

VISTAS Roadmap for Calculations Associated with the Initial Screening of Sources for Reasonable Progress (Four-Factor Analyses)

Prepared by:
VISTAS Technical Analysis Workgroup

Overview

This document describes the calculations associated with the initial screening of sources for reasonable progress (four-factor analyses). The original PSAT results were determined based on the modeled elv3 2028 SO₂ and NOx emissions. The 2028 EGU and non-EGU (NEGU) point emissions were updated for a new 2028 model run based on the elv5 emissions inventory, but the original PSAT runs were not redone. Therefore, the original PSAT results have been adjusted using the methodology described below to reflect the updated 2028 emissions.

Task 2: Emission Inventories

VISTAS Emissions 2028 Comparisons Remodeling 200902.xlsx

- The “STATE_LEVEL_COMPARISON” tab contains EGU and NEGU state-level comparisons for the original (elv3 modeled) and revised (elv5 inventory) SO₂ and NOx emissions inventory (Inv) and modeled emissions (Mod) in the VISTAS 12-km domain.
- The “FACILITY_COMPARISON” tab contains facility-by-facility comparisons for the original and revised SO₂ and NOx emissions in the VISTAS 12-km domain.
- The “PSAT_ANALYSIS” tab contains facility-by-facility comparisons for the original and revised SO₂ and NOx emissions for the 87 facilities with PSAT tags. The ratio of revised SO₂ to original SO₂ emissions is contained in Column Q. The ratio of revised NOx to original NOx emissions is contained in Column R. These ratios are used to adjust the original facility PSAT results under Task 7 in “ATTACHMENT_A_PSAT_TAG_RESULTS.xlsm” to account for emission increases/decreases associated with the revised SO₂ and NOx emissions. The file containing the adjusted impacts is called "ATTACHMENT_A_PSAT_TAG_RESULTS_adjusted_09-02-2020.xlsx." The facility ratios are shown in Table 1 at the end of this document.
- The “Ratios” tab contains the state level data for VISTAS states and the RPO level data for states outside of VISTAS states. This tab calculates the emissions ratio for NOx and for SO₂ between the elv3 modeled values and the elv5 inventory values for each state within VISTAS. It also calculates the RPO level ratios for NOx and SO₂ for CENSARA, MANE-VU, LADCO, and WRAP. These ratios are used to adjust estimated impacts from the EGU and NEGU sectors to each Class I area. Adjusted PSAT results are found in the spreadsheet called, "ATTACHMENT_A_PSAT_TAG_RESULTS_adjusted_09-02-2020.xlsx." The state and regional ratios are shown in Table 2 at the end of this document. Within the “Ratios” tab contained in the spreadsheet, “VISTAS Emissions 2028 Comparisons Remodeling 200902.xlsx”:
 - The sulfate ratio for EGUs for each VISTAS state (Column E) is the value in column D (SO₂ EGUElv5 Inv) divided by the value in column C (SO₂ EGU elv3 Mod).
 - The sulfate ratio for NEGUs for each VISTAS state (Column H) is the value in column G (SO₂ NEGU elv5 inv) divided by the value in column F (SO₂ NEGU elv3 Mod).
 - The nitrate ratio for EGUs for each VISTAS state (Column K) is the value in column J (NO_x EGU elv5 Inv) divided by the value in column I (NO_x EGU elv3 Mod).
 - The nitrate ratio for NEGUs for each VISTAS state (Column N) is the value in column M (NO_x NEGU elv5 Inv) divided by the value in column L (NO_x NEGU elv3 Mod).
 - The sulfate ratio for EGUs for each RPO other than VISTAS (Column E) is the sum of the SO₂ emissions for that RPO in column D (SO₂ EGUElv5 Inv) divided by the sum of SO₂ emissions for that RPO in column C (SO₂ EGUElv3 Mod).

- The nitrate ratio for EGUs for each RPO other than VISTAS (Column K) is the sum of the NO_x emissions for that RPO in column J (NO_x EGU elv5 Inv) divided by the sum of NO_x emissions for that RPO in column I (NO_x EGU elv3 Mod).
- The sulfate ratio for NEGUs for each RPO other than VISTAS (Column H) is the sum of the SO₂ emissions for that RPO in column G (SO₂ NEGU elv5 Inv) divided by the sum of SO₂ emissions for that RPO in column F (SO₂ NEGU elv3 Mod).
- The nitrate ratio for NEGUs for each RPO other than VISTAS (Column N) is the sum of the NO_x emissions for that RPO in column M (NO_x NEGU elv5 Inv) divided by the sum of NO_x emissions for that RPO in column L (NO_x NEGU elv3 Mod).

Task 5: Area of Influence Analysis

VISTAS AOI Data Summary.xlsx

This Excel file contains a summary of the facility information and AOI contributions from the “POINT” worksheet contained in the AOI spreadsheets for each Class I area. Only facilities contributing more than 0.1% combination of sulfate + nitrate (Column AS) are included in this summary for each Class I area.

Each worksheet identifies one of the pertinent Class I areas. The AOI contributions for the following are identified in each sheet:

- (facility nitrate)/(total EGU+NEGU sulfate+nitrate) → Column AQ
(Combined_NO3_2028_fraction)
- (facility sulfate)/(total EGU+NEGU sulfate+nitrate) → Column AR
(Combined_SO4_2028_fraction)
- (facility sulfate + facility nitrate)/(total EGU+NEGU sulfate+nitrate) → Column AS
(Combined_SO4_NO3_2028_EWRT.Qd)

The individual VISTAS Class I Area and nearby non-VISTAS Class I Area Excel spreadsheets with all the detailed calculations are located at:

<https://www.metro4-sesarm.org/content/task-5-area-influence-analysis>

Task 7: Source Apportionment Modeling/Tagging

ATTACHMENT_A_PSAT_TAG_RESULTS_adjusted_09-02-2020.xlsx

The data tabs in this spreadsheet (rh_results_SEC_v4_adj, rh_results_SEC_BCv4_adj, rh_results_INDv3_adj) contain the original PSAT results in columns identified with the heading delta_extw (20% most impaired days) and delta_extb (20% clearest days). Scaled values using the ratios developed from the elv5 inventory are in columns designated delta_extb_adj and delta_extw_adj. The adjusted PSAT results are based on emission ratios calculated in “VISTAS Emissions 2028 Comparisons Remodeling 200902.xlsx” (see Table 2 at the end of this document)

- Revised Facility EGU Sulfate PSAT Results = Original EGU Sulfate PSAT Results * SO₂ EGU Ratio
where, SO₂ EGU Ratio = (Revised EGU SO₂ emissions)/(Original EGU SO₂ emissions)

- Revised Facility NEGU Sulfate PSAT Results = Original NEGU Sulfate PSAT Results * SO₂ NEGU Ratio
where, SO₂ NEGU Ratio = (Revised NEGU SO₂ emissions)/(Original NEGU SO₂ emissions)
- Revised Facility EGU Nitrate PSAT Results = Original EGU Nitrate PSAT Results * NOx EGU Ratio
where, NOx EGU Ratio = (Revised EGU NOx emissions)/(Original EGU NOx emissions)
- Revised Facility NEGU Nitrate PSAT Results = Original NEGU Nitrate PSAT Results * NOx NEGU Ratio
where, NOx NEGU Ratio = (Revised NEGU NOx emissions)/(Original NEGU NOx emissions)

To adjust the total EGU+NEG, sulfate+nitrate contribution to visibility impairment at each Class I area, the EGU sulfate, EGU nitrate, NEGU sulfate, and NEGU nitrate contributions at each Class I area were adjusted by the respective ratio for that area (state or RPO), sector (EGU or NEG), and pollutant (sulfate or nitrate). These adjusted values were summed to determine the scaled EGU+NEG, sulfate+nitrate impact on each Class I area.

Since impacts of any facility are reviewed as a percentage of the total EGU+NEG, sulfate+nitrate impact on a Class I area, revisions to the inventory affect both the numerator of the equation (the scaled PSAT estimate of sulfate or nitrate impact from a particular facility) and the denominator of the equation (the scaled PSAT estimate of sulfate + nitrate impact from all EGUs and NEGUs on a Class I area). Table 3 at the end of this document provides the original and adjusted EGU + NEG impacts for each Class I area as well as the ratios developed from this information. To calculate the changes to the denominator, the Ratio_Class_I_Area was used:

- Ratio_Class_I_Area = (Original EGU sulfate + NEGU sulfate + EGU nitrate + NEGU nitrate)/
(Revised EGU sulfate + NEGU sulfate + EGU nitrate + NEGU nitrate)

This methodology allows a user to calculate a singular value for a particular Class I area and sector impact. To make the wholesale updates to the PSAT estimated impacts at each Class I area, a pivot table approach was used to create the ATTACHMENT_A_PSAT_TAG_RESULTS_adjusted_09-02-2020.xlsx file.

Task 7: Source Apportionment Modeling/Tagging

VISTAS PSAT Percent Contribution Rankings 02-09-2021 calcs.xlsx

The VISTAS PSAT Percent Contribution Ranking 02-09-2021 calcs.xlsx, tab "comb SO4+NO3>0.0001-copy" worksheet combines AOI information from the database provided by the VISTAS contractor (AOI_SPREADSHEET_ANALYSIS_POINT.zip) for all facilities with a Combined_SO4_NO3_2028_EWRT.Qd of at least 0.01% (0.0001) with original and adjusted PSAT information from "ATTACHMENT_A_PSAT_TAG_RESULTS_adjusted_09-02-2020.xlsx".

Tab "Facility Ratios" shows the emissions estimate for each tagged facility from the AOI analysis, the elv3 modeling, and the elv5 modeling. It also shows the ratio applied to each facility. This information originates in the Excel file called, "VISTAS Emissions 2028 Comparisons Remodeling 200902.xlsx."

Tab "Facility Tagging Results" shows the original, elv3 PSAT tagging results and the adjusted PSAT tagging results based on the elv5 inventory for each facility. This information originates in the Excel file called, "ATTACHMENT_A_PSAT_TAG_RESULTS_adjusted_09-02-2020.xlsx," tab "rh_results_INDv3_adj."

Tab "Class I EGU+NEG, S+N" shows the original, elv3 PSAT tagging results for the impact of sulfate and nitrate from EGUs and NEGUs on each Class I area for 20% most impaired days and 20% clearest days. The tab also shows the adjusted values for each Class I area and the ratio of the original value to the

adjusted value. This information originates in the Excel file called, "ATTACHMENT_A_PSAT_TAG_RESULTS_adjusted_09-02-2020.xlsx", tab "rh_results_SEC+BECv4_adj". This information is provided in Table 3 at the end of this document.

Tab "Tagged Facilities Xwalk" shows the facility identification for each tagged facility, which allow comparison of tagged and AOI results. This information originates in the Excel file called, "ATTACHMENT_A_PSAT_TAG_RESULTS_adjusted_09-02-2020.xlsx", tab "Facility Name xwalk".

Certain facilities were tagged for NO_x and SO₂ twice. Since multiple tags for a facility produced identical PSAT results, such facilities are only listed once in tab "comb SO4+NO3>0.0001-copy." These facilities are shown in Table 4:

Table 4: Facilities Tagged Twice

State	Tag Numbers	Facility FIPS and EIS ID	Facility Name
FL	020/074	12123-752411	Buckeye Florida, Limited Partnership
GA	023/080	13127-3721011	Brunswick Cellulose Inc
NC	028/088	37013-8479311	PCS Phosphate Company, Inc - Aurora
NC	029/085	37087-7920511	Blue Ridge Paper Products – Canton Mill
VA	040/095	51023-5039811	Roanoke Cement Company
VA	041/093	51027-4034811	Jewell Coke Company LLP
VA	042/094	51580-5798711	Meadwestvaco Packaging Resource Group

Two facilities are scheduled to be shut down prior to 2028 but were tagged in the elv3 PSAT run. These facilities are listed in Table 5. Under the tab "Facility Ratios," each facility is listed as having zero NO_x and SO₂ emissions in 2028. State emissions totals were adjusted accordingly and are reflected in the scaled values for EGU+NEG, Sulfate+Nitrate impacts on Class I areas in the tab "Class I EGU+NEG S+N." These facilities are not shown in tab "comb SO4+NO3>0.0001-copy."

Table 5: Facilities with AoI of zero but included in the PSAT tagging

State	Tag Numbers	Facility FIPS and EIS ID	Facility Name
