

**STATE OF GEORGIA
TIER 2 TMDL Implementation Plan (Revision # 1)**

Segment Name: Horse Creek

Date: June 15, 2007

River Basin: Ogeechee River Basin

Local Watershed Governments:

City of Rock Ford, Screven County, Georgia

I. INTRODUCTION

Total Maximum Daily Load (TMDL) Implementation Plans are platforms for evaluating and tracking water quality protection and restoration. These plans have been designed to accommodate continual updates and revisions as new conditions and information warrant. In addition, field verification of watershed characteristics and listing data has been built into the preparation of the plans. The overall goal of the plans is to define a set of actions that will help achieve water quality standards in the state of Georgia.

This implementation plan addresses the general characteristics of the watershed, the sources of pollution, stakeholders and public involvement, and education/outreach activities. In addition, the plan describes regulatory and voluntary practices/control actions (Best Management Practices, or BMPs) to reduce pollutants, milestone schedules to show development of the BMPs (*measurable milestones*), and a monitoring plan to determine BMP effectiveness.

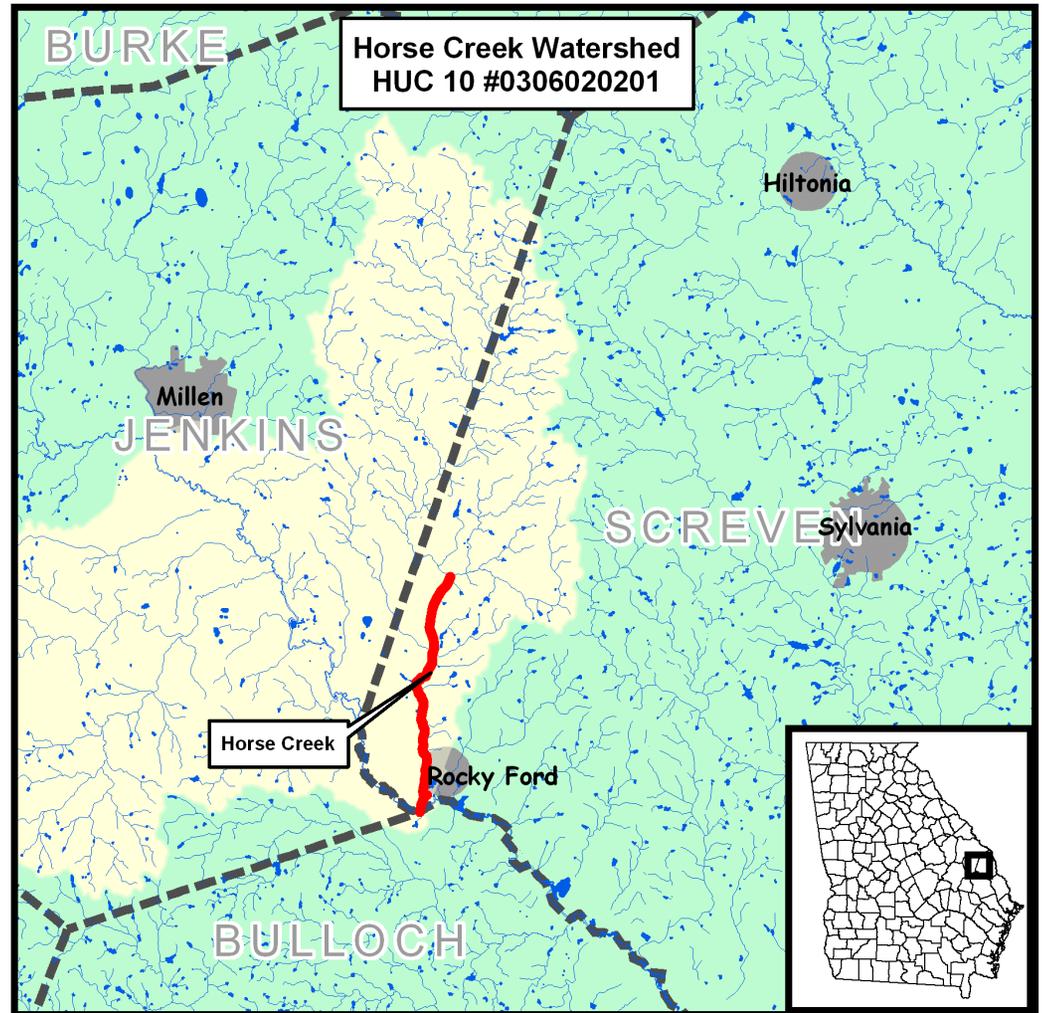

Table 1. IMPAIRED SEGMENTS IN THE HUC 10 WATERSHED

IMPAIRED SEGMENT	IMPAIRED SEGMENT LOCATION	EXTENT (mi/ac)	CRITERIA VIOLATED	EVALUATION
Horse Creek	Little Horse Creek to Ogeechee River near Rocky Ford	5 miles	Fecal Coliform	Not Supporting
Horse Creek*	Little Horse Creek to Ogeechee River near Rocky Ford	5 miles	Dissolved Oxygen*	Not Supporting

* Plan to be done by EPD

II. GENERAL INFORMATION ABOUT THE HUC 10 AND THE SPECIFIC SEGMENT WATERSHED

Following is a review of watershed characteristics including its size and location, political jurisdictions, physical features, land uses, and identified potential sources of pollutants that could cause or contribute to violations of water quality standards addressed in this TMDL Implementation Plan. New conditions or changes in information contained in the previous TMDL Implementation Plan should be in **bold** and underlined.

Horse Creek is a 5-mile segment located in southwestern Screven County that begins at its confluence with Little Horse Creek and flows southward through a portion of the City of Rocky Ford until it joins the Ogeechee River at the Screven-Bulloch County line. Horse Creek has a beneficial water use classification of fishing and is currently listed as an impaired water body.

According to the 2005 EPA Total Maximum Daily Load Evaluation for Twenty-one Stream Segments in the Ogeechee River Basin for Fecal Coliform, the total land coverage in the stream segment watershed is 49,666 acres (coverage determined using data from the National Land Cover Dataset for Georgia and developed from Landsat Thematic Mapper Digital Images produced in 1995), and the land use categories include the following:

- *27,066 acres, or 54.5% of forest lands;*
- *14,771 acres, or 29.7% of agriculture lands;*
- *3,326 acres, or 6.7% of woody wetlands;*
- *2,679 acres, or 5.4% of lands described as transitional lands;*
- *1,437 acres, or 2.9% of pasture lands; and*
- *Less than 1%, or 387 acres are comprised of open water, residential uses, commercial/industrial uses, barren land, other grasses (urban, recreational), and emergent herbaceous wetlands.*

This is the most recent land use data available for the watershed. Screven County's comprehensive plan is scheduled for completion in 2009, and the land use data obtained from the plan may be helpful in updating this plan.

Horse Creek was sampled at the State Road 17 Bridge near Rocky Ford in 2002. Screven County was experiencing a severe drought in 2002 and many of the wells in the county went dry. Monitoring may be influenced by drought, and the Horse Creek watershed is very prone to be affected by drought conditions.

A field survey on February 26, 2007 was conducted at the bridge crossings on State Road 17 and on Thomasboro Road. Both indicated that the area was mostly cropland and planted pine, justifying that land uses have not changed much since the 2005 TMDL. The stream had a medium flow, tea-colored appearance, and normal surface conditions (no foam or slime). At the State Road 17 location, there were cleared areas on the bank where GDOT built the bridge. Very little residential development was observed at the survey sites and while driving between them. An official from the Natural Resources Conservation Service said there are around 50 to 60 homes scattered throughout the segment watershed that all utilize onsite septic disposal systems.

Screven County is a Local Issuing Authority for Erosion and Sedimentation permitting of land disturbing activities. The ordinance applies to land disturbing activities on one acre or more and permits are administered through the Screven County Zoning Office. The City of Rocky Ford submits such permits to the EPD East Central District.

III. CAUSES AND SOURCES OF SEGMENT IMPAIRMENT(S) LISTED IN TMDLs

Table 2 provides information contained in the current TMDL for the impaired water body. This includes the name and location of the impaired segment, the water quality criteria violated, and the wasteload and load allocations determined in the TMDL. Potential sources described in the TMDL may include domestic treatment facilities (M), industrial treatment facilities (I), urban runoff and sources (UR), and other nonpoint or unknown (NP) sources. By definition, “wasteload allocations” (WLA) are established for municipal and industrial treatment facilities and storm water discharges in permitted areas (WLA_{sw}), while “load allocations” (LA) are established for nonpoint sources. **Wasteload allocations are assigned by EPD during the NPDES permitting process. They are not part of EPD’s TMDL implementation planning process, which deals solely with non-point sources of pollutants.**

Table 2. WASTE LOAD AND LOAD ALLOCATIONS AND TMDLS FOR THE IMPAIRED SEGMENT

STREAM SEGMENT NAME	LOCATION	CRITERIA VIOLATED	WLA	WLA _{sw}	LA	TMDL
Horse Creek	Little Horse Creek to Ogeechee River near Rocky Ford	Fecal Coliform	N/A	N/A	3.63E+10	4.04E+10

Table 3 also contains information presented in the TMDLs that this plan is designed to address. This includes the criteria responsible for the impairment(s), the specific water quality standard(s) violated, potential sources/causes of impairment, and the needed reduction in source loads estimated in the TMDL.

Table 3. SOURCES OF IMPAIRMENT INDICATED IN THE TMDLs

CRITERIA VIOLATED	WQ STANDARD	SOURCES OF IMPAIRMENT	NEEDED % REDUCTION (FROM THE TMDL)
Fecal Coliform Bacteria (FC)	1,000 per 100 ml (geometric mean Nov-April) 200 per 100 ml (geometric mean May-Oct)	Wildlife Agricultural Livestock <ul style="list-style-type: none"> • Animal Grazing • Animal Access to Stream • Application of Manure to pastureland and cropland Urban Development <ul style="list-style-type: none"> • Leaking sanitary sewer lines • Leaking septic systems • Land Application Systems • Landfills 	38 percent

IV. IDENTIFICATION AND RANKING OF POTENTIAL SOURCES OF IMPAIRMENT

This section identifies and describes, in order of importance, the extent and relative contributions from sources of pollutants listed in Table 2 and identified through this TMDL implementation planning process. This description includes information presented in the current TMDL or TMDL implementation plan and/or collected during the TMDL implementation planning process that either verifies or alters estimates of contributions from the sources listed in the TMDL and repeated in Table 2.

In the Nonpoint Source Assessment, the TMDLs lists three potential sources of impairments: wildlife, agricultural livestock, and urban development. Visual field surveys were conducted to evaluate the stream condition and the presence of any of these potential sources of impairments. Aerial photos provided by Georgia EPD show that the buffers are predominantly intact along the impaired stream segment, with the adjacent land coverage along the length of the corridor showing very little signs of disturbance or development.

Wildlife contributors are potential candidates for the elevated fecal coliform levels based on reports that wild hogs, deer, beavers, and raccoons are prevalent within Screven County and the watershed. Waterfowl would also be a potential contributor. Geese were described as a nuisance in the area, especially for farmers. Most of the streams are narrow with thick tree canopies and very shallow, which are not expected to provide the best habitat; however, activity provided by beavers to create ponds and increase the area of flooded forested wetlands would create some of the best habitat to support notable waterfowl numbers. Within the segment watershed, there are extensive signs of agricultural activity, most likely contributed to row crops since there are no registered confined animal feeding operations within Screven County. However, none of this activity was observed along the impaired stream segment. The application of manure to pastureland and cropland is not a practice that occurs in this watershed, and is thus eliminated from the nonpoint source assessment for the purposes of this implementation plan. Urban development within the watershed

is low, and there are an estimated number of 50-60 homes within the watershed, all of which are on septic systems. Failing systems are usually identified through complaint, but since residential development is sparse in the watershed, a problem may not be reported or repaired for some time.

Table 4 ranks potential sources of water quality impairments in order of importance as determined through this TMDL implementation planning process. A “rating scale” of 0.5 to 5 has been developed for this activity. “Rating A” is an estimate of the geographic extent of each potential nonpoint source as a percentage of the contributing watershed area, percent of stream miles affected, or number of acres. “Rating B” is an estimate of the relative contribution from each major source of the pollutant causing the impairment. The overall relative “Impact Ratings” for each source is calculated by multiplying Rating A by Rating B.

The following table provides guidance for rating the estimated extent (Rating A) and portion of the contribution (Rating B) from each potential source and cause.

Rating A: Estimated Geographic Extent of the Source or Cause in the Contributing Watershed	Rating B: Estimated Portion of Contribution from the Source to the Pollutant Load Causing the Impairment	Rating
None or negligible (approximately 0-5%)	None or negligible (approximately 0-5%)	0.5
Scattered or low (approximately 5-20%)	Scattered or low (approximately 5-20%)	1
Medium (approximately 20-50%)	Medium (approximately 20-50%)	3
Widespread or high (approximately 50% or more)	Widespread or high (approximately 50% or more)	5
Unknown	Unknown	UNK

Comments on the source of information used to determine the extent or contribution are entered in the applicable columns in Table 4. Appropriate management actions (i.e. watershed assessments, increased water quality monitoring, etc.) are suggested where available information is deemed inadequate to estimate the extent and relative contribution of significant potential sources.

Table 4. EVALUATION OF POTENTIAL SOURCES OF STREAM SEGMENT IMPAIRMENT
CRITERION: Fecal Coliform Bacteria.

POTENTIAL SOURCES	ESTIMATED EXTENT OF CONTRIBUTION		ESTIMATED PORTION OF CONTRIBUTION		IMPACT RATING (A X B)
	Comments	Rating (A)	Comments	Rating (B)	
Wildlife	Throughout watershed.	3	Reports of wild hog and beaver populations migrating to this portion of the Ogeechee River Basin; Carcasses of deer reported in or near segment watershed. Screven County has experienced flooding along roads from beaver activity.	1	3
Agricultural Livestock	No activity observed along accessible portion of stream segment; however, commercial fertilizers are said to be used instead of manure/litter	1	Low.	1	1
Urban Development (residential)	Relatively low – only 50-60 residential units located within the watershed.	1	Low. However, failing systems may not be identified for quite some time, and there is no inspection or maintenance schedule required at the local level.	1	1

V. STAKEHOLDERS

Public involvement through the stakeholder process is a vital component of TMDL implementation planning. Stakeholders with local knowledge can provide valuable information regarding their communities, impaired waters, potential sources of impairments, and BMPs that might be employed to improve water quality. This section describes outreach activities engaging local stakeholders in the TMDL implementation plan preparation process, including the number of attendees, meeting dates, and major findings, and recommendations.

The first stakeholder meeting was announced through public notice published in the local newspaper, the Sylvania Telephone, as well as through invitation letters addressed to a group of initially identified stakeholders that included local officials, members of the Natural Resources Conservation Service, environmental and special interest groups, and representatives from the Coastal Health district. The meeting will be held on Thursday, May 31, 2007, from 6:00-8:00 p.m. at the Bulloch County Center for Agriculture, 151 Langston Chapel Road in Statesboro.

The CGRDC presented information on the TMDL planning process and the development of the plan. Ten people were in attendance, which included two representatives from the Screven County Extension Service, four from the NRCS, one from the Central Savannah River RC&D, one from GSWCC, one representing Screven County (Public Works Director), and the Executive Director of the Ogeechee-Canoochee Riverkeeper.

We encouraged input from those who are familiar with the watershed and how to address the potential nonpoint source contributors of fecal coliform bacteria. Through discussion with the group, a potential nonpoint source – the application of manure to pastureland/cropland – was eliminated.

The group also said that Screven County is going through another severe drought. Portions of the segment watershed were described as dry – with no water in the creek beds – just a few months after the visual surveys in February.

Additional meetings and outreach activities are expected to occur during the month of August.

Following is a list of advisory committee or watershed group members who participated in this TMDL implementation planning process.

Table 5. STAKEHOLDER ADVISORY GROUP MEMBERS

NAME/ORG	ADDRESS	CITY	STATE	ZIP	PHONE	E-MAIL
Tom Joyner - GSWCC	151 Langston Chapel Rd	Statesboro	GA	30458	912-681-5241	tjoyner@gaswcc.org

Jason Gatch - NRCS	151 Langston Chapel Rd	Statesboro	GA	30458	912-871-2600	jason.gatch@ga.usda.gov

Major stakeholders in the watershed are listed in Appendix A.

VI. MANAGEMENT MEASURES AND ACTIVITIES

Table 6A identifies significant BMPs that either have been or may be implemented in the future to address sources of impairment. The BMPs are in Column 1, organization responsible for implementation in Column 2, description of the measure(s) in Column 3, and sources of funding or other resources in Column 4. Column 5 contains one of the following status codes: (A) installed and active; (AE) active and will be enhanced or expanded; (R) required by law, regulation or permit conditions; (P) currently proposed, but not required; (NR) new recommendation; or (NE) enhanced existing recommendation. Column 6 shows the approximate date when the measure has or will be implemented. Column 7 contains an “extent” rating for the BMP or the percentage of individual sources to which the BMP has or will be applied (see the following table). Column 8 is an estimated BMP “effectiveness” rating that may be either provided by local experts or derived from technical guidance information. The following table provides guidance for rating the estimated management measure “extent” and “effectiveness” of each significant potential source.

BMP Extent (Percentage of Sources to Which the BMP Has or Will Be Applied)	BMP Effectiveness (Percent Removal of Pollutant by the BMP)	Rating
None or negligible (approximately 0-5%)	None or negligible (approximately 0-5%)	.5
Scattered or low (approximately 5-20%)	Low to medium (approximately 5-25%)	1
Medium (approximately 20-50%)	Medium to High (approximately 25-75%)	3
Widespread or high (approximately 50% or more)	High (approximately 75% or more)	5
Unknown	Unknown	UNK

--------------------------------------	--	-----------------------	--	--	--	--	--

Work Sheet for Table 6B is designed to evaluate the capacity of existing, proposed, or pending BMPs to achieve nonpoint source load reductions specified in the TMDL as well as other BMPs that might be implemented to further reduce pollutant loadings from significant sources. This approach is intended to provide a usable local guide to adopt BMPs for achieving water quality goals, establishing priorities for grant or loan programs, and identifying priorities for local watershed assessments and protection plans.

Columns 1 and 2 contain significant potential sources and their corresponding impact ratings (from Table 3). Column 3 lists significant BMPs applicable to each significant source (from Table 6A). Column 4 is a very brief “evaluation summary”, developed in conjunction with local stakeholders, of whether existing or proposed BMPs will achieve load reductions identified in the TMDL. Column 5 contains a summary of additional information needed to further determine significant sources and their relative contributions, and could contain recommendations for water quality monitoring, watershed assessments, or additional data acquisition. If current or proposed management measures are judged inadequate to achieve the load reductions for significant sources identified in the TMDL, additional management measures that could effectively reduce pollutant loads should be listed in “Additional Information / Measures Needed” (Column 5) and included as new enhanced existing recommendations (NE) or new recommendations (NR) under “Status Code (5)” in Table 6B and under “Milestones” (Table 9).

**Work Sheet for Table 6B. EVALUATION OF GENERAL AND SPECIFIC MANAGEMENT MEASURES AND ACTIVITIES
APPLICABLE TO EACH CRITERION**

APPLICABLE TO FECAL COLIFORM BACTERIA

SIGNIFICANT POTENTIAL SOURCES (1) (From Table 3)	IMPACT RATING (2) (From Table 3)	APPLICABLE BMPs (3) (From Table 6A)	EVALUATION SUMMARY (4)	ADDITIONAL INFORMATION / MEASURES NEEDED (5)
Wildlife	3	Wild hog management	Reducing wild hog population could possibly reduce fecal coliform loads and allow for natural buffer and wetlands restoration to occur.	Educate hunters and property owners on the risks of dumping animal carcasses in streams Possibly develop watershed assessment and protection plan.
Agricultural Livestock	1	Several NRCS sponsored measures.	Many could be applicable to provide education and assistance for fencing to prevent stream access and buffer restoration.	
Urban Development (septic, illicit discharges, illegal pumping)	1	Regulation of On-Site Sewage Management Systems, IAW O.C.G.A. 290-5-26	Ensures that system design and installation guidelines are met; however, system malfunctions may not be corrected for long periods of time	Develop county-wide inventory for maintenance scheduling and adopt ordinances that require pump-outs at least every five years.
		Commercial Waste Transporter Law (12-15-21)	Illegal pumping (emptying) of waste transport trucks (septic sludge, fats, oils, and grease) into the rural streams and creeks may not necessarily be a practice in Screven County, but local officials should ensure that the applicable state laws are followed and establish local ordinances if needed.	Develop County-wide Greenspace Plan. Update local stormwater management regulations as new technologies and BMPs develop and improve. Incorporate local regulations similar to the state regulations for commercial waste transporters.

Table 6B identifies new enhancements to existing measures (NE) or new recommended measures (NR) that could improve or supplement current or proposed management measures listed in Table 6A, where current and required measures have been judged inadequate for achieving the load reductions from significant sources identified in the TMDL. After further evaluation generated in the Work Sheet for Table 6B, the additional management measures proposed in Table 6B have been determined more effective in reducing pollutant loads from the most likely sources of impairment. The BMPs are listed in Column 1, organization responsible for implementation in Column 2, description of the measure(s) in Column 3, and sources of funding or other resources in Column 4. Column 5 contains one of the following status codes: (NE) enhanced existing measure or (NR) new recommended measure. Column 6 shows the approximate date when the measure has or will be implemented. Column 7 contains an “extent” rating for the BMP or the percentage of individual sources to which the BMP could be applied (see the following table). Column 8 is an estimated BMP “effectiveness” rating that may be either provided by local experts or derived from technical guidance information. The following table provides guidance for rating the estimated management measure “extent” and “effectiveness” of each significant potential source.

BMP Extent (Percentage of Sources to Which the BMP Has or Will Be Applied)	BMP Effectiveness (Percent Removal of Pollutant by the BMP)	Rating
None or negligible (approximately 0-5%)	None or negligible (approximately 0-5%)	.5

Scattered or low (approximately 5-20%)	Low to medium (approximately 5-25%)	1
Medium (approximately 20-50%)	Medium to High (approximately 25-75%)	3
Widespread or high (approximately 50% or more)	High (approximately 75% or more)	5
Unknown	Unknown	UNK

(COMPILED FROM TABLE 6A AND COLUMN 5 IN WORK SHEET FOR TABLE 6B)**

APPLICABLE TO FECAL COLIFORM BACTERIA

BEST MANAGEMENT PRACTICE (1)	RESPONSIBILITY (2)	DESCRIPTION (3)	SOURCES OF FUNDING & RESOURCES (4)	STATUS CODE (5)	TARGET DATE (6)	EXTENT RATING (7)	EFFECT. RATING (8)
Outreach – Education – Publication	State, RDC, local, NRCS, County Extension Service	Develop program to educate hunters and property owners to discourage the placement (illegal dumping) of animal (both wild game and domestic) carcasses in or near bodies of water, specifically streams on the 305(b)/303(d) list. Publication in Georgia Outdoor News, Georgia Outdoor News Network, local paper.	State, Federal, local	NR	2010	UNK	UNK
Develop Greenspace Plan	Screven County	Identify areas in the county that need to be preserved from future development. Preserving land helps land value, and preserving watershed can protect water quality for future residents.	Local, State	NR	2009	UNK	UNK

Plan for Horse Creek
HUC 10 # 0306020201

Coastal Supplement to the Georgia Stormwater Management Manual (GSMM).	EDP, CRD, Center for Watershed Protection, Savannah-Chatham County MPC	Consequently, the GSMM does not specifically address many of the physiographic features (e.g. flat terrain, shallow groundwater), and water quality concerns (e.g. nitrogen, bacteria) of the coast. The State has decided to develop the Coastal Stormwater Supplement (CSS) to provide stormwater management guidance that is better adapted to the coastal zone.	State	NE	2007	UNK	UNK
Wild Hog Management Assistance	USDA Wildlife Services (Athens)	Developed programs to reduce or eliminate localized wild hog populations.	State, local	NR	2010	UNK	UNK
Landowner education and Fencing to prevent stream access from domestic animals	NRCS, local, private landowners	Although domestic animal access to stream was not observed in the Horse Creek watershed, the practice was observed in several areas throughout the Lower Ogeechee Basin. Funding for such a project should therefore be considered for the entire basin.	State, local, 319 funds	NR	2010	5	5
Develop Horse Creek Watershed Assessment and Protection Plan	Screven County, State, CGRDC	Provide an up-to-date assessment of conditions in the watershed. May also help to update and verify success of the TMDL Implementation Plan.	State, local	NR	2010	UNK	UNK

VII. MONITORING PLAN

Water quality monitoring serves several purposes, including obtaining data to determine sources of pollution, supporting management decisions, describing baseline conditions, and evaluating the effects of management measures on water quality. This section describes parameters to be monitored, status, whether monitoring is required for watershed assessments or storm water permits, and the intended purpose. Submittal of a Sampling and Quality Assurance Plan (SQAP) for EPD approval is mandatory if monitoring data is to be used in support of listing decisions.

Water quality data used to evaluate the criteria violated are less than five years old? Yes [X] No [].

Table 7. MONITORING PLAN

PARAMETER (S) TO BE MONITORED	RESPONSIBLE ENTITY	STATUS (CURRENT, PROPOSED, OR RECOMMENDED)	TIME FRAME		PURPOSE (If for listing assessment, date of SQAP submission)
			START	END	
Fecal Coliform	EPD, USGS	Current	Every 5 years (2007)		Ongoing monitoring for listing, delisting or impaired streams
Multiple	Screven County, CGRDC, other regional organization	Proposed	2008	2017	Obtain SQAP approval to perform monitoring in order to support/revise the Implementation Plan and listing/delisting purposes.

VIII. PLANNED OUTREACH FOR IMPLEMENTATION

Table 8 lists and describes outreach activities that will be conducted to support this implementation plan, or help to improve water quality in the segment watershed. Identify either the projected start date or completion date. At a minimum, this is to include all education/outreach activities defined in the contractual Scope of Work for TMDL Implementation Plan development or revisions.

Table 8. PLANNED OUTREACH FOR IMPLEMENTATION

RESPONSIBILITY	DESCRIPTION	AUDIENCE	START OR COMPLETION DATE
CGRDC, Screven County, NRCS, stakeholders	Identify sources of funding for BMP demonstration projects (319 program) in the Lower Ogeechee River Basin.	Private property owners, local government officials	2008 funding cycle.
CGRDC, Screven County Board of Education	Develop outreach program concerning stream cleanup efforts to be used as volunteer credits for graduation.	Board of Education, teachers, students and parents of the local school system	Proposed
Screven County/Citizens of Screven County	Adopt-A-Stream Program. Efforts to raise public awareness about water quality to enlist the public support and action in monitoring and protecting water resources.	Concerned residents	Proposed
Screven County, CGRDC	Obtain a SQAP and submit water quality sample results to EPD.	EPD, local	Proposed
State, CGRDC, local, NRCS, County Extension Service	Education on the potential adverse impacts that the dumping of animal carcasses in water bodies may have on water quality.	Hunters, land owners, concerned citizens	Proposed

IX. MILESTONES AND MEASURES OF PROGRESS FOR BEST MANAGEMENT PRACTICES (BMPs) AND OUTREACH

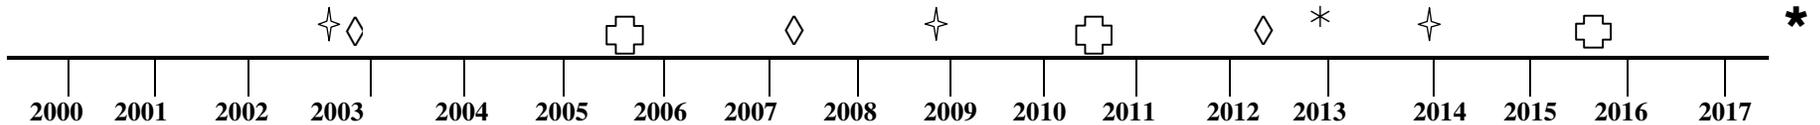

Table 9 tracks and reports progress of significant management measures identified in Tables 6A, 6B, and other sections of this plan, including outreach, additional monitoring and assessments, and enhancement or installation of BMPs. Significant activities and the target dates of accomplishment are listed under STATUS, and comments are provided on the effectiveness of the management measure, the degree of community support, what was learned, how the measure might be improved in the future, and other pertinent observations.

Table 9. MILESTONES AND MEASURES OF PROGRESS

BEST MANAGEMENT PRACTICE	RESPONSIBLE ORGANIZATION	STATUS		COMMENT
		PROPOSED	INSTALLED	
Obtain local/regional SQAP	Screven County, CGRDC	2008		Ensure that monitoring samples would be approved by EPD for listing/delisting purposes.
Install Fencing to eliminate livestock access to stream and restore buffers	NRCS, Screven County, landowners	2009		Develop project application so that funding would be for a basin-wide (Lower Ogeechee River Basin) BMP demonstration (if determined most effective)

PROJECTED ATTAINMENT DATE

The projected date to attain and maintain water quality standards in this watershed is 10 years from receipt of this TMDL Implementation Plan by Georgia EPD.

- ✦ Projected EPD Basin Group Monitoring
New TMDLs Completed
- ◇ Revised or Updated TMDL Implementation Plan Received by EPD
- ⊕ Evaluation of Implementation Plan/water Quality Improvement
- * Project Attainment for Plans Prepared in 2002
- * Project Attainment for Plans Prepared in 2007

APPENDIX B.

UPDATES TO THIS PLAN

If this is a major or minor revision of an existing plan, this section will describe the date, section or table updated, and a summary of what was changed and why. Georgia EPD has developed guidelines for revising existing TMDL implementation plans.

This is a new tier 2 TMDL Implementation plan.

APPENDIX C. FIELD SURVEYS, NOTES, PHOTOGRAPHS, AND MAPS.

Horse Creek at SR 17.

Low levels at the SR 17 Bridge crossing.

Horse Creek at Thomasboro Road.

Horse Creek at Thomasboro Road Bridge.

Visual field surveys were conducted to evaluate the stream condition and the presence of any of these potential sources of impairments. The area was heavily forested and although 50 to 60 homes were said to be located in the watershed, none were observed to be located near the two access points.
