**Re: December 2012 VRP Progress Report with Updated Appendix C**
**Avery Dennison Property, Flowery Branch, Georgia – HSI No. 10578**

Mr. Collins:

As discussed with you, and on behalf of Avery Dennison Corporation, please find attached one hard copy and two complete electronic copies of the updated December 2012 Progress Report for the Avery Dennison property in Flowery Branch, Georgia (HSI No. 10578). The attached version includes a hard copy of ProUCL input and output files, as requested by EPD, as well as an updated Appendix C, as performed by the ecological risk assessor, Ted Simon, LLC. We will provide you, by email, a file transfer link to facilitate your upload of the complete electronic document to the EPD website.

If you have any questions regarding the attached report, please do not hesitate to contact Mr. Bruce Martin of Avery Dennison by phone at (508)476-5041, or by electronic mail at bruce.martin@averydennison.com.

Sincerely,
THE JOHNSON COMPANY, INC.

## 1.0 PROFESSIONAL ENGINEER CERTIFICATION

I certify under penalty of law that this report and all attachments were prepared by me or under my direct supervision in accordance with the Voluntary Remediation Program Act (O.C.G.A. Section 12-8-101, et seq.). I am a professional engineer/professional geologist who is registered with the Georgia State Board of Registration for Professional Engineers and Land Surveyors/Georgia State Board of Registration for Professional Geologists and I have the necessary experience and am in charge of investigation and remediation of this release of regulated substances.

Furthermore, to document my direct oversight of the Voluntary Remediation Plan development, implementation of corrective action, and long term monitoring, I have attached a monthly summary of hours invoiced and a description of services provided by me to the Voluntary Remediation Program participant since the previous submittal to the Georgia Environmental Protection Division.

The information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

*Joel Behrsing, Georgia PE033869*

Signature and Stamp

## 2.0 INTRODUCTION

In accordance with the requirements of the Voluntary Remediation Program (VRP), The Johnson Company, Inc. (JCO) has prepared this Voluntary Investigation and Remediation Plan (VIRP) Semiannual Progress Report (Progress Report) on behalf of Avery Dennison Corporation (Avery) for the Avery Dennison Property at 4350 Avery Drive, Flowery Branch, Hall County, Georgia (the Property). The location of the Property is shown in Figure 2-1, and is identified on Figure 2-2 as Parcel Number 08073 000003D. A portion of the Property is currently listed on the Hazardous Site Inventory, HSI No. 10578, (the Site) for releases of chlorinated compounds in soil and groundwater. A Voluntary Investigation and Remediation Program Application (VIRPA) was submitted to the Georgia Environmental Protection Division (EPD) for the Property on December 23, 2011. On June 5, 2012, EPD approved the VIRPA with comments (see Appendix A) and entered the Property into the VRP. This Progress Report – the first since approval of the VIRPA - has been prepared to describe the activities performed during the period of December 23, 2011 to December 5, 2012.

## 3.0 DESCRIPTION OF WORK PERFORMED

The activities currently identified to be performed at the Site under the VRP are outlined in the following documents:

- VIRPA, dated December 23, 2011;
- EPD VIRPA approval letter dated June 5, 2012; and the
- EPD VIRPA comment letter dated June 5, 2012 (see Appendix A).

The activities that have been performed by Avery, or on Avery's behalf, from December 23, 2011 through December 5, 2012 are as follows:

- review and preparation of responses to VIRPA comments provided by EPD on June 5, 2012 (*see Section 3.1*);

- compilation and evaluation of groundwater and surface water analyses, including volatile organic compounds (VOC) and 1,4-dioxane, for samples collected in fall 2011 (*see Section 3.2*);

- performance of groundwater and surface water sampling during spring 2012 for analyses of VOC and 1,4-dioxane, and compilation and evaluation of the data to confirm horizontal and vertical delineation of VOC and 1,4-dioxane in groundwater (*see Section 3.2*);

- performance of a groundwater and surface water sampling event during fall 2012 to confirm the horizontal and vertical delineation of VOC and 1,4-dioxane in groundwater (*see Section 3.2*);

- preparation and submittal of a Financial Assurance Instrument (*see Section 3.3*);

- extensive interaction with Wrigley Manufacturing Company, LLC (Wrigley) as part of Avery's pending acquisition of an abutting land parcel from Wrigley (*see Section 3.4*) - the acquisition of the parcel will result in Avery owning all property containing Site constituents in soil and groundwater above Type 1 Risk Reduction Standards (RRS); and

- operation of a soil vapor extraction (SVE) system as an engineering control to mitigate potential for vapor intrusion into the Avery facility, and planning and preparation for implementation of a multi-phase extraction (MPE) system in its place in early 2013 (*see Section 3.5*).

## 3.1 RESPONSE TO JUNE 5, 2012 COMMENTS FROM GEORGIA EPD

Responses to each of the comments provided by EPD in its June 5, 2012 letter regarding the VIRPA are provided in Appendix B. The responses include revisions to Risk Reduction Standards (RRS), as requested by EPD. Avery Dennison now requests that EPD provide final approval of the Risk Reduction Standards presented in this Progress Report.

## 3.2 CONFIRMATION OF THE CONCEPTUAL SITE MODEL

The Conceptual Site Model (CSM) and delineation of VOC and 1,4-dioxane in groundwater presented in the VIRPA were confirmed by the results of three groundwater and surface water monitoring events evaluated following submission of the VIRPA: Fall 2011, Spring 2012, and Fall 2012.[1] Samples were collected per the methods described in the March 2010 Compliance Status Report (CSR) and analyzed for VOC by EPA Method 8260B and for 1,4-dioxane by selective ion monitoring (SIM) to achieve laboratory reporting limits below the applicable Type 1 RRS. In addition, site-wide potentiometric monitoring events were performed in the same manner reported in the CSR.

Potentiometric data collected during the monitoring events is presented in summary form in Table 3-1. Mapped potentiometric contours are presented for each of the three monitoring events in Figures 3-1 through 3-12 for the water table, weathered bedrock, and shallow and deep bedrock units. Observed patterns are consistent with the CSM presented in the VIRPA.

Laboratory analytical results for groundwater and surface water samples are presented in Tables 3-2 and 3-3, respectively, and are presented in Figure 3-13. The associated laboratory reports are presented in Appendix D. Exceedences of applicable non-residential Type 3/4 RRS in groundwater are summarized in Table 3-4.

[1] Two monitoring events were described in the VIRPA; however, a third confirmatory event was performed in Fall 2012 due to atypical rises in stream stage prior to the Fall 2011 and Spring 2012 events as a result of beaver activity. The beavers were trapped during the Spring 2012 event and removed from the area. The dam was manually removed at the start of the Fall 2011 and Spring 2012 sampling events. It was not present for the Fall 2012 event.

Horizontal delineation of Site constituents to applicable Type 1 RRS in groundwater has been achieved, as shown in Figure 3-14. Vertical delineation of Site constituents to applicable Type 1 RRS in groundwater has also been achieved to the extent that is practicable – see Figures 3-15 and 3-16. Delineation of Site constituents in other applicable media was demonstrated in prior submittals to EPD.

### 3.3 SUBMITTAL OF FINANCIAL ASSURANCE INSTRUMENT

In its June 5, 2012 VIRPA acceptance letter, EPD requested that Avery submit to EPD no later than September 5, 2012 a Financial Assurance Instrument (FAI) in the amount of the estimated cost to complete the work proposed in the VIRPA. The FAI was submitted to the Director of EPD by certified mail on August 28, 2012.

### 3.4 ACQUISITION OF LAND PARCEL FROM WRIGLEY MANUFACTURING COMPANY, LLC

On July 30, 2012, Avery and JCO met with Mr. David Brownlee and Mr. Kevin Collins of EPD to provide an update on Avery's activities at the Site. At the meeting, Avery representatives advised EPD of Avery's intent to acquire a parcel of land from Wrigley that would result in the entire area containing Site constituents at concentrations above Type 1 RRS being on land owned by Avery. The dimensions of the parcel were discussed, and EPD concurred that the dimensions of the parcel shown on Figure 3-17 would be suitable as an additional qualifying property under the VRP, and to address Comment #5 of the June 5, 2012 comment letter from EPD to Avery Dennison (see Appendix A).

Since the July 30, 2012 meeting at EPD, Avery and Wrigley representatives have had extensive discussions concerning the Wrigley parcel, and are now moving toward completion of the transactional documents necessary to finalize the acquisition. Upon completion of the transaction, Avery will promptly seek to include the acquired parcel as a qualifying property under the VRP.

## 3.5 ACTIVE VAPOR INTRUSION MITIGATION

As described in the VIRPA, Avery proactively commenced design and installation of a multi-phase extraction (MPE) system for the southern source area, including a portion of the facility footprint, several months prior to the VIRPA acceptance by EPD. An MPE pilot test was performed, and a *Multiphase Extraction Pilot Test Report* was submitted to EPD in May 2011. The report was also provided as an appendix to the VIRPA. Following successful completion of the pilot test, Avery began negotiations with the City of Flowery Branch to accept treated groundwater from the MPE system into its Publicly Owned Treatment Works (POTW). Avery expected that the process, including approvals from City Council, would require several months. Therefore, the MPE system components, which had already been installed in anticipation of Avery obtaining a POTW discharge permit, were configured in July 2011 for interim operation as a soil vapor extraction (SVE) system, i.e., vapor extraction without groundwater extraction.

Operation of the SVE system, which is depicted on Figure 3-18, began on July 14, 2011. Additional information regarding the SVE system construction, components, and operation is provided in Appendix E. The SVE system has operated continuously since start-up, except for a few brief occasions when it has been shut down due to power outages or maintenance events. As of November 1, 2012, the System uptime is 98 percent over a total duration of 475 days.

Figure 3-19 shows the cumulative mass of VOC removed by the SVE system over its period of operation. As of October 26, 2012, over 1,500 pounds of VOC had been removed from the unsaturated zone of the southern source area, as determined by laboratory EPA Method TO-15 analyses of monthly samples collected from each extraction well, and individual measurements of air flow from each extraction well using a hot wire anemometer. Example calculations of mass removal are provided in Appendix E. Laboratory analytical reports for the monthly analyses of extracted soil vapor from each operational SVE well are provided in Appendix F. Of the over 1,500 pounds of VOC removed, approximately 28 percent of the mass removed was 1,1,1-trichloroethane (1,1,1-TCA) and approximately 59 pounds was 1,1-

dichloroethene (1,1-DCE) – the primary daughter product of abiotic degradation of 1,1,1-TCA. The remaining mass fraction has been primarily comprised of toluene, methylene chloride, acetone, and 1,1-dichloroethane. None of the VOC amounts emitted to outdoor ambient air by rooftop stack are significant in comparison to the threshold criteria for treatment of VOC discharge to ambient air, which are 40,000 and 4,000 pounds per year for total VOC and individual Hazardous Air Pollutants (HAP)[2], respectively.[3]

After receiving approval from the City of Flowery Branch to discharge treated groundwater at its POTW, Avery filed an application with EPD for an Industrial Pretreatment Permit (the Permit). The Permit application includes a description of the planned MPE system, and is provided herein as Appendix G. EPD approved the application for the Permit on July 17, 2012. JCO then continued the implementation planning of the MPE system and began procurement of the necessary groundwater treatment system components on behalf of Avery. It is anticipated that installation of the final components of the MPE system, and commencement of its operation, will occur in the first quarter of 2013. The as-built details will be provided with the first Progress Report that is submitted after construction completion, which is anticipated to be the June 2013 Progress Report.

The operation of the SVE system is scheduled to continue until the aboveground infrastructure of the MPE system, including the groundwater treatment system, is ready to connect to the MPE wells.

[2] 1,1-DCE is classified as a HAP; 1,1,1-TCA is not.
[3] Other applicable threshold criteria for treatment of VOC discharges to ambient air are 15 pounds per day of an individual HAP, and 10,000 pounds per year for total HAP – all of which are a factor of 10 or more above the calculated emissions.

# 4.0 NEXT STEPS AND SCHEDULE

## 4.1 ACQUISITION OF THE WRIGLEY PARCEL

As described in Section 3.4, Avery is diligently moving toward completion of the transaction to acquire a parcel of land that would result in Avery owning all of the property within which site constituents exceed Type 1 RRS in groundwater (see Figure 3-17). Following completion of the acquisition, Avery will promptly seek to include the acquired parcel as a qualifying property under the VRP.

## 4.2 POINT OF DEMONSTRATION MONITORING PLAN

A Point of Demonstration (POD) Monitoring Plan will be developed and provided with the next Progress Report, as requested by EPD.

## 4.3 FATE AND TRANSPORT MODELING

A groundwater model will be developed to evaluate future potential for groundwater constituents associated with the Site to discharge to the unnamed tributary to Mud Creek at concentrations that exceed applicable in-stream water quality standards (ISWQS). The model will be developed and validated prior to the December 2013 Progress Report, and the POD Monitoring Plan will be amended, if necessary, following evaluation of the groundwater model results.

## 4.4 MULTI-PHASE EXTRACTION SYSTEM INSTALLATION AND OPERATION

As described in Section 3.5, the MPE system installation is anticipated to be completed in early 2013, after which operation of the MPE system as an engineering control will begin. In the meantime, operation of the SVE system will continue. As-built drawings of the MPE system will be provided in the first Progress Report due after the system operation commences.

## 4.5 UPDATED MILESTONE SCHEDULE

An updated milestone schedule for the project is shown in Figure 4-1.

## 5.0 PROFESSIONAL SERVICE HOURS BY THE CERTIFYING ENGINEER DURING THE REPORTING PERIOD

Below is a summary and monthly breakdown of the 156.75 professional service hours provided to the project by the Engineer of Record, Mr. Joel Behrsing, P.E., since December 23, 2011, the date of the most recent document submittal to EPD.

- *January 2012 – 29.25 hours*. Design of the MPE system and assessment of Permit requirements. Review of SVE performance and mass removal calculations.

- *February 2012 – 26.5 hours*. Design of the MPE system and review of SVE performance data and mass removal calculations. Review EPD comments on other VRP projects.

- *March 2012 – 8.25 hours.* Design of the MPE system and review of SVE performance data and mass removal calculations.

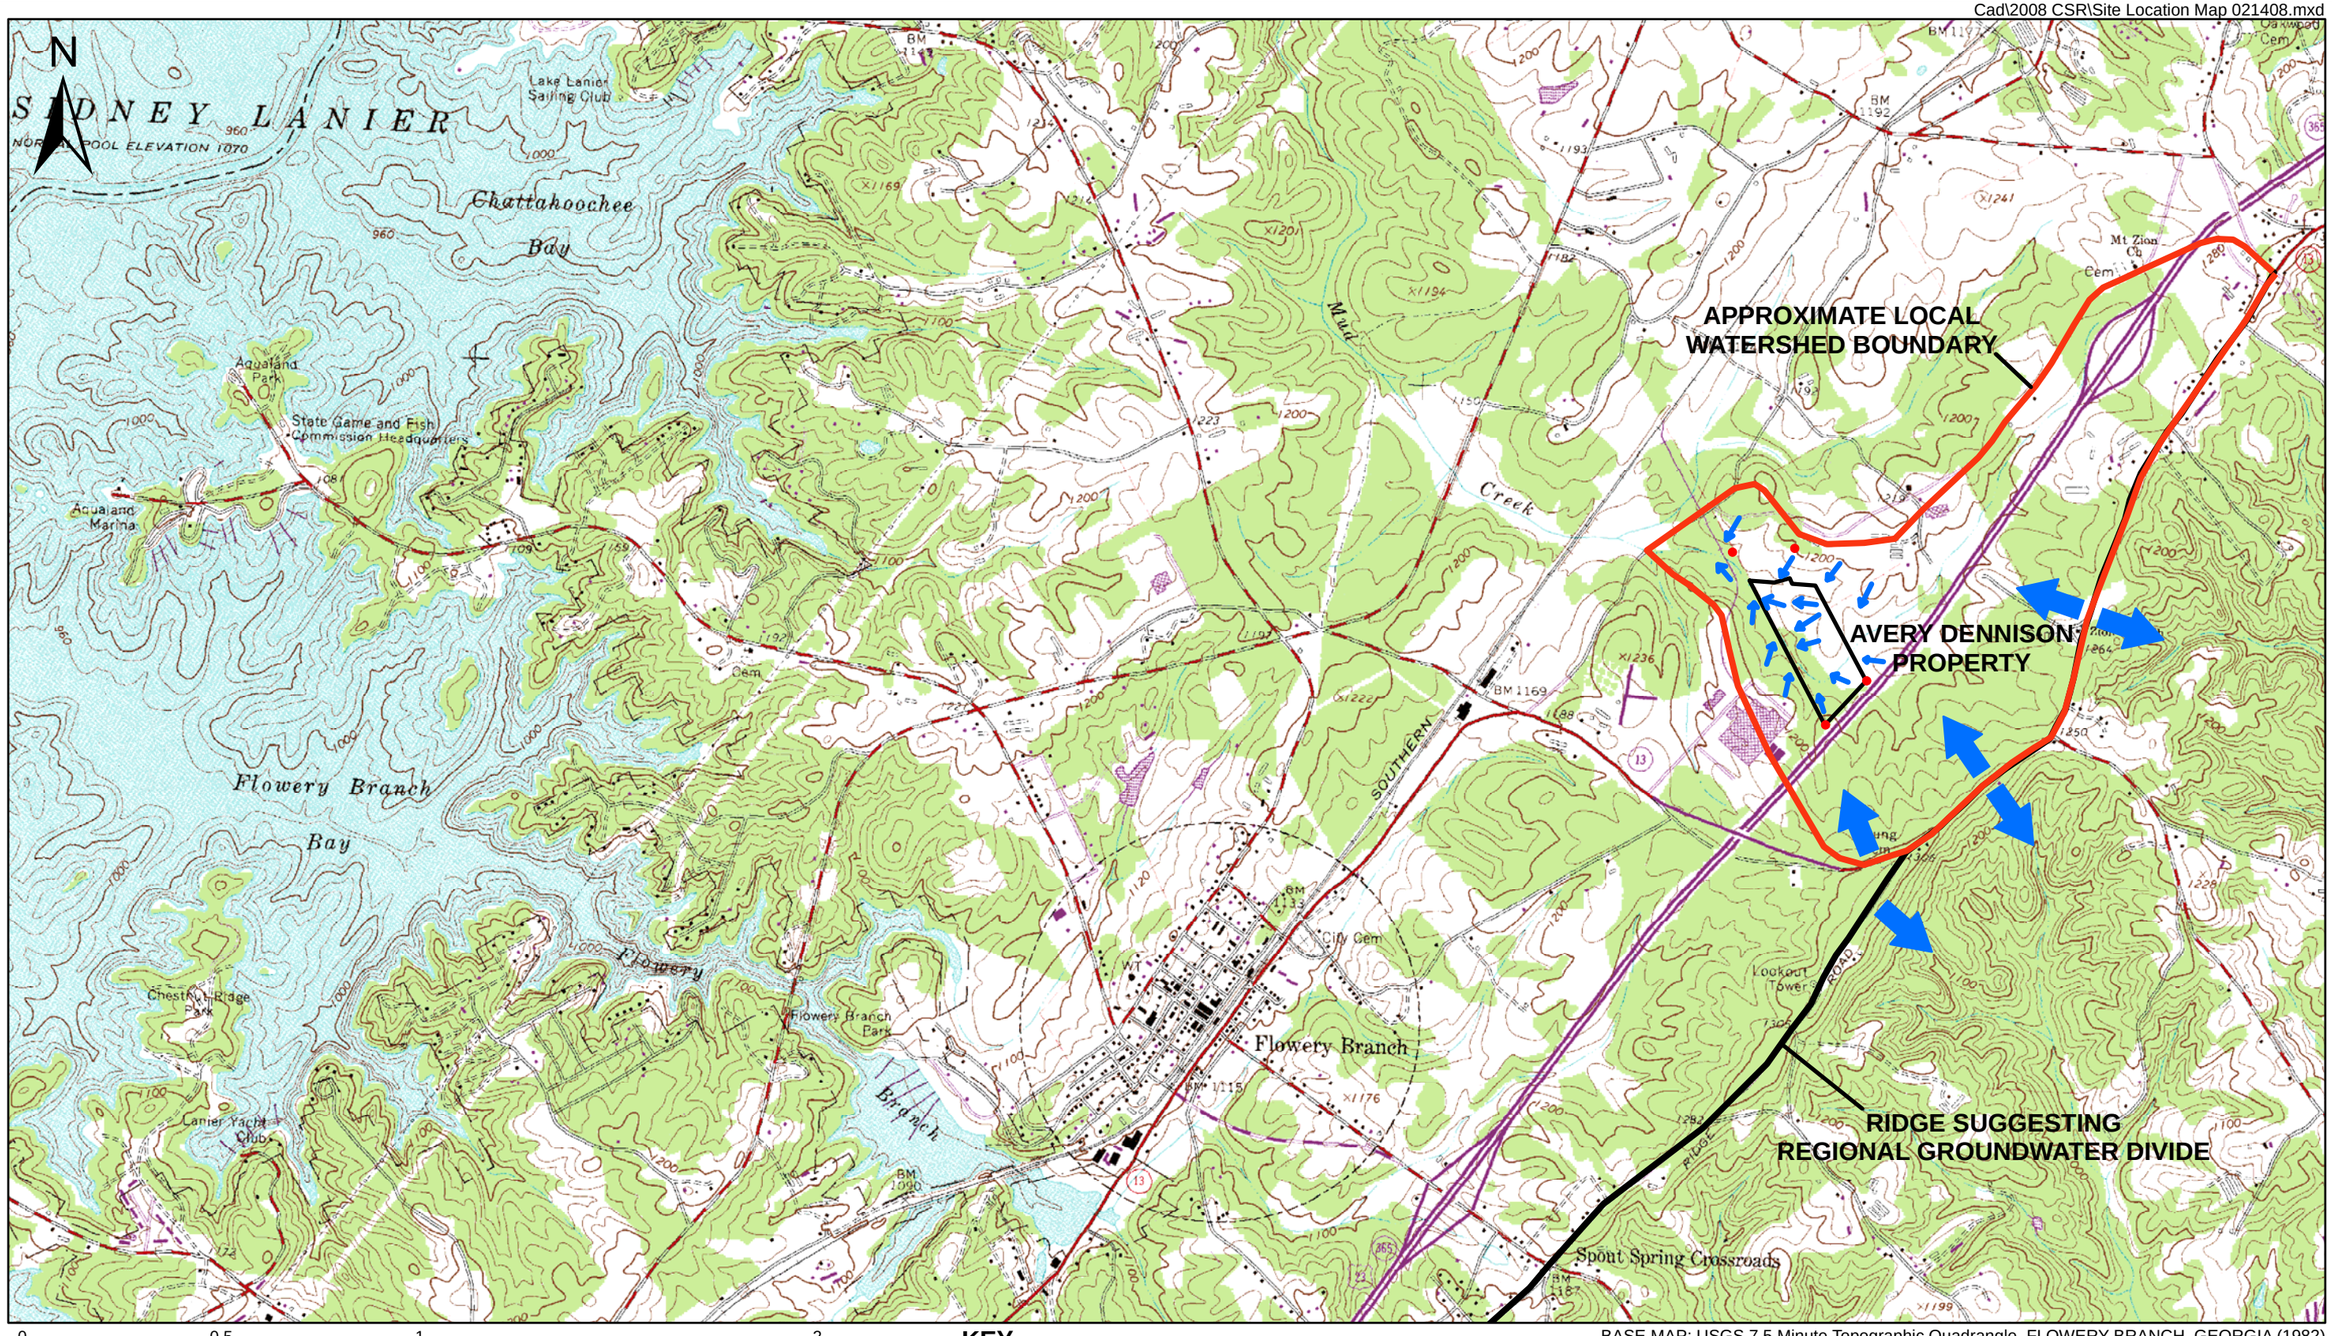
- *April 2012 – 4.5 hours.* Design of the MPE system and preparation of the Permit application.

- *May 2012 – 7.5 hours*. Coordination with EPD for Site visit to be attended by JCO. Performance modifications to SVE system. Review Permit application and meet public notice requirement.

- *June 2012 – 15.75 hours*. Review June 5, 2012 comment letter by EPD. Contact EPD regarding Permit specifics following submittal. Review applicable surface water quality rules. Review of remediation cost estimate to be provided to EPD. Oversee engineering staff for MPE design.

- *July 2012 – 3 hours*. Oversee engineering staff for SVE system operation and mass removal determination. Review correspondence regarding EPD comments.

- *August 2012 – 19.5 hours*. Review correspondence regarding land acquisition from Wrigley. Multiple calls with EPD regarding the Permit application. Oversee MPE design efforts and SVE system performance.



- *September 2012 – 37.5 hours*. Oversee building repairs proximate to the SVE system. Oversee SVE system performance evaluation. Review of financial assurance documentation and final engineering cost estimate. Coordination with contractors for MPE system installation preparation.

- *October 2012 – 4.5 hours.* SVE system performance evaluation. Updates from staff regarding preparation of the Progress Report.

- *November 2012 – 21.75 hours.* Review draft Progress Report, including hydrogeologic interpretations performed by Mr. Chris Turner, P.G., a Professional Geologist registered in the State of Georgia (P.G. #2035), and review layout for advanced oxidation treatment unit.

| m,p-X | m,p-Xylene |
| MCH | Methylcyclohexane |
| o-X | o-Xylene |
| X | Xylenes (total) |
| 1,4-DIOX | 1,4 Dioxane |
| PCE | Tetrachloroethene |
| T | Toluene |
| t1,2-DCE | trans-1,2-Dichloroethene |
| TCE | Trichloroethene |
| VC | Vinyl Chloride |
| S | Styrene |
| ND | Not Detected above Laboratory PQL |
| NS | Not Sampled |

Notes:
- All results in µg/L
- Wells shaded gray were not sampled during the October 2011 - October 2012 rounds of sampling.
- Wells labeled with "ND" had no detections for all analytes during the Oct '11 - Oct '12 sampling rounds.

* Note: The October 2011 detection of 1,1-DCE in SBW-1 is the only detection in 14 sampling events.

| Risk Reduction Standards | | |
|---|---|---|
| | Type 1 GW (ug/L) | Type 3/4 GW (ug/L) |
| 1,1,1-TCA | 200 | 13600 |
| 1,1,2-TCA | 5 | 5 |
| 1,1-DCA | 4000 | 4000 |

| A | 4000 | 45600 |
| CCL4 | 5 | 10 |
| CA | NA | 29200 |
| CF | 80 | 80 |
| c1,2-DCE | 70 | 200 |
| DCM | 5 | 450 |
| EB | 700 | 700 |
| F-11 | 2000 | 2000 |
| m,p-X | - | - |
| MCH | Not Regulated | Not Regulated |
| o-X | - | - |
| X | 10000 | 10000 |
| 1,4-DIOX | 70 | 70 |
| PCE | 5 | 98 |
| T | 1000 | 5200 |
| t1,2-DCE | 100 | 160 |
| TCE | 5 | 5 |
| VC | 2 | 3 |
| S | 100 | 2600 |

Note: Yellow highlighting in groundwater data indicates detection in excess of Type - 3/4 risk reduction standard.

| In-stream Water Quality Criteria (ug/L) | |
|---|---|
| 1,1-DCE | 7100 |

Notes:
- In-stream Water Quality Criteria from *Georgia Rules & Regulations for Water Quality Control Chapter 391-3-6-.03*
- Of the compounds detected in site surface water, only 1,1-DCE has an in-stream water quality criterion.

Orange highlighting in surface water data indicates detection in excess of In-Stream Water Criterion for 1,1-DCE.

**Notes:**
Elevations expressed in untis of feet above mean sea level, datum NGVD, 1988
Northing and Easting coordinates in Georgia State Plane coordinate system
MW-25DRX is an artesian well that flows when uncapped. On 7/3/03 and 6/6/05, site conditions permitted attachment of a riser to measure artesian head.

Notes:
1) Only compounds detected above laboratory quantitation limits (PQL) are shown.
2) Non-detects are presented as "ND < ##", where ## is the laboratory PQL.
3)"--" = Compound was not included in the laboratory analysis.
4)Detections in excess of Type 3/4 groundwater RRS are shaded.
5)Type 3/4 GW RRS's referenced from "Revisions to the RRS Calculations per 19 June 2012 memo and 11 July 2012 Contract Addendum".
6) Xylenes (total) is the sum of m&p-Xylene and o-Xylene concentrations.
7) Samples collected using a polyethylene diffusion bag are indicated by (DBS).
8) B indicates that the analyte was found in the associated laboratory blank, as well as in the sample.

Notes:
1) Only compounds detected above laboratory quantitation limits (PQL) are shown.
2) Non-detects are presented as "ND < ##", where ## is the laboratory PQL.
3)"--" = Compound was not included in the laboratory analysis.
4)Detections in excess of Type 3/4 groundwater RRS are shaded.
5)Type 3/4 GW RRS's referenced from "Revisions to the RRS Calculations per 19 June 2012 memo and 11 July 2012 Contract Addendum".
6) Xylenes (total) is the sum of m&p-Xylene and o-Xylene concentrations.
7) Samples collected using a polyethylene diffusion bag are indicated by (DBS).
8) B indicates that the analyte was found in the associated laboratory blank, as well as in the sample.

Notes:
1) Only compounds detected above laboratory quantitation limits (PQL) are shown.
2) Non-detects are presented as "ND < ##", where ## is the laboratory PQL.
3)"--" = Compound was not included in the laboratory analysis.
4)Detections in excess of Type 3/4 groundwater RRS are shaded.
5)Type 3/4 GW RRS's referenced from "Revisions to the RRS Calculations per 19 June 2012 memo and 11 July 2012 Contract Addendum".
6) Xylenes (total) is the sum of m&p-Xylene and o-Xylene concentrations.
7) Samples collected using a polyethylene diffusion bag are indicated by (DBS).
8) B indicates that the analyte was found in the associated laboratory blank, as well as in the sample.

Notes:
1) Only compounds detected above laboratory quantitation limits (PQL) are shown.
2) Non-detects are presented as "ND < ##", where ## is the laboratory PQL.
3)"--" = Compound was not included in the laboratory analysis.
4)Detections in excess of Type 3/4 groundwater RRS are shaded.
5)Type 3/4 GW RRS's referenced from "Revisions to the RRS Calculations per 19 June 2012 memo and 11 July 2012 Contract Addendum".
6) Xylenes (total) is the sum of m&p-Xylene and o-Xylene concentrations.
7) Samples collected using a polyethylene diffusion bag are indicated by (DBS).
8) B indicates that the analyte was found in the associated laboratory blank, as well as in the sample.

Notes:
1) Only compounds detected above laboratory quantitation limits (PQL) are shown.
2) Non-detects are presented as "ND < ##", where ## is the laboratory PQL.
3)"--" = Compound was not included in the laboratory analysis.
4)Detections in excess of Type 3/4 groundwater RRS are shaded.
5)Type 3/4 GW RRS's referenced from "Revisions to the RRS Calculations per 19 June 2012 memo and 11 July 2012 Contract Addendum".
6) Xylenes (total) is the sum of m&p-Xylene and o-Xylene concentrations.
7) Samples collected using a polyethylene diffusion bag are indicated by (DBS).
8) B indicates that the analyte was found in the associated laboratory blank, as well as in the sample.

Notes:
1) Only compounds detected above laboratory quantitation limits (PQL) are shown.
2) Non-detects are presented as "ND < ##", where ## is the laboratory PQL.
3)"--" = Compound was not included in the laboratory analysis.
4)Detections in excess of Type 3/4 groundwater RRS are shaded.
5)Type 3/4 GW RRS's referenced from "Revisions to the RRS Calculations per 19 June 2012 memo and 11 July 2012 Contract Addendum".
6) Xylenes (total) is the sum of m&p-Xylene and o-Xylene concentrations.
7) Samples collected using a polyethylene diffusion bag are indicated by (DBS).
8) B indicates that the analyte was found in the associated laboratory blank, as well as in the sample.

| Xylenes (unspecified) | 10000 | -- | ND < 5 | ND < 5 | ND < 5 | ND < 5 | ND < 5 | -- | -- | ND < 5 | ND < 5 | ND < 5 | ND < 5 | ND < 5 |

Notes:
1) Only compounds detected above laboratory quantitation limits (PQL) are shown.
2) Non-detects are presented as "ND < ##", where ## is the laboratory PQL.
3)"--" = Compound was not included in the laboratory analysis.
4)Detections in excess of Type 3/4 groundwater RRS are shaded.
5)Type 3/4 GW RRS's referenced from "Revisions to the RRS Calculations per 19 June 2012 memo and 11 July 2012 Contract Addendum".
6) Xylenes (total) is the sum of m&p-Xylene and o-Xylene concentrations.
7) Samples collected using a polyethylene diffusion bag are indicated by (DBS).
8) B indicates that the analyte was found in the associated laboratory blank, as well as in the sample.

Notes:
1) Only compounds detected above laboratory quantitation limits (PQL) are shown.
2) Non-detects are presented as "ND < ##", where ## is the laboratory PQL.
3)"--" = Compound was not included in the laboratory analysis.
4)Detections in excess of Type 3/4 groundwater RRS are shaded.
5)Type 3/4 GW RRS's referenced from "Revisions to the RRS Calculations per 19 June 2012 memo and 11 July 2012 Contract Addendum".
6) Xylenes (total) is the sum of m&p-Xylene and o-Xylene concentrations.
7) Samples collected using a polyethylene diffusion bag are indicated by (DBS).
8) B indicates that the analyte was found in the associated laboratory blank, as well as in the sample.

Notes:
1) Only compounds detected above laboratory quantitation limits (PQL) are shown.
2) Non-detects are presented as "ND < ##", where ## is the laboratory PQL.
3)"--" = Compound was not included in the laboratory analysis.
4)Detections in excess of Type 3/4 groundwater RRS are shaded.
5)Type 3/4 GW RRS's referenced from "Revisions to the RRS Calculations per 19 June 2012 memo and 11 July 2012 Contract Addendum".
6) Xylenes (total) is the sum of m&p-Xylene and o-Xylene concentrations.
7) Samples collected using a polyethylene diffusion bag are indicated by (DBS).
8) B indicates that the analyte was found in the associated laboratory blank, as well as in the sample.

Notes:
1) Only compounds detected above laboratory quantitation limits (PQL) are shown.
2) Non-detects are presented as "ND < ##", where ## is the laboratory PQL.
3)"--" = Compound was not included in the laboratory analysis.
4)Detections in excess of Type 3/4 groundwater RRS are shaded.
5)Type 3/4 GW RRS's referenced from "Revisions to the RRS Calculations per 19 June 2012 memo and 11 July 2012 Contract Addendum".
6) Xylenes (total) is the sum of m&p-Xylene and o-Xylene concentrations.
7) Samples collected using a polyethylene diffusion bag are indicated by (DBS).
8) B indicates that the analyte was found in the associated laboratory blank, as well as in the sample.

Notes:
1) Only compounds detected above laboratory quantitation limits (PQL) are shown.
2) Non-detects are presented as "ND < ##", where ## is the laboratory PQL.
3)"--" = Compound was not included in the laboratory analysis.
4)Detections in excess of Type 3/4 groundwater RRS are shaded.
5)Type 3/4 GW RRS's referenced from "Revisions to the RRS Calculations per 19 June 2012 memo and 11 July 2012 Contract Addendum".
6) Xylenes (total) is the sum of m&p-Xylene and o-Xylene concentrations.
7) Samples collected using a polyethylene diffusion bag are indicated by (DBS).
8) B indicates that the analyte was found in the associated laboratory blank, as well as in the sample.

Notes:
1) Only compounds detected above laboratory quantitation limits (PQL) are shown.
2) Non-detects are presented as "ND < ##", where ## is the laboratory PQL.
3)"--" = Compound was not included in the laboratory analysis.
4)Detections in excess of Type 3/4 groundwater RRS are shaded.
5)Type 3/4 GW RRS's referenced from "Revisions to the RRS Calculations per 19 June 2012 memo and 11 July 2012 Contract Addendum".
6) Xylenes (total) is the sum of m&p-Xylene and o-Xylene concentrations.
7) Samples collected using a polyethylene diffusion bag are indicated by (DBS).
8) B indicates that the analyte was found in the associated laboratory blank, as well as in the sample.

Notes:
1) Only compounds detected above laboratory quantitation limits (PQL) are shown.
2) Non-detects are presented as "ND < ##", where ## is the laboratory PQL.
3)"--" = Compound was not included in the laboratory analysis.
4)Detections in excess of Type 3/4 groundwater RRS are shaded.
5)Type 3/4 GW RRS's referenced from "Revisions to the RRS Calculations per 19 June 2012 memo and 11 July 2012 Contract Addendum".
6) Xylenes (total) is the sum of m&p-Xylene and o-Xylene concentrations.
7) Samples collected using a polyethylene diffusion bag are indicated by (DBS).
8) B indicates that the analyte was found in the associated laboratory blank, as well as in the sample.

Notes:
1) Only compounds detected above laboratory quantitation limits (PQL) are shown.
2) Non-detects are presented as "ND < ##", where ## is the laboratory PQL.
3)"--" = Compound was not included in the laboratory analysis.
4)Detections in excess of Type 3/4 groundwater RRS are shaded.
5)Type 3/4 GW RRS's referenced from "Revisions to the RRS Calculations per 19 June 2012 memo and 11 July 2012 Contract Addendum".
6) Xylenes (total) is the sum of m&p-Xylene and o-Xylene concentrations.
7) Samples collected using a polyethylene diffusion bag are indicated by (DBS).
8) B indicates that the analyte was found in the associated laboratory blank, as well as in the sample.

3)"--" = Compound was not included in the laboratory analysis.
4)Detections in excess of Type 3/4 groundwater RRS are shaded.
5)Type 3/4 GW RRS's referenced from "Revisions to the RRS Calculations per 19 June 2012 memo and 11 July 2012 Contract Addendum".
6) Xylenes (total) is the sum of m&p-Xylene and o-Xylene concentrations.
7) Samples collected using a polyethylene diffusion bag are indicated by (DBS).
8) B indicates that the analyte was found in the associated laboratory blank, as well as in the sample.

Notes:
1) Only compounds detected above laboratory quantitation limits (PQL) are shown.
2) Non-detects are presented as "ND < ##", where ## is the laboratory PQL.
3)"--" = Compound was not included in the laboratory analysis.
4)Detections in excess of Type 3/4 groundwater RRS are shaded.
5)Type 3/4 GW RRS's referenced from "Revisions to the RRS Calculations per 19 June 2012 memo and 11 July 2012 Contract Addendum".
6) Xylenes (total) is the sum of m&p-Xylene and o-Xylene concentrations.
7) Samples collected using a polyethylene diffusion bag are indicated by (DBS).
8) B indicates that the analyte was found in the associated laboratory blank, as well as in the sample.

Notes:
1) Only compounds detected above laboratory quantitation limits (PQL) are shown.
2) Non-detects are presented as "ND < ##", where ## is the laboratory PQL.
3)"--" = Compound was not included in the laboratory analysis.
4)Detections in excess of Type 3/4 groundwater RRS are shaded.
5)Type 3/4 GW RRS's referenced from "Revisions to the RRS Calculations per 19 June 2012 memo and 11 July 2012 Contract Addendum".
6) Xylenes (total) is the sum of m&p-Xylene and o-Xylene concentrations.
7) Samples collected using a polyethylene diffusion bag are indicated by (DBS).
8) B indicates that the analyte was found in the associated laboratory blank, as well as in the sample.

Notes:
1) Only compounds detected above laboratory quantitation limits (PQL) are shown.
2) Non-detects are presented as "ND < ##", where ## is the laboratory PQL.
3)"--" = Compound was not included in the laboratory analysis.
4)Detections in excess of Type 3/4 groundwater RRS are shaded.
5)Type 3/4 GW RRS's referenced from "Revisions to the RRS Calculations per 19 June 2012 memo and 11 July 2012 Contract Addendum".
6) Xylenes (total) is the sum of m&p-Xylene and o-Xylene concentrations.
7) Samples collected using a polyethylene diffusion bag are indicated by (DBS).
8) B indicates that the analyte was found in the associated laboratory blank, as well as in the sample.

Notes:
1) Only compounds detected above laboratory quantitation limits (PQL) are shown.
2) Non-detects are presented as "ND < ##", where ## is the laboratory PQL.
3)"--" = Compound was not included in the laboratory analysis.
4)Detections in excess of Type 3/4 groundwater RRS are shaded.
5)Type 3/4 GW RRS's referenced from "Revisions to the RRS Calculations per 19 June 2012 memo and 11 July 2012 Contract Addendum".
6) Xylenes (total) is the sum of m&p-Xylene and o-Xylene concentrations.
7) Samples collected using a polyethylene diffusion bag are indicated by (DBS).
8) B indicates that the analyte was found in the associated laboratory blank, as well as in the sample.

Notes:
1) Only compounds detected above laboratory quantitation limits (PQL) are shown.
2) Non-detects are presented as "ND < ##", where ## is the laboratory PQL.
3)"--" = Compound was not included in the laboratory analysis.
4)Detections in excess of Type 3/4 groundwater RRS are shaded.
5)Type 3/4 GW RRS's referenced from "Revisions to the RRS Calculations per 19 June 2012 memo and 11 July 2012 Contract Addendum".
6) Xylenes (total) is the sum of m&p-Xylene and o-Xylene concentrations.
7) Samples collected using a polyethylene diffusion bag are indicated by (DBS).
8) B indicates that the analyte was found in the associated laboratory blank, as well as in the sample.

Notes:
1) Only compounds detected above laboratory quantitation limits (PQL) are shown.
2) Non-detects are presented as "ND < ##", where ## is the laboratory PQL.
3)"--" = Compound was not included in the laboratory analysis.
4)Detections in excess of Type 3/4 groundwater RRS are shaded.
5)Type 3/4 GW RRS's referenced from "Revisions to the RRS Calculations per 19 June 2012 memo and 11 July 2012 Contract Addendum".
6) Xylenes (total) is the sum of m&p-Xylene and o-Xylene concentrations.
7) Samples collected using a polyethylene diffusion bag are indicated by (DBS).
8) B indicates that the analyte was found in the associated laboratory blank, as well as in the sample.

Notes:
1) Only compounds detected above laboratory quantitation limits (PQL) are shown.
2) Non-detects are presented as "ND < ##", where ## is the laboratory PQL.
3)"--" = Compound was not included in the laboratory analysis.
4)Detections in excess of Type 3/4 groundwater RRS are shaded.
5)Type 3/4 GW RRS's referenced from "Revisions to the RRS Calculations per 19 June 2012 memo and 11 July 2012 Contract Addendum".
6) Xylenes (total) is the sum of m&p-Xylene and o-Xylene concentrations.
7) Samples collected using a polyethylene diffusion bag are indicated by (DBS).
8) B indicates that the analyte was found in the associated laboratory blank, as well as in the sample.

Notes:
1) Only compounds detected above laboratory quantitation limits (PQL) are shown.
2) Non-detects are presented as "ND < ##", where ## is the laboratory PQL.
3)"--" = Compound was not included in the laboratory analysis.
4)Detections in excess of Type 3/4 groundwater RRS are shaded.
5)Type 3/4 GW RRS's referenced from "Revisions to the RRS Calculations per 19 June 2012 memo and 11 July 2012 Contract Addendum".
6) Xylenes (total) is the sum of m&p-Xylene and o-Xylene concentrations.
7) Samples collected using a polyethylene diffusion bag are indicated by (DBS).
8) B indicates that the analyte was found in the associated laboratory blank, as well as in the sample.

Notes:
1) Only compounds detected above laboratory quantitation limits (PQL) are shown.
2) Non-detects are presented as "ND < ##", where ## is the laboratory PQL.
3)"--" = Compound was not included in the laboratory analysis.
4)Detections in excess of Type 3/4 groundwater RRS are shaded.
5)Type 3/4 GW RRS's referenced from "Revisions to the RRS Calculations per 19 June 2012 memo and 11 July 2012 Contract Addendum".
6) Xylenes (total) is the sum of m&p-Xylene and o-Xylene concentrations.
7) Samples collected using a polyethylene diffusion bag are indicated by (DBS).
8) B indicates that the analyte was found in the associated laboratory blank, as well as in the sample.

Notes:
1) Only compounds detected above laboratory quantitation limits (PQL) are shown.
2) Non-detects are presented as "ND < ##", where ## is the laboratory PQL.
3)"--" = Compound was not included in the laboratory analysis.
4)Detections in excess of Type 3/4 groundwater RRS are shaded.
5)Type 3/4 GW RRS's referenced from "Revisions to the RRS Calculations per 19 June 2012 memo and 11 July 2012 Contract Addendum".
6) Xylenes (total) is the sum of m&p-Xylene and o-Xylene concentrations.
7) Samples collected using a polyethylene diffusion bag are indicated by (DBS).
8) B indicates that the analyte was found in the associated laboratory blank, as well as in the sample.

Notes:
1) Only compounds detected above laboratory quantitation limits (PQL) are shown.
2) Non-detects are presented as "ND < ##", where ## is the laboratory PQL.
3)"--" = Compound was not included in the laboratory analysis.
4)Detections in excess of Type 3/4 groundwater RRS are shaded.
5)Type 3/4 GW RRS's referenced from "Revisions to the RRS Calculations per 19 June 2012 memo and 11 July 2012 Contract Addendum".
6) Xylenes (total) is the sum of m&p-Xylene and o-Xylene concentrations.
7) Samples collected using a polyethylene diffusion bag are indicated by (DBS).
8) B indicates that the analyte was found in the associated laboratory blank, as well as in the sample.

| VOC (µg/L) | Location ID: / Sample Date: / In-stream Water Quality Criteria | SW-5 3/15/2005 | SW-5 6/25/2006 | SW-5 10/10/2006 | SW-5 2/22/2007 | SW-5 5/19/2007 | SW-5 10/23/2007 | SW-5 6/10/2009 | SW-5 10/20/2009 | SW-5 5/27/2010 | SW-5 11/1/2010 |
|---|---|---|---|---|---|---|---|---|---|---|---|
| 1,1,1-Trichloroethane | - | ND < 5 | ND < 5 | ND < 5 | ND < 5 | ND < 5 | ND < 5 | ND < 1 | ND < 1 | ND < 5 | ND < 5 |
| 1,1-Dichloroethane | - | ND < 5 | ND < 5 | ND < 5 | ND < 5 | ND < 5 | ND < 5 | ND < 1 | ND < 1 | ND < 5 | ND < 5 |
| 1,1-Dichloroethene | 7100 | ND < 5 | ND < 5 | ND < 5 | ND < 5 | ND < 5 | ND < 5 | ND < 1 | ND < 1 | ND < 5 | ND < 2 |
| 1,4-Dioxane | - | -- | -- | -- | -- | -- | -- | ND < 150 | ND < 150 | ND < 250 | ND < 250 |

Notes:

1) All concentrations are expressed in micrograms per liter (µg/L).

2) "-" indicates no in-stream water quality criteria.

3) Non-Detects are expressed as "ND < #", where # is the laboratory PQL.

4) In-stream Water Quality Criteria from Georgia Rules & Regulations for Water Quality Control Chapter 391-3-6.03 (rev June 5, 2011).

5) Of the compounds detected in site surface water, only 1,1-Dichlorethene has an in-stream water quality criterion.

6) Detections of 1,1-Dichloroethene in excess of In-Stream Water Quality Criteria are shown in bold and shaded.

Re: December 23, 2011 Voluntary Remediation Plan Application
Avery Dennison, HSI #10578
Flowery Branch, Hall County, GA
Tax Parcel ID 08073 000003D

Dear Mr. Martin:

The Georgia Environmental Protection Division (EPD) has received the December 2011 Voluntary Remediation Program (VRP) application that has been submitted pursuant to the Georgia Voluntary Remediation Program Act (the Act) O.C.G.A. 12-8-100. EPD acknowledges that this VRP application was submitted in lieu of a Corrective Action Plan (CAP) Addendum and Revised Compliance Status Report required pursuant to the Georgia Rules for Hazardous Site Response (the Rules) for the above referenced property. EPD is approving your VRP application, which specifies corrective action consisting of the following:

- Execute institutional controls in the form of environmental covenants on the qualifying property(ies) in conformance with O.C.G.A. 44-16-1, et seq., the 'Georgia Uniform Environmental Covenants Act'.

- Vapor Intrusion mitigation by Engineering Controls commenced through the design and installation of a Multi-Phase Extraction (MPE) System.

- Conduct additional groundwater and surface water monitoring activities, the results of which are to be compiled and evaluated in order to develop a Point of Demonstration Monitoring Plan.

Therefore, EPD is accepting Avery Dennison Corporation (Avery) as a participant as defined in the Act for the following qualifying property provided Avery implements the VRP application in compliance with the following schedule and conditions:

Qualifying property:

Avery Dennison Corporation Site
4350 Avery Drive
Flowery Branch, Hall County, Georgia 30542
Tax Parcel ID 08073 000003D

Within six months of detecting regulated substance(s) on a non-qualifying property, the participant must apply to EPD to include the affected property as a qualifying property under the Act or notify EPD that the non-qualifying property is not included under the Act. Consequently, please note that the currently available site information indicates that site related contaminants have been detected on the adjacent Wrigley property on the southwestern border of the Avery Dennison property. Therefore, please ensure that the first semiannual progress report includes a description of this Wrigley property as an additional qualifying property, along with a supporting site figure that illustrates the extent of this property or notify EPD that the Wrigley property will not be included under the Act.

Schedule:

- Semiannual progress reports are to be submitted to EPD. Each progress report must describe all actions taken since the last submittal, and include certification by the professional engineer/geologist specified in the VRP application along with a monthly summary of hours invoiced and description of services provided since the last submittal.
    - December 5th and June 5th through December 5, 2016

  In addition to the information required above, the following must be included in the specific progress reports discussed below.

    - June 5, 2013 semiannual progress report must include the Point of Demonstration Monitoring Plan, and the design plans for the MPE System;
    - June 5, 2014 semiannual progress report must demonstrate complete horizontal delineation on all impacted properties; and,
    - December 5, 2014 semiannual progress report must demonstrate complete horizontal and vertical delineation, finalize the remediation plan and provide a cost estimate for implementation of remediation and associated continuing actions. EPD recommends that participant finalize approval of cleanup standards for all regulated substances prior to this submittal.

- Compliance status report including certifications by no later than:
    - June 5, 2017

Conditions:

1) EPD requests the submittal of a cost estimate to complete the work proposed in the VRP application through the CSR submittal and a financial assurance instrument in that amount by no later than September 5, 2012. Model financial assurance instruments can be located at http://www.gaepd.org/Files_PDF/forms/hwb/HSIModel.pdf.

2) Avery must address EPD's comments dated June 5, 2012 and any other comments addressing the investigation and remediation pursuant to the Act to the satisfaction of the Director that it is consistent with the provisions, purposes, standards and policies of the Act.

3) Within ninety (90) days of Avery's notice to withdraw from the Voluntary Remediation Program or termination by the Director pursuant to §12-8-107(d) of the Act, Avery must submit the required Corrective Action Plan Addendum or a compliance status report that complies with the requirements of the Hazardous Site Response Act and associated Rules for Hazardous Site Response.

4) Avery must pay all outstanding fees within sixty (60) days of receipt of an invoice for any costs to the division in reviewing the application or subsequent document the exceeds the initial application fee.

EPD requires that Avery, and the professional engineer/geologist specified in the VRP application, oversee the implementation of the VRP investigation and corrective action activities in accordance with the provisions, purposes, standards and policies of the Act. EPD may, at its sole discretion, review and comment on documents submitted by Avery. However, failure of EPD to respond to a submittal within any timeframe does not relieve Avery from complying with the specified schedule and the provisions, purposes, standards and policies of the Act. Should Avery fail to comply with the above schedule, EPD may terminate enrollment of the participant and the qualifying property from the voluntary remediation program.

EPD's approval of the VRP application extends only to those technical aspects of the document that expressly require EPD approval under applicable rules and statutes. This approval is not an endorsement by EPD that it accepts as conclusive any representations made in the document. Nor does EPD guarantee or warrant that the document is free of errors or omissions. EPD may later withdraw approval of this document, in whole or in part, if EPD determines that withdrawal is necessary to ensure compliance with the applicable rules and statutes.

Should you have any question or concerns regarding this site, please contact Mr. Kevin Collins of the Response and Remediation Program at (404) 657-0488.

Sincerely,

David Brownlee
Acting Program Manager
Response and Remediation Program

Re: December 23, 2011 Voluntary Remediation Plan Application
Avery Dennison, HSI #10578
Flowery Branch, Hall County, GA
Tax Parcel ID 08073 000003D

Dear Mr. Martin:

The Georgia Environmental Protection Division (EPD) has received the December 23, 2011, Voluntary Remediation Program application that has been submitted pursuant to the Georgia Voluntary Remediation Program Act (the Act) O.C.G.A. 12-8-100, by the Johnson Company on behalf of Avery Dennison. After completing its review of the application, EPD has prepared the following comments:

Conceptual Site Model (CSM):

1) Please note that the vapor extraction phase of the multi-phase extraction (MPE) corrective action must continue until such time that the subsurface impacts no longer represent a potential risk to the vapor intrusion pathway, i.e. indoor and subslab air quality as it relates directly to land use determinations. This may require an evaluation of the indoor vapor intrusion pathway at some point in the future in order to establish criteria for the completion of the noted corrective action. EPD recommends that the environmental covenant placed on the property incorporate the appropriate verbiage to address this particular concern.

2) Please note that the May 2010 Corrective Action Plan (CAP) for the site included plans for designing a full-scale application of a MPE/pump & treat corrective action for the southern/western source areas in order to achieve hydraulic containment of the groundwater plume, onsite active remediation & treatment, and permitted discharge. The VRP application did not clearly indicate if the VRP Status Update Report would include design plans for the installation of a groundwater pump & treat component of the Multi-Phase Extraction System to address the groundwater impacts in the western source area of the site. Please provide clarification as to whether or not this particular corrective action component will be included in the VRP remedial action plan, as it may influence the result of the aforementioned modeling and potential for impact(s) to the downgradient surface water feature.

3) Please include the evaluation of the exposure pathway for the utility worker/construction worker scenario during onsite/offsite subsurface activities, and if necessary develop an operation & maintenance (O&M) plan to protect the integrity of these areas and restrict future exposure.

4) According the data for the subject site, the downgradient creek is considered a discharge point for the impacted groundwater migrating from the subject site. While surface water data has been provided as part of the VRP Application to illustrate that there have been no impacts above the In-Stream Water Quality Standards (ISWQS), additional information must be provided to address concerns associated with this complete exposure pathway, including but not limited to the following:

   i. Sections 6 and 7 of the VRP Application indicated that a point of demonstration monitoring plan would be included as part of the Status Update Report. Please ensure that this plan establishes a clear Point of Exposure (POE) and associated Point of Demonstration (POD) for the surface water exposure pathway and associated groundwater contaminant plume.

   ii. In the event that the MPE system design plan does not incorporate a western source area pump & treat component, please provide a groundwater model to demonstrate the current and/or future potential for groundwater impacts to migrate to and potentially discharge to the stream at concentrations greater than the ISWQS for the constituents of concern. Long-term surface water monitoring at the POD/POE may be required should the modeling indicate continued exposure potential from a long-term remnant source area plume. These sampling requirements, if necessary, can be included as part of the environmental covenants for the site.

   iii. Please note that based on the below listed Ecological Screening Assessment comments associated with the downgradient stream, EPD does not currently agree that an exposure risk does not exist for the surface water exposure pathway and additional information will be required.

   iv. Please ensure that the environmental covenants that are to be placed on the qualifying property(ies) include a stipulation that the remedial goals and associated in-stream water quality for the downgradient stream will comply with the requirements and criteria established within the Georgia Rules for Water Quality Control (Rule 391-3-6) and associated Georgia Water Quality Act (O.C.G.A. 12-5-20, et seq.), and the 2004 Comprehensive State-wide Water Management Planning Act (O.C.G.A. 12-5-520 to 525) and associated local Watershed/River Basin Management Plan(s).

5) Within six months of detecting regulated substance(s) on a non-qualifying property, the participant must apply to EPD to include the affected property as a qualifying property under the Act or notify EPD that the non-qualifying property is not included under the Act. Consequently, please note that the currently available site information indicates that site related contaminants have been detected on the adjacent Wrigley property on the southwest border of the Avery Dennison property. Therefore, please ensure that the first semiannual progress report includes a description of this Wrigley property as an additional qualifying property, along with a supporting site figure that illustrates the extent of this leased property or notify EPD that the Wrigley property will not be included under the Act. Please note that confirmation and/or documentation that Wrigley has provided express permission to enter the property and perform any applicable corrective actions must be included in the event that Wrigley retains ownership of the impacted area(s) north of the stream. In addition, please provide a copy of the VRP Application and future VRP documentation to Wrigley for their records.

Included as part of the VRP Application submittal was a November 23, 2011, "Response to EPD June 30, 2011 Comments on March 2010 Compliance Status Report," which responded to a number of EPD comments associated with the calculated risk reduction standards for the subject site. EPD's comments regarding the proposed RRS for the site, and Avery's associated comment responses, are included as follows:

Risk Reduction Standards (RRS):

6) The responses to Comments 5 & 6 are acceptable.

7) Comment 7:

   i. The response is acceptable and the necessary revisions have been made.
   ii. Please note that the correct Type 2 for Arsenic is 5.6E-4mg/L (based on adult cancer risk). This value is however produced correctly in Table 7-5.
   iii. The correct Type 4 RRS for cis-1,2-Dichloroethylene and Chromium (III) is 0.2mg/L and 153mg/L respectively. Please revise Table 7-3.

8) Comment 8: Response is noted. However, please note that EPD stated the Type 1 soils for Fluorotrichloromethane, Vinyl Chloride, Carbon Tetrachloride and 1,4-Dichlorobenzene are based on '100xApp III' value. Please revise based on this value. The RAGS equation values for these constituents in Table 7-4 could not be reproduced and are incorrect. Also note that the Type 1 RRS for Carbon Disulfide, Xylenes, are also based on the '100xApp III' value. Please revise Table 7-4.

9) The responses to Comments 9 and 10 are acceptable.

10) The response to Comments 11 is acceptable however, Table 7-7 will need to be revised based on comment 8(iii). In addition, please revise the "Selected GW RRS" in the leachability calculations for soil screening level (SSL) values. Please also note that for Chromium (VI), the higher of the Type 3 and Type 4 RRS was not selected. The higher value should be the Type 1 RRS for Chromium. Please revise SSL calculations for Chromium (VI).

Additional Screening Level Ecological Risk Assessment Comments:

11) Table 5: COPEC Selection in Sediment:

   i. As was done with the selection of COPECs in Surface Water, Maximum Detected Concentrations (MDCs) should be compared to appropriate screening values. If any of the MDCs exceed their respective screening values that regulated substance needs to be carried forward into the refinement step.

   ii. In the refinement step alternate screening values and refined exposure concentrations equal to 95% Upper Confidence Levels (UCLs) of the means can be used for comparative purposes, rather than Arithmetic Means of Detects. Please include the input and output data for the 95% UCL calculations for review, as these values will need to be verified by EPD. Please re-screen the regulated substances using the aforementioned method and revise the table as necessary.

iii. Dutch Target and Intervention Values: EPD finds these values to be inappropriate for use for sites in Georgia. Please consult the Oak Ridge National Laboratory's1 Risk Assessment Information System for additional sediment screening values.

12) Table 7: COPEC Selection in Groundwater-Surface Water Transition Zone:

i. As was done with the selection of COPECs in Surface Water, Maximum Detected Concentrations (MDCs) should be compared to appropriate screening values. If any of the MDCs exceed their respective screening values that regulated substance needs to be carried forward into the refinement step.

ii. In the refinement step alternate screening values and refined exposure concentrations can be used for comparative purposes, rather than 30% of MDCs. The refined exposure concentrations should be derived using a methodology (i.e., modeling) that can be justified.

13) Table 8: Screening Risk Calculation and Initial Refinement:

i. Surface Water: Please provide the input and output data for the 95% UCL calculations for review, as these values will need to be verified by EPD. Additionally, the "Refined Hazard Quotient based on UCL" values may need to be revised. From the information provided it appears that exposure to surface water does not currently pose a risk to ecological receptors, however additional justification must be provided for the use of a Dilution Factor of 30% of the 95% UCL to demonstrate that future groundwater discharges will not negatively impact surface water.

ii. Groundwater-Surface Water Transition: From the information provided it is difficult for EPD to verify that groundwater will not have future negative impacts to surface water. EPD needs a demonstration (i.e., model results) to show that as groundwater continues to discharge to surface water that negative impacts to surface water will not be seen. Please provide this information to EPD for review.

14) Table 9: Refined Screening Level Risk Calculation for the Groundwater-Surface Transition Zone: Please revise the table based on aforementioned comments.

The above comments must be addressed to EPD's satisfaction in order to demonstrate compliance with the provisions, purposes, standards and policies of the Act. EPD may, at its sole discretion, review and comment on documents submitted by Avery. However, failure of EPD to respond to a submittal within any timeframe does not relieve Avery from complying with the provisions, purposes, standards, and policies of the Act.

# APPENDIX B
# RESPONSE TO JUNE 5, 2012 COMMENT LETTER BY EPD

**APPENDIX B – Responses to June 5, 2012 Comment Letter by GA EPD**

**Comments as provided by GA EPD in its June 5, 2012 comment letter to Avery Dennison are shown in normal font under the corresponding heading used by GA EPD in its letter. Avery Dennison's responses are shown in *blue italics font*.**

**Conceptual Site Model (CSM):**

1) Please note that the vapor extraction phase of the multi-phase extraction (MPE) corrective action must continue until such time that the subsurface impacts no longer represent a potential risk to the vapor intrusion pathway, i.e. indoor and subslab air quality as it relates directly to land use determinations. This may require an evaluation of the indoor vapor intrusion pathway at some point in the future in order to establish criteria for the completion of the noted corrective action. EPD recommends that the environmental covenant placed on the property incorporate the appropriate verbiage to address this particular concern.

*Avery Dennison Response: The comment is noted.*

2) Please note that the May 2010 Corrective Action Plan (CAP) for the site included plans for designing a full-scale application of a MPE/pump & treat corrective action for the southern/western source areas in order to achieve hydraulic containment of the groundwater plume, onsite active remediation & treatment, and permitted discharge. The VRP application did not clearly indicate if the VRP Status Update Report would include design plans for the installation of a groundwater pump & treat component of the Multi-Phase Extraction System to address the groundwater impacts in the western source area of the site. Please provide clarification as to whether or not this particular corrective action component will be included in the VRP remedial action plan, as it may influence the result of the aforementioned modeling and potential for impact(s) to the downgradient surface water feature.

*Avery Dennison Response: The western source area will not be addressed by a multiphase extraction system. Relevant potential risk exposure pathways will be addressed by environmental covenants that will be developed per the requirements of the VRP.*

3) Please include the evaluation of the exposure pathway for the utility worker/construction worker scenario during onsite/offsite subsurface activities, and if necessary develop an operation and maintenance (O&M) plan to protect the integrity of these areas and restrict future exposure.

*Avery Dennison Response: Please see pages 1-2 of the memorandum from Ted Simon, LLC, which is provided in Appendix C to the Progress Report. None of the Type 3/4 Risk Reduction Standards are exceeded for soil, nor are any of the alternative screening thresholds developed for the Voluntary Remediation Program based on guidance from EPD's Risk Assessment Unit.*

4) According the data for the subject site, the downgradient creek is considered a discharge point for the impacted groundwater migrating from the subject site. While surface water data has been

provided as part of the VRP Application to illustrate that there have been no impacts above the In-Stream Water Quality Standards (ISWQS), additional information must be provided to address concerns associated with this complete exposure pathway, including but not limited to the following:

i. Sections 6 and 7 of the VRP Application indicated that a point of demonstration monitoring plan would be included as part of the Status Update Report. Please ensure that this plan establishes a clear Point of Exposure (POE) and associated Point of Demonstration (POD) for the surface water exposure pathway and associated groundwater contaminant plume.

*Avery Dennison Response: A point of demonstration monitoring plan will be provided with the next Progress Report.*

ii. In the event that the MPE system design plan does not incorporate a western source area pump &treat component, please provide a groundwater model to demonstrate the current and/or future potential for groundwater impacts to migrate to and potentially discharge to the stream at concentrations greater than the ISWQS for the constituents of concern. Long-term surface water monitoring at the POD/POE may be required should the modeling indicate continued exposure potential from a long-term remnant source area plume. These sampling requirements, if necessary, can be included as part of the environmental covenants for the site.

*Avery Dennison Response: The comment is noted and will be addressed in a subsequent Progress Report.*

iii. Please note that based on the below listed Ecological Screening Assessment comments associated with the downgradient stream, EPD does not currently agree that an exposure risk does not exist for the surface water exposure pathway and additional information will be required.

*Avery Dennison Response: EPD's comments regarding the Screening Level Ecological Risk Assessment and refinement are addressed below. No unacceptable ecological exposure risk exists.*

iv. Please ensure that the environmental covenants that are to be placed on the qualifying property(ies) include a stipulation that the remedial goals and associated in-stream water quality for the downgradient stream will comply with the requirements and criteria established within the Georgia Rules for Water Quality Control (Rule 391-3-6) and associated Georgia Water Quality Act (O.C.G.A. 12-5-20, et seq.), and the 2004 Comprehensive State- wide Water Management Planning Act (O.C.GA. 12-5-520 to 525) and associated local Watershed/River Basin Management Plan(s).

*Avery Dennison Response: The comment is noted.*

5) Within six months of detecting regulated substance(s) on a non-qualifying property, the participant must apply to EPD to include the affected property as a qualifying property under the Act or notify EPD that the non-qualifying property is not included under the Act. Consequently, please note

that the currently available site information indicates that site related contaminants have been detected on the adjacent Wrigley property on the southwest border of the Avery Dennison property. Therefore, please ensure that the first semiannual progress report includes a description of this Wrigley property as an additional qualifying property, along with a supporting site figure that illustrates the extent of this leased property or notify EPD that the Wrigley property will not be included under the Act. Please note that confirmation and/or documentation that Wrigley has provided express permission to enter the property and perform any applicable corrective actions must be included in the event that Wrigley retains ownership of the impacted area(s) north of the stream. In addition, please provide a copy of the VRP Application and future VRP documentation to Wrigley for their records.

*Avery Dennison Response: Please see Section 3.4 of the Progress Report. Confirmation of acquisition of the affected portion of the now-Wrigley property will be promptly provided to EPD following completion of the sale.*

Included as part of the VRP Application submittal was a November 23, 2011, "Response to EPD June 30, 2011 Comments on March 2010 Compliance Status Report," which responded to a number of EPD comments associated with the calculated risk reduction standards for the subject site. EPD's comments regarding the proposed RRS for the site, and Avery's associated comment responses, are included as follows:

**Risk Reduction Standards (RRS):**

6) The responses to Comments 5 & 6 are acceptable.

7) Comment 7:

i. The response is acceptable and the necessary revisions have been made.

ii. Please note that the correct Type 2 RRS for Arsenic is 5.6E-4mg/L (based on adult cancer risk).

This value is however produced correctly in Table 7-5.

*Avery Dennison Response: Please see pages 2-3 of the memorandum from Ted Simon, LLC, which is provided in Appendix C to the Progress Report. The correct development of Type 2 RRS is shown.*

iii. The correct Type 4 RRS for cis-1,2-Dichloroethylene and Chromium (III) is 0.2 mg/L and 153 mg/L respectively. Please revise Table 7-3.

*Avery Dennison Response: The revised Table 7-3 is shown in Appendix C to the Progress Report, and the development of the Type 4 RRS for cis-1,2-dichoroethlyene and Chromium (III) is shown.*

8) Comment 8: Response is noted. However, please note that EPD stated the Type 1 soils for Fluorotrichloromethane, Vinyl Chloride, Carbon Tetrachloride and 1,4-Dichlorobenzene are based on

'1OO x App III' value. Please revise based on this value. The RAGS equation values for these constituents in Table 7-4 could not be reproduced and are incorrect. Also note that the Type 1 RRS for Carbon Disulfide, Xylenes, are also based on the '100xApp III' value. Please revise Table 7-4.

*Avery Dennison Response: A revised Table 7-4 is shown in Appendix C to the Progress Report.*

9) The responses to Comments 9 and 10 are acceptable.

10) The response to Comments 11 is acceptable; however, Table 7-7 will need to be revised based on comment 8(iii). In addition, please revise the "Selected GW RRS" in the leachability calculations for soil screening level (SSL) values. Please also note that for Chromium (VI), the higher of the Type 3 and Type 4 RRS was not selected. The higher value should be the Type 1 RRS for Chromium. Please revise SSL calculations for Chromium (VI).

*Avery Dennison Response: Please see the response provided in pages 4-5 of the memorandum from Ted Simon, LLC, which is provided in Appendix C to the Progress Report.*

**Additional Screening Level Ecological Risk Assessment Comments:**

11) Table 5: COPEC Selection in Sediment:

i. As was done with the selection of COPECs in Surface Water, Maximum Detected Concentrations (MDCs) should be compared to appropriate screening values. If any of the MDCs exceed their respective screening values that regulated substance needs to be carried forward into the refinement step.

ii. In the refinement step alternate screening values and refined exposure concentrations equal to 95% Upper Confidence Levels (UCLs) of the means can be used for comparative purposes, rather than Arithmetic Means of Detects. Please include the input and output data for the 95%UCL calculations for review, as these values will need to be verified by EPD. Please re-screen the regulated substances using the aforementioned method and revise the table as necessary.

iii. Dutch Target and Intervention Values: EPD finds these values to be inappropriate for use for sites in Georgia. Please consult the Oak Ridge National Laboratory's (http://rais.ornl.gov) Risk Assessment Information System for additional sediment screening values.

*Avery Dennison Response: Please see the response provided in pages 5-6 of the memorandum from Ted Simon, LLC, which is provided in Appendix C to the Progress Report.*

12) Table 7: COPEC Selection in Groundwater-Surface Water Transition Zone:

i. As was done with the selection of COPECs in Surface Water, Maximum Detected Concentrations (MDCs) should be compared to appropriate screening values. If any of the MDCs exceed their respective screening values that regulated substance needs to be carried forward into the refinement step.

ii. In the refinement step alternate screening values and refined exposure concentrations can be used for comparative purposes, rather than 30% of MDCs. The refined exposure concentrations should be derived using a methodology (i.e., modeling) that can be justified.

*Avery Dennison Response: Please see the response provided in pages 6-8 of the memorandum from Ted Simon, LLC, which is provided in Appendix C to the Progress Report.*

13) Table 8: Screening Risk Calculation and Initial Refinement:

i. Surface Water: Please provide the input and output data for the 95% UCL calculations for review, as these values will need to be verified by EPD. Additionally, the "Refined Hazard Quotient based on UCL" values may need to be revised. From the information provided it appears that exposure to surface water does not currently pose a risk to ecological receptors, however additional justification must be provided for the use of a Dilution Factor of 30% of the 95% UCL to demonstrate that future groundwater discharges will not negatively impact surface water.

ii. Groundwater-Surface Water Transition: From the information provided it is difficult for EPD to verify that groundwater will not have future negative impacts to surface water. EPD needs a demonstration (i.e., model results) to show that as groundwater continues to discharge to surface water that negative impacts to surface water will not be seen. Please provide this information to EPD for review.

*Avery Dennison Response: Please see the response provided in page 8 of the memorandum from Ted Simon, LLC, which is provided in Appendix C to the Progress Report.*

14) Table 9: Refined Screening Level Risk Calculation for the Groundwater-Surface Transition Zone: Please revise the table based on aforementioned comments.

*Avery Dennison Response: Please see the response provided in page 9 of the memorandum from Ted Simon, LLC, which is provided in Appendix C to the Progress Report, as well as the associated revised tables.*

**Memorandum**

To: The Johnson Company, Inc.

From: Ted Simon, LLC

Date: November 1, 2012 – Revised

Re: Response to June 5, 2012 Comments by Georgia EPD re: Avery Dennison Site, HSI #10578

The purpose of the memorandum is to provide responses to Comments #3, #7, #8 and #10 to #14 of the June 5, 2012 letter from David Brownlee of Georgia EPD to Bruce Martin of Avery Dennison regarding the Flowery Branch site. The Georgia EPD Comments are shown below in *italics* font, and each respective comment-by-comment response is shown in normal font. In addition to the changes noted below, all values in Tables 7-3, 7-4 and 7-7 were checked based on the most recent version of EPA's Regional Screening Level Table, dated May 2012.

**Comment #3:** *Please include the evaluation of the exposure pathway for the utility worker/construction worker scenario during onsite/offsite [sic] subsurface activities, and if necessary develop an operation and maintenance (O&M) plan to protect the integrity of these areas and restrict future exposure.*

This comment was discussed with Ms. Shanna Alexander of Georgia EPD's Risk Assessment Unit on November 7, 2012, and Ms. Alexander sent a follow-up email which is attached to this memorandum as *Attachment 1*. Under HSRA, the exposure pathway for the utility worker/construction worker scenario is assessed under the Type 3 (default) and Type 4 (site-specific) Risk Reduction Standards (RRS) for soil, which were already presented in the Voluntary Investigation and Remediation Plan (VIRPA) submitted by Avery Dennison in December 2011, and revised herein per EPD's comments (see attached Table 7-4). As reported in the VIRPA, the property is in compliance with the Type 3/4 RRS for soil, including the revised RRS presented in Table 7-4.

Ms. Alexander verbally indicated that EPD is still determining the specific approach that will be used for risk assessment for the VRP, and thus an additional analysis is presented herein that is not part of the Risk Reduction Standard (RRS) determination. Ms. Alexander provided exposure assumptions in her email, and indicated that dermal exposure should be considered as well as ingestion and inhalation.

For dermal exposure, a soil adherence factor of 0.3 mg/cm$^2$ was obtained from Appendix C of RAGS, Part E, Exhibit C-3 and a skin surface area of 3300 cm$^2$ from RAGS part E, page 3-11. Default dermal absorption values were obtained from Region 4 Risk Assessment

guidance, human health bulletins of 1% for organics and 0.1% for inorganics. Any chromium present was assumed to be in the form of Cr(VI). Lead was not assessed here because the adult lead model has already been evaluated for the site and reported in the May 2010 Compliance Status Report.

Table 1 (attached) provides the threshold values for soil for protection of the utility/construction worker based on this analysis. The Johnson Company reports that none of the thresholds are exceeded on the property.

**Comment #7 ii:** *Please note the correct Type 2* [sic] *Arsenic is 5.6E-04 mg/L (based on adult cancer risk). The value is however correctly produced in Table 7-5.*

A revised version of Table 7-3 is attached, which shows the result of the following calculation:

Equation 1 from RAGS Part B is

$$C\ (mg/L) = \frac{(TR)(BW)(AT)(365\ days/year)}{(EF)(ED)[(SFi)(K)(IRa) + (SFo)(IRw)]}$$

where TR = Target Risk = 1E-05

BW = Body Weight (kg) = 70 kg for an adult and 15 kg for a child

AT = Averaging Time = 70 years

EF = Exposure Frequency = 350 days/year

ED = Exposure Duration = 30 years for an adult and 6 years for a child

SFi = Inhalation Slope Factor (per mg/kg/d) (chemical-specific)

K = Volatilization Factor = 0.5 $L/m^3$ (from Andelman, 1990)

Ira = Daily Indoor Inhalation Rate = 15 $m^3/d$

SFo = Oral Slope Factor (per mg/kg/d) (chemical-specific)

IRw = Water Ingestion Rate = 2 L/d for adults and 1 L/d for children

Since arsenic dissolved in water is not volatile, the inhalation portion in the denominator drops out. The oral slope factor for arsenic is 1.5 per mg/kg/d and the inhalation slope factor is 15 per mg/kg/d calculated from a unit risk value of 4.3E-03 per $\mu g/m^3$.

Therefore, C = (1E-05 x 70 kg x 70 yr x 365 days/yr) /(30 yr x 350 days/yr x (1.5 per mg/kg/d x 2 L/day))
= 5.67E-04 mg/L

**Comment #7, iii.** *The correct Type 4 RRS for cis-1,2-Dichloroethylene and Chromium (III) is* [sic] *0.2 mg/L and 153 mg/L respectively. Please revise Table 7-3.*

A revised version of Table 7-3 is attached, which shows the result of the calculation shown below.

Cis-1,2-dichloroethene and chromium (III) both non-carcinogens—hence, Equation 2 in RAGS, Part B is operative.

$$C\ (mg/L) = \frac{(THI)(BW)(AT)(365\ days/year)}{(EF)(ED)[(1/RfDi)(K)(IRa) + (1/RfDo)(IRw)]}$$

where RfDi = inhalation reference dose (mg/kg/d)
RfDo = oral reference dose (mg/kg/d)
THI = target hazard index = 1.0
AT = ED x 365 days/yr
Other variables as defined above

The oral RfD for cis-1,2-dichloroethylene is 2E-03 mg/kg/d and there is no inhalation RfD. The oral RfD for chromium(III) is 1.5 mg/kg/d and there is no inhalation RfD.

Thus:

Cis-1,2-dichloroethylene
(1.0 x 70 kg x 25 yr x 365 days/yr) / (25 yr x 250 days/yr x (1/2E-03 mg/kg/d) x 1 L/d)
= 0.2 mg/L

Chromium(III)
(1.0 x 70 kg x 25 yr x 365 days/yr) / (25 yr x 250 days/yr x (1/1.5 mg/kg/d) x 1 L/d)
= 153.3 mg/L[1]

**Comment 8:** *Response is noted. However, please note that EPD stated the Type 1 soils* [sic] *for Fluorotrichloromethane, Vinyl Chloride, Carbon Tetrachloride, and 1,4-Dichlorobenzene are based on '100xApp III' value. Please revise based on this value. The RAGS equation values for these constituents in Table 7-4 could not be reproduced and are incorrect. Also note that the Type 1 RRS for Carbon Disulfide, Xylenes, are also based on the '100xApp III' value. Please revise Table 7-4.*

A revised Table 7-4 is attached.

[1] It should be noted that chromium in soil and groundwater at the Site is attributed to background sources, as described in pages 3-9 and 4-23 of the March 2010 Compliance Status Report.

**Comment 10:** *The response to Comments 11 [sic] is acceptable however, Table 7-7 will need to be revised based on comment 8(iii). In addition, please revise the "Selected GW RRS" in the leachability calculations for soil screening level (SSL) values. Please also note that for Chromium (VI), the higher of the Type 3 and Type 4 RRS was not selected. The higher value should be the Type 1 RRS for Chromium. Please revise SSL calculations for Chromium.*

We assume "comment 8(iii)" actually revers to 7(iii). We also assume the reference to the Type 1 RRS for Chromium should be Type 4 RRS for Chromium—as the higher of the Type 3 RRS and the Type 4 Candidate RRS.

The equation for calculating the soil-to-groundwater RRS is

$$SSL\left(\frac{mg}{kg}\right) = C_w\left[K_d + \frac{\theta_w + \theta_a H'}{\rho_B}\right]$$

where $C_w$ = Groundwater Target Concentration
$K_d$ = Soil-Water Partition Coefficient (L/kg)
$\theta_w$ = water-filled soil porosity = 0.3
$\theta_a$ = air-filled soil porosity = 0.134
$\rho_B$ = dry soil bulk density = 1.5
H' = unitless Henry's Law constant

For Chromium(III), Attachment C of EPA's 1996 *Soil Screening Guidance* provides a $K_d$ value of 1.8E+06 at pH 6.8. For Chromium(VI), the $K_d$ value is 19.[2]

For cis-1,2-dichloroethylene, the $K_d$ value is obtained from the organic carbon partition coefficient or $K_{oc}$ available in the Regional Screening Level Table; the value is 39.6 L/kg. Multiplying by the default soil organic carbon fraction of 0.002, the value of $K_d$ becomes 0.0792 L/kg. The unitless Henry's Law constant for cis-1,2-dichloroethylene is 0.1668.

Hence, the calculated SSL values based on the Type 1/3 and Type 4 groundwater RRS values are shown below.

[2] It should be noted that chromium in soil and groundwater at the Site is attributed to background sources, as described in pages 3-9 and 4-23 of the March 2010 Compliance Status Report.

| Chemical | Type 1/3 GW RRS (mg/L) | Target Leachate Conc. (mg/L) | Soil-to-GW RRS (mg/kg) | Type 4 GW RRS (mg/L) | Target Leachate Conc. (mg/L) | Type 4 Soil-to-GW RRS (SSL) (mg/kg) |
|---|---|---|---|---|---|---|
| Chromium(III) | 0.1 | 2 | 3.6E+06 | 153 | 3070 | 5.5E+09 |
| Chromium(VI) | 0.1 | 2 | 38.4 | 0.0057 | 0.11 | 2.2 |
| Cis-1,2-dichloroethylene | 0.7 | 1,4 | 0.41 | 0.2 | 4.1 | 1.2 |

**Comment #11(i):** *As was done with the selection of COPECs in Surface Water, Maximum Detected Concentrations (MDCs) should be compared to appropriate screening values. If any of the MDCs exceed their respective screening values that regulated substance need to be carried forward into the refinement step.*

**Response to Comment #11(i):**
All COPECs in surface water, sediment or the GW/SW transition zone were rescreened using the maximum detected concentration. Please see the revised tables in Attachment 2.

**Comment #11(ii):** *In the refinement step alternate screening values and refined exposure concentrations equal to 95% Upper Confidence Levels (UCLS) of the means can be used for comparative purposes, rather than Arithmetic Means of Detects. Please include the input and output data for the 95%UCL calculations for review, as these values will need to be verified by EPD. Please re-screen the regulated substances using the aforementioned method and revise the table as necessary.*

**Response to Comment #11(ii):**
The input files (*.wst) and output files (*.ost) from EPA's ProUCL software were converted to PDF format and are included in Attachment 3. The original .wst and .ost files are provided on disk in Attachment 4. ProUCL 4.1 can be downloaded at http://www.epa.gov/osp/hstl/tsc/software.htm. Tables were revised as necessary. Please note that an earlier version of ProUCL was used in the original submission, and thus the results vary slightly between versions. In addition, for some values, the slight variation may be due to the use by ProUCL of random numbers in some of the UCL calculations.

**Comment #11(iii):** *Dutch Target and Intervention Values: EPD finds these values to be inappropriate for use for sites in Georgia. Please consult the Oak Ridge National Laboratory's Risk Assessment information System for additional sediment screening values.*

**Response to Comment #11(iii)**
The Risk Assessment Information System at http://rais.ornl.gov/ was used as the source of all screening values. The lowest, i.e., most conservative, of the screening values was

chosen. These can be seen in the tables in Attachment 2. Some information about the source of RAIS values is also presented below.

*EPA Region 3 Biological Technical Assistance Group Freshwater Sediment Screening Benchmarks*

The EPA Region III Biological Technical Assistance Group (BTAG) Screening Benchmarks are values to be used for the evaluation of sampling data at Superfund sites. These values facilitate consistency in screening level ecological risk assessments throughout EPA Region III. Additional toxicological information should be considered in Step 3 as provided by the Ecological Risk Assessment Guidance for Superfund (EPA, 1997). The tables in Attachment 2 include compounds for which benchmark values have been established or that are considered bioaccumulative compounds (identified in tables). For additional information on compounds for which no benchmarks are identified and the use of alternate values, please consult the BTAG FAQs specific to these subjects. The tables and FAQs are available at http://www.epa.gov/reg3hwmd/risk/eco/index.htm.

The following files that support the BTAG freshwater sediment screening benchmarks are available on the RAIS: table of benchmarks, notes and references, table for the Computation of Freshwater Sediment Screening Benchmarks Using Site-Specific Total Organic Carbon, and Import Notes.

*EPA Region 5 ESLs - Sediment*

The ESL reference database consists of Region 5 media-specific (soil, water, sediment, and air) Ecological Screening Levels (ESLs) for RCRA Appendix IX hazardous constituents. The ESLs are initial screening levels with which the site contaminant concentrations can be compared. The ESLs help to focus the investigation on those areas and chemicals that are most likely to pose an unacceptable risk to the environment. ESLs also impact the data requirements for the planning and implementation of field investigations. ESLs alone are not intended to serve as cleanup levels. See the August 2003 revision of the ESLs (formerly EDQLs) at http://www.epa.gov/reg5rcra/ca/ESL.pdf

*OSWER (Office of Solid Waste and Emergency Response). 1996. Ecotox thresholds*. U.S. Environmental Protection Agency. ECO Update 3 (2):1-12.
http://www.epa.gov/superfund/programs/risk/eco_updt.pdf

**Comment #12(i):** *As was done with the selection of COPECS in Surface Water, Maximum Detected Concentrations (MDCS) should be compared to appropriate screening values. If any of the MDCS exceed their respective screening values that regulated substance needs to be carried forward into the refinement step.*

**Response to Comment #12(i):**
See response to Comment #11(i).

**Comment #12(ii):** *A. In the refinement step alternate screening values and refined exposure concentrations can be used for comparative purposes, rather than 30% of MDCs. The refined exposure concentrations should be derived using a methodology (i.e., modeling) that can be justified.*

**Response to Comment #12(ii):**
Ample justification for the use of 30% was provided. In EPA's *Eco Update/Ground Water Forum Issue Paper – Evaluating Ground-Water/Surface-Water Transition Zones in Ecological Risk Assessment* - specific guidance on this issue is provided: http://www.epa.gov/oswer/riskassessment/ecoup/pdf/eco_update_08.pdf. On page 20 of that Issue Paper, it says:

> *"Reasonable exposure point concentrations can be determined, in consultation with the site hydrogeologist, from a particular well or set of wells along the flow path(s) from the source to the discharge zone in the surface water. However, it may be preferable to determine this more realistic exposure-point concentration from available or new data from transition zone samples."*

The preferable alternative was exactly what was done at this site. The text of the SLERA refinement previously submitted with the March 2010 Compliance Status Report states:

> *"The concentration of VOC that is representative of the transition zone between groundwater and surface water was developed for this SLERA [refinement] by evaluation of relationships between streambed groundwater and surface water VOC concentrations at common points of measurement within the unnamed tributary stream.*
>
> *There are three such points: (1) SW-2 and SBW-4; (2) SW-4 and SBW-7; and (3) SW-5 and SBW-10. The analytical results for VOC at SW-4 and SW-5 were almost uniformly non-detect, hence the respective pairings could not be used for the evaluation. However, at the SBW-4/SW-2 location, which is at the location of highest overall VOC detections in streambed groundwater, there has been a positive correlation between SW-2 concentrations and SBW-4 concentrations over the entire period of monitoring: October 2006 until the recent sampling event in October 2009. This correlation is apparent in Figure 13 [of the SLERA refinement].*
>
> *The SBW-4/SW-2 location of the unnamed tributary stream is adjacent to the emergence of the visible seep shown in Figures 9 and 10 [of the SLERA refinement]. While not a transition zone itself, the presence of the seep is indicative of the existence of a connection between groundwater and surface water in other parts of the stream. This connection may be a transition zone as defined in EPA guidance, Evaluating Ground-Water/Surface-Water Transition Zones in Ecological Risk Assessment (EPA, 2008). The concentration of VOC within the transition zone at a given discharge location is expected to be at the low end of the range of VOC concentrations existing in proximate underlying groundwater based on a comparison between streambed well concentrations and surface water concentrations (e.g., Figure 13). The water concentrations to which benthic invertebrates or other stream-dwelling receptors would be exposed would be expected to be represented more closely by surface water concentrations than groundwater concentration since the habitat for ecological receptors is proximate to the surface water and sediment pore water rather than groundwater.*

*To determine concentrations in the transition zone, the ratio of concentrations of 1,1,1-TCA, 1,1-DCA or 1,1-DCE in surface water at SW-2 and those in groundwater at SBW-4 were examined over time (Figure 13 [of the SLERA refinement). The surface water concentrations of these chemicals at SW-2 have ranged from 2% to 30% of those in groundwater at SBW-4. Hence, a value of 30% of the streambed well groundwater concentration for each analyte was selected for this SLERA refinement as a conservative estimate of the VOC concentration within the water at the transition between groundwater and surface water. Ten percent was selected as a central estimate value. To apply conservatism, the concentration of VOC for each compound at the transition between groundwater and surface water was calculated as 30% and 10% of the either the maximum detect or the 95% upper confidence limit from the streambed groundwater wells. 30% was the highest value observed whereas 10% represented a central value."*

Data to support this evaluation was presented in the SLERA refinement. Given the direct empirical derivation of the analysis based on a thorough dataset, and the implicit conservatism in the analysis, it is unclear how EPD determines a modeling analysis is required to establish the groundwater/surface water relationship for purposes of a SLERA. We request that EPD provide additional support for its comment.

**Comment #13(i):** *Surface Water: Please provide the input and output data for the 95% UCL calculations for review, as these values will need to be verified by EPD. Additionally, the "Refined Hazard Quotient based on UCL" values may need to be revised. From the information provided it appears that exposure to surface water does not currently pose a risk to ecological receptors, however additional justification must be provided for the use of a Dilution Factor of 30% of the 95% UCL to demonstrate that future groundwater discharges will not negatively impact surface water.*

**Response to Comment #13(i)**
The 30% factor for dilution during passage through the GW/SW transition zone is discussed in the response to comment #12(ii). The input files (*.wst) and output files (*.ost) for the 95% UCL determination are provided in PDF format in Attachment 3; original files are included on disk in Attachment 4. ProUCL 4.1 can be downloaded at http://www.epa.gov/osp/hstl/tsc/software.htm.

**Comment #13(ii):** *Groundwater-Surface Water Transition: From the information provided it is difficult for EPD to verify that groundwater will not have future negative impacts to surface water. EPD needs a demonstration (i.e., model results) to show that as groundwater continues to discharge to surface water that negative impacts to surface water will not be seen. Please provide this information to EPD for review.*

**Response to Comment #13(ii):**
This comment will be addressed in a subsequent semi-annual Status Report.

**Comment #14:** *Table 9: Refined Screening Level Risk Calculation for the Groundwater-Surface Transition Zone: Please revise the table based on aforementioned comments.*

**Response to Comment #14:**
The revised sequence of tables from the SLERA refinement (see Attachment 2: Tables 4 through 9) culminate in the revision to Table 9, as requested. The revised Table 9 is provided in Attachment 2.

**Subject:** Exposure Factors for the Excavation Worker

**From:** "Shanna Alexander" <Shanna.Alexander@dnr.state.ga.us>(Add as Preferred Sender)
**Date:** Wed, Nov 07, 2012 10:03 am
**To:** <ted@tedsimon-toxicology.com>

Ted,

Given the little site information relayed from you this morning via phone about the site in question, here are the recommended exposure factors commonly used and accepted for the quantitative evaluation of the soil ingestion and inhalation pathways for an excavation worker under the RCRA and NPL programs. As discussed, sites under the HSRA program divides receptors into residential and non-residential receptor groups. Therefore, construction/excavation workers, utility workers and commercial/industrial workers are all assessed under the Type 3 (default) and Type 4 (site-specific) RRS. Default exposure factors for non-residential receptors can be found in App. III, Table 3 of the Georgia Rules for Hazardous Site Response (HSRA Rules):http://rules.sos.state.ga.us/docs/391/3/19/Appendix%20I-IV.pdf. Given this information, I would recommend checking in with the assigned compliance officer to clarify their request for quantitative evaluation of this receptor given the existing default exposure factors in the Rules for non-residential site receptors.

Another noteworthy point is that unless the site is under the Voluntary Remediation Program or seeking compliance to the Type 5 soil RRS, evaluation of the dermal exposure pathway is not required as the dermal risk is deemed insignificant for the Type 1-4 RRS for soil.

Ingestion Rate of Soil (IRs) - 330 mg/day
Fraction Ingested (FI) - 1
Exposure Duration (ED) - 0.5 years (any proposed value based on professional judgment of less than a 6-mos. contracted period will require adequate justification)
Exposure Frequency (EF) - 130 days/yr (5 days/week over 6 months)
Inhalation Rate (IRa) - 20 m3/day

The body weight and averaging time (cancer and non-cancer) parameters will remain the same as recommended in App. III, Table 3 of the HSRA Rules. Please feel free to contact me if you need further assistance and/or have questions regarding this.

Regards,

Shanna Alexander

Table 8. Screening Risk Calculation and Initial Refinement

| Surface Water | | | | | |
|---|---|---|---|---|---|
| **Chemical** | **95% UCL** | **Maximum Detect** | **Screening Benchmarks (µg/L)** | **Preliminary Hazard Quotient[3]** | **Refined Hazard Quotient based on UCL[4]** |
| 1,1,1-Trichloroethane | 3.921[5] | 25 | 11 / 11 | 2 | 0.3 |
| 1,1-Dichloroethene | 6.521[7] | 47 | 25 / 25 | 2 | 0.3 |
| Sediment | | | | | |
| **Chemical** | **95% UCL** | **Maximum Detect** | **Screening Benchmarks (µg/kg)** | **Preliminary Hazard Quotient[5]** | **Refined Hazard Quotient based on UCL** |
| 1,1,1-Trichloroethane | 29.21[6] | 110 | 170 / 213 / 30.2 | 4 | <1 (0.14) - <1 (0.97) |
| 1,1-Dichloroethane | 16.73[7] | 19 | 0.575 | 33[7] | 30 (29)[6, 9] |
| 1,1-Dichloroethene | 29.22[7] | 64 | 19.4 / 31 | 3 | <1 (0.94) – 2 (1.5) |

| Groundwater-Surface Water Transition | | | | | | | |
|---|---|---|---|---|---|---|---|
| **Chemical** | **95% UCL** | **30% of the 95.% UCL** | **Maximum Detect** | **30% of the Max** | **Screening Benchmarks (µg/L)** | **Preliminary Hazard Quotient** | **Refined Hazard Quotient based on 30% of UCL** |
| 1,1,1-Trichloroethane | 56.55[7] | 16.97 | 260 | 78 | 11 / 11 | 7 | 2 (1.5) |
| 1,1-Dichloroethane | 58.36[8] | 17.51 | 370 | 111 | 47 / 47 | 2 | <1 (0.4) |
| 1,1-Dichloroethene | 107.8[8] | 32.34 | 790 | 237 | 25 / 25 | 9 | 1 (1.3) |

[3] Preliminary HQ calculated as the ratio between the maximum detect and the benchmark.
[4] Refined HQ calculated as the ratio between the UCL and the benchmark.
[5] 95% KM(t) UCL (recommended by ProUCL). For some of the ProUCL calculations, the bootstrap and some of the Kaplan-Meier calculations, random numbers are used and, for this reason, additional ProUCL runs may not be to reproduce UCL values exactly.
[6] 95% KM (bootstrap t) UCL (used because the recommended 95% KM(BCA) UCL was the same value as the maximum detect)
[7] Two significant digits to show difference between the preliminary HQ and refined HQ
[8] 95% KM (BCA) UCL (recommended by ProUCL)

Table 9. Additional Refinement of Screening Level Risk Calculation for the Groundwater-Surface Transition Zone and for Sediment. This table provides a range of HQ values based on various values of screening benchmarks.

| Groundwater-Surface Water Transition | | | | | | | |
|---|---|---|---|---|---|---|---|
| **Chemical** | **Arithmetic Mean Normal DL/2** | **95% UCL** | **10% of the UCL as a Transition Zone Conc.** | **30% of the UCL as a Transition Zone Conc.** | **Tier II SCV SW Screening Benchmark (µg/L)[9]** | **EPA R6 Chronic Freshwater Benchmark (µg/L)[11]** | **HQ Range[10]** |
| **VOCs (µg/L)** | | | | | | | |
| 1,1,1-Trichloroethane | 40.3 | 56.55 | 5.66 | 16.97 | 11 | 4900 | **0.001 - 2(1.5)** |
| 1,1-Dichloroethene | 75.92 | 107.8 | 10.78 | 32.24 | 25 | 3000 | **0.004 - 1** |
| Sediment | | | | | | | |
| **Chemical** | **Average Concentration** | **95% UCL** | **Maximum Detect** | **EPA R5 Sediment Screening Benchmark (µg/kg)[12]** | **Texas Commission on Environmental Quality Sediment Benchmark (µg/kg)[12]** | | **HQ Range[11]** |
| | | | | | | | |
| 1,1-Dichloroethane | 5.546 | 16.73 | 19 | 0.575 | 13890 | | **0.001 - 30** |
| 1,1-Dichloroethene | 8.904 | 29.22 | 64 | 19.4 | 11200 | | **0.002 - 2** |

[9] To provide additional context for these HQ values, the highest and lowest benchmarks from http://rais.ornl.gov were used. For 1,1-DCE and 1,1-DCA in sediment, the TCEQ benchmark was used to provide perspective.

[10] For the GWSW transition, the range of HQ values was based on the use of the 10% UCL and 30% UCL with the highest and lowest benchmarks respectively. Hence 5.66/4900 = 0.001 and 16.97/11 = 2. The range changed from a previous version due to the use of a different upper benchmark value (200 previously, now 4900). For sediment, the UCL was used with both benchmarks. Hence. 16.73/13890 = 0.001 and 16.73/0.575 = 30.

| Confidence Coefficient | 95% |
| Number of Bootstrap Operations | 2000 |

111-TCA

**General Statistics**

| | | | |
|---|---|---|---|
| Number of Valid Data | 14 | Number of Detected Data | 2 |
| Number of Distinct Detected Data | 2 | Number of Non-Detect Data | 12 |
| | | Percent Non-Detects | 85.71% |

| Raw Statistics | | Log-transformed Statistics | |
|---|---|---|---|
| Minimum Detected | 23 | Minimum Detected | 3.135 |
| Maximum Detected | 110 | Maximum Detected | 4.7 |
| Mean of Detected | 66.5 | Mean of Detected | 3.918 |
| SD of Detected | 61.52 | SD of Detected | 1.107 |
| Minimum Non-Detect | 5.5 | Minimum Non-Detect | 1.705 |
| Maximum Non-Detect | 23 | Maximum Non-Detect | 3.135 |
| Note: Data have multiple DLs - Use of KM Method is recommended | | Number treated as Non-Detect | 12 |
| For all methods (except KM, DL/2, and ROS Methods), | | Number treated as Detected | 2 |
| Observations < Largest ND are treated as NDs | | Single DL Non-Detect Percentage | 85.71% |

Warning: Data set has only 2 Distinct Detected Values.

This may not be adequate enough to compute meaningful and reliable test statistics and estimates.

The Project Team may decide to use alternative site specific values to estimate environmental parameters (e.g., EPC, BTV).

**Unless Data Quality Objectives (DQOs) have been met, it is suggested to collect additional observations.**

The number of detected data may not be adequate enough to perform GOF tests, bootstrap, and ROS methods.

Those methods will return a 'N/A' value on your output display!

**It is necessary to have 4 or more Distinct Values for bootstrap methods.**

**However, results obtained using 4 to 9 distinct values may not be reliable.**

**It is recommended to have 10 to 15 or more observations for accurate and meaningful results and estimates.**

ANALYTICAL RESULTS

Prepared by:

Lancaster Laboratories
2425 New Holland Pike
Lancaster, PA 17605-2425

Prepared for:

The Johnson Company, Inc.
Suite 600
100 State Street
Montpelier VT 05602

October 31, 2011

Project: Avery Dennison / Flowery Branch, GA

Submittal Date: 10/20/2011
Group Number: 1272269
PO Number: 1-0145-4
State of Sample Origin: GA

## General Sample Comments

PA DEP Lab Certification ID 36-00037, Expiration Date: 1/31/12

All QC is compliant unless otherwise noted. Please refer to the Quality Control Summary for overall QC performance data and associated samples.

# Analysis Report

## Quality Control Summary

Client Name: The Johnson Company, Inc. Group Number: 1272269
Reported: 10/31/11 at 04:01 PM

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD was performed, unless otherwise specified in the method.

All Inorganic Initial Calibration and Continuing Calibration Blanks met acceptable method criteria unless otherwise noted on the Analysis Report.

# Explanation of Symbols and Abbreviations

*The following defines common symbols and abbreviations used in reporting technical data:*

| | | | |
|---|---|---|---|
| **RL** | Reporting Limit | **BMQL** | Below Minimum Quantitation Level |
| **N.D.** | none detected | **MPN** | Most Probable Number |
| **TNTC** | Too Numerous To Count | **CP Units** | cobalt-chloroplatinate units |
| **IU** | International Units | **NTU** | nephelometric turbidity units |
| **umhos/cm** | micromhos/cm | **ng** | nanogram(s) |
| **C** | degrees Celsius | **F** | degrees Fahrenheit |
| **meq** | milliequivalents | **lb.** | pound(s) |
| **g** | gram(s) | **kg** | kilogram(s) |
| **ug** | microgram(s) | **mg** | milligram(s) |
| **ml** | milliliter(s) | **l** | liter(s) |
| **m3** | cubic meter(s) | **ul** | microliter(s) |

**<** less than - The number following the sign is the limit of quantitation, the smallest amount of analyte which can be reliably determined using this specific test.

**>** greater than

**J** estimated value – The result is ≥ the Method Detection Limit (MDL) and < the Limit of Quantitation (LOQ).

**ppm** parts per million - One ppm is equivalent to one milligram per kilogram (mg/kg), or one gram per million grams. For aqueous liquids, ppm is usually taken to be equivalent to milligrams per liter (mg/l), because one liter of water has a weight very close to a kilogram. For gases or vapors, one ppm is equivalent to one microliter of gas per liter of gas.

**ppb** parts per billion

**Dry weight basis** Results printed under this heading have been adjusted for moisture content. This increases the analyte weight concentration to approximate the value present in a similar sample without moisture. All other results are reported on an as-received basis.

*U.S. EPA CLP Data Qualifiers:*

**Organic Qualifiers**

| | |
|---|---|
| **A** | TIC is a possible aldol-condensation product |
| **B** | Analyte was also detected in the blank |
| **C** | Pesticide result confirmed by GC/MS |
| **D** | Compound quantitated on a diluted sample |
| **E** | Concentration exceeds the calibration range of the instrument |
| **N** | Presumptive evidence of a compound (TICs only) |
| **P** | Concentration difference between primary and confirmation columns >25% |
| **U** | Compound was not detected |
| **X,Y,Z** | Defined in case narrative |

**Inorganic Qualifiers**

| | |
|---|---|
| **B** | Value is <CRDL, but ≥IDL |
| **E** | Estimated due to interference |
| **M** | Duplicate injection precision not met |
| **N** | Spike sample not within control limits |
| **S** | Method of standard additions (MSA) used for calculation |
| **U** | Compound was not detected |
| **W** | Post digestion spike out of control limits |
| ***** | Duplicate analysis not within control limits |
| **+** | Correlation coefficient for MSA <0.995 |

Analytical test results meet all requirements of NELAC unless otherwise noted under the individual analysis.

Measurement uncertainty values, as applicable, are available upon request.

Tests results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff. This report shall not be reproduced except in full, without the written approval of the laboratory.

**WARRANTY AND LIMITS OF LIABILITY** - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. THE FOREGOING EXPRESS WARRANTY IS EXCLUSIVE AND IS GIVEN IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED. WE DISCLAIM ANY OTHER WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING A WARRANTY OF FITNESS FOR PARTICULAR PURPOSE AND WARRANTY OF MERCHANTABILITY. IN NO EVENT SHALL LANCASTER LABORATORIES BE LIABLE FOR INDIRECT, SPECIAL, CONSEQUENTIAL, OR INCIDENTAL DAMAGES INCLUDING, BUT NOT LIMITED TO, DAMAGES FOR LOSS OF PROFIT OR GOODWILL REGARDLESS OF (A) THE NEGLIGENCE (EITHER SOLE OR CONCURRENT) OF LANCASTER LABORATORIES AND (B) WHETHER LANCASTER LABORATORIES HAS BEEN INFORMED OF THE POSSIBILITY OF SUCH DAMAGES. We accept no legal responsibility for the purposes for which the client uses the test results. No purchase order or other order for work shall be accepted by Lancaster Laboratories which includes any conditions that vary from the Standard Terms and Conditions, and Lancaster hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

## General Sample Comments

PA DEP Lab Certification ID 36-00037, Expiration Date: 1/31/12

All QC is compliant unless otherwise noted. Please refer to the Quality Control Summary for overall QC performance data and associated samples.

# Analysis Report

## Quality Control Summary

Client Name: The Johnson Company, Inc. Group Number: 1272363
Reported: 11/01/11 at 11:17 AM

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD was performed, unless otherwise specified in the method.

All Inorganic Initial Calibration and Continuing Calibration Blanks met acceptable method criteria unless otherwise noted on the Analysis Report.

# Explanation of Symbols and Abbreviations

*The following defines common symbols and abbreviations used in reporting technical data:*

| | | | |
|---|---|---|---|
| **RL** | Reporting Limit | **BMQL** | Below Minimum Quantitation Level |
| **N.D.** | none detected | **MPN** | Most Probable Number |
| **TNTC** | Too Numerous To Count | **CP Units** | cobalt-chloroplatinate units |
| **IU** | International Units | **NTU** | nephelometric turbidity units |
| **umhos/cm** | micromhos/cm | **ng** | nanogram(s) |
| **C** | degrees Celsius | **F** | degrees Fahrenheit |
| **meq** | milliequivalents | **lb.** | pound(s) |
| **g** | gram(s) | **kg** | kilogram(s) |
| **ug** | microgram(s) | **mg** | milligram(s) |
| **ml** | milliliter(s) | **l** | liter(s) |
| **m3** | cubic meter(s) | **ul** | microliter(s) |

**<** less than - The number following the sign is the limit of quantitation, the smallest amount of analyte which can be reliably determined using this specific test.

**>** greater than

**J** estimated value – The result is ≥ the Method Detection Limit (MDL) and < the Limit of Quantitation (LOQ).

**ppm** parts per million - One ppm is equivalent to one milligram per kilogram (mg/kg), or one gram per million grams. For aqueous liquids, ppm is usually taken to be equivalent to milligrams per liter (mg/l), because one liter of water has a weight very close to a kilogram. For gases or vapors, one ppm is equivalent to one microliter of gas per liter of gas.

**ppb** parts per billion

**Dry weight basis** Results printed under this heading have been adjusted for moisture content. This increases the analyte weight concentration to approximate the value present in a similar sample without moisture. All other results are reported on an as-received basis.

*U.S. EPA CLP Data Qualifiers:*

**Organic Qualifiers**

| | |
|---|---|
| **A** | TIC is a possible aldol-condensation product |
| **B** | Analyte was also detected in the blank |
| **C** | Pesticide result confirmed by GC/MS |
| **D** | Compound quantitated on a diluted sample |
| **E** | Concentration exceeds the calibration range of the instrument |
| **N** | Presumptive evidence of a compound (TICs only) |
| **P** | Concentration difference between primary and confirmation columns >25% |
| **U** | Compound was not detected |
| **X,Y,Z** | Defined in case narrative |

**Inorganic Qualifiers**

| | |
|---|---|
| **B** | Value is <CRDL, but ≥IDL |
| **E** | Estimated due to interference |
| **M** | Duplicate injection precision not met |
| **N** | Spike sample not within control limits |
| **S** | Method of standard additions (MSA) used for calculation |
| **U** | Compound was not detected |
| **W** | Post digestion spike out of control limits |
| ***** | Duplicate analysis not within control limits |
| **+** | Correlation coefficient for MSA <0.995 |

Analytical test results meet all requirements of NELAC unless otherwise noted under the individual analysis.

Measurement uncertainty values, as applicable, are available upon request.

Tests results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff. This report shall not be reproduced except in full, without the written approval of the laboratory.

**WARRANTY AND LIMITS OF LIABILITY** - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. THE FOREGOING EXPRESS WARRANTY IS EXCLUSIVE AND IS GIVEN IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED. WE DISCLAIM ANY OTHER WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING A WARRANTY OF FITNESS FOR PARTICULAR PURPOSE AND WARRANTY OF MERCHANTABILITY. IN NO EVENT SHALL LANCASTER LABORATORIES BE LIABLE FOR INDIRECT, SPECIAL, CONSEQUENTIAL, OR INCIDENTAL DAMAGES INCLUDING, BUT NOT LIMITED TO, DAMAGES FOR LOSS OF PROFIT OR GOODWILL REGARDLESS OF (A) THE NEGLIGENCE (EITHER SOLE OR CONCURRENT) OF LANCASTER LABORATORIES AND (B) WHETHER LANCASTER LABORATORIES HAS BEEN INFORMED OF THE POSSIBILITY OF SUCH DAMAGES. We accept no legal responsibility for the purposes for which the client uses the test results. No purchase order or other order for work shall be accepted by Lancaster Laboratories which includes any conditions that vary from the Standard Terms and Conditions, and Lancaster hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

# Analysis Report

## Quality Control Summary

Client Name: The Johnson Company, Inc. Group Number: 1272537
Reported: 11/01/11 at 11:12 AM

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD was performed, unless otherwise specified in the method.

All Inorganic Initial Calibration and Continuing Calibration Blanks met acceptable method criteria unless otherwise noted on the Analysis Report.

# Explanation of Symbols and Abbreviations

*The following defines common symbols and abbreviations used in reporting technical data:*

| | | | |
|---|---|---|---|
| **RL** | Reporting Limit | **BMQL** | Below Minimum Quantitation Level |
| **N.D.** | none detected | **MPN** | Most Probable Number |
| **TNTC** | Too Numerous To Count | **CP Units** | cobalt-chloroplatinate units |
| **IU** | International Units | **NTU** | nephelometric turbidity units |
| **umhos/cm** | micromhos/cm | **ng** | nanogram(s) |
| **C** | degrees Celsius | **F** | degrees Fahrenheit |
| **meq** | milliequivalents | **lb.** | pound(s) |
| **g** | gram(s) | **kg** | kilogram(s) |
| **ug** | microgram(s) | **mg** | milligram(s) |
| **ml** | milliliter(s) | **l** | liter(s) |
| **m3** | cubic meter(s) | **ul** | microliter(s) |

**<** less than - The number following the sign is the limit of quantitation, the smallest amount of analyte which can be reliably determined using this specific test.

**>** greater than

**J** estimated value – The result is ≥ the Method Detection Limit (MDL) and < the Limit of Quantitation (LOQ).

**ppm** parts per million - One ppm is equivalent to one milligram per kilogram (mg/kg), or one gram per million grams. For aqueous liquids, ppm is usually taken to be equivalent to milligrams per liter (mg/l), because one liter of water has a weight very close to a kilogram. For gases or vapors, one ppm is equivalent to one microliter of gas per liter of gas.

**ppb** parts per billion

**Dry weight basis** Results printed under this heading have been adjusted for moisture content. This increases the analyte weight concentration to approximate the value present in a similar sample without moisture. All other results are reported on an as-received basis.

*U.S. EPA CLP Data Qualifiers:*

**Organic Qualifiers**

| | |
|---|---|
| **A** | TIC is a possible aldol-condensation product |
| **B** | Analyte was also detected in the blank |
| **C** | Pesticide result confirmed by GC/MS |
| **D** | Compound quantitated on a diluted sample |
| **E** | Concentration exceeds the calibration range of the instrument |
| **N** | Presumptive evidence of a compound (TICs only) |
| **P** | Concentration difference between primary and confirmation columns >25% |
| **U** | Compound was not detected |
| **X,Y,Z** | Defined in case narrative |

**Inorganic Qualifiers**

| | |
|---|---|
| **B** | Value is <CRDL, but ≥IDL |
| **E** | Estimated due to interference |
| **M** | Duplicate injection precision not met |
| **N** | Spike sample not within control limits |
| **S** | Method of standard additions (MSA) used for calculation |
| **U** | Compound was not detected |
| **W** | Post digestion spike out of control limits |
| ***** | Duplicate analysis not within control limits |
| **+** | Correlation coefficient for MSA <0.995 |

Analytical test results meet all requirements of NELAC unless otherwise noted under the individual analysis.

Measurement uncertainty values, as applicable, are available upon request.

Tests results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff. This report shall not be reproduced except in full, without the written approval of the laboratory.

**WARRANTY AND LIMITS OF LIABILITY** - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. THE FOREGOING EXPRESS WARRANTY IS EXCLUSIVE AND IS GIVEN IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED. WE DISCLAIM ANY OTHER WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING A WARRANTY OF FITNESS FOR PARTICULAR PURPOSE AND WARRANTY OF MERCHANTABILITY. IN NO EVENT SHALL LANCASTER LABORATORIES BE LIABLE FOR INDIRECT, SPECIAL, CONSEQUENTIAL, OR INCIDENTAL DAMAGES INCLUDING, BUT NOT LIMITED TO, DAMAGES FOR LOSS OF PROFIT OR GOODWILL REGARDLESS OF (A) THE NEGLIGENCE (EITHER SOLE OR CONCURRENT) OF LANCASTER LABORATORIES AND (B) WHETHER LANCASTER LABORATORIES HAS BEEN INFORMED OF THE POSSIBILITY OF SUCH DAMAGES. We accept no legal responsibility for the purposes for which the client uses the test results. No purchase order or other order for work shall be accepted by Lancaster Laboratories which includes any conditions that vary from the Standard Terms and Conditions, and Lancaster hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

## Quality Control Summary

Client Name: The Johnson Company, Inc. Group Number: 1272750
Reported: 11/03/11 at 03:43 PM

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD was performed, unless otherwise specified in the method.

All Inorganic Initial Calibration and Continuing Calibration Blanks met acceptable method criteria unless otherwise noted on the Analysis Report.

# Explanation of Symbols and Abbreviations

*The following defines common symbols and abbreviations used in reporting technical data:*

| | | | |
|---|---|---|---|
| **RL** | Reporting Limit | **BMQL** | Below Minimum Quantitation Level |
| **N.D.** | none detected | **MPN** | Most Probable Number |
| **TNTC** | Too Numerous To Count | **CP Units** | cobalt-chloroplatinate units |
| **IU** | International Units | **NTU** | nephelometric turbidity units |
| **umhos/cm** | micromhos/cm | **ng** | nanogram(s) |
| **C** | degrees Celsius | **F** | degrees Fahrenheit |
| **meq** | milliequivalents | **lb.** | pound(s) |
| **g** | gram(s) | **kg** | kilogram(s) |
| **ug** | microgram(s) | **mg** | milligram(s) |
| **ml** | milliliter(s) | **l** | liter(s) |
| **m3** | cubic meter(s) | **ul** | microliter(s) |

**<** less than - The number following the sign is the limit of quantitation, the smallest amount of analyte which can be reliably determined using this specific test.

**>** greater than

**J** estimated value – The result is ≥ the Method Detection Limit (MDL) and < the Limit of Quantitation (LOQ).

**ppm** parts per million - One ppm is equivalent to one milligram per kilogram (mg/kg), or one gram per million grams. For aqueous liquids, ppm is usually taken to be equivalent to milligrams per liter (mg/l), because one liter of water has a weight very close to a kilogram. For gases or vapors, one ppm is equivalent to one microliter of gas per liter of gas.

**ppb** parts per billion

**Dry weight basis** Results printed under this heading have been adjusted for moisture content. This increases the analyte weight concentration to approximate the value present in a similar sample without moisture. All other results are reported on an as-received basis.

*U.S. EPA CLP Data Qualifiers:*

**Organic Qualifiers**

| | |
|---|---|
| **A** | TIC is a possible aldol-condensation product |
| **B** | Analyte was also detected in the blank |
| **C** | Pesticide result confirmed by GC/MS |
| **D** | Compound quantitated on a diluted sample |
| **E** | Concentration exceeds the calibration range of the instrument |
| **N** | Presumptive evidence of a compound (TICs only) |
| **P** | Concentration difference between primary and confirmation columns >25% |
| **U** | Compound was not detected |
| **X,Y,Z** | Defined in case narrative |

**Inorganic Qualifiers**

| | |
|---|---|
| **B** | Value is <CRDL, but ≥IDL |
| **E** | Estimated due to interference |
| **M** | Duplicate injection precision not met |
| **N** | Spike sample not within control limits |
| **S** | Method of standard additions (MSA) used for calculation |
| **U** | Compound was not detected |
| **W** | Post digestion spike out of control limits |
| ***** | Duplicate analysis not within control limits |
| **+** | Correlation coefficient for MSA <0.995 |

Analytical test results meet all requirements of NELAC unless otherwise noted under the individual analysis.

Measurement uncertainty values, as applicable, are available upon request.

Tests results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff. This report shall not be reproduced except in full, without the written approval of the laboratory.

**WARRANTY AND LIMITS OF LIABILITY** - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. THE FOREGOING EXPRESS WARRANTY IS EXCLUSIVE AND IS GIVEN IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED. WE DISCLAIM ANY OTHER WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING A WARRANTY OF FITNESS FOR PARTICULAR PURPOSE AND WARRANTY OF MERCHANTABILITY. IN NO EVENT SHALL LANCASTER LABORATORIES BE LIABLE FOR INDIRECT, SPECIAL, CONSEQUENTIAL, OR INCIDENTAL DAMAGES INCLUDING, BUT NOT LIMITED TO, DAMAGES FOR LOSS OF PROFIT OR GOODWILL REGARDLESS OF (A) THE NEGLIGENCE (EITHER SOLE OR CONCURRENT) OF LANCASTER LABORATORIES AND (B) WHETHER LANCASTER LABORATORIES HAS BEEN INFORMED OF THE POSSIBILITY OF SUCH DAMAGES. We accept no legal responsibility for the purposes for which the client uses the test results. No purchase order or other order for work shall be accepted by Lancaster Laboratories which includes any conditions that vary from the Standard Terms and Conditions, and Lancaster hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

## Quality Control Summary

Client Name: The Johnson Company, Inc. Group Number: 1272972
Reported: 11/04/11 at 04:16 PM

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD was performed, unless otherwise specified in the method.

All Inorganic Initial Calibration and Continuing Calibration Blanks met acceptable method criteria unless otherwise noted on the Analysis Report.

# Explanation of Symbols and Abbreviations

*The following defines common symbols and abbreviations used in reporting technical data:*

| | | | |
|---|---|---|---|
| **RL** | Reporting Limit | **BMQL** | Below Minimum Quantitation Level |
| **N.D.** | none detected | **MPN** | Most Probable Number |
| **TNTC** | Too Numerous To Count | **CP Units** | cobalt-chloroplatinate units |
| **IU** | International Units | **NTU** | nephelometric turbidity units |
| **umhos/cm** | micromhos/cm | **ng** | nanogram(s) |
| **C** | degrees Celsius | **F** | degrees Fahrenheit |
| **meq** | milliequivalents | **lb.** | pound(s) |
| **g** | gram(s) | **kg** | kilogram(s) |
| **ug** | microgram(s) | **mg** | milligram(s) |
| **ml** | milliliter(s) | **l** | liter(s) |
| **m3** | cubic meter(s) | **ul** | microliter(s) |

**<** less than - The number following the sign is the limit of quantitation, the smallest amount of analyte which can be reliably determined using this specific test.

**>** greater than

**J** estimated value – The result is ≥ the Method Detection Limit (MDL) and < the Limit of Quantitation (LOQ).

**ppm** parts per million - One ppm is equivalent to one milligram per kilogram (mg/kg), or one gram per million grams. For aqueous liquids, ppm is usually taken to be equivalent to milligrams per liter (mg/l), because one liter of water has a weight very close to a kilogram. For gases or vapors, one ppm is equivalent to one microliter of gas per liter of gas.

**ppb** parts per billion

**Dry weight basis** Results printed under this heading have been adjusted for moisture content. This increases the analyte weight concentration to approximate the value present in a similar sample without moisture. All other results are reported on an as-received basis.

*U.S. EPA CLP Data Qualifiers:*

**Organic Qualifiers**

| | |
|---|---|
| **A** | TIC is a possible aldol-condensation product |
| **B** | Analyte was also detected in the blank |
| **C** | Pesticide result confirmed by GC/MS |
| **D** | Compound quantitated on a diluted sample |
| **E** | Concentration exceeds the calibration range of the instrument |
| **N** | Presumptive evidence of a compound (TICs only) |
| **P** | Concentration difference between primary and confirmation columns >25% |
| **U** | Compound was not detected |
| **X,Y,Z** | Defined in case narrative |

**Inorganic Qualifiers**

| | |
|---|---|
| **B** | Value is <CRDL, but ≥IDL |
| **E** | Estimated due to interference |
| **M** | Duplicate injection precision not met |
| **N** | Spike sample not within control limits |
| **S** | Method of standard additions (MSA) used for calculation |
| **U** | Compound was not detected |
| **W** | Post digestion spike out of control limits |
| ***** | Duplicate analysis not within control limits |
| **+** | Correlation coefficient for MSA <0.995 |

Analytical test results meet all requirements of NELAC unless otherwise noted under the individual analysis.

Measurement uncertainty values, as applicable, are available upon request.

Tests results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff. This report shall not be reproduced except in full, without the written approval of the laboratory.

**WARRANTY AND LIMITS OF LIABILITY** - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. THE FOREGOING EXPRESS WARRANTY IS EXCLUSIVE AND IS GIVEN IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED. WE DISCLAIM ANY OTHER WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING A WARRANTY OF FITNESS FOR PARTICULAR PURPOSE AND WARRANTY OF MERCHANTABILITY. IN NO EVENT SHALL LANCASTER LABORATORIES BE LIABLE FOR INDIRECT, SPECIAL, CONSEQUENTIAL, OR INCIDENTAL DAMAGES INCLUDING, BUT NOT LIMITED TO, DAMAGES FOR LOSS OF PROFIT OR GOODWILL REGARDLESS OF (A) THE NEGLIGENCE (EITHER SOLE OR CONCURRENT) OF LANCASTER LABORATORIES AND (B) WHETHER LANCASTER LABORATORIES HAS BEEN INFORMED OF THE POSSIBILITY OF SUCH DAMAGES. We accept no legal responsibility for the purposes for which the client uses the test results. No purchase order or other order for work shall be accepted by Lancaster Laboratories which includes any conditions that vary from the Standard Terms and Conditions, and Lancaster hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

## Quality Control Summary

Client Name: The Johnson Company, Inc. Group Number: 1273196
Reported: 11/07/11 at 01:21 PM

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD was performed, unless otherwise specified in the method.

All Inorganic Initial Calibration and Continuing Calibration Blanks met acceptable method criteria unless otherwise noted on the Analysis Report.

# Environmental Sample Administration
# Receipt Documentation Log

**Client/Project:** The JOHNSON Co

**Date of Receipt:** 10/26/11

**Time of Receipt:** 0900

**Source Code:** 50-1

**Shipping Container Sealed:** (YES) NO

**Custody Seal Present * :** (YES) NO

* Custody seal was intact unless otherwise noted in the discrepancy section

**Package:** (Chilled) Not Chilled

| Temperature of Shipping Containers | | | | | | | |
|---|---|---|---|---|---|---|---|
| Cooler # | Thermometer ID | Temperature (°C) | Temp Bottle (TB) or Surface Temp (ST) | Wet Ice (WI) or Dry Ice (DI) or Ice Packs (IP) | Ice Present? Y/N | Loose (L) Bagged Ice (B) or NA | Comments |
| 1 | 9422 | 4.2 | TD | WI | Y | B | |
| 2 | | | | | | | |
| 3 | | | | | | | |
| 4 | | | | | | | |
| 5 | | | | | | | |
| 6 | | | | | | | |

**Number of Trip Blanks received NOT listed on chain of custody:** 0

**Paperwork Discrepancy/Unpacking Problems:**

**Unpacker Signature/Emp#:** Suzette Lehman 1677 **Date/Time:** 10/26/11 10:40

Issued by Dept. 6042 Management

# Explanation of Symbols and Abbreviations

*The following defines common symbols and abbreviations used in reporting technical data:*

| | | | |
|---|---|---|---|
| **RL** | Reporting Limit | **BMQL** | Below Minimum Quantitation Level |
| **N.D.** | none detected | **MPN** | Most Probable Number |
| **TNTC** | Too Numerous To Count | **CP Units** | cobalt-chloroplatinate units |
| **IU** | International Units | **NTU** | nephelometric turbidity units |
| **umhos/cm** | micromhos/cm | **ng** | nanogram(s) |
| **C** | degrees Celsius | **F** | degrees Fahrenheit |
| **meq** | milliequivalents | **lb.** | pound(s) |
| **g** | gram(s) | **kg** | kilogram(s) |
| **ug** | microgram(s) | **mg** | milligram(s) |
| **ml** | milliliter(s) | **l** | liter(s) |
| **m3** | cubic meter(s) | **ul** | microliter(s) |

**<** less than - The number following the sign is the limit of quantitation, the smallest amount of analyte which can be reliably determined using this specific test.

**>** greater than

**J** estimated value – The result is ≥ the Method Detection Limit (MDL) and < the Limit of Quantitation (LOQ).

**ppm** parts per million - One ppm is equivalent to one milligram per kilogram (mg/kg), or one gram per million grams. For aqueous liquids, ppm is usually taken to be equivalent to milligrams per liter (mg/l), because one liter of water has a weight very close to a kilogram. For gases or vapors, one ppm is equivalent to one microliter of gas per liter of gas.

**ppb** parts per billion

**Dry weight basis** Results printed under this heading have been adjusted for moisture content. This increases the analyte weight concentration to approximate the value present in a similar sample without moisture. All other results are reported on an as-received basis.

*U.S. EPA CLP Data Qualifiers:*

**Organic Qualifiers**

| | |
|---|---|
| **A** | TIC is a possible aldol-condensation product |
| **B** | Analyte was also detected in the blank |
| **C** | Pesticide result confirmed by GC/MS |
| **D** | Compound quantitated on a diluted sample |
| **E** | Concentration exceeds the calibration range of the instrument |
| **N** | Presumptive evidence of a compound (TICs only) |
| **P** | Concentration difference between primary and confirmation columns >25% |
| **U** | Compound was not detected |
| **X,Y,Z** | Defined in case narrative |

**Inorganic Qualifiers**

| | |
|---|---|
| **B** | Value is <CRDL, but ≥IDL |
| **E** | Estimated due to interference |
| **M** | Duplicate injection precision not met |
| **N** | Spike sample not within control limits |
| **S** | Method of standard additions (MSA) used for calculation |
| **U** | Compound was not detected |
| **W** | Post digestion spike out of control limits |
| ***** | Duplicate analysis not within control limits |
| **+** | Correlation coefficient for MSA <0.995 |

Analytical test results meet all requirements of NELAC unless otherwise noted under the individual analysis.

Measurement uncertainty values, as applicable, are available upon request.

Tests results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff. This report shall not be reproduced except in full, without the written approval of the laboratory.

**WARRANTY AND LIMITS OF LIABILITY** - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. THE FOREGOING EXPRESS WARRANTY IS EXCLUSIVE AND IS GIVEN IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED. WE DISCLAIM ANY OTHER WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING A WARRANTY OF FITNESS FOR PARTICULAR PURPOSE AND WARRANTY OF MERCHANTABILITY. IN NO EVENT SHALL LANCASTER LABORATORIES BE LIABLE FOR INDIRECT, SPECIAL, CONSEQUENTIAL, OR INCIDENTAL DAMAGES INCLUDING, BUT NOT LIMITED TO, DAMAGES FOR LOSS OF PROFIT OR GOODWILL REGARDLESS OF (A) THE NEGLIGENCE (EITHER SOLE OR CONCURRENT) OF LANCASTER LABORATORIES AND (B) WHETHER LANCASTER LABORATORIES HAS BEEN INFORMED OF THE POSSIBILITY OF SUCH DAMAGES. We accept no legal responsibility for the purposes for which the client uses the test results. No purchase order or other order for work shall be accepted by Lancaster Laboratories which includes any conditions that vary from the Standard Terms and Conditions, and Lancaster hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

## General Sample Comments

PA DEP Lab Certification ID 36-00037, Expiration Date: 1/31/12

All QC is compliant unless otherwise noted. Please refer to the Quality Control Summary for overall QC performance data and associated samples.

# Analysis Report

## Quality Control Summary

Client Name: The Johnson Company, Inc. Group Number: 1273480
Reported: 11/08/11 at 07:20 PM

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD was performed, unless otherwise specified in the method.

All Inorganic Initial Calibration and Continuing Calibration Blanks met acceptable method criteria unless otherwise noted on the Analysis Report.

# Explanation of Symbols and Abbreviations

*The following defines common symbols and abbreviations used in reporting technical data:*

| | | | |
|---|---|---|---|
| **RL** | Reporting Limit | **BMQL** | Below Minimum Quantitation Level |
| **N.D.** | none detected | **MPN** | Most Probable Number |
| **TNTC** | Too Numerous To Count | **CP Units** | cobalt-chloroplatinate units |
| **IU** | International Units | **NTU** | nephelometric turbidity units |
| **umhos/cm** | micromhos/cm | **ng** | nanogram(s) |
| **C** | degrees Celsius | **F** | degrees Fahrenheit |
| **meq** | milliequivalents | **lb.** | pound(s) |
| **g** | gram(s) | **kg** | kilogram(s) |
| **ug** | microgram(s) | **mg** | milligram(s) |
| **ml** | milliliter(s) | **l** | liter(s) |
| **m3** | cubic meter(s) | **ul** | microliter(s) |

**<** less than - The number following the sign is the limit of quantitation, the smallest amount of analyte which can be reliably determined using this specific test.

**>** greater than

**J** estimated value – The result is ≥ the Method Detection Limit (MDL) and < the Limit of Quantitation (LOQ).

**ppm** parts per million - One ppm is equivalent to one milligram per kilogram (mg/kg), or one gram per million grams. For aqueous liquids, ppm is usually taken to be equivalent to milligrams per liter (mg/l), because one liter of water has a weight very close to a kilogram. For gases or vapors, one ppm is equivalent to one microliter of gas per liter of gas.

**ppb** parts per billion

**Dry weight basis** Results printed under this heading have been adjusted for moisture content. This increases the analyte weight concentration to approximate the value present in a similar sample without moisture. All other results are reported on an as-received basis.

*U.S. EPA CLP Data Qualifiers:*

**Organic Qualifiers**

| | |
|---|---|
| **A** | TIC is a possible aldol-condensation product |
| **B** | Analyte was also detected in the blank |
| **C** | Pesticide result confirmed by GC/MS |
| **D** | Compound quantitated on a diluted sample |
| **E** | Concentration exceeds the calibration range of the instrument |
| **N** | Presumptive evidence of a compound (TICs only) |
| **P** | Concentration difference between primary and confirmation columns >25% |
| **U** | Compound was not detected |
| **X,Y,Z** | Defined in case narrative |

**Inorganic Qualifiers**

| | |
|---|---|
| **B** | Value is <CRDL, but ≥IDL |
| **E** | Estimated due to interference |
| **M** | Duplicate injection precision not met |
| **N** | Spike sample not within control limits |
| **S** | Method of standard additions (MSA) used for calculation |
| **U** | Compound was not detected |
| **W** | Post digestion spike out of control limits |
| ***** | Duplicate analysis not within control limits |
| **+** | Correlation coefficient for MSA <0.995 |

Analytical test results meet all requirements of NELAC unless otherwise noted under the individual analysis.

Measurement uncertainty values, as applicable, are available upon request.

Tests results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff. This report shall not be reproduced except in full, without the written approval of the laboratory.

**WARRANTY AND LIMITS OF LIABILITY** - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. THE FOREGOING EXPRESS WARRANTY IS EXCLUSIVE AND IS GIVEN IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED. WE DISCLAIM ANY OTHER WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING A WARRANTY OF FITNESS FOR PARTICULAR PURPOSE AND WARRANTY OF MERCHANTABILITY. IN NO EVENT SHALL LANCASTER LABORATORIES BE LIABLE FOR INDIRECT, SPECIAL, CONSEQUENTIAL, OR INCIDENTAL DAMAGES INCLUDING, BUT NOT LIMITED TO, DAMAGES FOR LOSS OF PROFIT OR GOODWILL REGARDLESS OF (A) THE NEGLIGENCE (EITHER SOLE OR CONCURRENT) OF LANCASTER LABORATORIES AND (B) WHETHER LANCASTER LABORATORIES HAS BEEN INFORMED OF THE POSSIBILITY OF SUCH DAMAGES. We accept no legal responsibility for the purposes for which the client uses the test results. No purchase order or other order for work shall be accepted by Lancaster Laboratories which includes any conditions that vary from the Standard Terms and Conditions, and Lancaster hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

## Quality Control Summary

Client Name: The Johnson Company, Inc. Group Number: 1273674
Reported: 11/08/11 at 06:36 PM

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD was performed, unless otherwise specified in the method.

All Inorganic Initial Calibration and Continuing Calibration Blanks met acceptable method criteria unless otherwise noted on the Analysis Report.

### Surrogate Quality Control

Surrogate recoveries which are outside of the QC window are confirmed
unless attributed to dilution or otherwise noted on the Analysis Report.

Analysis Name: 1,4-Dioxane by Isotope Dil SIM
Batch number: E113021AA

| | Toluene-d8 |
|---|---|
| 6453237 | 99 |
| 6453238 | 98 |
| 6453239 | 98 |
| 6453240 | 98 |
| 6453241 | 98 |
| 6453242 | 98 |
| 6453243 | 98 |
| 6453244 | 98 |
| 6453245 | 98 |
| 6453246 | 98 |
| 6453247 | 99 |
| Blank | 99 |
| LCS | 99 |
| MS | 99 |
| MSD | 98 |
| Limits: | 80-120 |

Analysis Name: 8260 Std. Water Master
Batch number: L113021AA

*- Outside of specification
(1) The result for one or both determinations was less than five times the LOQ.
(2) The unspiked result was more than four times the spike added.

# Explanation of Symbols and Abbreviations

*The following defines common symbols and abbreviations used in reporting technical data:*

| | | | |
|---|---|---|---|
| **RL** | Reporting Limit | **BMQL** | Below Minimum Quantitation Level |
| **N.D.** | none detected | **MPN** | Most Probable Number |
| **TNTC** | Too Numerous To Count | **CP Units** | cobalt-chloroplatinate units |
| **IU** | International Units | **NTU** | nephelometric turbidity units |
| **umhos/cm** | micromhos/cm | **ng** | nanogram(s) |
| **C** | degrees Celsius | **F** | degrees Fahrenheit |
| **meq** | milliequivalents | **lb.** | pound(s) |
| **g** | gram(s) | **kg** | kilogram(s) |
| **ug** | microgram(s) | **mg** | milligram(s) |
| **ml** | milliliter(s) | **l** | liter(s) |
| **m3** | cubic meter(s) | **ul** | microliter(s) |

**<** less than - The number following the sign is the limit of quantitation, the smallest amount of analyte which can be reliably determined using this specific test.

**>** greater than

**J** estimated value – The result is ≥ the Method Detection Limit (MDL) and < the Limit of Quantitation (LOQ).

**ppm** parts per million - One ppm is equivalent to one milligram per kilogram (mg/kg), or one gram per million grams. For aqueous liquids, ppm is usually taken to be equivalent to milligrams per liter (mg/l), because one liter of water has a weight very close to a kilogram. For gases or vapors, one ppm is equivalent to one microliter of gas per liter of gas.

**ppb** parts per billion

**Dry weight basis** Results printed under this heading have been adjusted for moisture content. This increases the analyte weight concentration to approximate the value present in a similar sample without moisture. All other results are reported on an as-received basis.

*U.S. EPA CLP Data Qualifiers:*

**Organic Qualifiers**

| | |
|---|---|
| **A** | TIC is a possible aldol-condensation product |
| **B** | Analyte was also detected in the blank |
| **C** | Pesticide result confirmed by GC/MS |
| **D** | Compound quantitated on a diluted sample |
| **E** | Concentration exceeds the calibration range of the instrument |
| **N** | Presumptive evidence of a compound (TICs only) |
| **P** | Concentration difference between primary and confirmation columns >25% |
| **U** | Compound was not detected |
| **X,Y,Z** | Defined in case narrative |

**Inorganic Qualifiers**

| | |
|---|---|
| **B** | Value is <CRDL, but ≥IDL |
| **E** | Estimated due to interference |
| **M** | Duplicate injection precision not met |
| **N** | Spike sample not within control limits |
| **S** | Method of standard additions (MSA) used for calculation |
| **U** | Compound was not detected |
| **W** | Post digestion spike out of control limits |
| ***** | Duplicate analysis not within control limits |
| **+** | Correlation coefficient for MSA <0.995 |

Analytical test results meet all requirements of NELAC unless otherwise noted under the individual analysis.

Measurement uncertainty values, as applicable, are available upon request.

Tests results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff. This report shall not be reproduced except in full, without the written approval of the laboratory.

**WARRANTY AND LIMITS OF LIABILITY** - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. THE FOREGOING EXPRESS WARRANTY IS EXCLUSIVE AND IS GIVEN IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED. WE DISCLAIM ANY OTHER WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING A WARRANTY OF FITNESS FOR PARTICULAR PURPOSE AND WARRANTY OF MERCHANTABILITY. IN NO EVENT SHALL LANCASTER LABORATORIES BE LIABLE FOR INDIRECT, SPECIAL, CONSEQUENTIAL, OR INCIDENTAL DAMAGES INCLUDING, BUT NOT LIMITED TO, DAMAGES FOR LOSS OF PROFIT OR GOODWILL REGARDLESS OF (A) THE NEGLIGENCE (EITHER SOLE OR CONCURRENT) OF LANCASTER LABORATORIES AND (B) WHETHER LANCASTER LABORATORIES HAS BEEN INFORMED OF THE POSSIBILITY OF SUCH DAMAGES. We accept no legal responsibility for the purposes for which the client uses the test results. No purchase order or other order for work shall be accepted by Lancaster Laboratories which includes any conditions that vary from the Standard Terms and Conditions, and Lancaster hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

# Analysis Report

## Quality Control Summary

Client Name: The Johnson Company, Inc. Group Number: 1273874
Reported: 11/03/11 at 04:03 PM

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD was performed, unless otherwise specified in the method.

All Inorganic Initial Calibration and Continuing Calibration Blanks met acceptable method criteria unless otherwise noted on the Analysis Report.

## Laboratory Compliance Quality Control

# Explanation of Symbols and Abbreviations

*The following defines common symbols and abbreviations used in reporting technical data:*

| | | | |
|---|---|---|---|
| **RL** | Reporting Limit | **BMQL** | Below Minimum Quantitation Level |
| **N.D.** | none detected | **MPN** | Most Probable Number |
| **TNTC** | Too Numerous To Count | **CP Units** | cobalt-chloroplatinate units |
| **IU** | International Units | **NTU** | nephelometric turbidity units |
| **umhos/cm** | micromhos/cm | **ng** | nanogram(s) |
| **C** | degrees Celsius | **F** | degrees Fahrenheit |
| **meq** | milliequivalents | **lb.** | pound(s) |
| **g** | gram(s) | **kg** | kilogram(s) |
| **ug** | microgram(s) | **mg** | milligram(s) |
| **ml** | milliliter(s) | **l** | liter(s) |
| **m3** | cubic meter(s) | **ul** | microliter(s) |

**<** less than - The number following the sign is the limit of quantitation, the smallest amount of analyte which can be reliably determined using this specific test.

**>** greater than

**J** estimated value – The result is ≥ the Method Detection Limit (MDL) and < the Limit of Quantitation (LOQ).

**ppm** parts per million - One ppm is equivalent to one milligram per kilogram (mg/kg), or one gram per million grams. For aqueous liquids, ppm is usually taken to be equivalent to milligrams per liter (mg/l), because one liter of water has a weight very close to a kilogram. For gases or vapors, one ppm is equivalent to one microliter of gas per liter of gas.

**ppb** parts per billion

**Dry weight basis** Results printed under this heading have been adjusted for moisture content. This increases the analyte weight concentration to approximate the value present in a similar sample without moisture. All other results are reported on an as-received basis.

*U.S. EPA CLP Data Qualifiers:*

**Organic Qualifiers**

| | |
|---|---|
| **A** | TIC is a possible aldol-condensation product |
| **B** | Analyte was also detected in the blank |
| **C** | Pesticide result confirmed by GC/MS |
| **D** | Compound quantitated on a diluted sample |
| **E** | Concentration exceeds the calibration range of the instrument |
| **N** | Presumptive evidence of a compound (TICs only) |
| **P** | Concentration difference between primary and confirmation columns >25% |
| **U** | Compound was not detected |
| **X,Y,Z** | Defined in case narrative |

**Inorganic Qualifiers**

| | |
|---|---|
| **B** | Value is <CRDL, but ≥IDL |
| **E** | Estimated due to interference |
| **M** | Duplicate injection precision not met |
| **N** | Spike sample not within control limits |
| **S** | Method of standard additions (MSA) used for calculation |
| **U** | Compound was not detected |
| **W** | Post digestion spike out of control limits |
| ***** | Duplicate analysis not within control limits |
| **+** | Correlation coefficient for MSA <0.995 |

Analytical test results meet all requirements of NELAC unless otherwise noted under the individual analysis.

Measurement uncertainty values, as applicable, are available upon request.

Tests results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff. This report shall not be reproduced except in full, without the written approval of the laboratory.

**WARRANTY AND LIMITS OF LIABILITY** - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. THE FOREGOING EXPRESS WARRANTY IS EXCLUSIVE AND IS GIVEN IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED. WE DISCLAIM ANY OTHER WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING A WARRANTY OF FITNESS FOR PARTICULAR PURPOSE AND WARRANTY OF MERCHANTABILITY. IN NO EVENT SHALL LANCASTER LABORATORIES BE LIABLE FOR INDIRECT, SPECIAL, CONSEQUENTIAL, OR INCIDENTAL DAMAGES INCLUDING, BUT NOT LIMITED TO, DAMAGES FOR LOSS OF PROFIT OR GOODWILL REGARDLESS OF (A) THE NEGLIGENCE (EITHER SOLE OR CONCURRENT) OF LANCASTER LABORATORIES AND (B) WHETHER LANCASTER LABORATORIES HAS BEEN INFORMED OF THE POSSIBILITY OF SUCH DAMAGES. We accept no legal responsibility for the purposes for which the client uses the test results. No purchase order or other order for work shall be accepted by Lancaster Laboratories which includes any conditions that vary from the Standard Terms and Conditions, and Lancaster hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

## Quality Control Summary

Client Name: The Johnson Company, Inc. Group Number: 1303310
Reported: 04/29/12 at 05:43 PM

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD was performed, unless otherwise specified in the method.

All Inorganic Initial Calibration and Continuing Calibration Blanks met acceptable method criteria unless otherwise noted on the Analysis Report.

# Explanation of Symbols and Abbreviations

*The following defines common symbols and abbreviations used in reporting technical data:*

| | | | |
|---|---|---|---|
| **RL** | Reporting Limit | **BMQL** | Below Minimum Quantitation Level |
| **N.D.** | none detected | **MPN** | Most Probable Number |
| **TNTC** | Too Numerous To Count | **CP Units** | cobalt-chloroplatinate units |
| **IU** | International Units | **NTU** | nephelometric turbidity units |
| **umhos/cm** | micromhos/cm | **ng** | nanogram(s) |
| **C** | degrees Celsius | **F** | degrees Fahrenheit |
| **meq** | milliequivalents | **lb.** | pound(s) |
| **g** | gram(s) | **kg** | kilogram(s) |
| **µg** | microgram(s) | **mg** | milligram(s) |
| **mL** | milliliter(s) | **L** | liter(s) |
| **m3** | cubic meter(s) | **µL** | microliter(s) |
| | | **pg/L** | picogram/liter |

**<** less than - The number following the sign is the limit of quantitation, the smallest amount of analyte which can be reliably determined using this specific test.

**>** greater than

**ppm** parts per million - One ppm is equivalent to one milligram per kilogram (mg/kg), or one gram per million grams. For aqueous liquids, ppm is usually taken to be equivalent to milligrams per liter (mg/l), because one liter of water has a weight very close to a kilogram. For gases or vapors, one ppm is equivalent to one microliter of gas per liter of gas.

**ppb** parts per billion

**Dry weight basis** Results printed under this heading have been adjusted for moisture content. This increases the analyte weight concentration to approximate the value present in a similar sample without moisture. All other results are reported on an as-received basis.

*Data Qualifiers:*

**C –** result confirmed by reanalysis.

**J -** estimated value – The result is ≥ the Method Detection Limit (MDL) and < the Limit of Quantitation (LOQ).

*U.S. EPA CLP Data Qualifiers:*

| **Organic Qualifiers** | | **Inorganic Qualifiers** | |
|---|---|---|---|
| **A** | TIC is a possible aldol-condensation product | **B** | Value is <CRDL, but ≥IDL |
| **B** | Analyte was also detected in the blank | **E** | Estimated due to interference |
| **C** | Pesticide result confirmed by GC/MS | **M** | Duplicate injection precision not met |
| **D** | Compound quantitated on a diluted sample | **N** | Spike sample not within control limits |
| **E** | Concentration exceeds the calibration range of the instrument | **S** | Method of standard additions (MSA) used for calculation |
| **N** | Presumptive evidence of a compound (TICs only) | **U** | Compound was not detected |
| **P** | Concentration difference between primary and confirmation columns >25% | **W** | Post digestion spike out of control limits |
| **U** | Compound was not detected | ***** | Duplicate analysis not within control limits |
| **X,Y,Z** | Defined in case narrative | **+** | Correlation coefficient for MSA <0.995 |

**Analytical test results meet all requirements of NELAC unless otherwise noted under the individual analysis.**

Measurement uncertainty values, as applicable, are available upon request.

Tests results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff. This report shall not be reproduced except in full, without the written approval of the laboratory.

Times are local to the area of activity. Parameters listed in the 40 CFR part 136 Table II as “analyze immediately” are not performed within 15 minutes.

**WARRANTY AND LIMITS OF LIABILITY** - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. THE FOREGOING EXPRESS WARRANTY IS EXCLUSIVE AND IS GIVEN IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED. WE DISCLAIM ANY OTHER WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING A WARRANTY OF FITNESS FOR PARTICULAR PURPOSE AND WARRANTY OF MERCHANTABILITY. IN NO EVENT SHALL LANCASTER LABORATORIES BE LIABLE FOR INDIRECT, SPECIAL, CONSEQUENTIAL, OR INCIDENTAL DAMAGES INCLUDING, BUT NOT LIMITED TO, DAMAGES FOR LOSS OF PROFIT OR GOODWILL REGARDLESS OF (A) THE NEGLIGENCE (EITHER SOLE OR CONCURRENT) OF LANCASTER LABORATORIES AND (B) WHETHER LANCASTER LABORATORIES HAS BEEN INFORMED OF THE POSSIBILITY OF SUCH DAMAGES. We accept no legal responsibility for the purposes for which the client uses the test results. No purchase order or other order for work shall be accepted by Lancaster Laboratories which includes any conditions that vary from the Standard Terms and Conditions, and Lancaster hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

# Quality Control Summary

Client Name: The Johnson Company, Inc. Group Number: 1303626
Reported: 04/29/12 at 05:44 PM

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD was performed, unless otherwise specified in the method.

All Inorganic Initial Calibration and Continuing Calibration Blanks met acceptable method criteria unless otherwise noted on the Analysis Report.

## Sample Matrix Quality Control

*- Outside of specification
(1) The result for one or both determinations was less than five times the LOQ.
(2) The unspiked result was more than four times the spike added.

# Quality Control Summary

# Explanation of Symbols and Abbreviations

*The following defines common symbols and abbreviations used in reporting technical data:*

| | | | |
|---|---|---|---|
| **RL** | Reporting Limit | **BMQL** | Below Minimum Quantitation Level |
| **N.D.** | none detected | **MPN** | Most Probable Number |
| **TNTC** | Too Numerous To Count | **CP Units** | cobalt-chloroplatinate units |
| **IU** | International Units | **NTU** | nephelometric turbidity units |
| **umhos/cm** | micromhos/cm | **ng** | nanogram(s) |
| **C** | degrees Celsius | **F** | degrees Fahrenheit |
| **meq** | milliequivalents | **lb.** | pound(s) |
| **g** | gram(s) | **kg** | kilogram(s) |
| **µg** | microgram(s) | **mg** | milligram(s) |
| **mL** | milliliter(s) | **L** | liter(s) |
| **m3** | cubic meter(s) | **µL** | microliter(s) |
| | | **pg/L** | picogram/liter |

**<** less than - The number following the sign is the limit of quantitation, the smallest amount of analyte which can be reliably determined using this specific test.

**>** greater than

**ppm** parts per million - One ppm is equivalent to one milligram per kilogram (mg/kg), or one gram per million grams. For aqueous liquids, ppm is usually taken to be equivalent to milligrams per liter (mg/l), because one liter of water has a weight very close to a kilogram. For gases or vapors, one ppm is equivalent to one microliter of gas per liter of gas.

**ppb** parts per billion

**Dry weight basis** Results printed under this heading have been adjusted for moisture content. This increases the analyte weight concentration to approximate the value present in a similar sample without moisture. All other results are reported on an as-received basis.

*Data Qualifiers:*

**C –** result confirmed by reanalysis.

**J -** estimated value – The result is ≥ the Method Detection Limit (MDL) and < the Limit of Quantitation (LOQ).

*U.S. EPA CLP Data Qualifiers:*

| **Organic Qualifiers** | | **Inorganic Qualifiers** | |
|---|---|---|---|
| **A** | TIC is a possible aldol-condensation product | **B** | Value is <CRDL, but ≥IDL |
| **B** | Analyte was also detected in the blank | **E** | Estimated due to interference |
| **C** | Pesticide result confirmed by GC/MS | **M** | Duplicate injection precision not met |
| **D** | Compound quantitated on a diluted sample | **N** | Spike sample not within control limits |
| **E** | Concentration exceeds the calibration range of the instrument | **S** | Method of standard additions (MSA) used for calculation |
| **N** | Presumptive evidence of a compound (TICs only) | **U** | Compound was not detected |
| **P** | Concentration difference between primary and confirmation columns >25% | **W** | Post digestion spike out of control limits |
| **U** | Compound was not detected | ***** | Duplicate analysis not within control limits |
| **X,Y,Z** | Defined in case narrative | **+** | Correlation coefficient for MSA <0.995 |

**Analytical test results meet all requirements of NELAC unless otherwise noted under the individual analysis.**

Measurement uncertainty values, as applicable, are available upon request.

Tests results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff. This report shall not be reproduced except in full, without the written approval of the laboratory.

Times are local to the area of activity. Parameters listed in the 40 CFR part 136 Table II as “analyze immediately” are not performed within 15 minutes.

**WARRANTY AND LIMITS OF LIABILITY** - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. THE FOREGOING EXPRESS WARRANTY IS EXCLUSIVE AND IS GIVEN IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED. WE DISCLAIM ANY OTHER WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING A WARRANTY OF FITNESS FOR PARTICULAR PURPOSE AND WARRANTY OF MERCHANTABILITY. IN NO EVENT SHALL LANCASTER LABORATORIES BE LIABLE FOR INDIRECT, SPECIAL, CONSEQUENTIAL, OR INCIDENTAL DAMAGES INCLUDING, BUT NOT LIMITED TO, DAMAGES FOR LOSS OF PROFIT OR GOODWILL REGARDLESS OF (A) THE NEGLIGENCE (EITHER SOLE OR CONCURRENT) OF LANCASTER LABORATORIES AND (B) WHETHER LANCASTER LABORATORIES HAS BEEN INFORMED OF THE POSSIBILITY OF SUCH DAMAGES. We accept no legal responsibility for the purposes for which the client uses the test results. No purchase order or other order for work shall be accepted by Lancaster Laboratories which includes any conditions that vary from the Standard Terms and Conditions, and Lancaster hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

## Quality Control Summary

Client Name: The Johnson Company, Inc. Group Number: 1303876
Reported: 04/29/12 at 05:59 PM

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD was performed, unless otherwise specified in the method.

All Inorganic Initial Calibration and Continuing Calibration Blanks met acceptable method criteria unless otherwise noted on the Analysis Report.

# Explanation of Symbols and Abbreviations

*The following defines common symbols and abbreviations used in reporting technical data:*

| | | | |
|---|---|---|---|
| **RL** | Reporting Limit | **BMQL** | Below Minimum Quantitation Level |
| **N.D.** | none detected | **MPN** | Most Probable Number |
| **TNTC** | Too Numerous To Count | **CP Units** | cobalt-chloroplatinate units |
| **IU** | International Units | **NTU** | nephelometric turbidity units |
| **umhos/cm** | micromhos/cm | **ng** | nanogram(s) |
| **C** | degrees Celsius | **F** | degrees Fahrenheit |
| **meq** | milliequivalents | **lb.** | pound(s) |
| **g** | gram(s) | **kg** | kilogram(s) |
| **µg** | microgram(s) | **mg** | milligram(s) |
| **mL** | milliliter(s) | **L** | liter(s) |
| **m3** | cubic meter(s) | **µL** | microliter(s) |
| | | **pg/L** | picogram/liter |

**<** less than - The number following the sign is the limit of quantitation, the smallest amount of analyte which can be reliably determined using this specific test.

**>** greater than

**ppm** parts per million - One ppm is equivalent to one milligram per kilogram (mg/kg), or one gram per million grams. For aqueous liquids, ppm is usually taken to be equivalent to milligrams per liter (mg/l), because one liter of water has a weight very close to a kilogram. For gases or vapors, one ppm is equivalent to one microliter of gas per liter of gas.

**ppb** parts per billion

**Dry weight basis** Results printed under this heading have been adjusted for moisture content. This increases the analyte weight concentration to approximate the value present in a similar sample without moisture. All other results are reported on an as-received basis.

*Data Qualifiers:*

**C –** result confirmed by reanalysis.

**J -** estimated value – The result is ≥ the Method Detection Limit (MDL) and < the Limit of Quantitation (LOQ).

*U.S. EPA CLP Data Qualifiers:*

| **Organic Qualifiers** | | **Inorganic Qualifiers** | |
|---|---|---|---|
| **A** | TIC is a possible aldol-condensation product | **B** | Value is <CRDL, but ≥IDL |
| **B** | Analyte was also detected in the blank | **E** | Estimated due to interference |
| **C** | Pesticide result confirmed by GC/MS | **M** | Duplicate injection precision not met |
| **D** | Compound quantitated on a diluted sample | **N** | Spike sample not within control limits |
| **E** | Concentration exceeds the calibration range of the instrument | **S** | Method of standard additions (MSA) used for calculation |
| **N** | Presumptive evidence of a compound (TICs only) | **U** | Compound was not detected |
| **P** | Concentration difference between primary and confirmation columns >25% | **W** | Post digestion spike out of control limits |
| **U** | Compound was not detected | ***** | Duplicate analysis not within control limits |
| **X,Y,Z** | Defined in case narrative | **+** | Correlation coefficient for MSA <0.995 |

**Analytical test results meet all requirements of NELAC unless otherwise noted under the individual analysis.**

Measurement uncertainty values, as applicable, are available upon request.

Tests results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff. This report shall not be reproduced except in full, without the written approval of the laboratory.

Times are local to the area of activity. Parameters listed in the 40 CFR part 136 Table II as “analyze immediately” are not performed within 15 minutes.

**WARRANTY AND LIMITS OF LIABILITY** - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. THE FOREGOING EXPRESS WARRANTY IS EXCLUSIVE AND IS GIVEN IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED. WE DISCLAIM ANY OTHER WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING A WARRANTY OF FITNESS FOR PARTICULAR PURPOSE AND WARRANTY OF MERCHANTABILITY. IN NO EVENT SHALL LANCASTER LABORATORIES BE LIABLE FOR INDIRECT, SPECIAL, CONSEQUENTIAL, OR INCIDENTAL DAMAGES INCLUDING, BUT NOT LIMITED TO, DAMAGES FOR LOSS OF PROFIT OR GOODWILL REGARDLESS OF (A) THE NEGLIGENCE (EITHER SOLE OR CONCURRENT) OF LANCASTER LABORATORIES AND (B) WHETHER LANCASTER LABORATORIES HAS BEEN INFORMED OF THE POSSIBILITY OF SUCH DAMAGES. We accept no legal responsibility for the purposes for which the client uses the test results. No purchase order or other order for work shall be accepted by Lancaster Laboratories which includes any conditions that vary from the Standard Terms and Conditions, and Lancaster hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

# Quality Control Summary

Client Name: The Johnson Company, Inc. Group Number: 1304174
Reported: 05/04/12 at 12:19 PM

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD was performed, unless otherwise specified in the method.

All Inorganic Initial Calibration and Continuing Calibration Blanks met acceptable method criteria unless otherwise noted on the Analysis Report.

# Explanation of Symbols and Abbreviations

*The following defines common symbols and abbreviations used in reporting technical data:*

| | | | |
|---|---|---|---|
| **RL** | Reporting Limit | **BMQL** | Below Minimum Quantitation Level |
| **N.D.** | none detected | **MPN** | Most Probable Number |
| **TNTC** | Too Numerous To Count | **CP Units** | cobalt-chloroplatinate units |
| **IU** | International Units | **NTU** | nephelometric turbidity units |
| **umhos/cm** | micromhos/cm | **ng** | nanogram(s) |
| **C** | degrees Celsius | **F** | degrees Fahrenheit |
| **meq** | milliequivalents | **lb.** | pound(s) |
| **g** | gram(s) | **kg** | kilogram(s) |
| **µg** | microgram(s) | **mg** | milligram(s) |
| **mL** | milliliter(s) | **L** | liter(s) |
| **m3** | cubic meter(s) | **µL** | microliter(s) |
| | | **pg/L** | picogram/liter |

**<** less than - The number following the sign is the limit of quantitation, the smallest amount of analyte which can be reliably determined using this specific test.

**>** greater than

**ppm** parts per million - One ppm is equivalent to one milligram per kilogram (mg/kg), or one gram per million grams. For aqueous liquids, ppm is usually taken to be equivalent to milligrams per liter (mg/l), because one liter of water has a weight very close to a kilogram. For gases or vapors, one ppm is equivalent to one microliter of gas per liter of gas.

**ppb** parts per billion

**Dry weight basis** Results printed under this heading have been adjusted for moisture content. This increases the analyte weight concentration to approximate the value present in a similar sample without moisture. All other results are reported on an as-received basis.

*Data Qualifiers:*

**C –** result confirmed by reanalysis.

**J -** estimated value – The result is ≥ the Method Detection Limit (MDL) and < the Limit of Quantitation (LOQ).

*U.S. EPA CLP Data Qualifiers:*

| **Organic Qualifiers** | | **Inorganic Qualifiers** | |
|---|---|---|---|
| **A** | TIC is a possible aldol-condensation product | **B** | Value is <CRDL, but ≥IDL |
| **B** | Analyte was also detected in the blank | **E** | Estimated due to interference |
| **C** | Pesticide result confirmed by GC/MS | **M** | Duplicate injection precision not met |
| **D** | Compound quantitated on a diluted sample | **N** | Spike sample not within control limits |
| **E** | Concentration exceeds the calibration range of the instrument | **S** | Method of standard additions (MSA) used for calculation |
| **N** | Presumptive evidence of a compound (TICs only) | **U** | Compound was not detected |
| **P** | Concentration difference between primary and confirmation columns >25% | **W** | Post digestion spike out of control limits |
| **U** | Compound was not detected | ***** | Duplicate analysis not within control limits |
| **X,Y,Z** | Defined in case narrative | **+** | Correlation coefficient for MSA <0.995 |

**Analytical test results meet all requirements of NELAC unless otherwise noted under the individual analysis.**

Measurement uncertainty values, as applicable, are available upon request.

Tests results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff. This report shall not be reproduced except in full, without the written approval of the laboratory.

Times are local to the area of activity. Parameters listed in the 40 CFR part 136 Table II as “analyze immediately” are not performed within 15 minutes.

**WARRANTY AND LIMITS OF LIABILITY** - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. THE FOREGOING EXPRESS WARRANTY IS EXCLUSIVE AND IS GIVEN IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED. WE DISCLAIM ANY OTHER WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING A WARRANTY OF FITNESS FOR PARTICULAR PURPOSE AND WARRANTY OF MERCHANTABILITY. IN NO EVENT SHALL LANCASTER LABORATORIES BE LIABLE FOR INDIRECT, SPECIAL, CONSEQUENTIAL, OR INCIDENTAL DAMAGES INCLUDING, BUT NOT LIMITED TO, DAMAGES FOR LOSS OF PROFIT OR GOODWILL REGARDLESS OF (A) THE NEGLIGENCE (EITHER SOLE OR CONCURRENT) OF LANCASTER LABORATORIES AND (B) WHETHER LANCASTER LABORATORIES HAS BEEN INFORMED OF THE POSSIBILITY OF SUCH DAMAGES. We accept no legal responsibility for the purposes for which the client uses the test results. No purchase order or other order for work shall be accepted by Lancaster Laboratories which includes any conditions that vary from the Standard Terms and Conditions, and Lancaster hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

| 00527 | 1,4-Dioxane | 123-91-1 | < 2.0 | 2.0 | 1 |

The GC/MS volatile internal standard peak areas were outside the QC limits. A re-analysis was performed, and the matrix effect was confirmed.

## General Sample Comments

PA DEP Lab Certification ID 36-00037, Expiration Date: 1/31/13

All QC is compliant unless otherwise noted. Please refer to the Quality Control Summary for overall QC performance data and associated samples.

# Quality Control Summary

Client Name: The Johnson Company, Inc. Group Number: 1304506
Reported: 05/07/12 at 06:15 PM

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD was performed, unless otherwise specified in the method.

All Inorganic Initial Calibration and Continuing Calibration Blanks met acceptable method criteria unless otherwise noted on the Analysis Report.

# Explanation of Symbols and Abbreviations

*The following defines common symbols and abbreviations used in reporting technical data:*

| | | | |
|---|---|---|---|
| **RL** | Reporting Limit | **BMQL** | Below Minimum Quantitation Level |
| **N.D.** | none detected | **MPN** | Most Probable Number |
| **TNTC** | Too Numerous To Count | **CP Units** | cobalt-chloroplatinate units |
| **IU** | International Units | **NTU** | nephelometric turbidity units |
| **umhos/cm** | micromhos/cm | **ng** | nanogram(s) |
| **C** | degrees Celsius | **F** | degrees Fahrenheit |
| **meq** | milliequivalents | **lb.** | pound(s) |
| **g** | gram(s) | **kg** | kilogram(s) |
| **µg** | microgram(s) | **mg** | milligram(s) |
| **mL** | milliliter(s) | **L** | liter(s) |
| **m3** | cubic meter(s) | **µL** | microliter(s) |
| | | **pg/L** | picogram/liter |

**<** less than - The number following the sign is the limit of quantitation, the smallest amount of analyte which can be reliably determined using this specific test.

**>** greater than

**ppm** parts per million - One ppm is equivalent to one milligram per kilogram (mg/kg), or one gram per million grams. For aqueous liquids, ppm is usually taken to be equivalent to milligrams per liter (mg/l), because one liter of water has a weight very close to a kilogram. For gases or vapors, one ppm is equivalent to one microliter of gas per liter of gas.

**ppb** parts per billion

**Dry weight basis** Results printed under this heading have been adjusted for moisture content. This increases the analyte weight concentration to approximate the value present in a similar sample without moisture. All other results are reported on an as-received basis.

*Data Qualifiers:*

**C –** result confirmed by reanalysis.

**J -** estimated value – The result is ≥ the Method Detection Limit (MDL) and < the Limit of Quantitation (LOQ).

*U.S. EPA CLP Data Qualifiers:*

| **Organic Qualifiers** | | **Inorganic Qualifiers** | |
|---|---|---|---|
| **A** | TIC is a possible aldol-condensation product | **B** | Value is <CRDL, but ≥IDL |
| **B** | Analyte was also detected in the blank | **E** | Estimated due to interference |
| **C** | Pesticide result confirmed by GC/MS | **M** | Duplicate injection precision not met |
| **D** | Compound quantitated on a diluted sample | **N** | Spike sample not within control limits |
| **E** | Concentration exceeds the calibration range of the instrument | **S** | Method of standard additions (MSA) used for calculation |
| **N** | Presumptive evidence of a compound (TICs only) | **U** | Compound was not detected |
| **P** | Concentration difference between primary and confirmation columns >25% | **W** | Post digestion spike out of control limits |
| **U** | Compound was not detected | ***** | Duplicate analysis not within control limits |
| **X,Y,Z** | Defined in case narrative | **+** | Correlation coefficient for MSA <0.995 |

**Analytical test results meet all requirements of NELAC unless otherwise noted under the individual analysis.**

Measurement uncertainty values, as applicable, are available upon request.

Tests results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff. This report shall not be reproduced except in full, without the written approval of the laboratory.

Times are local to the area of activity. Parameters listed in the 40 CFR part 136 Table II as “analyze immediately” are not performed within 15 minutes.

**WARRANTY AND LIMITS OF LIABILITY** - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. THE FOREGOING EXPRESS WARRANTY IS EXCLUSIVE AND IS GIVEN IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED. WE DISCLAIM ANY OTHER WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING A WARRANTY OF FITNESS FOR PARTICULAR PURPOSE AND WARRANTY OF MERCHANTABILITY. IN NO EVENT SHALL LANCASTER LABORATORIES BE LIABLE FOR INDIRECT, SPECIAL, CONSEQUENTIAL, OR INCIDENTAL DAMAGES INCLUDING, BUT NOT LIMITED TO, DAMAGES FOR LOSS OF PROFIT OR GOODWILL REGARDLESS OF (A) THE NEGLIGENCE (EITHER SOLE OR CONCURRENT) OF LANCASTER LABORATORIES AND (B) WHETHER LANCASTER LABORATORIES HAS BEEN INFORMED OF THE POSSIBILITY OF SUCH DAMAGES. We accept no legal responsibility for the purposes for which the client uses the test results. No purchase order or other order for work shall be accepted by Lancaster Laboratories which includes any conditions that vary from the Standard Terms and Conditions, and Lancaster hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

## General Sample Comments

PA DEP Lab Certification ID 36-00037, Expiration Date: 1/31/13

All QC is compliant unless otherwise noted. Please refer to the Quality Control Summary for overall QC performance data and associated samples.
