Subject: RE: Yellow Pine Energy Company, SIP Application 19518, AIRS:06100001 - air dispersion modeling information

Brian,

I have received the modeling files from your consultant. I recall that, in addition to conducting your operating load assessment for worst-case impacts, I also volunteered to conduct your start-up emissions modeling for your six-hour cold start scenario. Have you been able to develop the hourly changes to CO emission rates, exit velocities and exhaust temperatures to characterize your start-up scenario?

Sincerely,

Pete Courtney
