Subject: No New Coal in Georgia

Mr. Capp,

I am writing to express my concern over the proposed construction of the coal-fired power plant in Washington County. If built, this plant will harm Georgia's air and environmental quality and will divert excessive amounts of water from the Oconee River. Allowing this plant to be built would be a step in the wrong direction for the state of Georgia. Instead, I urge the Georgia Environmental Protection Division to take a stronger stance on promoting investment in renewable energy sources, such as solar power. Our environment and our livelihoods depend on it.

Thank you for your consideration,

Chris Morphis
