NOTICE OF THE OPPORTUNITY FOR PUBLIC COMMENT
GEORGIA DEPARTMENT OF NATURAL RESOURCES
ENVIRONMENTAL PROTECTION DIVISION
AIR PROTECTION BRANCH

STATE OF GEORGIA

NOTICE OF DRAFT ADDENDUM to 2023 AMBIENT AIR MONITORING PLAN – August 2023

To All Interested Parties:

The Georgia Environmental Protection Division (GA EPD) announces its intent to issue the Addendum to 2023 Ambient Air Monitoring Plan to the U.S. Environmental Protection Agency in August 2023. The GA EPD is required to produce this annual plan as part of EPA’s amended ambient air monitoring regulations established October 17, 2006.

Georgia EPD’s 2023 Ambient Air Monitoring Plan will show how the state agency plans to meet EPA regulations for monitoring air quality in the state by assessing monitoring objectives, site appropriateness for air quality characterization, spatial scale represented by each monitor and appropriate new technologies.

GA EPD’s air monitoring network consists of a number of stations located throughout the state. GA EPD uses the air monitoring data to track if air quality standards are being met, to assist in enforcement actions, to determine the improvement or decline of air quality, to trace the extent of allowable industrial expansion and to provide air pollution information to the public.

The draft Addendum to 2023 Ambient Air Monitoring Plan will be available for review on the GA EPD Air Protection Branch internet site: https://epd.georgia.gov/air-protection-branch-public-announcements and the Ambient Air Monitoring Program website: https://airegorgia.org/.

Persons wishing to comment on the draft Addendum to 2023 Ambient Air Monitoring Plan are required to submit their comments, in writing, to GA EPD at the following address:

Air Protection Branch
Attn: Annual Air Monitoring Plan Comments
4244 International Parkway, Suite 120
Atlanta, Georgia 30354
In addition, public comments can be submitted in writing to Jaime Gore, Program Manager of the Ambient Monitoring Program, at Jaime.Gore@dnr.ga.gov or to EPD.comments@dnr.ga.gov.

Comments must be received by GA EPD no later than September 17, 2023. Should the comment period end on a weekend or holiday, comments will be accepted up until the next working day. GA EPD, in soliciting comments for the final draft before submittal to EPA as required by 40CFR58, will consider all comments received on or prior to that date.

After the comment period has expired, GA EPD will consider all comments received. GA EPD’s responses to comments and any other relevant information will be included in the final document published on https://airgeorgia.org/.

For additional information, contact the manager of the Ambient Air Monitoring Program, Jaime Gore at the Atlanta address, or by phone at 404-363-7000. Please refer to this notice when requesting information.
Air Protection Branch
Ambient Monitoring Program

Draft Addendum to 2023 Ambient Air Monitoring Plan
Per the Environmental Protection Agency regulations, the Georgia Ambient Air Monitoring Program (GA AAMP) produces an annual network monitoring plan to show how the ambient air monitoring requirements are met (40 CFR 58.10). If that plan is modified during the year after it is published, it is the state’s responsibility to let the public know of those modifications. Since the publication of the 2023 Ambient Air Monitoring Plan in June 2023, the GA AAMP is in the process of making the following changes to the ambient air monitoring network. For more information regarding the 2023 Ambient Air Monitoring Plan, refer to the GA AAMP website at https://airgeorgia.org/networkplans.html.

For the following site changes, GA AAMP worked closely with EPA Region 4 to find a suitable monitoring location for the ambient air monitoring equipment. Obstructions, monitoring path and fetch, distances from roadways, power availability, and access for staff are all considered when considering the feasibility of a potential site. All GA AAMP sites must be selected such that the requirements of 40 CFR 58 Appendix E are met upon the site being commissioned. This addendum will cover a correction to the spatial scale for the ambient air monitoring equipment at the Albany site’s (13-095-0007) current location, the ambient air monitoring equipment being relocated at the Albany site, and a waiver for the siting requirements of the new ambient air monitoring location at the Albany site. In addition, this addendum will cover GA AAMP’s plan to change parameter and method codes in EPA’s Air Quality System (AQS) for the PM$_{2.5}$ Teledyne T640(x)s at the Columbus-Airport site (13-215-0008), Augusta site (13-245-0091), and Albany site (13-095-0007).
Reclassification of Spatial Scale for Albany’s Monitors

In accordance with 40 CFR 58.10 regarding modifications to the 2023 Ambient Air Monitoring Plan, the GA AAMP provides the following documentation in support of reclassifying the Albany ambient air monitoring site (13-095-0007). Due to the distance from the nearest street, the current site location as described in the 2023 Ambient Air Monitoring Plan needs to be corrected from a neighborhood spatial scale to reflect an urban spatial scale. Please see the spatial scale reclassification in the following detailed site information. The first set of site details below lists the information as it was shown in the original 2023 Ambient Air Monitoring Plan. The next set of site details shows the correction of the spatial scale.

Original site details:

**Albany**

AQS ID: 130950007  
Address: Turner Elementary School, 2001 Leonard Avenue, Albany, Dougherty County, Georgia 31705  
Site Established: 7/31/91  
Latitude/Longitude: N31.5776/W-84.0998  
Elevation: 67 meters  
Area Represented: Albany MSA Site  
History: Established as TSP site

**Albany Site Location Change**

In accordance with 40 CFR 58.10 regarding relocation requests for State or Local Air Monitoring Stations (SLAMS), the GA AAMP provides the following documentation in support of moving the Albany ambient air monitoring site (13-095-0007). The Albany site is located within Dougherty County in the Albany MSA. The GA AAMP monitors PM$_{2.5}$ data with collocated Partisol 2025 federal reference methods (FRMs), as well as a continuous federal equivalent method PM$_{2.5}$ Teledyne T640 monitors. The PM$_{2.5}$ Teledyne T640 monitor is set up as a non-National Ambient Air Quality Standards (NAAQS) monitor in the EPA’s Air Quality System (AQS) at this location.

Due to the monitoring equipment being on the roof of the Turner Elementary School and an effort to improve the safety of the Site Operators and Field Auditors, GA AAMP is relocating the monitoring equipment to a platform on ground level. The following map shows the old and new locations (marked in yellow), as well as the distance between the two locations. The two locations are approximately 98.5 meters apart, as shown with the red line on the map. Since the relocation is within a mile, the GA AAMP will retain the same AQS ID number (13-095-0007) to keep continuity of the monitoring data.
The following windroses show the annual average for July 1, 2022-June 30, 2023 and a 10-year average, respectively. These windroses were considered when selecting the new location at the Albany site.
The next map shows four proposed locations (in yellow) that GA AAMP considered when deciding on the new location. Site B is adjacent to a gravel road that could impact sampling. With Site C, it would be difficult to access power at the location, and it would likely impinge on the school field activities. Site D would be adjacent to the school playground/school activities and would not be appropriate to have Site Operators and Field Auditors performing job functions (i.e., taking site photos) in that close proximity to a playground. Therefore, after considering the locations, Site A is the best option. Site A would not hinder any school activities, it is close to a power source, and the Site Operators/Field Auditors would have direct access without requiring access to the school property. The monitors will have 270° unobstructed fetch for wind flow.
The new location is approximately 6.48 meters from the nearest road.

The trees to the West of the site are approximately 25.18 meters from the new site location.
The distance to the tree to the North of the site is approximately 13.87 meters.

The next two photographs show the locations that were considered in the decision making process: Site A and Site B (marked with the yellow letters).
The map below shows the aerial view of the new location at ground level. The red circle indicates the new site location.
At the new Albany location, PM$_{2.5}$ data will continue to be monitored with a federal reference method (FRM) Partisol 2025 on a daily sampling schedule, as well as on a continuous basis with the federal equivalent method (FEM) Teledyne T640 collecting data as a non-NAAQS monitor. The information below shows site details for the new Albany monitoring location with the deck and fencing installed as of the publication of this document.

TBD: To be determined when monitors are in place.  
*Requesting waiver for monitor location.
**Waiver Request**

Per 40 CFR Part 58, Appendix E, Section 10, GA AAMP is requesting a waiver for the new location of the monitors at the Albany site. Due to logistics, the monitors are less than 15 meters from the nearest road (School Street). After much consideration and discussion with EPA, GA AAMP and EPA are in agreement that the road has minimal impact on the air monitors and representative of the neighborhood scale. School Street has less than 4,430 annual average daily traffic count. In addition, as explained above, after much examination of the Turner Elementary School property, the monitors cannot reasonably be located in another area on the school property.

The current Albany site is important to maintain for the continuity of data collection. GA AAMP has collected data at the Albany site since 1991, and with long term data collection, the data can be used for trends and longevity analyses. In addition, the Albany site has consistently had some higher readings due to the agricultural burns in the area and beneficial to reflect concentrations in the Albany MSA. Furthermore, the location of the site at the Turner Elementary School is important for environmental justice (EJ) concerns. The site is located at an elementary school and able to represent the young sensitive population at the school. Please refer to the following EJ maps showing the Albany site location (blue triangle) in relation to several EJ factors. The darker red colors represent a higher percentage of the EJ factor being examined with each map. The following socioeconomic and environmental demographic information was obtained from EPA’s EJScreen tool at [https://ejscreen.epa.gov/arcgis/rest/services/ejscreen](https://ejscreen.epa.gov/arcgis/rest/services/ejscreen), using the 2022 and 2023 data as available.

Parameter and Method Code Changes
As of August 1, 2023, GA AAMP has implemented a new data alignment feature on the PM$_{2.5}$ Teledyne T640(x)s installed at the Columbus-Airport site (13-215-0008), Augusta site (13-245-0091), and Albany site (13-095-0007). GA AAMP will take up to the next two years to evaluate the Teledyne T640(x)s with the data alignment feature, and compare the data collected with the PM$_{2.5}$ FRMs. GA AAMP has PM$_{2.5}$ FRMs, with data compared to the PM$_{2.5}$ NAAQS, at each of the sites where this evaluation is taking place. During this evaluation period, these Teledyne T640(x) monitors with the data alignment feature will not be compared to the PM$_{2.5}$ NAAQS. These monitors will change from State and Local Ambient Monitoring Stations (SLAMS) to Special Purpose Monitors (SPMs) in EPA’s AQS. The data will continue to be used for the Air Quality Index (AQI) reporting both to EPA’s Air Now website as well as the GA AAMP website [www.georgiaair.org](http://www.georgiaair.org). GA AAMP requests that EPA concur with this adjustment in AQS to not compare these three monitors to the PM$_{2.5}$ NAAQS for up to two years during this time of evaluation.

The following table shows all the PM$_{2.5}$ Teledyne T640(x)s that GA AAMP will have listed as SPM, with the AQI data being reported to Air Now and the GA AAMP website.
