R&B LANDFILL

COAL COMBUSTION RESIDUALS (CCR) MANAGEMENT PLAN ANNUAL UPDATE

PERMIT #: 006-009D (MSWL)

ANNUAL CCR MANAGEMENT PLAN AND DUST CONTROL REPORT

ATLANTIC COAST CONSULTING, INC.

March 2018

Table of Contents

This annual CCR management and dust control report was prepared in accordance with OCGA Solid Waste Management Rule 391-3-4-.07(5) and the Annual Coal Combustion Residuals (CCR) Management Plan and Dust Control Report Guidance Document provided by Georgia Department of Natural Resources, Environmental Protection Division (EPD) dated May 2018.

SUMMARY:

The R&B Landfill is composed of three distinct disposal areas identified as the East, Central, and West Disposal Units. The East Disposal Unit was closed and capped in 2006. The Central Disposal Unit is separated from the East Disposal Unit by Frank Bennett Road while the West Disposal Unit is separated from the Central Unit by Carlan Creek and is the current area of active waste placement. The current Design and Operation (D&O) plan was approved by EPD on January 23, 2017 with the current CCR Management Plan being established through a minor modification approved by Georgia's Environmental Protection Division (EPD) on May 18, 2017.

FACILITY LOCATION AND DESCRIPTION:

The R&B Landfill is located at 610 Bennett Road, Homer, Georgia. The landfill sits on a 970.59 acre tract of land located in Banks County in a rural area approximately 3.5 miles northeast of the center of Homer, Georgia. The landfill entrance is located approximately four miles southeast of Interstate 85.

CCR MANAGEMENT ACTIVITIES:

CCR and Non-CCR Waste Volumes:

R&B currently receives CCR materials for disposal in the active West Disposal Unit. It is currently permitted to receive CCR at an estimated rate 1,000,000 tons per year with an estimated daily maximum of 3,500 tons. These limits are defined in Section 1 of the current Operational Narrative shown on Sheet 44 of the Design and Operation (D&O) Plans. The facility's capacity for placement of CCR material in the West and Central Units was established by verifying that the facility's design is able to withstand the additional loads presented by the higher density CCR material. The basis of the design verification provided in the May 18, 2017 CCR Management Minor Modification was an overall waste mass density of 115 lb/CF (3,105 lb/CY). This density takes into account the elevated waste mass density experienced by the containment systems when subjected to the CCR waste placement.

The CCR material received at this facility between January 1, 2018 and December 31, 2018 had a recorded weight of 780,727 tons. This is below the upper limits established by the Operational Narrative. Therefore, no adjustments are needed to the plan or design components related to stability, leachate collection or base grade settlement.

The maximum amount of CCR received in any given day between January 1, 2018 and December 31, 2018 was 3,932 tons. This exceeds the estimated max daily weight of 3,500 tons shown in Section 1 of the Operational Narrative. This single exceedance causes no design

concerns as it does not impact the waste mass characteristics related to composition and density. Therefore, no adjustments are needed to the plan or design components related to stability, leachate collection or base grade settlement.

CCR Source:

The only CCR material received at the facility was sourced from Duke Energy as required by Part 14 of the CCR Disposal Procedures on Sheet 46 of the D&O Plan. It should be noted that the CCR interned at the landfill is from the same source whose material was used as the basis of design for the original CCR Management Permit. Additionally, its 'as received' physical condition has remained generally consistent throughout the disposal process and no new CCR waste streams were accepted by the facility during this reporting period. Additionally, the facility does not utilize CCR material as a solidification agent for liquid wastes.

CCR Characterization and Compatibility:

Parts 14 and 15 of the CCR Disposal Procedures on Sheet 46 of the D&O Plan requires all CCR waste streams entering the facility be tested for characterization and compatibility using the Toxicity Characteristic Leaching Procedure (TCLP) 8 RCRA Metals by SW-846 Method 1311 and a Paint Filter Test by SW-845 Method 9095.

As noted above, the material source and general physical characteristics have remained consistent since the CCR Management permit's initial issue date and the customer has not notified the facility of any significant process changes. Therefore, additional testing to verify characterization and compatibility have not been required. The original laboratory results upon which the CCR Management is based are repeated in Appendix A for reference. Please note that this laboratory analysis, although specific for Superior Landfill, represents typical analytical data found in CCR material across all of Waste Management facilities in Georgia.

CCR Placement, Compaction and Cover:

The facility is permitted to operate two independent working faces. A second working face is required to be located at least 100 feet from the primary working face and is intended to support smaller vehicles and operational requirements. The combined area of the individual working faces operated during this period did not exceed 40,000 square feet. The maximum area of the working face and their management were conducted in accordance with Section 2 of the Operational Narrative on Sheet 44. Daily cover for the working faces were applied, at a minimum, at the end of each work day in accordance with Section 3 of the Odor Management Plan and CCR Disposal Procedures on Sheet 46.

CCR material was 'block' or mono filled in the West Disposal Unit. As required, in the CCR Disposal Procedures on Sheet 46 of the D&O Plan, a test pad area was established to determine placement and compaction requirements necessary to obtain a minimum compaction of 90% standard proctor. Due to the consistent physical nature of the CCR material and sourcing, the original test pad results have been used to guide placement and

compaction efforts to date. The results of the tests are contained in Appendix A and demonstrate compliance with the compaction requirements.

No leachate outbreaks were observed during this reporting period and all cells receiving CCR material had its leachate collection gravel covered with a minimum of 12-inches of protective cover soil as required by the CCR disposal procedures on Sheet 46 of the D&O Plan. Additionally, none of the previously placed CCR material was harvested for beneficial re-use.

Record Keeping:

Records of all waste transported to the site along with daily logs and operational records are retained at the facility's site office building. All record keeping is in accordance with the Georgia Rules for Solid Waste Management 391-3-4-.07(3)(u).

Fugitive Dust Control:

The operators at the facility spread and compacted CCR material as it was received. If the CCR material was not spread during operating hours on the day it was received, the operator would use the on-site water truck to maintain the CCR's moisture levels. This procedure was determined to be an efficient and effective method to avoid fugitive dust generation.

The interior and perimeter roads were moisture conditioned using a water truck, as required, between rain fall events to avoid fugitive dust generated from vehicular traffic.

The facility did not receive any complaints related to dust between January 1, 2018 and December 31, 2018 and has remained compliant with requirements established by Air Quality Rule 391-3-1-.02(2)(n)1.

Leachate Collection and Removal System:

The facility's leachate collection, removal and storage system is in good working order with no known issues related to the disposal of CCR wastes.

Stormwater Management System:

The working face(s) were managed to ensure that surface water contacting CCR waste was not discharged into the stormwater management system. This was accomplished by placing and compacting material away from the side slopes, using soil diversion berms near side slopes and by sloping the working face into the waste mass.

The facility did experience two incidents of CCR material entering the stormwater management system. This was the result of two heavy rain eventS that compromised the LF's cover material and carried CCR material downstream into the stormwater surface components (i.e. perimeter ditches and sediment pond). The CCR material deposited in the perimeter ditches and sediment pond was removed and reincorporated into the waste mass at the active working face. Additionally, the grades in the washout area were re-established with compacted cover

material. These corrective actions have been successful in preventing further transport of CCR material into the stormwater management system during rain events. To prevent future reoccurrence of these types of washouts, the compacted cover and stormwater controls are regularly inspected to ensure integrity.

Environmental Monitoring:

The environmental monitoring program for the facility was modified during development of the CCR Management Plan to include appropriate Appendix III/IV analytical parameters in accordance with United States Environmental Protection Agency recommendations and Georgia Environmental Protection Division Regulations. The monitoring network (consisting of groundwater wells, surface water, underdrain, and leachate monitoring points) and extended parameter list, based on data collected to date, remains suitable for detection of CCR related constituents. Current data does not suggest confirmed impacts at these monitoring points as a result of handling CCR material. The facility will continue implementing the CCR monitoring program and documenting results to EPD in semi-annual monitoring reports.

Emergencies:

The facility did not experience any events or circumstances that represented an operational or environmental emergency during this reporting period.

Documentation of Notification to Local Governments:

The operation of CCR disposal activities during this reporting period have been in compliance with the currently approved CCR management plans and design parameters. Therefore, no plan modifications or local government notifications are required at this time

CONCLUSION:

The current CCR Management routines required by the facility's Design and Operation Plan has proven to be effective in governing the proper handling and placement of CCR material as required by OCGA's Solid Waste Management Rule 391-3-4-.07(5) and the Guidance Document for Coal Combustion Residuals (CCR) Management Plans dated December 22, 2016.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
X	Surrogate is outside control limits

Metals

Qualifier	Qualifier Description
F1	MS and/or MSD Recovery is outside acceptance limits.

General Chemistry

Qualifier	Qualifier Description
HF	Field parameter with a holding time of 15 minutes. Test performed by laboratory at client's request.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Narrative

CASE NARRATIVE
Client: Waste Management
Project: Superior Landfill Waste Char.

Report Number: 680-138279-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In the event of interference or analytes present at high concentrations, samples may be diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

RECEIPT
The samples were received on 05/03/2017; the samples arrived in good condition, properly preserved and on ice. The temperature of the coolers at receipt was 2.8 C.

TCLP VOLATILE ORGANIC COMPOUNDS (GC-MS)
Samples Ash-Kraft (680-138279-1) and Ash-Grumman (680-138279-2) were analyzed for TCLP volatile organic compounds (GC-MS) in accordance with EPA SW-846 Methods 1311/8260B. The samples were leached on 05/11/2017 and analyzed on 05/14/2017.

4-Bromofluorobenzene (Surr) recovered low for LCSD 680-479788/4.

Samples Ash-Kraft (680-138279-1)[20X] and Ash-Grumman (680-138279-2)[20X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

TCLP SEMIVOLATILE ORGANIC COMPOUNDS (GC-MS)
Samples Ash-Kraft (680-138279-1) and Ash-Grumman (680-138279-2) were analyzed for TCLP semivolatile organic compounds (GC-MS) in accordance with EPA SW846 Methods 1311 / 8270D. The samples were leached on 05/11/2017, prepared on 05/15/2017 and analyzed on 05/17/2017.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

METALS (ICP) - TCLP
Samples Ash-Kraft (680-138279-1) and Ash-Grumman (680-138279-2) were analyzed for Metals (ICP) - TCLP in accordance with EPA SW-846 Methods 1311/6010C. The samples were leached on 05/11/2017, and prepared and analyzed on 05/12/2017.

Barium recovered high for the MS of sample Ash-Kraft (680-138279-1) in batch 680-479888.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

MERCURY - TCLP
Samples Ash-Kraft (680-138279-1) and Ash-Grumman (680-138279-2) were analyzed for mercury - TCLP in accordance with EPA SW-846 Methods 1311/7470A. The samples were leached on 05/11/2017, prepared on 05/12/2017 and analyzed on 05/15/2017.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

IGNITABILITY FOR SOLIDS
Samples Ash-Kraft (680-138279-1) and Ash-Grumman (680-138279-2) were analyzed for ignitability for solids in accordance with EPA SW-846 Method 1030. The samples were analyzed on 05/10/2017.

The following sample did not ignite: Ash-Kraft (680-138279-1) and Ash-Grumman (680-138279-2); therefore, an ignitability value could not

Job ID: 680-138279-1 (Continued)

Laboratory: TestAmerica Savannah (Continued)

be obtained. The result has been reported as "No Burn" (NB).

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

REACTIVE CYANIDE

Samples Ash-Kraft (680-138279-1) and Ash-Grumman (680-138279-2) were analyzed for reactive cyanide in accordance with EPA SW-846 Method 9014. The samples were prepared on 05/08/2017 and analyzed on 05/09/2017.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

REACTIVE SULFIDE

Samples Ash-Kraft (680-138279-1) and Ash-Grumman (680-138279-2) were analyzed for reactive sulfide in accordance with EPA SW-846 Method 9034. The samples were prepared on 05/08/2017 and analyzed on 05/09/2017.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

CORROSIVITY (PH)

Samples Ash-Kraft (680-138279-1) and Ash-Grumman (680-138279-2) were analyzed for corrosivity (pH) in accordance with EPA SW-846 Method 9045D. The samples were analyzed on 05/11/2017.

This analysis is considered a field test and is to be performed within 15 minutes of collection. This analysis was performed in the laboratory outside the 15 minute timeframe.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GRAIN SIZE

Samples Ash-Kraft (680-138279-1) and Ash-Grumman (680-138279-2) were analyzed for grain size in accordance with ASTM D422. The samples were analyzed on 05/04/2017.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Mr. John Workman, P.E.
Director of Engineering
Waste Management, Inc.
1850 Parkway Place, Suite 600
Marietta, Georgia 30337

SUBJECT: Test Pad Evaluation
R&B Landfill
Banks County, Georgia

Dear Mr. Workman:

Atlantic Coast Consulting, Inc. (ACC) is pleased to transmit the attached results of the test pad evaluation in Cell 11A at the above referenced landfill facility. Waste Management is currently receiving two different types of ash which are being disposed of in Cell 11A. The Project Specifications require the ash material be compacted to a minimum of 90% of the materials maximum dry density. Waste Management constructed a test pad for each ash material to determine what compaction efforts needed to be made in order to achieve the minimum 90% compaction requirement. Per the request of Waste Management ACC was on site to perform density testing on the test pads for each ash material.

Laboratory Testing

Prior to construction of the ash material test pads, representative samples of each ash material were collected and delivered to Timely engineering Soil Tests, LLC (TEST) for laboratory testing. The samples were labeled ASH-1 and ASH-2. The laboratory testing program was comprised of a Standard Proctor moisture/density relationship ASTM D698, particle size analysis ASTM D422 and moisture content ASTM D2216. The results of the laboratory testing are provided in Appendix A.

ATLANTIC COAST CONSULTING, INC.

Test Pad Construction

Waste Management constructed a test pad for each ash material that was approximately 10' X 15'. Construction of the test pads was accomplished by using a bulldozer and a vibratory smooth drum roller. The bulldozer was used to spread a 12 inch thick lift of the ash material and the vibratory smooth drum roller was used for compaction of the ash material. Both test pads were constructed within the limits of Cell 11A.

Field Density Testing

Taylor Herbertson of ACC arrived at the site on Friday, May 22, 2015 for construction of the first test pad. This visit was for the test pad construction and evaluation of the ASH-1 material. Three nuclear density tests were performed on the test pad. The first density test was taken after the vibratory smooth drum roller made one pass, the second density test was taken after the vibratory smooth drum roller made a second pass and the third density test was taken after the vibratory smooth drum roller made a third pass. All of these tests met the Project Specifications. The daily field summary report along with the results of field density tests TP-1 through TP-3 are provided in Appendix B.

Taylor Herbertson of ACC arrived back at the site on Thursday, June 4, 2015 for construction of the second test pad. This visit was for the test pad construction and evaluation of the ASH-2 material. Three nuclear density tests were performed on the test pad. The first density test was taken after the vibratory smooth drum roller made one pass, the second density test was taken after the vibratory smooth drum roller made a second pass and the third density test was taken after the vibratory smooth drum roller made a third pass. All of these tests met the Project Specifications. The daily field summary report along with the results of field density tests TP-4 through TP-6 are provided in Appendix C.

Construction Photographs

During the test pad construction at the R&B landfill in Cell 11A photographs were taken by the site technician to document the construction activities. Attached please find the construction photographs with a brief description below each photograph.

ATLANTIC COAST CONSULTING, INC.

Test Pad Evaluation Summary

Based on ACC's test pad evaluation including laboratory testing and field density testing for the ASH-1 and ASH-2 materials, it has been concluded that no more than one pass with the vibratory smooth drum roller needs to be made in order to achieve the required 90% compaction.

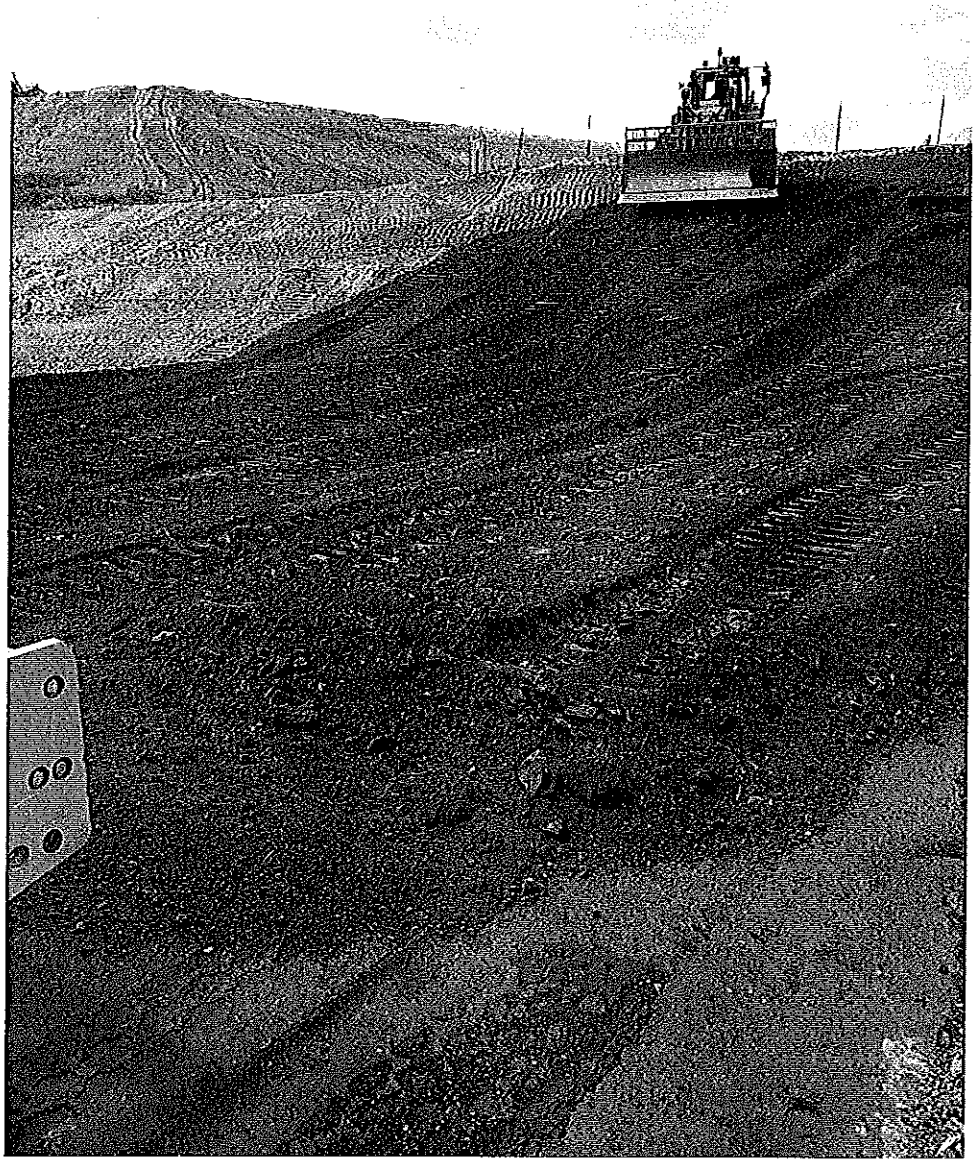
If you have any questions, please feel free to contact me at 770-594-5998.

Sincerely,

ATLANTIC COAST CONSULTING, INC.

Richard T. Deason, P.E.
Certifying Engineer

RTH/RTD:rsc



Test pad construction began with a bulldozer spreading a 12" lift of ash material. The test pad for each material was approximately 10' X 15'.

Compaction of the ash material was achieved using a vibratory smooth drum roller.

Nuclear density tests were performed to verify the compaction of the ash material.

I monitored operations after the test pad construction to insure lift thickness did not exceed 12".

I monitored operations after the test pad construction to insure at least one pass was made using the vibratory smooth drum roller.

ATLANTIC COAST
CONSULTING, INC.

APPENDIX B

Field Density Testing – ASH-1 Material

May 22, 2015

Daily Monitoring Summary

Date: May 22, 2015 S M T W T (F) S

Project Number: I002.362
Project Title: R&B – Cell 11A
Location: Banks County, Georgia
Weather: Temperature: Low: 64° @ AM High: 82° @ PM
Cloud Cover: Sunny Precipitation: None Wind: 0-5

ACC Personnel On-Site: Taylor Herbertson

Summary of Construction Progress: WM is currently placing ash in Cell 11A. There is a compaction requirment of 90% on 12" compacted lifts. Per John Workman's request WM is constructing a test pad to ensure the 90% compaction requirment is being met.

ACC Activities and Test Results: I observed the activities noted above and density tested the test pad. A sample of the ash labled ASH-1 was previously tested for Std. Proctor in the laboratory. My 3 density test were compared to this proctor and were found to have sufficient compaction.

The test pad was constructed using the below number of passes for each test.

TP-1 - One pass using a smooth drum roller.
TP-2 - Two passes using a smooth drum roller.
TP-3 - Three passes using a smooth drum roller.
* The vibrator was used on all passes

Daily Monitoring Summary

Date: 5/22/2015 S M T W T (F) S

Summary of Surveyor's Activities: None

Summary of Problems and Resolutions: None

Summary of Meetings and Discussions Held: I met with John Workman from Waste Management and he provided guidance on how he wanted the test pad constructed including equipment used and number of passes.

After completion of the test pad it was noted that no more than one pass needs to be made to achieve the required compaction.

Summary of Health and Safety Issues: None

APPENDIX C

Field Density Testing – ASH-2 Material

June 4, 2015

Daily Monitoring Summary

Date: June 4, 2015 S M T W (T) F S

Project Number: I002.362
Project Title: R&B – Cell 11A
Location: Banks County, Georgia
Weather: Temperature: Low: 62 @ AM High: 77 @ PM
Cloud Cover: Partly Cloudy Precipitation: None Wind: 0-5MPH

ACC Personnel On-Site: Taylor Herbertson

Summary of Construction Progress: WM is receiving a diffrent type of ash from another site. Due to the 90% compaction requirment John Workman requested that we perform another test pad.

ACC Activities and Test Results: I monitored and density tested the test pad construction. A sample of the material labled ASH-2 was previously tested for std. proctor in the laboratory. The 3 density test I performed were compared to this proctor and were found to have sufficent compaction

The test pad was constructed using the below number of passes for each lift.

TP-4 - One pass with a vibratory smooth drum roller.
TP-5 - Two passes with a vibratory smooth drum roller.
TP-6 - Three passes with a vibratory smooth drum roller.

Daily Monitoring Summary

Date: 6/4/2015 S M T W (T) F S

Summary of Surveyor's Activities: None

Summary of Problems and Resolutions: None

Summary of Meetings and Discussions Held: I met with John Workman from Waste Management and he provided guidance on how he wanted the test pad constructed including equipment used and number of passes

After completion of the test pad it was noted that no more than one pass needs to be made to achieve the required compaction using both ASH-1 and ASH-2 materials.

Summary of Health and Safety Issues: None
