12/17/14	BDL	38,000
SG-3	12/17/14	BDL	5,500

Notes:

TSSSGC = Target Sub-Slab Soil Gas Concentration

Freon-12 = Dichlorodifluoromethane

PCE = Tetrachloroethene

$\mu\text{g}/\text{m}^3$  = micrograms per cubic meter

RSL = US EPA Regional Screening Level

N/A = Not Applicable

\* = Residential Cancer Target Risk of  $10^{-6}$

\*\* = Non-Residential Cancer Target Risk of  $10^{-5}$

\* Kd values fo metals are taken from SSG assuming a pH of 6.8

SSG -EPA Soil Screening Guidance - Values are calculated values unless otherwise indicated as measured.

ORNL RAIS - Oak Ridge National Laboratory Risk Assessment Information System

EPI Suite -EPI (Estimation Programs Interface) Suite™

Calculated - from H' - Where H' =H\*41

VF (m<sup>3</sup>/kg) =

$$\frac{(LS \times V \times DH)}{A} \times \frac{(\pi \times \alpha \times T)^{1/2}}{(2 \times D_{ei} \times E \times K_{as} \times 10^{-3} \text{ kg/g})}$$

LS = 45 m length of side of contaminated area

V = 2.25 m/s wind speed in mixing zone

DH = 2 m diffusion height

A = 20300000 cm<sup>2</sup> area of contamination

$\pi$  = 3.14

$$\alpha = \frac{(D_{ei} \times E)}{E + \rho_s(1-E)/K_{as}} \text{ cm}^2/\text{s}$$

$D_{ei} = D_i \times E^{0.33}$  cm<sup>2</sup>/s effective diffusivity

$D_i$  = Chemical specific molecular diffusivity (cm<sup>2</sup>/s)

E = 0.35 total soil porosity

$\rho_s$  = 2.65 g/m<sup>3</sup> density of soil solids

Kas = (H/Kd) x 41 soil/air partition coefficient (g soil/cm<sup>3</sup> air)

H = Chemical specific Henry's law constant (atm-m<sup>3</sup>/mol)

Kd = Koc x OC soil-water partition coefficient

Koc= Chemical specific organic carbon partition coefficient

OC = 0.02 soil organic carbon content fraction

T = 790000000 s exposure interval

SSL Eqn:

Notes:

DAF	20.00
OC (site specific organic carbon)=	0.2%
n (porosity) <sup>c</sup> =	0.43
ps (soil particle den. kg/L) <sup>c</sup> =	2.65
0w (water-filled soil por) <sup>c</sup> =	0.3
0a (air-filled soil por) <sup>c</sup> = n - 0w	0.13
pb (dry soil bulk den. kg/L) <sup>c</sup> =	1.5

<sup>a</sup>H is set to zero for metals, with the exception of mercury

<sup>b</sup>equation 4-10, Supplemental SSG (USEPA 2002) (p. 4-28),  $SSL = Cw * (Kd + ((0w + 0a * H') / pb))$

<sup>c</sup>Default Soil Screening Guidance Values

NA = No Appendix III Groundwater Concentration available; SSL cannot be calculated.

SPLP:

Location	Tetrachloroethene		Target L Conc.
	Total (mg/kg)	SPLP (mg/L)	
SB-32 (10 ft)	2.5	<0.005	0.005
SB-32 (2ft)	2.7	0.0053	0.0053
SB-33 (2 ft)	3.7	0.049	0.049
SB-34 (2 ft)	5.3	0.008	0.008
SB-34 (10 ft)	46	0.012	0.012
SB-33 (10 ft)	55	0.023	0.023

All SPLP results less than target leachage concentration.  
Thus, SSL set at highest total concentration.

TEL: (404) 315-9113  
FAX: (404) 315-8509

RE: TLC Cleaners

Dear Justin Vickery:

Order No: 1412I67

Analytical Environmental Services, Inc. received 22 samples on 12/19/2014 10:55:00 AM for the analyses presented in following report.

No problems were encountered during the analyses. Additionally, all results for the associated Quality Control samples were within EPA and/or AES established limits. Any discrepancies associated with the analyses contained herein will be noted and submitted in the form of a project Case Narrative.

AES' certifications are as follows:

-NELAC/Florida Certification number E87582 for analysis of Environmental Water, soil/hazardous waste, and Drinking Water Microbiology, effective 07/01/14-06/30/15.

-AIHA-LAP, LLC Laboratory ID: 100671 for Industrial Hygiene samples (Organics, Inorganics), Environmental Lead (Paint, Soil, Dust Wipes, Air), and Environmental Microbiology (Fungal) Direct Examination, effective until 09/01/15.

These results relate only to the items tested. This report may only be reproduced in full.

If you have any questions regarding these test results, please feel free to call.

*Jenifair*

# James Forrest

Mr. Justin Vickery  
EPS, Inc.  
1050 Crown Pointe Parkway, Suite 550  
Atlanta, GA 30338

H&P Project: EPS121914-12  
Client Project: TLC Cleaners / Marietta, GA

Dear Mr. Justin Vickery:

Enclosed is the analytical report for the above referenced project. The data herein applies to samples as received by H&P Mobile Geochemistry, Inc. on 19-Dec-14 which were analyzed in accordance with the attached Chain of Custody record(s).

The results for all sample analyses and required QA/QC analyses are presented in the following sections and summarized in the documents:

- Sample Summary
- Case Narrative (if applicable)
- Sample Results
- Quality Control Summary
- Notes and Definitions / Appendix
- Chain of Custody

Unless otherwise noted, all analyses were performed and reviewed in compliance with our Quality Systems Manual and Standard Operating Procedures. This report shall not be reproduced, except in full, without the written approval of H&P Mobile Geochemistry, Inc.

We at H&P Mobile Geochemistry, Inc. sincerely appreciate the opportunity to provide analytical services to you on this project. If you have any questions or concerns regarding this analytical report, please contact me at your convenience at 760-804-9678.

Sincerely,

A handwritten signature in black ink that reads "Janis Villarreal".

**ANALYTICAL REPORT FOR SAMPLES**

Sample ID	Laboratory ID	Matrix	Date Sampled	Date Received
14351-SG-1	E412086-01	Vapor	17-Dec-14	19-Dec-14
14351-SG-2	E412086-02	Vapor	17-Dec-14	19-Dec-14
14351-SG-3	E412086-03	Vapor	17-Dec-14	19-Dec-14
14351-SG-Dup	E412086-04	Vapor	17-Dec-14	19-Dec-14

Due to the presence of elevated analyte concentrations, all samples were analyzed using H&P 8260SV rather than EPA Method TO-15.

The following EPA Method TO-15 analytes are not reported by H&P 8260SV:

Dichlorotetrafluoroethane

Carbon Disulfide

4-Ethyltoluene

### Appendix

H&P Mobile Geochemistry, Inc. is approved as an Environmental Testing Laboratory (Certification # L11-175) in accordance with the DoD-ELAP program. H&P is approved by the State of Arizona under Certification Numbers AZM758 and AZ0779. H&P is approved as an Environmental Laboratory in conformance with the Environmental Laboratory Accreditation Program (CA) for the category of Volatile and Semi-Volatile Organic Chemistry of Hazardous Waste for the following methods:

Certificate# 2741, 2743, 2579, 2754 & 2740 approved for EPA 8260 and LUFT GC/MS  
Certificate# 2742, 2745, & 2741 approved for LUFT  
Certificate# 2745 & 2742 approved for EPA 418.1

H&P Mobile Geochemistry, Inc. is approved as an Environmental Laboratory in conformance with the National Environmental Accreditation Conference Standards for the category Environmental Analysis Air and Emissions for the following analytes and methods:

Hexachlorobutadiene by EPA TO-15 & TO-14A  
1,2,4-Trichlorobenzene by EPA TO-15 & TO-14A  
1,2-Dichlorobenzene by EPA TO-15 & TO-14A

RE: TLC Cleaners

Dear Justin Vickery:

Order No: 1502A03

Analytical Environmental Services, Inc. received 35 samples on 2/12/2015 8:50:00 AM for the analyses presented in following report.

No problems were encountered during the analyses. Additionally, all results for the associated Quality Control samples were within EPA and/or AES established limits. Any discrepancies associated with the analyses contained herein will be noted and submitted in the form of a project Case Narrative.

AES' certifications are as follows:

-NELAC/Florida Certification number E87582 for analysis of Environmental Water, soil/hazardous waste, and Drinking Water Microbiology, effective 07/01/14-06/30/15.

-AIHA-LAP, LLC Laboratory ID: 100671 for Industrial Hygiene samples (Organics, Inorganics), Environmental Lead (Paint, Soil, Dust Wipes, Air), and Environmental Microbiology (Fungal) Direct Examination, effective until 09/01/15.

These results relate only to the items tested. This report may only be reproduced in full.

If you have any questions regarding these test results, please feel free to call.

Nick Z. Jessup

# Nicole Jessup

## Sample/Cooler Receipt Checklist

Client Env. Planning Specialists

Work Order Number 1502A03

Checklist completed by Tanna Pacurar Date 2/12/15

Carrier name: FedEx  UPS  Courier  Client  US Mail  Other \_\_\_\_\_

Shipping container/coolers in good condition? Yes  No  Not Present

Custody seals intact on shipping container/coolers? Yes  No  Not Present

Custody seals intact on sample bottles? Yes  No  Not Present

Container/Temp Blank temperature in compliance? (0°≤6°C)\* Yes  No

Cooler #1 3.1 Cooler #2 3.5 Cooler #3 \_\_\_\_\_ Cooler #4 \_\_\_\_\_ Cooler #5 \_\_\_\_\_ Cooler #6 \_\_\_\_\_

Chain of custody present? Yes  No

Chain of custody signed when relinquished and received? Yes  No

Chain of custody agrees with sample labels? Yes  No

Samples in proper container/bottle? Yes  No

Sample containers intact? Yes  No

Sufficient sample volume for indicated test? Yes  No

All samples received within holding time? Yes  No

Was TAT marked on the COC? Yes  No

Proceed with Standard TAT as per project history? Yes  No  Not Applicable

Water - VOA vials have zero headspace? No VOA vials submitted  Yes  No

Water - pH acceptable upon receipt? Yes  No  Not Applicable

Adjusted? \_\_\_\_\_ Checked by \_\_\_\_\_

Sample Condition: Good  Other(Explain) \_\_\_\_\_

(For diffusive samples or AIHA lead) Is a known blank included? Yes  No

**See Case Narrative for resolution of the Non-Conformance.**

\* Samples do not have to comply with the given range for certain parameters.

## ANALYTICAL ENVIRONMENTAL SERVICES, INC.

March 09, 2015

Justin Vickery  
Environmental Planning Specialists, Inc.  
1050 Crown Pointe Parkway  
Atlanta GA 30338

TEL: (404) 315-9113  
FAX: (404) 315-8509

RE: TLC Cleaners

Dear Justin Vickery: Order No: 1503054

Analytical Environmental Services, Inc. received 3 samples on 3/2/2015 12:00:00 AM for the analyses presented in following report.

No problems were encountered during the analyses. Additionally, all results for the associated Quality Control samples were within EPA and/or AES established limits. Any discrepancies associated with the analyses contained herein will be noted and submitted in the form of a project Case Narrative.

AES' certifications are as follows:

-NELAC/Florida Certification number E87582 for analysis of Environmental Water, soil/hazardous waste, and Drinking Water Microbiology, effective 07/01/14-06/30/15.  
-AIHA-LAP, LLC Laboratory ID: 100671 for Industrial Hygiene samples (Organics, Inorganics), Environmental Lead (Paint, Soil, Dust Wipes, Air), and Environmental Microbiology (Fungal) Direct Examination, effective until 09/01/15.

These results relate only to the items tested. This report may only be reproduced in full.

If you have any questions regarding these test results, please feel free to call.

A handwritten signature in black ink that reads "Nicole Jessup".

Nicole Jessup  
Project Manager

**Client:** Environmental Planning Specialists, Inc.  
**Project:** TLC Cleaners  
**Lab ID:** 1503054

**Case Narrative**

Per Justin Vickery via phone 3/2/15, samples 15042-SB-29-2, 15042-SB-29-6, 15042-SB-29-10 should be analyzed out of hold for total VOCs at a standard TAT.

Volatile Organic Compounds Analysis by Method 8260B:

Samples 1503054-001A, -002A, & -003A were extracted and/or analyzed outside holding time of 14 days. Analysis was requested by client after holding time had expired.

Checklist completed by Laura Pacurar 2/12/15

Signature

Date

Carrier name: FedEx  UPS  Courier  Client  US Mail  Other \_\_\_\_\_

Shipping container/cooler in good condition? Yes  No  Not Present

Custody seals intact on shipping container/cooler? Yes  No  Not Present

Custody seals intact on sample bottles? Yes  No  Not Present

Container/Temp Blank temperature in compliance? (0°≤6°C)\* Yes  No

Cooler #1 3.1 Cooler #2 3.5 Cooler #3 \_\_\_\_\_ Cooler #4 \_\_\_\_\_ Cooler #5 \_\_\_\_\_ Cooler #6 \_\_\_\_\_

Chain of custody present? Yes  No

Chain of custody signed when relinquished and received? Yes  No

Chain of custody agrees with sample labels? Yes  No

Samples in proper container/bottle? Yes  No

Sample containers intact? Yes  No

Sufficient sample volume for indicated test? Yes  No

All samples received within holding time? Yes  No

Was TAT marked on the COC? Yes  No

Proceed with Standard TAT as per project history? Yes  No  Not Applicable

Water - VOA vials have zero headspace? No VOA vials submitted  Yes  No

Water - pH acceptable upon receipt? Yes  No  Not Applicable

Adjusted? \_\_\_\_\_ Checked by \_\_\_\_\_

Sample Condition: Good  Other(Explain) \_\_\_\_\_

(For diffusive samples or AIHA lead) Is a known blank included? Yes  No

**See Case Narrative for resolution of the Non-Conformance.**

\* Samples do not have to comply with the given range for certain parameters.

RE: TLC Cleaners

Dear Justin Vickery:

Order No: 1505644

Analytical Environmental Services, Inc. received 2 samples on 5/7/2015 2:40:00 PM for the analyses presented in following report.

No problems were encountered during the analyses. Additionally, all results for the associated Quality Control samples were within EPA and/or AES established limits. Any discrepancies associated with the analyses contained herein will be noted and submitted in the form of a project Case Narrative.

AES' certifications are as follows:

-NELAC/Florida Certification number E87582 for analysis of Environmental Water, soil/hazardous waste, and Drinking Water Microbiology, effective 07/01/14-06/30/15.

-AIHA-LAP, LLC Laboratory ID: 100671 for Industrial Hygiene samples (Organics, Inorganics), Environmental Lead (Paint, Soil, Dust Wipes, Air), and Environmental Microbiology (Fungal) Direct Examination, effective until 09/01/15.

These results relate only to the items tested. This report may only be reproduced in full.

If you have any questions regarding these test results, please feel free to call.

Nick Z. Jessup

**Case Narrative**

Three sets of Trip Blanks (6 vials) were received; however, only 2 vials were indicated on the Chain of Custody (COC). Trip Blank samples have been placed on hold per the COC.

"Trip Blank" and sample "15127-P23-S1-7" were placed on hold per instruction listed on the COC.

## Sample/Cooler Receipt Checklist

Client Env. Planning

Work Order Number 1505L01

Checklist completed by JWM Signature

Date 5/22/15

Carrier name: FedEx  UPS  Courier  Client  US Mail  Other

Shipping container/coolers in good condition? Yes  No  Not Present

Custody seals intact on shipping container/coolers? Yes  No  Not Present

Custody seals intact on sample bottles? Yes  No  Not Present

Container/Temp Blank temperature in compliance? (0°≤6°C)\* Yes  No

Cooler #1 3.2°C Cooler #2  Cooler #3  Cooler #4  Cooler #5  Cooler #6

Chain of custody present? Yes  No

Chain of custody signed when relinquished and received? Yes  No

Chain of custody agrees with sample labels? Yes  No

Samples in proper container/bottle? Yes  No

Sample containers intact? Yes  No

Sufficient sample volume for indicated test? Yes  No

All samples received within holding time? Yes  No

Was TAT marked on the COC? Yes  No

Proceed with Standard TAT as per project history? Yes  No  Not Applicable

Water - VOA vials have zero headspace? No VOA vials submitted Yes  No

Water - pH acceptable upon receipt? Yes  No  Not Applicable

Adjusted?  Checked by

Sample Condition: Good  Other(Explain)

(For diffusive samples or AIHA lead) Is a known blank included? Yes  No

See Case Narrative for resolution of the Non-Conformance.

\* Samples do not have to comply with the given range for certain parameters.

TEL: (404) 315-9113  
FAX: (404) 315-8509

RE: TLC Cleaners

Dear Justin Vickery:

Order No: 1507324

Analytical Environmental Services, Inc. received 13 samples on 7/6/2015 11:36:00 AM for the analyses presented in following report.

No problems were encountered during the analyses. Additionally, all results for the associated Quality Control samples were within EPA and/or AES established limits. Any discrepancies associated with the analyses contained herein will be noted and submitted in the form of a project Case Narrative.

AES' certifications are as follows:

-NELAC/Florida Certification number E87582 for analysis of Environmental Water, soil/hazardous waste, and Drinking Water Microbiology, effective 07/01/15-06/30/16.

-AIHA-LAP, LLC Laboratory ID: 100671 for Industrial Hygiene samples (Organics, Inorganics), Environmental Lead (Paint, Soil, Dust Wipes, Air), and Environmental Microbiology (Fungal) Direct Examination, effective until 09/01/15.

These results relate only to the items tested. This report may only be reproduced in full.

If you have any questions regarding these test results, please feel free to call.

Nick Z. Jessup

# Nicole Jessup

**Client:** Environmental Planning Specialists, Inc.  
**Project:** TLC Cleaners  
**Lab ID:** 1507324

**Case Narrative**

Volatile Organic Compounds Analysis by Method 8260B:

Percent recovery for the internal standard compound Pentafluorobenzene on sample 1507324-001 A was outside control limits biased low due to suspected matrix interference. All other internal standard recoveries were within control limits.

Sample/Cooler Receipt Checklist

Client ENV. Planning

Work Order Number 507324

Checklist completed by Miriam Pacurar Date 7/6/2015  
Signature

Carrier name: FedEx  UPS  Courier  Client  US Mail  Other \_\_\_\_\_

Shipping container/cooler in good condition? Yes  No  Not Present

Custody seals intact on shipping container/cooler? Yes  No  Not Present

Custody seals intact on sample bottles? Yes  No  Not Present

Container/Temp Blank temperature in compliance? (0°≤6°C)\* Yes  No

Cooler #1 3.4°C Cooler #2 3.1°C Cooler #3 \_\_\_\_\_ Cooler #4 \_\_\_\_\_ Cooler #5 \_\_\_\_\_ Cooler #6 \_\_\_\_\_

Chain of custody present? Yes  No

Chain of custody signed when relinquished and received? Yes  No

Chain of custody agrees with sample labels? Yes  No

Samples in proper container/bottle? Yes  No

Sample containers intact? Yes  No

Sufficient sample volume for indicated test? Yes  No

All samples received within holding time? Yes  No

Was TAT marked on the COC? Yes  No

Proceed with Standard TAT as per project history? Yes  No  Not Applicable

Water - VOA vials have zero headspace? No VOA vials submitted Yes  No

Water - pH acceptable upon receipt? Yes  No  Not Applicable

Adjusted? \_\_\_\_\_ Checked by \_\_\_\_\_

Sample Condition: Good  Other(Explain) \_\_\_\_\_

(For diffusive samples or AIHA lead) Is a known blank included? Yes  No

See Case Narrative for resolution of the Non-Conformance.

\* Samples do not have to comply with the given range for certain parameters.
