Swinney Branch	Headwaters to Tallapoosa River	Tallapoosa	Not Supporting	Bio F, Bio M	4.8	4a	TMDL completed Bio F 2009 & Bio M 2016. EPD believes that our pH probes may have been providing falsely low values at times. EPD developed a new method for measuring pH that may provide more reliable data especially in streams with low conductivity. EPD needs to collect more data at this site using the new methods before determining if the stream is meeting the pH criteria.

Nottely River	Lake Nottely to State line	Tennessee	Not Supporting	Bio F	2.4	4c	TMDL completed DO 2000. Bio F is in Category 4c. The impairment is caused by the dam. TVA has done extensive work to improve water quality below its dams including reoxygenation of hypolimnetic releases and the change in operation of the dam to provide a more stable flow in tailwater reaches. The water is supporting its Recreation Use, but not its Fishing Use. EPD believes that our pH probes may have been providing falsely low values at times. EPD developed a new method for measuring pH that may provide more reliable data especially in streams with low conductivity.
