## General Sample Comments

PA DEP Lab Certification ID 36-00037, Expiration Date: 1/31/12

All QC is compliant unless otherwise noted. Please refer to the Quality Control Summary for overall QC performance data and associated samples.

# Quality Control Summary

Client Name: The Johnson Company, Inc. Group Number: 1283295
Reported: 01/13/12 at 07:05 PM

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD was performed, unless otherwise specified in the method.

All Inorganic Initial Calibration and Continuing Calibration Blanks met acceptable method criteria unless otherwise noted on the Analysis Report.

# Environmental Sample Administration Receipt Documentation Log

**Client/Project:** Johnson Co.

**Date of Receipt:** 1/3/12

**Time of Receipt:** 0940

**Source Code:** 60-1

**Shipping Container Sealed:** (YES) NO

**Custody Seal Present * :** YES (NO)

* Custody seal was intact unless otherwise noted in the discrepancy section

**Package:** Chilled (Not Chilled)

| Temperature of Shipping Containers | | | | | | | |
|---|---|---|---|---|---|---|---|
| Cooler # | Thermometer ID | Temperature (°C) | Temp Bottle (TB) or Surface Temp (ST) | Wet Ice (WI) or Dry Ice (DI) or Ice Packs (IP) | Ice Present? Y/N | Loose (L) Bagged Ice (B) or NA | Comments |
| 1 | | | | | | | |
| 2 | | | | | | | |
| 3 | | | | | | | |
| 4 | | | | | | | |
| 5 | | | | | | | |
| 6 | | | | | | | |

**Number of Trip Blanks received NOT listed on chain of custody:** 0

**Paperwork Discrepancy/Unpacking Problems:**

-Rcvd 22 pcs. 8 Swagelok tubing & 22 filters.

**Unpacker Signature/Emp#:** [signature] 2316 **Date/Time:** 1/3/12 1000

Issued by Dept. 6042 Management

eurofins | Lancaster Laboratories

# Explanation of Symbols and Abbreviations

*The following defines common symbols and abbreviations used in reporting technical data:*

| | | | |
|---|---|---|---|
| **RL** | Reporting Limit | **BMQL** | Below Minimum Quantitation Level |
| **N.D.** | none detected | **MPN** | Most Probable Number |
| **TNTC** | Too Numerous To Count | **CP Units** | cobalt-chloroplatinate units |
| **IU** | International Units | **NTU** | nephelometric turbidity units |
| **umhos/cm** | micromhos/cm | **ng** | nanogram(s) |
| **C** | degrees Celsius | **F** | degrees Fahrenheit |
| **meq** | milliequivalents | **lb.** | pound(s) |
| **g** | gram(s) | **kg** | kilogram(s) |
| **µg** | microgram(s) | **mg** | milligram(s) |
| **mL** | milliliter(s) | **L** | liter(s) |
| **m3** | cubic meter(s) | **µL** | microliter(s) |
| | | **pg/L** | picogram/liter |

**<** less than - The number following the sign is the limit of quantitation, the smallest amount of analyte which can be reliably determined using this specific test.

**>** greater than

**J** estimated value – The result is ≥ the Method Detection Limit (MDL) and < the Limit of Quantitation (LOQ).

**ppm** parts per million - One ppm is equivalent to one milligram per kilogram (mg/kg), or one gram per million grams. For aqueous liquids, ppm is usually taken to be equivalent to milligrams per liter (mg/l), because one liter of water has a weight very close to a kilogram. For gases or vapors, one ppm is equivalent to one microliter of gas per liter of gas.

**ppb** parts per billion

**Dry weight basis** Results printed under this heading have been adjusted for moisture content. This increases the analyte weight concentration to approximate the value present in a similar sample without moisture. All other results are reported on an as-received basis.

*U.S. EPA CLP Data Qualifiers:*

**Organic Qualifiers**

| | |
|---|---|
| **A** | TIC is a possible aldol-condensation product |
| **B** | Analyte was also detected in the blank |
| **C** | Pesticide result confirmed by GC/MS |
| **D** | Compound quantitated on a diluted sample |
| **E** | Concentration exceeds the calibration range of the instrument |
| **N** | Presumptive evidence of a compound (TICs only) |
| **P** | Concentration difference between primary and confirmation columns >25% |
| **U** | Compound was not detected |
| **X,Y,Z** | Defined in case narrative |

**Inorganic Qualifiers**

| | |
|---|---|
| **B** | Value is <CRDL, but ≥IDL |
| **E** | Estimated due to interference |
| **M** | Duplicate injection precision not met |
| **N** | Spike sample not within control limits |
| **S** | Method of standard additions (MSA) used for calculation |
| **U** | Compound was not detected |
| **W** | Post digestion spike out of control limits |
| ***** | Duplicate analysis not within control limits |
| **+** | Correlation coefficient for MSA <0.995 |

Analytical test results meet all requirements of NELAC unless otherwise noted under the individual analysis.

Measurement uncertainty values, as applicable, are available upon request.

Tests results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff. This report shall not be reproduced except in full, without the written approval of the laboratory.

Times are local to the area of activity. Parameters listed in the 40 CFR part 136 Table II as “analyze immediately” are not performed within 15 minutes.

**WARRANTY AND LIMITS OF LIABILITY** - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. THE FOREGOING EXPRESS WARRANTY IS EXCLUSIVE AND IS GIVEN IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED. WE DISCLAIM ANY OTHER WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING A WARRANTY OF FITNESS FOR PARTICULAR PURPOSE AND WARRANTY OF MERCHANTABILITY. IN NO EVENT SHALL LANCASTER LABORATORIES BE LIABLE FOR INDIRECT, SPECIAL, CONSEQUENTIAL, OR INCIDENTAL DAMAGES INCLUDING, BUT NOT LIMITED TO, DAMAGES FOR LOSS OF PROFIT OR GOODWILL REGARDLESS OF (A) THE NEGLIGENCE (EITHER SOLE OR CONCURRENT) OF LANCASTER LABORATORIES AND (B) WHETHER LANCASTER LABORATORIES HAS BEEN INFORMED OF THE POSSIBILITY OF SUCH DAMAGES. We accept no legal responsibility for the purposes for which the client uses the test results. No purchase order or other order for work shall be accepted by Lancaster Laboratories which includes any conditions that vary from the Standard Terms and Conditions, and Lancaster hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

MDL = Method Detection Limit

## General Sample Comments

PA DEP Lab Certification ID 36-00037, Expiration Date: 1/31/13

All QC is compliant unless otherwise noted. Please refer to the Quality Control Summary for overall QC performance data and associated samples.

MDL = Method Detection Limit

## General Sample Comments

PA DEP Lab Certification ID 36-00037, Expiration Date: 1/31/13

All QC is compliant unless otherwise noted. Please refer to the Quality Control Summary for overall QC performance data and associated samples.

# Quality Control Summary

Client Name: The Johnson Company, Inc. Group Number: 1287512
Reported: 02/13/12 at 11:11 PM

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD was performed, unless otherwise specified in the method.

All Inorganic Initial Calibration and Continuing Calibration Blanks met acceptable method criteria unless otherwise noted on the Analysis Report.

*- Outside of specification
(1) The result for one or both determinations was less than five times the LOQ.
(2) The unspiked result was more than four times the spike added.

# Environmental Sample Administration
# Receipt Documentation Log

**Client/Project:** Avery Dennison

**Date of Receipt:** 2/1/12

**Time of Receipt:** 0950

**Source Code:** 60-1

**Shipping Container Sealed:** (YES) NO

**Custody Seal Present * :** YES (NO)

* Custody seal was intact unless otherwise noted in the discrepancy section

**Package:** Chilled (Not Chilled)

Temperature of Shipping Containers

| Cooler # | Thermometer ID | Temperature (°C) | Temp Bottle (TB) or Surface Temp (ST) | Wet Ice (WI) or Dry Ice (DI) or Ice Packs (IP) | Ice Present? Y/N | Loose (L) Bagged Ice (B) or NA | Comments |

# Explanation of Symbols and Abbreviations

*The following defines common symbols and abbreviations used in reporting technical data:*

| | | | |
|---|---|---|---|
| **RL** | Reporting Limit | **BMQL** | Below Minimum Quantitation Level |
| **N.D.** | none detected | **MPN** | Most Probable Number |
| **TNTC** | Too Numerous To Count | **CP Units** | cobalt-chloroplatinate units |
| **IU** | International Units | **NTU** | nephelometric turbidity units |
| **umhos/cm** | micromhos/cm | **ng** | nanogram(s) |
| **C** | degrees Celsius | **F** | degrees Fahrenheit |
| **meq** | milliequivalents | **lb.** | pound(s) |
| **g** | gram(s) | **kg** | kilogram(s) |
| **µg** | microgram(s) | **mg** | milligram(s) |
| **mL** | milliliter(s) | **L** | liter(s) |
| **m3** | cubic meter(s) | **µL** | microliter(s) |
| | | **pg/L** | picogram/liter |

**<** less than - The number following the sign is the limit of quantitation, the smallest amount of analyte which can be reliably determined using this specific test.

**>** greater than

**J** estimated value – The result is ≥ the Method Detection Limit (MDL) and < the Limit of Quantitation (LOQ).

**ppm** parts per million - One ppm is equivalent to one milligram per kilogram (mg/kg), or one gram per million grams. For aqueous liquids, ppm is usually taken to be equivalent to milligrams per liter (mg/l), because one liter of water has a weight very close to a kilogram. For gases or vapors, one ppm is equivalent to one microliter of gas per liter of gas.

**ppb** parts per billion

**Dry weight basis** Results printed under this heading have been adjusted for moisture content. This increases the analyte weight concentration to approximate the value present in a similar sample without moisture. All other results are reported on an as-received basis.

*U.S. EPA CLP Data Qualifiers:*

**Organic Qualifiers**

| | |
|---|---|
| **A** | TIC is a possible aldol-condensation product |
| **B** | Analyte was also detected in the blank |
| **C** | Pesticide result confirmed by GC/MS |
| **D** | Compound quantitated on a diluted sample |
| **E** | Concentration exceeds the calibration range of the instrument |
| **N** | Presumptive evidence of a compound (TICs only) |
| **P** | Concentration difference between primary and confirmation columns >25% |
| **U** | Compound was not detected |
| **X,Y,Z** | Defined in case narrative |

**Inorganic Qualifiers**

| | |
|---|---|
| **B** | Value is <CRDL, but ≥IDL |
| **E** | Estimated due to interference |
| **M** | Duplicate injection precision not met |
| **N** | Spike sample not within control limits |
| **S** | Method of standard additions (MSA) used for calculation |
| **U** | Compound was not detected |
| **W** | Post digestion spike out of control limits |
| ***** | Duplicate analysis not within control limits |
| **+** | Correlation coefficient for MSA <0.995 |

Analytical test results meet all requirements of NELAC unless otherwise noted under the individual analysis.

Measurement uncertainty values, as applicable, are available upon request.

Tests results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff. This report shall not be reproduced except in full, without the written approval of the laboratory.

Times are local to the area of activity. Parameters listed in the 40 CFR part 136 Table II as “analyze immediately” are not performed within 15 minutes.

**WARRANTY AND LIMITS OF LIABILITY** - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. THE FOREGOING EXPRESS WARRANTY IS EXCLUSIVE AND IS GIVEN IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED. WE DISCLAIM ANY OTHER WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING A WARRANTY OF FITNESS FOR PARTICULAR PURPOSE AND WARRANTY OF MERCHANTABILITY. IN NO EVENT SHALL LANCASTER LABORATORIES BE LIABLE FOR INDIRECT, SPECIAL, CONSEQUENTIAL, OR INCIDENTAL DAMAGES INCLUDING, BUT NOT LIMITED TO, DAMAGES FOR LOSS OF PROFIT OR GOODWILL REGARDLESS OF (A) THE NEGLIGENCE (EITHER SOLE OR CONCURRENT) OF LANCASTER LABORATORIES AND (B) WHETHER LANCASTER LABORATORIES HAS BEEN INFORMED OF THE POSSIBILITY OF SUCH DAMAGES. We accept no legal responsibility for the purposes for which the client uses the test results. No purchase order or other order for work shall be accepted by Lancaster Laboratories which includes any conditions that vary from the Standard Terms and Conditions, and Lancaster hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

# Quality Control Summary

Client Name: The Johnson Company, Inc. Group Number: 1291899
Reported: 03/19/12 at 05:56 PM

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD was performed, unless otherwise specified in the method.

All Inorganic Initial Calibration and Continuing Calibration Blanks met acceptable method criteria unless otherwise noted on the Analysis Report.

## Laboratory Compliance Quality Control

# Environmental Sample Administration
# Receipt Documentation Log

**Client/Project:** Johnson Co.

**Date of Receipt:** 2/28/12

**Time of Receipt:** 0930

**Source Code:** 60-1

**Shipping Container Sealed:** (YES) NO

**Custody Seal Present * :** YES (NO)

* Custody seal was intact unless otherwise noted in the discrepancy section

**Package:** Chilled (Not Chilled)

Temperature of Shipping Containers

| Cooler # | Thermometer ID | Temperature (°C) | Temp Bottle (TB) or Surface Temp (ST) | Wet Ice (WI) or Dry Ice (DI) or Ice Packs (IP) | Ice Present? Y/N | Loose (L) Bagged Ice (B) or NA | Comments |

# Explanation of Symbols and Abbreviations

*The following defines common symbols and abbreviations used in reporting technical data:*

| | | | |
|---|---|---|---|
| **RL** | Reporting Limit | **BMQL** | Below Minimum Quantitation Level |
| **N.D.** | none detected | **MPN** | Most Probable Number |
| **TNTC** | Too Numerous To Count | **CP Units** | cobalt-chloroplatinate units |
| **IU** | International Units | **NTU** | nephelometric turbidity units |
| **umhos/cm** | micromhos/cm | **ng** | nanogram(s) |
| **C** | degrees Celsius | **F** | degrees Fahrenheit |
| **meq** | milliequivalents | **lb.** | pound(s) |
| **g** | gram(s) | **kg** | kilogram(s) |
| **µg** | microgram(s) | **mg** | milligram(s) |
| **mL** | milliliter(s) | **L** | liter(s) |
| **m3** | cubic meter(s) | **µL** | microliter(s) |
| | | **pg/L** | picogram/liter |

**<** less than - The number following the sign is the limit of quantitation, the smallest amount of analyte which can be reliably determined using this specific test.

**>** greater than

**ppm** parts per million - One ppm is equivalent to one milligram per kilogram (mg/kg), or one gram per million grams. For aqueous liquids, ppm is usually taken to be equivalent to milligrams per liter (mg/l), because one liter of water has a weight very close to a kilogram. For gases or vapors, one ppm is equivalent to one microliter of gas per liter of gas.

**ppb** parts per billion

**Dry weight basis** Results printed under this heading have been adjusted for moisture content. This increases the analyte weight concentration to approximate the value present in a similar sample without moisture. All other results are reported on an as-received basis.

*Data Qualifiers:*

**C –** result confirmed by reanalysis.

**J -** estimated value – The result is ≥ the Method Detection Limit (MDL) and < the Limit of Quantitation (LOQ).

*U.S. EPA CLP Data Qualifiers:*

| **Organic Qualifiers** | | **Inorganic Qualifiers** | |
|---|---|---|---|
| **A** | TIC is a possible aldol-condensation product | **B** | Value is <CRDL, but ≥IDL |
| **B** | Analyte was also detected in the blank | **E** | Estimated due to interference |
| **C** | Pesticide result confirmed by GC/MS | **M** | Duplicate injection precision not met |
| **D** | Compound quantitated on a diluted sample | **N** | Spike sample not within control limits |
| **E** | Concentration exceeds the calibration range of the instrument | **S** | Method of standard additions (MSA) used for calculation |
| **N** | Presumptive evidence of a compound (TICs only) | **U** | Compound was not detected |
| **P** | Concentration difference between primary and confirmation columns >25% | **W** | Post digestion spike out of control limits |
| **U** | Compound was not detected | ***** | Duplicate analysis not within control limits |
| **X,Y,Z** | Defined in case narrative | **+** | Correlation coefficient for MSA <0.995 |

**Analytical test results meet all requirements of NELAC unless otherwise noted under the individual analysis.**

Measurement uncertainty values, as applicable, are available upon request.

Tests results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff. This report shall not be reproduced except in full, without the written approval of the laboratory.

Times are local to the area of activity. Parameters listed in the 40 CFR part 136 Table II as “analyze immediately” are not performed within 15 minutes.

**WARRANTY AND LIMITS OF LIABILITY** - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. THE FOREGOING EXPRESS WARRANTY IS EXCLUSIVE AND IS GIVEN IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED. WE DISCLAIM ANY OTHER WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING A WARRANTY OF FITNESS FOR PARTICULAR PURPOSE AND WARRANTY OF MERCHANTABILITY. IN NO EVENT SHALL LANCASTER LABORATORIES BE LIABLE FOR INDIRECT, SPECIAL, CONSEQUENTIAL, OR INCIDENTAL DAMAGES INCLUDING, BUT NOT LIMITED TO, DAMAGES FOR LOSS OF PROFIT OR GOODWILL REGARDLESS OF (A) THE NEGLIGENCE (EITHER SOLE OR CONCURRENT) OF LANCASTER LABORATORIES AND (B) WHETHER LANCASTER LABORATORIES HAS BEEN INFORMED OF THE POSSIBILITY OF SUCH DAMAGES. We accept no legal responsibility for the purposes for which the client uses the test results. No purchase order or other order for work shall be accepted by Lancaster Laboratories which includes any conditions that vary from the Standard Terms and Conditions, and Lancaster hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

## General Sample Comments

PA DEP Lab Certification ID 36-00037, Expiration Date: 1/31/13

All QC is compliant unless otherwise noted. Please refer to the Quality Control Summary for overall QC performance data and associated samples.

# Quality Control Summary

Client Name: The Johnson Company, Inc. Group Number: 1295444
Reported: 04/04/12 at 06:53 PM

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD was performed, unless otherwise specified in the method.

All Inorganic Initial Calibration and Continuing Calibration Blanks met acceptable method criteria unless otherwise noted on the Analysis Report.

# Explanation of Symbols and Abbreviations

*The following defines common symbols and abbreviations used in reporting technical data:*

| | | | |
|---|---|---|---|
| **RL** | Reporting Limit | **BMQL** | Below Minimum Quantitation Level |
| **N.D.** | none detected | **MPN** | Most Probable Number |
| **TNTC** | Too Numerous To Count | **CP Units** | cobalt-chloroplatinate units |
| **IU** | International Units | **NTU** | nephelometric turbidity units |
| **umhos/cm** | micromhos/cm | **ng** | nanogram(s) |
| **C** | degrees Celsius | **F** | degrees Fahrenheit |
| **meq** | milliequivalents | **lb.** | pound(s) |
| **g** | gram(s) | **kg** | kilogram(s) |
| **µg** | microgram(s) | **mg** | milligram(s) |
| **mL** | milliliter(s) | **L** | liter(s) |
| **m3** | cubic meter(s) | **µL** | microliter(s) |
| | | **pg/L** | picogram/liter |

**<** less than - The number following the sign is the limit of quantitation, the smallest amount of analyte which can be reliably determined using this specific test.

**>** greater than

**ppm** parts per million - One ppm is equivalent to one milligram per kilogram (mg/kg), or one gram per million grams. For aqueous liquids, ppm is usually taken to be equivalent to milligrams per liter (mg/l), because one liter of water has a weight very close to a kilogram. For gases or vapors, one ppm is equivalent to one microliter of gas per liter of gas.

**ppb** parts per billion

**Dry weight basis** Results printed under this heading have been adjusted for moisture content. This increases the analyte weight concentration to approximate the value present in a similar sample without moisture. All other results are reported on an as-received basis.

*Data Qualifiers:*

**C –** result confirmed by reanalysis.

**J -** estimated value – The result is ≥ the Method Detection Limit (MDL) and < the Limit of Quantitation (LOQ).

*U.S. EPA CLP Data Qualifiers:*

| **Organic Qualifiers** | | **Inorganic Qualifiers** | |
|---|---|---|---|
| **A** | TIC is a possible aldol-condensation product | **B** | Value is <CRDL, but ≥IDL |
| **B** | Analyte was also detected in the blank | **E** | Estimated due to interference |
| **C** | Pesticide result confirmed by GC/MS | **M** | Duplicate injection precision not met |
| **D** | Compound quantitated on a diluted sample | **N** | Spike sample not within control limits |
| **E** | Concentration exceeds the calibration range of the instrument | **S** | Method of standard additions (MSA) used for calculation |
| **N** | Presumptive evidence of a compound (TICs only) | **U** | Compound was not detected |
| **P** | Concentration difference between primary and confirmation columns >25% | **W** | Post digestion spike out of control limits |
| **U** | Compound was not detected | ***** | Duplicate analysis not within control limits |
| **X,Y,Z** | Defined in case narrative | **+** | Correlation coefficient for MSA <0.995 |

**Analytical test results meet all requirements of NELAC unless otherwise noted under the individual analysis.**

Measurement uncertainty values, as applicable, are available upon request.

Tests results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff. This report shall not be reproduced except in full, without the written approval of the laboratory.

Times are local to the area of activity. Parameters listed in the 40 CFR part 136 Table II as “analyze immediately” are not performed within 15 minutes.

**WARRANTY AND LIMITS OF LIABILITY** - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. THE FOREGOING EXPRESS WARRANTY IS EXCLUSIVE AND IS GIVEN IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED. WE DISCLAIM ANY OTHER WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING A WARRANTY OF FITNESS FOR PARTICULAR PURPOSE AND WARRANTY OF MERCHANTABILITY. IN NO EVENT SHALL LANCASTER LABORATORIES BE LIABLE FOR INDIRECT, SPECIAL, CONSEQUENTIAL, OR INCIDENTAL DAMAGES INCLUDING, BUT NOT LIMITED TO, DAMAGES FOR LOSS OF PROFIT OR GOODWILL REGARDLESS OF (A) THE NEGLIGENCE (EITHER SOLE OR CONCURRENT) OF LANCASTER LABORATORIES AND (B) WHETHER LANCASTER LABORATORIES HAS BEEN INFORMED OF THE POSSIBILITY OF SUCH DAMAGES. We accept no legal responsibility for the purposes for which the client uses the test results. No purchase order or other order for work shall be accepted by Lancaster Laboratories which includes any conditions that vary from the Standard Terms and Conditions, and Lancaster hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

MDL = Method Detection Limit

## General Sample Comments

PA DEP Lab Certification ID 36-00037, Expiration Date: 1/31/13

All QC is compliant unless otherwise noted. Please refer to the Quality Control Summary for overall QC performance data and associated samples.

# Quality Control Summary

Client Name: The Johnson Company, Inc. Group Number: 1299581
Reported: 04/19/12 at 11:43 PM

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD was performed, unless otherwise specified in the method.

All Inorganic Initial Calibration and Continuing Calibration Blanks met acceptable method criteria unless otherwise noted on the Analysis Report.

# Explanation of Symbols and Abbreviations

*The following defines common symbols and abbreviations used in reporting technical data:*

| | | | |
|---|---|---|---|
| **RL** | Reporting Limit | **BMQL** | Below Minimum Quantitation Level |
| **N.D.** | none detected | **MPN** | Most Probable Number |
| **TNTC** | Too Numerous To Count | **CP Units** | cobalt-chloroplatinate units |
| **IU** | International Units | **NTU** | nephelometric turbidity units |
| **umhos/cm** | micromhos/cm | **ng** | nanogram(s) |
| **C** | degrees Celsius | **F** | degrees Fahrenheit |
| **meq** | milliequivalents | **lb.** | pound(s) |
| **g** | gram(s) | **kg** | kilogram(s) |
| **µg** | microgram(s) | **mg** | milligram(s) |
| **mL** | milliliter(s) | **L** | liter(s) |
| **m3** | cubic meter(s) | **µL** | microliter(s) |
| | | **pg/L** | picogram/liter |

**<** less than - The number following the sign is the limit of quantitation, the smallest amount of analyte which can be reliably determined using this specific test.

**>** greater than

**ppm** parts per million - One ppm is equivalent to one milligram per kilogram (mg/kg), or one gram per million grams. For aqueous liquids, ppm is usually taken to be equivalent to milligrams per liter (mg/l), because one liter of water has a weight very close to a kilogram. For gases or vapors, one ppm is equivalent to one microliter of gas per liter of gas.

**ppb** parts per billion

**Dry weight basis** Results printed under this heading have been adjusted for moisture content. This increases the analyte weight concentration to approximate the value present in a similar sample without moisture. All other results are reported on an as-received basis.

*Data Qualifiers:*

**C –** result confirmed by reanalysis.

**J -** estimated value – The result is ≥ the Method Detection Limit (MDL) and < the Limit of Quantitation (LOQ).

*U.S. EPA CLP Data Qualifiers:*

| **Organic Qualifiers** | | **Inorganic Qualifiers** | |
|---|---|---|---|
| **A** | TIC is a possible aldol-condensation product | **B** | Value is <CRDL, but ≥IDL |
| **B** | Analyte was also detected in the blank | **E** | Estimated due to interference |
| **C** | Pesticide result confirmed by GC/MS | **M** | Duplicate injection precision not met |
| **D** | Compound quantitated on a diluted sample | **N** | Spike sample not within control limits |
| **E** | Concentration exceeds the calibration range of the instrument | **S** | Method of standard additions (MSA) used for calculation |
| **N** | Presumptive evidence of a compound (TICs only) | **U** | Compound was not detected |
| **P** | Concentration difference between primary and confirmation columns >25% | **W** | Post digestion spike out of control limits |
| **U** | Compound was not detected | ***** | Duplicate analysis not within control limits |
| **X,Y,Z** | Defined in case narrative | **+** | Correlation coefficient for MSA <0.995 |

**Analytical test results meet all requirements of NELAC unless otherwise noted under the individual analysis.**

Measurement uncertainty values, as applicable, are available upon request.

Tests results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff. This report shall not be reproduced except in full, without the written approval of the laboratory.

Times are local to the area of activity. Parameters listed in the 40 CFR part 136 Table II as “analyze immediately” are not performed within 15 minutes.

**WARRANTY AND LIMITS OF LIABILITY** - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. THE FOREGOING EXPRESS WARRANTY IS EXCLUSIVE AND IS GIVEN IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED. WE DISCLAIM ANY OTHER WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING A WARRANTY OF FITNESS FOR PARTICULAR PURPOSE AND WARRANTY OF MERCHANTABILITY. IN NO EVENT SHALL LANCASTER LABORATORIES BE LIABLE FOR INDIRECT, SPECIAL, CONSEQUENTIAL, OR INCIDENTAL DAMAGES INCLUDING, BUT NOT LIMITED TO, DAMAGES FOR LOSS OF PROFIT OR GOODWILL REGARDLESS OF (A) THE NEGLIGENCE (EITHER SOLE OR CONCURRENT) OF LANCASTER LABORATORIES AND (B) WHETHER LANCASTER LABORATORIES HAS BEEN INFORMED OF THE POSSIBILITY OF SUCH DAMAGES. We accept no legal responsibility for the purposes for which the client uses the test results. No purchase order or other order for work shall be accepted by Lancaster Laboratories which includes any conditions that vary from the Standard Terms and Conditions, and Lancaster hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

# Quality Control Summary

Client Name: The Johnson Company, Inc. Group Number: 1307050
Reported: 05/17/12 at 05:30 PM

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD was performed, unless otherwise specified in the method.

All Inorganic Initial Calibration and Continuing Calibration Blanks met acceptable method criteria unless otherwise noted on the Analysis Report.

# Environmental Sample Administration Receipt Documentation Log

**Client/Project:** Johnson Co

**Date of Receipt:** 5/7/12

**Time of Receipt:** 0940

**Source Code:** 60-1

**Shipping Container Sealed:** (YES) NO

**Custody Seal Present * :** YES (NO)

* Custody seal was intact unless otherwise noted in the discrepancy section

**Package:** Chilled (Not Chilled)

| Temperature of Shipping Containers | | | | | | | |
|---|---|---|---|---|---|---|---|
| Cooler # | Thermometer ID | Temperature (°C) | Temp Bottle (TB) or Surface Temp (ST) | Wet Ice (WI) or Dry Ice (DI) or Ice Packs (IP) | Ice Present? Y/N | Loose (L) Bagged Ice (B) or NA | Comments |
| 1 | | | | | | | |
| 2 | | | | | | | |
| 3 | | | | | | | |
| 4 | | | | | | | |
| 5 | | | | | | | |
| 6 | | | | | | | |

**Number of Trip Blanks received NOT listed on chain of custody:** 0

**Paperwork Discrepancy/Unpacking Problems:**

**Unpacker Signature/Emp#:** [signature] 2316 **Date/Time:** 5/7/12 1015

Issued by Dept. 6042 Management

# Explanation of Symbols and Abbreviations

*The following defines common symbols and abbreviations used in reporting technical data:*

| | | | |
|---|---|---|---|
| **RL** | Reporting Limit | **BMQL** | Below Minimum Quantitation Level |
| **N.D.** | none detected | **MPN** | Most Probable Number |
| **TNTC** | Too Numerous To Count | **CP Units** | cobalt-chloroplatinate units |
| **IU** | International Units | **NTU** | nephelometric turbidity units |
| **umhos/cm** | micromhos/cm | **ng** | nanogram(s) |
| **C** | degrees Celsius | **F** | degrees Fahrenheit |
| **meq** | milliequivalents | **lb.** | pound(s) |
| **g** | gram(s) | **kg** | kilogram(s) |
| **µg** | microgram(s) | **mg** | milligram(s) |
| **mL** | milliliter(s) | **L** | liter(s) |
| **m3** | cubic meter(s) | **µL** | microliter(s) |
| | | **pg/L** | picogram/liter |

**<** less than - The number following the sign is the limit of quantitation, the smallest amount of analyte which can be reliably determined using this specific test.

**>** greater than

**ppm** parts per million - One ppm is equivalent to one milligram per kilogram (mg/kg), or one gram per million grams. For aqueous liquids, ppm is usually taken to be equivalent to milligrams per liter (mg/l), because one liter of water has a weight very close to a kilogram. For gases or vapors, one ppm is equivalent to one microliter of gas per liter of gas.

**ppb** parts per billion

**Dry weight basis** Results printed under this heading have been adjusted for moisture content. This increases the analyte weight concentration to approximate the value present in a similar sample without moisture. All other results are reported on an as-received basis.

*Data Qualifiers:*

**C –** result confirmed by reanalysis.

**J -** estimated value – The result is ≥ the Method Detection Limit (MDL) and < the Limit of Quantitation (LOQ).

*U.S. EPA CLP Data Qualifiers:*

| **Organic Qualifiers** | | **Inorganic Qualifiers** | |
|---|---|---|---|
| **A** | TIC is a possible aldol-condensation product | **B** | Value is <CRDL, but ≥IDL |
| **B** | Analyte was also detected in the blank | **E** | Estimated due to interference |
| **C** | Pesticide result confirmed by GC/MS | **M** | Duplicate injection precision not met |
| **D** | Compound quantitated on a diluted sample | **N** | Spike sample not within control limits |
| **E** | Concentration exceeds the calibration range of the instrument | **S** | Method of standard additions (MSA) used for calculation |
| **N** | Presumptive evidence of a compound (TICs only) | **U** | Compound was not detected |
| **P** | Concentration difference between primary and confirmation columns >25% | **W** | Post digestion spike out of control limits |
| **U** | Compound was not detected | ***** | Duplicate analysis not within control limits |
| **X,Y,Z** | Defined in case narrative | **+** | Correlation coefficient for MSA <0.995 |

**Analytical test results meet all requirements of NELAC unless otherwise noted under the individual analysis.**

Measurement uncertainty values, as applicable, are available upon request.

Tests results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff. This report shall not be reproduced except in full, without the written approval of the laboratory.

Times are local to the area of activity. Parameters listed in the 40 CFR part 136 Table II as “analyze immediately” are not performed within 15 minutes.

**WARRANTY AND LIMITS OF LIABILITY** - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. THE FOREGOING EXPRESS WARRANTY IS EXCLUSIVE AND IS GIVEN IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED. WE DISCLAIM ANY OTHER WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING A WARRANTY OF FITNESS FOR PARTICULAR PURPOSE AND WARRANTY OF MERCHANTABILITY. IN NO EVENT SHALL LANCASTER LABORATORIES BE LIABLE FOR INDIRECT, SPECIAL, CONSEQUENTIAL, OR INCIDENTAL DAMAGES INCLUDING, BUT NOT LIMITED TO, DAMAGES FOR LOSS OF PROFIT OR GOODWILL REGARDLESS OF (A) THE NEGLIGENCE (EITHER SOLE OR CONCURRENT) OF LANCASTER LABORATORIES AND (B) WHETHER LANCASTER LABORATORIES HAS BEEN INFORMED OF THE POSSIBILITY OF SUCH DAMAGES. We accept no legal responsibility for the purposes for which the client uses the test results. No purchase order or other order for work shall be accepted by Lancaster Laboratories which includes any conditions that vary from the Standard Terms and Conditions, and Lancaster hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

# Quality Control Summary

Client Name: The Johnson Company, Inc. Group Number: 1310347
Reported: 05/29/12 at 04:26 PM

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD was performed, unless otherwise specified in the method.

All Inorganic Initial Calibration and Continuing Calibration Blanks met acceptable method criteria unless otherwise noted on the Analysis Report.

# Explanation of Symbols and Abbreviations

*The following defines common symbols and abbreviations used in reporting technical data:*

| | | | |
|---|---|---|---|
| **RL** | Reporting Limit | **BMQL** | Below Minimum Quantitation Level |
| **N.D.** | none detected | **MPN** | Most Probable Number |
| **TNTC** | Too Numerous To Count | **CP Units** | cobalt-chloroplatinate units |
| **IU** | International Units | **NTU** | nephelometric turbidity units |
| **umhos/cm** | micromhos/cm | **ng** | nanogram(s) |
| **C** | degrees Celsius | **F** | degrees Fahrenheit |
| **meq** | milliequivalents | **lb.** | pound(s) |
| **g** | gram(s) | **kg** | kilogram(s) |
| **µg** | microgram(s) | **mg** | milligram(s) |
| **mL** | milliliter(s) | **L** | liter(s) |
| **m3** | cubic meter(s) | **µL** | microliter(s) |
| | | **pg/L** | picogram/liter |

**<** less than - The number following the sign is the limit of quantitation, the smallest amount of analyte which can be reliably determined using this specific test.

**>** greater than

**ppm** parts per million - One ppm is equivalent to one milligram per kilogram (mg/kg), or one gram per million grams. For aqueous liquids, ppm is usually taken to be equivalent to milligrams per liter (mg/l), because one liter of water has a weight very close to a kilogram. For gases or vapors, one ppm is equivalent to one microliter of gas per liter of gas.

**ppb** parts per billion

**Dry weight basis** Results printed under this heading have been adjusted for moisture content. This increases the analyte weight concentration to approximate the value present in a similar sample without moisture. All other results are reported on an as-received basis.

*Data Qualifiers:*

**C –** result confirmed by reanalysis.

**J -** estimated value – The result is ≥ the Method Detection Limit (MDL) and < the Limit of Quantitation (LOQ).

*U.S. EPA CLP Data Qualifiers:*

| **Organic Qualifiers** | | **Inorganic Qualifiers** | |
|---|---|---|---|
| **A** | TIC is a possible aldol-condensation product | **B** | Value is <CRDL, but ≥IDL |
| **B** | Analyte was also detected in the blank | **E** | Estimated due to interference |
| **C** | Pesticide result confirmed by GC/MS | **M** | Duplicate injection precision not met |
| **D** | Compound quantitated on a diluted sample | **N** | Spike sample not within control limits |
| **E** | Concentration exceeds the calibration range of the instrument | **S** | Method of standard additions (MSA) used for calculation |
| **N** | Presumptive evidence of a compound (TICs only) | **U** | Compound was not detected |
| **P** | Concentration difference between primary and confirmation columns >25% | **W** | Post digestion spike out of control limits |
| **U** | Compound was not detected | ***** | Duplicate analysis not within control limits |
| **X,Y,Z** | Defined in case narrative | **+** | Correlation coefficient for MSA <0.995 |

**Analytical test results meet all requirements of NELAC unless otherwise noted under the individual analysis.**

Measurement uncertainty values, as applicable, are available upon request.

Tests results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff. This report shall not be reproduced except in full, without the written approval of the laboratory.

Times are local to the area of activity. Parameters listed in the 40 CFR part 136 Table II as “analyze immediately” are not performed within 15 minutes.

**WARRANTY AND LIMITS OF LIABILITY** - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. THE FOREGOING EXPRESS WARRANTY IS EXCLUSIVE AND IS GIVEN IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED. WE DISCLAIM ANY OTHER WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING A WARRANTY OF FITNESS FOR PARTICULAR PURPOSE AND WARRANTY OF MERCHANTABILITY. IN NO EVENT SHALL LANCASTER LABORATORIES BE LIABLE FOR INDIRECT, SPECIAL, CONSEQUENTIAL, OR INCIDENTAL DAMAGES INCLUDING, BUT NOT LIMITED TO, DAMAGES FOR LOSS OF PROFIT OR GOODWILL REGARDLESS OF (A) THE NEGLIGENCE (EITHER SOLE OR CONCURRENT) OF LANCASTER LABORATORIES AND (B) WHETHER LANCASTER LABORATORIES HAS BEEN INFORMED OF THE POSSIBILITY OF SUCH DAMAGES. We accept no legal responsibility for the purposes for which the client uses the test results. No purchase order or other order for work shall be accepted by Lancaster Laboratories which includes any conditions that vary from the Standard Terms and Conditions, and Lancaster hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

Reporting limits were raised due to interference from the sample matrix.

MDL = Method Detection Limit

## General Sample Comments

PA DEP Lab Certification ID 36-00037, Expiration Date: 1/31/13

All QC is compliant unless otherwise noted. Please refer to the Quality Control Summary for overall QC performance data and associated samples.

# Quality Control Summary

Client Name: The Johnson Company, Inc. Group Number: 1313430
Reported: 06/14/12 at 08:07 PM

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD was performed, unless otherwise specified in the method.

All Inorganic Initial Calibration and Continuing Calibration Blanks met acceptable method criteria unless otherwise noted on the Analysis Report.

# Environmental Sample Administration
# Receipt Documentation Log

**Client/Project:** Johnson 6

**Date of Receipt:** 6/5/12

**Time of Receipt:** 0935

**Source Code:** 60

**Shipping Container Sealed:** (YES) NO

**Custody Seal Present * :** YES (NO)

* Custody seal was intact unless otherwise noted in the discrepancy section

**Package:** Chilled (Not Chilled)

| Temperature of Shipping Containers | | | | | | | |
|---|---|---|---|---|---|---|---|
| Cooler # | Thermometer ID | Temperature (°C) | Temp Bottle (TB) or Surface Temp (ST) | Wet Ice (WI) or Dry Ice (DI) or Ice Packs (IP) | Ice Present? Y/N | Loose (L) Bagged Ice (B) or NA | Comments |
| 1 | | | | | | | |
| 2 | | | | | | | |
| 3 | | | | | | | |
| 4 | | | | | | | |
| 5 | | | | | | | |
| 6 | | | | | | | |

**Number of Trip Blanks received NOT listed on chain of custody:** Ø

**Paperwork Discrepancy/Unpacking Problems:**

2 Gauges + 2 large bags of hardware

**Unpacker Signature/Emp#:** 964 **Date/Time:** 6/5/12 0935

Issued by Dept. 6042 Management

# Explanation of Symbols and Abbreviations

*The following defines common symbols and abbreviations used in reporting technical data:*

| | | | |
|---|---|---|---|
| **RL** | Reporting Limit | **BMQL** | Below Minimum Quantitation Level |
| **N.D.** | none detected | **MPN** | Most Probable Number |
| **TNTC** | Too Numerous To Count | **CP Units** | cobalt-chloroplatinate units |
| **IU** | International Units | **NTU** | nephelometric turbidity units |
| **umhos/cm** | micromhos/cm | **ng** | nanogram(s) |
| **C** | degrees Celsius | **F** | degrees Fahrenheit |
| **meq** | milliequivalents | **lb.** | pound(s) |
| **g** | gram(s) | **kg** | kilogram(s) |
| **µg** | microgram(s) | **mg** | milligram(s) |
| **mL** | milliliter(s) | **L** | liter(s) |
| **m3** | cubic meter(s) | **µL** | microliter(s) |
| | | **pg/L** | picogram/liter |

**<** less than - The number following the sign is the limit of quantitation, the smallest amount of analyte which can be reliably determined using this specific test.

**>** greater than

**ppm** parts per million - One ppm is equivalent to one milligram per kilogram (mg/kg), or one gram per million grams. For aqueous liquids, ppm is usually taken to be equivalent to milligrams per liter (mg/l), because one liter of water has a weight very close to a kilogram. For gases or vapors, one ppm is equivalent to one microliter of gas per liter of gas.

**ppb** parts per billion

**Dry weight basis** Results printed under this heading have been adjusted for moisture content. This increases the analyte weight concentration to approximate the value present in a similar sample without moisture. All other results are reported on an as-received basis.

*Data Qualifiers:*

**C –** result confirmed by reanalysis.

**J -** estimated value – The result is ≥ the Method Detection Limit (MDL) and < the Limit of Quantitation (LOQ).

*U.S. EPA CLP Data Qualifiers:*

| **Organic Qualifiers** | | **Inorganic Qualifiers** | |
|---|---|---|---|
| **A** | TIC is a possible aldol-condensation product | **B** | Value is <CRDL, but ≥IDL |
| **B** | Analyte was also detected in the blank | **E** | Estimated due to interference |
| **C** | Pesticide result confirmed by GC/MS | **M** | Duplicate injection precision not met |
| **D** | Compound quantitated on a diluted sample | **N** | Spike sample not within control limits |
| **E** | Concentration exceeds the calibration range of the instrument | **S** | Method of standard additions (MSA) used for calculation |
| **N** | Presumptive evidence of a compound (TICs only) | **U** | Compound was not detected |
| **P** | Concentration difference between primary and confirmation columns >25% | **W** | Post digestion spike out of control limits |
| **U** | Compound was not detected | ***** | Duplicate analysis not within control limits |
| **X,Y,Z** | Defined in case narrative | **+** | Correlation coefficient for MSA <0.995 |

**Analytical test results meet all requirements of NELAC unless otherwise noted under the individual analysis.**

Measurement uncertainty values, as applicable, are available upon request.

Tests results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff. This report shall not be reproduced except in full, without the written approval of the laboratory.

Times are local to the area of activity. Parameters listed in the 40 CFR part 136 Table II as “analyze immediately” are not performed within 15 minutes.

**WARRANTY AND LIMITS OF LIABILITY** - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. THE FOREGOING EXPRESS WARRANTY IS EXCLUSIVE AND IS GIVEN IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED. WE DISCLAIM ANY OTHER WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING A WARRANTY OF FITNESS FOR PARTICULAR PURPOSE AND WARRANTY OF MERCHANTABILITY. IN NO EVENT SHALL LANCASTER LABORATORIES BE LIABLE FOR INDIRECT, SPECIAL, CONSEQUENTIAL, OR INCIDENTAL DAMAGES INCLUDING, BUT NOT LIMITED TO, DAMAGES FOR LOSS OF PROFIT OR GOODWILL REGARDLESS OF (A) THE NEGLIGENCE (EITHER SOLE OR CONCURRENT) OF LANCASTER LABORATORIES AND (B) WHETHER LANCASTER LABORATORIES HAS BEEN INFORMED OF THE POSSIBILITY OF SUCH DAMAGES. We accept no legal responsibility for the purposes for which the client uses the test results. No purchase order or other order for work shall be accepted by Lancaster Laboratories which includes any conditions that vary from the Standard Terms and Conditions, and Lancaster hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

Reporting limits were raised due to interference from the sample matrix.

MDL = Method Detection Limit

## General Sample Comments

PA DEP Lab Certification ID 36-00037, Expiration Date: 1/31/13

All QC is compliant unless otherwise noted. Please refer to the Quality Control Summary for overall QC performance data and associated samples.

# Quality Control Summary

Client Name: The Johnson Company, Inc. Group Number: 1325767
Reported: 08/13/12 at 11:16 PM

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD was performed, unless otherwise specified in the method.

All Inorganic Initial Calibration and Continuing Calibration Blanks met acceptable method criteria unless otherwise noted on the Analysis Report.

**To:** Kathy Klinefelter
**Cc:** Patrick Smart; Joel Behrsing
**Subject:** RE: 1325767 - Sample ID discrepancy noted.

Kathy,

I spoke with Joel and he confirmed your proposed changes are correct. The operator's field form confirms that the sample times are correct, SVE 6 was collected in summa #537, and SVE 5 was collected in summa #532. Please make your proposed changes and proceed with sample processing.

Thanks,

Todd Hall, P.E.

Hi Todd,

Have you had a chance to look into this?

Thanks,
Kathy

**Subject:** 1325767 - Sample ID discrepancy noted.

<<1325767c.pdf>> <<1325767d.pdf>>

Hello Todd,

Please see the attached COC and sample receipt doc log. 2 locations were marked on the COC as SVE 6, but the label on the summa can for the sample collected at 1050 identified the sample as SVE 5.

Please confirm that the following collection information is correct.

SVE 5 was collected 7/30/12 at 1050 as per the label. We will amend the COC to change the sample ID from SVE 6 to SVE 5.

SVE 6 was collected 7/30/12 at 1055 as per the label and COC. No change needed.

Thanks,

Kathy Klinefelter

# Explanation of Symbols and Abbreviations

*The following defines common symbols and abbreviations used in reporting technical data:*

| | | | |
|---|---|---|---|
| **RL** | Reporting Limit | **BMQL** | Below Minimum Quantitation Level |
| **N.D.** | none detected | **MPN** | Most Probable Number |
| **TNTC** | Too Numerous To Count | **CP Units** | cobalt-chloroplatinate units |
| **IU** | International Units | **NTU** | nephelometric turbidity units |
| **umhos/cm** | micromhos/cm | **ng** | nanogram(s) |
| **C** | degrees Celsius | **F** | degrees Fahrenheit |
| **meq** | milliequivalents | **lb.** | pound(s) |
| **g** | gram(s) | **kg** | kilogram(s) |
| **µg** | microgram(s) | **mg** | milligram(s) |
| **mL** | milliliter(s) | **L** | liter(s) |
| **m3** | cubic meter(s) | **µL** | microliter(s) |
| | | **pg/L** | picogram/liter |

**<** less than - The number following the sign is the limit of quantitation, the smallest amount of analyte which can be reliably determined using this specific test.

**>** greater than

**ppm** parts per million - One ppm is equivalent to one milligram per kilogram (mg/kg), or one gram per million grams. For aqueous liquids, ppm is usually taken to be equivalent to milligrams per liter (mg/l), because one liter of water has a weight very close to a kilogram. For gases or vapors, one ppm is equivalent to one microliter of gas per liter of gas.

**ppb** parts per billion

**Dry weight basis** Results printed under this heading have been adjusted for moisture content. This increases the analyte weight concentration to approximate the value present in a similar sample without moisture. All other results are reported on an as-received basis.

*Data Qualifiers:*

**C –** result confirmed by reanalysis.

**J -** estimated value – The result is ≥ the Method Detection Limit (MDL) and < the Limit of Quantitation (LOQ).

*U.S. EPA CLP Data Qualifiers:*

| **Organic Qualifiers** | | **Inorganic Qualifiers** | |
|---|---|---|---|
| **A** | TIC is a possible aldol-condensation product | **B** | Value is <CRDL, but ≥IDL |
| **B** | Analyte was also detected in the blank | **E** | Estimated due to interference |
| **C** | Pesticide result confirmed by GC/MS | **M** | Duplicate injection precision not met |
| **D** | Compound quantitated on a diluted sample | **N** | Spike sample not within control limits |
| **E** | Concentration exceeds the calibration range of the instrument | **S** | Method of standard additions (MSA) used for calculation |
| **N** | Presumptive evidence of a compound (TICs only) | **U** | Compound was not detected |
| **P** | Concentration difference between primary and confirmation columns >25% | **W** | Post digestion spike out of control limits |
| **U** | Compound was not detected | ***** | Duplicate analysis not within control limits |
| **X,Y,Z** | Defined in case narrative | **+** | Correlation coefficient for MSA <0.995 |

**Analytical test results meet all requirements of NELAC unless otherwise noted under the individual analysis.**

Measurement uncertainty values, as applicable, are available upon request.

Tests results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff. This report shall not be reproduced except in full, without the written approval of the laboratory.

Times are local to the area of activity. Parameters listed in the 40 CFR part 136 Table II as “analyze immediately” are not performed within 15 minutes.

**WARRANTY AND LIMITS OF LIABILITY** - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. THE FOREGOING EXPRESS WARRANTY IS EXCLUSIVE AND IS GIVEN IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED. WE DISCLAIM ANY OTHER WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING A WARRANTY OF FITNESS FOR PARTICULAR PURPOSE AND WARRANTY OF MERCHANTABILITY. IN NO EVENT SHALL LANCASTER LABORATORIES BE LIABLE FOR INDIRECT, SPECIAL, CONSEQUENTIAL, OR INCIDENTAL DAMAGES INCLUDING, BUT NOT LIMITED TO, DAMAGES FOR LOSS OF PROFIT OR GOODWILL REGARDLESS OF (A) THE NEGLIGENCE (EITHER SOLE OR CONCURRENT) OF LANCASTER LABORATORIES AND (B) WHETHER LANCASTER LABORATORIES HAS BEEN INFORMED OF THE POSSIBILITY OF SUCH DAMAGES. We accept no legal responsibility for the purposes for which the client uses the test results. No purchase order or other order for work shall be accepted by Lancaster Laboratories which includes any conditions that vary from the Standard Terms and Conditions, and Lancaster hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

## General Sample Comments

PA DEP Lab Certification ID 36-00037, Expiration Date: 1/31/13

All QC is compliant unless otherwise noted. Please refer to the Quality Control Summary for overall QC performance data and associated samples.

Reporting limits were raised due to interference from the sample matrix.

MDL = Method Detection Limit

## General Sample Comments

PA DEP Lab Certification ID 36-00037, Expiration Date: 1/31/13

All QC is compliant unless otherwise noted. Please refer to the Quality Control Summary for overall QC performance data and associated samples.

# Quality Control Summary

Client Name: The Johnson Company, Inc. Group Number: 1339635
Reported: 10/15/12 at 09:08 PM

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD was performed, unless otherwise specified in the method.

All Inorganic Initial Calibration and Continuing Calibration Blanks met acceptable method criteria unless otherwise noted on the Analysis Report.

*- Outside of specification
(1) The result for one or both determinations was less than five times the LOQ.
(2) The unspiked result was more than four times the spike added.

# Environmental Sample Administration Receipt Documentation Log

**Client/Project:** Johnson Company

**Date of Receipt:** 10/3/12

**Time of Receipt:** 1130

**Source Code:** SO-2

**Shipping Container Sealed:** (YES) NO

**Custody Seal Present * :** YES (NO)

* Custody seal was intact unless otherwise noted in the discrepancy section

**Package:** Chilled (Not Chilled)

| Temperature of Shipping Containers | | | | | | | |
|---|---|---|---|---|---|---|---|
| Cooler # | Thermometer ID | Temperature (°C) | Temp Bottle (TB) or Surface Temp (ST) | Wet Ice (WI) or Dry Ice (DI) or Ice Packs (IP) | Ice Present? Y/N | Loose (L) Bagged Ice (B) or NA | Comments |
| 1 | | | | | | | |
| 2 | | | | | | | |
| 3 | | | | | | | |
| 4 | | | | | | | |
| 5 | | | | | | | |
| 6 | | | | | | | |

**Number of Trip Blanks received NOT listed on chain of custody:** 0

**Paperwork Discrepancy/Unpacking Problems:**

rec'd 1 flow controller and 4 bag of swaglock tubing

**Unpacker Signature/Emp#:** Pat Gyla 3472 **Date/Time:** 10/3/12 1155

Issued by Dept. 6042 Management

# Explanation of Symbols and Abbreviations

*The following defines common symbols and abbreviations used in reporting technical data:*

| | | | |
|---|---|---|---|
| **RL** | Reporting Limit | **BMQL** | Below Minimum Quantitation Level |
| **N.D.** | none detected | **MPN** | Most Probable Number |
| **TNTC** | Too Numerous To Count | **CP Units** | cobalt-chloroplatinate units |
| **IU** | International Units | **NTU** | nephelometric turbidity units |
| **umhos/cm** | micromhos/cm | **ng** | nanogram(s) |
| **C** | degrees Celsius | **F** | degrees Fahrenheit |
| **meq** | milliequivalents | **lb.** | pound(s) |
| **g** | gram(s) | **kg** | kilogram(s) |
| **µg** | microgram(s) | **mg** | milligram(s) |
| **mL** | milliliter(s) | **L** | liter(s) |
| **m3** | cubic meter(s) | **µL** | microliter(s) |
| | | **pg/L** | picogram/liter |

**<** less than - The number following the sign is the limit of quantitation, the smallest amount of analyte which can be reliably determined using this specific test.

**>** greater than

**ppm** parts per million - One ppm is equivalent to one milligram per kilogram (mg/kg), or one gram per million grams. For aqueous liquids, ppm is usually taken to be equivalent to milligrams per liter (mg/l), because one liter of water has a weight very close to a kilogram. For gases or vapors, one ppm is equivalent to one microliter of gas per liter of gas.

**ppb** parts per billion

**Dry weight basis** Results printed under this heading have been adjusted for moisture content. This increases the analyte weight concentration to approximate the value present in a similar sample without moisture. All other results are reported on an as-received basis.

*Data Qualifiers:*

**C –** result confirmed by reanalysis.

**J -** estimated value – The result is ≥ the Method Detection Limit (MDL) and < the Limit of Quantitation (LOQ).

*U.S. EPA CLP Data Qualifiers:*

| **Organic Qualifiers** | | **Inorganic Qualifiers** | |
|---|---|---|---|
| **A** | TIC is a possible aldol-condensation product | **B** | Value is <CRDL, but ≥IDL |
| **B** | Analyte was also detected in the blank | **E** | Estimated due to interference |
| **C** | Pesticide result confirmed by GC/MS | **M** | Duplicate injection precision not met |
| **D** | Compound quantitated on a diluted sample | **N** | Spike sample not within control limits |
| **E** | Concentration exceeds the calibration range of the instrument | **S** | Method of standard additions (MSA) used for calculation |
| **N** | Presumptive evidence of a compound (TICs only) | **U** | Compound was not detected |
| **P** | Concentration difference between primary and confirmation columns >25% | **W** | Post digestion spike out of control limits |
| **U** | Compound was not detected | ***** | Duplicate analysis not within control limits |
| **X,Y,Z** | Defined in case narrative | **+** | Correlation coefficient for MSA <0.995 |

**Analytical test results meet all requirements of NELAC unless otherwise noted under the individual analysis.**

Measurement uncertainty values, as applicable, are available upon request.

Tests results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff. This report shall not be reproduced except in full, without the written approval of the laboratory.

Times are local to the area of activity. Parameters listed in the 40 CFR part 136 Table II as “analyze immediately” are not performed within 15 minutes.

**WARRANTY AND LIMITS OF LIABILITY** - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. THE FOREGOING EXPRESS WARRANTY IS EXCLUSIVE AND IS GIVEN IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED. WE DISCLAIM ANY OTHER WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING A WARRANTY OF FITNESS FOR PARTICULAR PURPOSE AND WARRANTY OF MERCHANTABILITY. IN NO EVENT SHALL LANCASTER LABORATORIES BE LIABLE FOR INDIRECT, SPECIAL, CONSEQUENTIAL, OR INCIDENTAL DAMAGES INCLUDING, BUT NOT LIMITED TO, DAMAGES FOR LOSS OF PROFIT OR GOODWILL REGARDLESS OF (A) THE NEGLIGENCE (EITHER SOLE OR CONCURRENT) OF LANCASTER LABORATORIES AND (B) WHETHER LANCASTER LABORATORIES HAS BEEN INFORMED OF THE POSSIBILITY OF SUCH DAMAGES. We accept no legal responsibility for the purposes for which the client uses the test results. No purchase order or other order for work shall be accepted by Lancaster Laboratories which includes any conditions that vary from the Standard Terms and Conditions, and Lancaster hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

# Quality Control Summary

Client Name: The Johnson Company, Inc. Group Number: 1346234
Reported: 11/13/12 at 06:11 PM

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD was performed, unless otherwise specified in the method.

All Inorganic Initial Calibration and Continuing Calibration Blanks met acceptable method criteria unless otherwise noted on the Analysis Report.

# Explanation of Symbols and Abbreviations

*The following defines common symbols and abbreviations used in reporting technical data:*

| | | | |
|---|---|---|---|
| **RL** | Reporting Limit | **BMQL** | Below Minimum Quantitation Level |
| **N.D.** | none detected | **MPN** | Most Probable Number |
| **TNTC** | Too Numerous To Count | **CP Units** | cobalt-chloroplatinate units |
| **IU** | International Units | **NTU** | nephelometric turbidity units |
| **umhos/cm** | micromhos/cm | **ng** | nanogram(s) |
| **C** | degrees Celsius | **F** | degrees Fahrenheit |
| **meq** | milliequivalents | **lb.** | pound(s) |
| **g** | gram(s) | **kg** | kilogram(s) |
| **µg** | microgram(s) | **mg** | milligram(s) |
| **mL** | milliliter(s) | **L** | liter(s) |
| **m3** | cubic meter(s) | **µL** | microliter(s) |
| | | **pg/L** | picogram/liter |

**<** less than - The number following the sign is the limit of quantitation, the smallest amount of analyte which can be reliably determined using this specific test.

**>** greater than

**J** estimated value – The result is ≥ the Method Detection Limit (MDL) and < the Limit of Quantitation (LOQ).

**ppm** parts per million - One ppm is equivalent to one milligram per kilogram (mg/kg), or one gram per million grams. For aqueous liquids, ppm is usually taken to be equivalent to milligrams per liter (mg/l), because one liter of water has a weight very close to a kilogram. For gases or vapors, one ppm is equivalent to one microliter of gas per liter of gas.

**ppb** parts per billion

**Dry weight basis** Results printed under this heading have been adjusted for moisture content. This increases the analyte weight concentration to approximate the value present in a similar sample without moisture. All other results are reported on an as-received basis.

*U.S. EPA CLP Data Qualifiers:*

**Organic Qualifiers**

| | |
|---|---|
| **A** | TIC is a possible aldol-condensation product |
| **B** | Analyte was also detected in the blank |
| **C** | Pesticide result confirmed by GC/MS |
| **D** | Compound quantitated on a diluted sample |
| **E** | Concentration exceeds the calibration range of the instrument |
| **N** | Presumptive evidence of a compound (TICs only) |
| **P** | Concentration difference between primary and confirmation columns >25% |
| **U** | Compound was not detected |
| **X,Y,Z** | Defined in case narrative |

**Inorganic Qualifiers**

| | |
|---|---|
| **B** | Value is <CRDL, but ≥IDL |
| **E** | Estimated due to interference |
| **M** | Duplicate injection precision not met |
| **N** | Spike sample not within control limits |
| **S** | Method of standard additions (MSA) used for calculation |
| **U** | Compound was not detected |
| **W** | Post digestion spike out of control limits |
| ***** | Duplicate analysis not within control limits |
| **+** | Correlation coefficient for MSA <0.995 |

Analytical test results meet all requirements of NELAC unless otherwise noted under the individual analysis.

Measurement uncertainty values, as applicable, are available upon request.

Tests results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff. This report shall not be reproduced except in full, without the written approval of the laboratory.

Times are local to the area of activity. Parameters listed in the 40 CFR part 136 Table II as “analyze immediately” are not performed within 15 minutes.

**WARRANTY AND LIMITS OF LIABILITY** - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. THE FOREGOING EXPRESS WARRANTY IS EXCLUSIVE AND IS GIVEN IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED. WE DISCLAIM ANY OTHER WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING A WARRANTY OF FITNESS FOR PARTICULAR PURPOSE AND WARRANTY OF MERCHANTABILITY. IN NO EVENT SHALL LANCASTER LABORATORIES BE LIABLE FOR INDIRECT, SPECIAL, CONSEQUENTIAL, OR INCIDENTAL DAMAGES INCLUDING, BUT NOT LIMITED TO, DAMAGES FOR LOSS OF PROFIT OR GOODWILL REGARDLESS OF (A) THE NEGLIGENCE (EITHER SOLE OR CONCURRENT) OF LANCASTER LABORATORIES AND (B) WHETHER LANCASTER LABORATORIES HAS BEEN INFORMED OF THE POSSIBILITY OF SUCH DAMAGES. We accept no legal responsibility for the purposes for which the client uses the test results. No purchase order or other order for work shall be accepted by Lancaster Laboratories which includes any conditions that vary from the Standard Terms and Conditions, and Lancaster hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

Re: **Application for a Pretreatment Permit; Groundwater Treatment System**
Avery Dennison Corporation - 4350 Avery Drive, Flowery Branch, Hall County, Georgia.

Dear Mr. Noell:

On behalf of Avery Dennison Corporation (Avery Dennison), please find attached, for review and approval, a completed *Application for a Pretreatment Permit* and associated attachments (Permit Application Package). Avery Dennison submits this Permit Application Package for approval of discharge of treated groundwater from a groundwater extraction and treatment system (the System) to be installed at its facility located at 4350 Avery Drive in Flowery Branch, Georgia. The System will remove target volatile organic compounds (VOC) and 1,4-dioxane from extracted groundwater, and the treated groundwater will then be discharged to the Flowery Branch Publicly Owned Treatment Works (POTW) per an agreement established between Avery Dennison and the POTW.

This Permit Application Package is comprised of the following attachments to this letter:

*Attachment 1*: A completed Pretreatment Permit Application form.

*Attachment 2*: A description of the proposed groundwater treatment system.

*Attachment 3*: A set of figures showing the property location, the preliminary system layout, and the proposed process flow diagram

*Attachment 4*: Evidence of the City of Flowery Branch's approval of the POTW's acceptance of the proposed discharge.

*Attachment 5*: A Statement of Qualifications and proposal from the planned licensed System operator, Complete Water Services LLC.

*Attachment 6*: A draft Best Management Practices (BMP) Plan for the System.

If there are questions regarding the treatment system design or enclosed Pretreatment Permit Application, please contact the undersigned. We look forward to your approval.

Sincerely,

THE JOHNSON COMPANY, INC.

# Attachment 1

# Completed Pretreatment Permit Application

**STATE OF GEORGIA DEPARTMENT OF NATURAL RESOURCES**
**ENVIRONMENTAL PROTECTION DIVISION**

# APPLICATION FOR A PRETREATMENT PERMIT
## (Includes Baseline Monitoring Report Data)

To be filed by persons engaged in manufacturing, mining or commercial operations which generate pollutants which are discharged to publicly owned treatment works and then into the waters of the State.

| FOR EPD USE ONLY | |
|---|---|
| Application No. | |
| Date Received: | |

## SECTION A - GENERAL INFORMATION

1. a. Will you be connected to the public sanitary sewer system?
[ X ] Yes [ ] No (if no, then do not continue with application. Sign application and submit to Environmental Protection Division).

b. <u>For an existing business</u>:

Is the building presently connected to the public sanitary sewer system?

[X] Yes:
[ ] No: Have you applied for a sanitary sewer hookup? [ ] Yes [ ] No

c. <u>For a new business</u>:

(i) Will you be occupying an existing vacant building?
[ ] Yes [ ] No

(ii). Have you applied for a building permit if a new facility will be constructed?
[ ] Yes [ ] No

2. Does or <u>will</u> this facility discharge any wastewater other than from rest rooms to the City sewer?

[X] Yes If the answer to this question is 'Yes", please complete the remainder of the application.

[ ] No If the answer to this question is “No”, skip to Section 1.

3. Facility Name: Avery Dennison Corporation

a. Operator Name: See below

b. Is the operator identified in 1.a., the owner of the facility?
[] Yes [X] No

If no, provide the name and address of the operator and submit a copy of the contract and/or other documents indicating the operator's scope of responsibility for the facility.

| |
|---|
| Avery Dennison will Contract an appropriately-licensed water treatment operator to operate the System following receipt of an industrial pretreatment permit from Georgia EPD. Avery Dennison has identified Complete Water Services, LLC as the planned Operator for the proposed System. A statement of qualifications and proposal from Complete Water Services LLC is provided as Attachment 5 to this application package. |

4. Facility Address:

| | | |
|---|---|---|
| Street: 4350 Avery Drive | | |
| City: Flowery Branch | State: GA | Zip: 30503 |

5. Business Mailing Address:

| | | |
|---|---|---|
| Street or P.O. Box: 130 Walnut Street | | |
| City: Douglas | State: MA | Zip: 01516 |

6. Designated signatory authority for the facility:
[Attach similar information for each authorized representative]

| | | |
|---|---|---|
| Name: Bruce Martin | | |
| Title: Manager of Environmental Remediation Systems<br>Corporate Environmental Health and Safety<br>Avery Dennison Corporation | | |
| Address: 130 Walnut Street | | |
| City: Douglas | State: Massachusetts | Zip:01516 |
| Phone #:(508) 476-5041 | | |

7. Designated facility contact:

| | | |
|---|---|---|
| Name: Mr. Bruce Martin | | |
| Title: : Manager of Environmental Remediation Systems<br>Corporate Environmental Health and Safety<br>Avery Dennison Corporation | | |
| Phone #: (508) 476-5041 | | |

**SECTION B – BUSINESS ACTIVITY**

1. If your facility employs or will be employing processes in any of the industrial categories listed below (regardless of whether they generate wastewater, waste sludge, or hazardous waste), place a check beside the category (check all that apply).

| ***NONE APPLY*** | Industrial Categories | Code of Federal Regulations (CFR) Reference No. |
|---|---|---|
| [ ] | Aluminum Forming | 467 |
| [ ] | Asbestos Manufacturing | 427 |
| [ ] | Battery Manufacturing | 461 |
| [ ] | Canned and Preserved Fruits and Vegetables Processing | 407 |
| [ ] | Canned and Preserved Seafood Processing | 408 |
| [ ] | Carbon Black Manufacturing | 458 |

| | | |
|---|---|---|
| [ ] | Cement Manufacturing | 411 |
| [ ] | Coal Mining | 434 |
| [ ] | Coil Coating | 465 |
| [ ] | Copper Forming | 468 |
| [ ] | Dairy Products Processing | 405 |
| [ ] | Electrical and Electronic Components Manufacturing | 469 |
| [ ] | Electroplating | 413 |

| Industrial Categories | | Code of Federal Regulations (CFR) Reference No. |
|---|---|---|
| [ ] | Explosives Manufacturing | 457 |
| [ ] | Feedlots | 412 |
| [ ] | Ferroalloy Manufacturing | 424 |
| [ ] | Fertilizer Manufacturing | 418 |
| [ ] | Glass Manufacturing | 426 |
| [ ] | Grain Mills | 406 |
| [ ] | Gum and Wood Chemicals Manufacturing | 454 |
| [ ] | Hospital | 460 |
| [ ] | Ink Formulating | 447 |
| [ ] | Inorganic Chemicals Manufacturing | 415 |
| [ ] | Iron and Steel Manufacturing | 420 |
| [ ] | Leather Tanning and Finishing | 425 |
| [ ] | Meat Products | 432 |
| [ ] | Metal Finishing | 433 |
| [ ] | Metal Molding and Casting | 464 |
| [ ] | Mineral Mining and Processing | 436 |
| [ ] | Nonferrous Metals Forming Metal Powders | 471 |
| [ ] | Nonferrous Metals Manufacturing | 421 |
| [ ] | Oil and Gas Extraction | 435 |
| [ ] | Ore Mining and Dressing | 440 |
| [ ] | Organic Chemicals Plastic and Synthetic Fibers | 414 |
| [ ] | Paint Formulating | 446 |
| [ ] | Paving and Roofing Materials | 443 |
| [ ] | Pesticides Chemicals | 455 |
| [ ] | Petroleum Refining | 419 |
| [ ] | Pharmaceutical Manufacturing | 439 |
| [ ] | Phosphate Manufacturing | 422 |
| [ ] | Photographic | 459 |
| [ ] | Plastics Molding and Forming | 463 |
| [ ] | Porcelain Enameling | 466 |
| [ ] | Pulp, Paper, and Paperboard | 430 |
| [ ] | Rubber Manufacturing | 428 |
| [ ] | Soap and Detergent Manufacturing | 417 |
| [ ] | Steam Electric Power Generating | 423 |
| [ ] | Sugar Processing | 409 |
| [ ] | Textile Mills | 410 |
| [ ] | Timber Products Processing | 429 |
| [ ] | The Builders' Paper and Board Mills | 431 |

A facility with process inclusive in the above areas may be covered by Environmental Protection Agency's (EPA) categorical pretreatment standards. These facilities are termed "categorical users".

2. Give a brief description of all operations at this facility including primary products or services (includes principal raw materials, catalysts, and intermediates used in the process).

Simultaneous extraction and treatment of groundwater and soil vapor with above ground phase separation and treatment of the water stream. Groundwater treatment will be a 2-step process: physical (air stripping) followed by chemical (advanced oxidation) treatment. Oxidants to be used include ozone ($0_3$) and a 3 percent (by weight) hydrogen peroxide ($H_2O_2$) solution. Treated groundwater will be discharged to the Flowery Branch sanitary sewer collection system via a private on-site pump station.

3. Indicate applicable Standard Industrial Classification (SIC) for all processes (If more than one applies, list in descending order of importance.):

***NOT APPLICABLE***

4. PRODUCT VOLUME: ***NOT APPLICABLE***

| **Product (Brand Name)** | **PAST CALENDAR YEAR Amounts Per Day (Daily Units)** | | **ESTIMATE THIS CALENDAR YEAR Amounts Per Date (Daily Units)** | |
|---|---|---|---|---|
| | Average | Maximum | Average | Maximum |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

## SECTION C – WATER SUPPLY

1 . Water Sources: (Check as many as are applicable)

[ ] Private Well
[ ] Surface Water
[X] Municipal Water Utility (Specify City): Gainesville
[ ] Other (Specify):

2. List average water usage on premises: [New facilities may estimate]

| Type | Average Water Usage (GPD) | Indicate Estimate (E) or Measured (M) |
|---|---|---|
| a. Contact cooling water | | |
| b. Non-contact cooling water | | |
| c. Boiler feed | | |
| d. Process | | |
| e. Sanitary | 500 | Measured, based on monthly water meter readings |
| f. Air pollution control | | |
| g. Contained in product | | |

| Type | Average Water Usage (GPD) | Indicate Estimate (E) or Measured (M) |
|---|---|---|
| h. Plant & equipment wash down | | |
| i. Irrigation & lawn watering | | |
| j. Other | | |
| k. TOTAL OF A - J | 500 | Measured |

**SECTION D – SEWER INFORMATION**

1. Name, address, and location of the publicly owned treatment works (POTW) to which you discharge.

   a. Name of organization responsible for receiving waste:

   CITY OF FLOWERY BRANCH

   b. Facility receiving waste:

| | | |
|---|---|---|
| Name: FLOWERY BRANCH WPCP | | |
| Street Address: 5572 ATLANTA HIGHWAY SOUTH | | |
| City: FLOWERY BRANCH | County: HALL | State: GA |
| NPDES Permit No. GA0031933 | | |

2. List size, descriptive location, and flow of each facility sewer which connects to the City's sewer system. (If more than three, attach additional information on another sheet).

| Sewer Size | Descriptive Location of Sewer Connection or Discharge Point | Average Flow (GPD) |
|---|---|---|
| 4” Force Main | On-site privately owned pump station discharges to a manhole along the west side of Avery Drive, near its intersection with the Thurmond Tanner Parkway | 500 |

## SECTION E – WASTEWATER DISCHARGE INFORMATION

1. Provide the following information on wastewater flow rate.
(New facilities may estimate).

a. Hours/Day discharged (e.g. 8 hours/day):

| Mon | Tue | Wed | Thu | Fri | Sat | Sun |
|---|---|---|---|---|---|---|
| 24 | 24 | 24 | 24 | 24 | 24 | 24 |

b. Hours of Discharge (e.g., 9 a.m. to 5 p.m.) ***NOT APPLICABLE - CONTINUOUS***

| Mon | Tue | Wed | Thu | Fri | Sat | Sun |
|---|---|---|---|---|---|---|
| | | | | | | |

c. Peak hourly flow rate (GPD)- ~ 28,800 gallons per day

d. Maximum daily flow rate (GPD) ~ 15,000 gallons per day

e. Annual daily average (GPD) ~ 14,400 gallons per day

2. If batch discharge occurs or will occur, indicate: ***NOT APPLICABLE - CONTINUOUS***
[New facilities may estimate]

a. Number of batch discharges per day

b. Average discharge per batch (GPD)

c. Time of batch discharges (days of week) (hrs of day)

d. Flow rate (gallons/minute)

e. Percent of total discharge

3. Schematic Flow Diagram – For each major activity in which wastewater is or will be generated, draw a diagram of the flow of materials, products, water, and wastewater from the start of the activity to its completion, showing all unit processes. Indicate which processes use water and which generate wastestreams. Include the average daily volume and maximum daily volume of each wastestream [new facilities may estimate]. If estimates are used for flow data this must be indicated. Number each unit process having wastewater discharges to the community sewer. Use these numbers when showing these unit processes in the building layout in Section H.

Attachment 3 of the Permit Application Package presents the Site Location (Figure 1), proposed system layout (Figure 2), and proposed process flow diagram (Figure 3).

Facilities that checked activities in question 1 of Section B are considered Categorical Industrial Users and should skip to question 5.

4. For Non-Categorical Users Only: List average wastewater discharge, maximum discharge, and type of discharge (batch, continuous, or both), for each of your processes or proposed processes. Include the reference number from the schematic flow diagram that corresponds to each process. [New facilities should provide estimates for each discharge].

| No. | Process Description | Average Flow (GPD) | Maximum Flow(GPD) | Type of Discharge (batch, continuous, none) |
|---|---|---|---|---|
| 1 | Groundwater Treatment | 14,400 | 15,000 | Continuous |
| | | | | |

ANSWER QUESTIONS 5 & 6 ONLY IF YOU ARE SUBJECT TO CATEGORICAL PRETREATMENT STANDARDS

5. For Categorical Users: Provide the wastewater discharge flows for each of your processes or proposed processes. Include the reference number from the schematic flow diagram that corresponds to each process. [New facilities should provide estimates for each discharge].

| No. | Regulated Process | Average Flow (GPD) | Maximum Flow (GPD) | Type of Discharge (batch, continuous, none) |
|---|---|---|---|---|
| | | | | |

| No. | Unregulated Process | Average Flow (GPD) | Maximum Flow(GPD) | Type of Discharge (batch, continuous, none) |
|---|---|---|---|---|
| | | | | |

| No. | Dilution | Average Flow (GPD) | Maximum Flow (GPD) | Type of Discharge (batch, continuous, none) |
|---|---|---|---|---|
| | | | | |

6. For Categorical Users Subject to Total Toxic Organic (TTO) Requirements:
Provide the following (TTO) information:

a. Does (or will) this facility use any of the toxic organics that are listed under the TTO standard of the applicable categorical pretreatment standards published by EPA?
[ ] Yes
[ ] No

b. Has a baseline monitoring report (BMR) been submitted which contains TTO information?
[ ] Yes
[ ] No

c. Has a toxic organics management plan (TOMP) been developed?
[ ] Yes, (Please attach a copy)
[ ] No

7. Do you have, or plan to have, automatic sampling equipment or continuous wastewater flow metering equipment at this facility?

| | | | | |
|---|---|---|---|---|
| Current: | Flow Metering | [ ] Yes | [] No | [ ] N/A |
| | Sampling Equipment | [ ] Yes | [] No | [ ] N/A |
| Planned: | Flow Metering | [ X] Yes | [ ] No | [ ] N/A |
| | Sampling Equipment | [ ] Yes | [ X] No | [ ] N/A |

If so, please indicate the present or future location of this equipment on the schematic flow diagram and describe the equipment below:

| |
|---|
| A totalizing flow meter will be installed on the discharge pipe that delivers treatment system effluent to the privately owned sewer pump station located at the site. This flow meter is indicated on the proposed process flow diagram (Figure 3 of Attachment 3). |

If flow metering equipment is not installed, will water use records or other method be used and be representative of discharged flow? Explain.

| |
|---|
| Flow metering equipment will be installed. |
| |

8. Are any process changes or expansions planned during the next three years that could alter wastewater volumes or characteristics? Consider production processes as well as air or water pollution treatment processes that may affect the discharge.

[X] No
[ ] Yes, then briefly describe these changes and their effects on the wastewater volume and characteristics: (Attach additional sheets if needed.)

| |
|---|
| |
| |

9. Are any materials or water reclamation systems in use or planned?

[X] No
[ ] Yes, then briefly describe recovery process, substance recovered, percent recovered, and the concentration in the spent solution. Submit a flow diagram for each process: (Attach additional sheets if needed.)

| |
|---|
| |
| |

10. Are any other waste minimization measures used or planned?

[X] No
[ ] Yes, then briefly describe measures.

| |
|---|
| |
| |

**Section F – CHARACTERISTICS OF DISCHARGE (refer to 40 CFR Part 403.12(b) for baseline monitoring report requirements).**

1. **DATA:** Report organics and pesticides as ug/l; conventional pollutants and metals as mg/l; mass as lbs/day. All other units have been specified.

   All current industrial users are required to submit monitoring data on all pollutants that are subject to categorical standards. Use the tables provided in this section to report the analytical results. **DO NOT LEAVE BLANKS.** For all other (nonregulated) pollutants, indicate whether the pollutant is known to be present (P), suspected to be present (S), or known not to be present (O), by placing the appropriate letter in the concentration column under average of analyses. If data is available for nonregulated pollutants, please include. Indicate on either the top of each table, or on a separate sheet, if necessary, the time, date, and place of sampling, the methods of analysis, the type of sample (i.e., flow proportional composite samples, time proportional composite samples or grab samples) and the number of representative samples taken. Be sure methods conform to **40 CFR Part 136:** if they do not, indicate what method was used. A certification statement should also be provided on the table or additional sheet if necessary that such sampling and analysis are representative of normal work cycles and expected pollutant discharges to the **POTW**. A copy of a pollutant scan can be attached in lieu of completing the tables provided that all requested information is included on the scan.

   New dischargers should use the table to indicate what pollutants will be present or are suspected to be present in proposed wastestreams by placing P (expected to be present), S (may be present), or O (will not be present) in the concentration column under average of analyses. If the industry is not yet in operation, the levels of the regulated pollutants and process flows should be estimated and reported.

   When analyzing for pollutants listed in Georgia's Rules and Regulations for Water Quality Control, the applicant should ensure that the pollutants are at least analyzed down to the detection limits as specified in Attachment No. 1. If detection levels are not applicable for specific pollutants, so indicate by placing N/A under the column detection level used.

## TABLE A – POLLUTANT SPECIFIC RESULTS

| Pollutant | Detection Level Used | Maximum Daily Value | | Average Of Analyses | | **Estimated Discharge Concentration** | Units | |
|---|---|---|---|---|---|---|---|---|
| | | Conc. | Mass | Conc. | Mass | | Conc. | Mass |
| Acenaphthene | | | | O | | | | |
| Acrolein | | | | O | | | | |
| Acrylonitrile | | | | O | | | | |
| Benzene | | | | O | | | | |
| Benzidine | | | | O | | | | |
| Carbon tetrachloride | | | | O | | | | |

| Sulfide (S) | | | | O[1] | | | | |
| Sulfite ($SO_3$) | | | | S* | | | | |
| Antimony | | | | S* | | | | |
| Arsenic | | | | S* | | | | |
| Barium | | | | O | | | | |
| Beryllium | | | | S* | | | | |
| Cadmium | | | | O | | | | |
| Chromium (total) | | | | O | | | | |
| Chromium VI | | | | O | | | | |
| Copper | | | | S* | | | | |
| Cyanide | | | | O | | | | |
| Lead | | | | S* | | | | |
| Mercury | | | | S* | | | | |
| Nickel | | | | S* | | | | |
| Selenium | | | | S* | | | | |
| Silver | | | | S* | | | | |
| Thallium | | | | S* | | | | |
| Zinc | | | | S* | | | | |
| Methoxychlor | | | | O | | | | |
| 2,4-Dichlorophenoxy propionic acid (TP Silvex) | | | | O | | | | |
| 1,4 Dioxane | | | | P | | < 3 ug/l | | |

*****Target constituent may be naturally occurring in groundwater. If present in the groundwater extracted from the Site, this constituent would likely be present in the effluent discharged from the treatment system.

[1] the treatment system includes an advanced oxidation process, which will oxidize any sulfide present in the groundwater to sulfate. Consequently, the treatment system effluent will not contain sulfide.

**TABLE B – PROHIBITED POLLUTANTS**

**Complete this table by checking the appropriate column and providing analytical results where indicated (P = known to be present, S = suspected to be present, O = known not to be present):**

| | **POLLUTANT** | P | | S | | O |
|---|---|---|---|---|---|---|
| 1 | Materials that may create a fire or explosion hazard, including wastestreams with a closed cup flash point of less than 140°F or 60°C using test methods in 40 CFR Part 261.21 | | | | | X |
| | Flash point (°F or °C) | | | | | |
| 2 | Corrosive type materials pH <5 or pH >9 | | | | | X |
| | pH (std. Units) | | | | | 6.5 – 7.0 |
| 3 | Solid or viscous pollutants in amounts, which could cause flow obstruction or interference with POTW operation. | | | | | X |
| 4 | Discharge of any pollutant (including $BOD_5$, Suspended Solids, COD, etc.) in volume or strength to cause POTW unit process upset of NPDES Permit Violations. | | | | | X |
| | $BOD_5$ (mg/l) | | | | | No data |
| | COD (mg/l) | | | | | No data |
| | Suspended Solids (mg/l) | | | | | No data |
| | Oil and Grease (mg/l) | | | | | No data |
| 5 | Heated discharges in excess of 104° F or 40° C | | | | | X |
| | Temperature (°F or °C) | | | | | Est. 19° C |
| 7 | Pollutants, which result in presence of toxic gases, vapors or fumes in a quantity that may cause acute worker health and safety problems. | | | | | X |

| | POLLUTANT | P | | S | | O |
|---|---|---|---|---|---|---|
| 8 | Any trucked or hauled pollutants to discharge points on the POTW system. | | | | | X |

2. HAZARDOUS WASTES DISCHARGED TO A POTW SEWER SYSTEM (see 40 CFR Part 403.12(P) for requirements of hazardous waste notification):

a. Do you now discharge listed or characteristic hazardous wastes as specified in 40 CFR Part 261 to a POTW sanitary sewer system?

[X] No
[ ] Yes (if the answer is "Yes" complete the following).

(i) Name of the hazardous waste as set forth in 40 CFR Part 261

(ii) EPA hazardous waste number

(iii) Type of discharge to the sewer (continuous, batch, or other)

(iv) A certification should be provided below that you have a program in place to reduce the volume and toxicity of hazardous wastes generated to the extent determined to be economically practical.

(v) Describe the program components:

b. Do you discharge more than 100 kilograms of hazardous waste per calendar month to the POTW sewer?

[X] No
[ ] Yes (if the answer is “Yes” report the following).

(i) An identification of the hazardous constituents contained in the hazardous waste as specified in 40 CFR Part 261.

An estimation of the mass and concentration of the constituents in the wastestream discharged during the calendar month.

(ii) An estimation of the mass of constituents in the wastestream expected to be discharged during the next 12 months.

c. Have you had to submit a hazardous waste notification (to the POTW that you discharge to) based on the requirements of 40 CFR Part 403.12(p)?

[X] No
[ ] Yes (if "Yes" provide the POTW name, address and date of notification).

## SECTION G – TREATMENT

1. Is any form of wastewater treatment practiced at this facility?

[ ] Yes
[X] No

2. Is any form of wastewater treatment (or changes to existing wastewater treatment) planned for this facility within the next three years?

[X] Yes, describe:

The proposed groundwater treatment system will include an air stripper followed by an advanced oxidation treatment process, as described in Attachment 2 of the Permit Application Package.

[] No

3. Treatment devices or processes used or proposed for treating wastewater or sludge (check as many as appropriate).

[ ] Air flotation
[ ] Centrifuge
[ ] Chemical precipitation
[ ] Chlorination
[ ] Cyclone
[ ] Filtration
[ ] Flow equalization
[ ] Grease or oil separation, type:
[ ] Grease trap
[ ] Grinding filter
[ ] Grit removal
[ ] Neutralization, pH correction
[ ] Ozonation
[ ] Reverse osmosis

[ ] Screen
[ ] Sedimentation
[ ] Septic tank
[ ] Solvent separation
[ ] Spill protection
[ ] Sump
[ ] Biological treatment, type:
[ ] Rainwater diversion or storage
[ X] Other chemical treatment, type: Air Stripping
[X ] Other physical treatment, type: Advanced Oxidation Process
[ ] Other type:

4. Description

Describe the pollutant loadings, flow rates, design capacity, physical size, and operating procedures of each treatment facility checked above (attach additional sheets if necessary).

Estimated influent concentrations include:

1,1-dichloroethene ~ 2,800 micrograms/liter (ug/L)
1,4-Dioxane ~ 500 ug/L
1,1,1-trichloroethane ~ 280 ug/L
1,1-dichloroethane ~ 90 ug/L
1,2-dichloroethane < 6 ug/L
total xylenes < 5 ug/L
vinyl chloride < 5 ug/L
1,1,2-trichloroethane < 3 ug/L
methylene chloride < 3 ug/L
toluene < 2 ug/L
trichloroethene < 2 ug/L
tetrachlorethene < 1 ug/L

Maximum daily flow rate of 15,000 gallons per day, and a maximum instantaneous peak flow rate of approximately 20 gallons per minute.

5. Attach a process flow diagram for each existing treatment system. Include process equipment, by-products, by-product disposal method, waste and by-product volumes, and design and operating conditions.

A process flow diagram is provided as Figure 3 of Attachment 3 of the Permit Application Package.

6. Describe any changes in treatment or disposal methods planned or under construction for the wastewater discharge to the sanitary sewer. Please include estimated completion dates.

No changes planned

7. Do you have a treatment plant operator? [X ] No [ ] Yes .
(if Yes):

| | |
|---|---|
| Name: | An Industrial Wastewater Operator licensed by the State of Georgia will be contracted by Avery Dennison to operate the System. This contract will be established following receipt of a pretreatment permit from Georgia EPD. Avery Dennison has identified Complete Water Services LLC as a potential Operator for the proposed water treatment system. A statement of qualifications and proposal from Complete Water Services LLC is provided as Attachment 5 to this permit application. |
| Title: | |
| Phone: | |
| Full Time: (specify hrs) | |
| Part Time: (specify hrs) | |

8. Is the treatment plant operator certified? [ ] No [X] Yes (if Yes):

Certification type: The Operator will be licensed, as required by the Pretreatment Permit issued for the System

Certification date & number To be provided

**SECTION H - FACILITY OPERATIONAL CHARACTERISTICS**

1. Indicate whether the facility discharge is:

[X] Continuous through the year, or
[ ] Seasonal – Circle or check the months of the year during which the business activity occurs:

J F M A M J J A S O N D

COMMENTS:

2. Does operation shut down for vacation, maintenance, or other reasons?

[ ] No
[X] Yes, indicate reasons and period when shutdown occurs:

The System will be shut down for periodic maintenance, as needed. Annual preventative maintenance will be performed in accordance with equipment manufacturer's recommendations, which may require the System to shut down.

3. List types and quantity of raw materials, catalysts, intermediates and other chemicals used or planned for use (attach list if needed).

| Chemical | Quantity |
|---|---|
| 3% (by weight ) Hydrogen Peroxide Solution | ~ 100 gallons per year |
| Liquid Oxygen for on-site ozone generation | ~ 78,300 standard cubic feet per year |

4. Building Layout - Draw to scale the location of each building on the premises. Show map orientation and location of all water meters, storm drains, numbered unit processes (from schematic flow diagram in Section E-3), public sewers, and each facility sewer line connected to the public sewers. Number each sewer.

   A blueprint or drawing of the facilities showing the above items may be attached in lieu of submitting a drawing.

   A proposed System Layout is provided as Figure 2 of Attachment 2.

**SECTION I - SPILL PREVENTION**

1. Do you have chemical storage containers, bins, or ponds at your facility? [ ] No [X] Yes

   If Yes, please give a description of their location, contents, size, type, and frequency and method of cleaning. Also indicate in a diagram or comment on the proximity of these containers to a sewer or storm drain. Indicate if buried metal containers have cathodic protection.

   Liquid oxygen and hydrogen peroxide solution (3% by weight) will be stored at and consumed by the water treatment system. Liquid oxygen will be stored in dewars provided by the chemical supplier. These containers will be returned to the chemical supplier once they are emptied; they will not be cleaned or serviced at the Site. A 100- gallon, double walled hydrogen peroxide storage tank will be located in the advanced oxidation treatment enclosure. This tank will not be cleaned or serviced during the 2-year design life of the treatment system. The storage containers described above will be located above grade. A storm drain is located approximately 110 feet to the west of the proposed hydrogen peroxide solution storage area, as shown on the proposed System Layout (Figure 2 of Attachment 3).

2. Do you have floor drains in your manufacturing or chemical storage area(s)? [X] No [ ] Yes
   if Yes, where do they discharge to?

3. If you have chemical storage containers, bins, or ponds in manufacturing area, could an accidental spill lead to a discharge to: (check all that apply).

   [ ] an on-site disposal system
   [ ] public sanitary sewer system (e.g. through a floor drain)
   [X] storm drain
   [X] to ground
   [ ] other, specify:

   [ ] not applicable, no possible discharge to any of the above routes

4. Do you have an accidental spill prevention plan (ASPP) to prevent spills of chemicals or slug discharges from entering the City's collection system?

[] No
[X] Yes (Please enclose a copy with the application)
[] N/A, not applicable since there are no floor drains and/or the facility discharges only domestic wastes.

Spill prevention is addressed in the Best Management Practices Plan (BMP Plan) for the System, which is provided as Attachment 6 of the permit application package.

## SECTION J - NON-DISCHARGED WASTES

1. Are any waste liquids or sludges generated and not disposed of in the sanitary sewer system?

[ ] No, skip the remainder of Section J.
[X] Yes, please describe below (attach additional sheets if necessary)

| Waste Generated | Quantity (per year) | Disposal Method | Treatment Facility On-site/Off-site |
|---|---|---|---|
| Scale removed from the air stripper | Est. < 50 lbs/year | Landfill | Off-site |
| Waste Sealant Oil | Est. 20 gallons/year | | Off-Site |
| | | | |
| | | | |

Scale-forming precipitates may accumulate on the trays of the air stripper due to concentrations of inorganic compounds present in the groundwater such as iron, calcium, and magnesium. Accumulation of these precipitates may, over time, interfere with operation of the Air Stripper. In this event, the System would be shut down, and the air stripper trays would be manually cleaned to remove the accumulated scale. The wash water and scale will be collected, containerized, characterized, and transported to an appropriately licensed off-site disposal facility.

Based on available groundwater quality data, and the results of treatability tests, scale forming precipitates will accumulate slowly, requiring infrequent (a few times a year) scale removal events to be performed.

Sealant oil will be utilized by the liquid ring vacuum pump in a closed-loop system included with the liquid ring pump assembly. The sealant oil will be replaced as recommended by the pump manufacturer, likely on an annual schedule. The waste sealant oil collected from the liquid ring pump will be managed by Evergreen Waste, LLC.

2. If any of your wastes identified in No. 1 are sent to an off-site centralized waste treatment facility, identify the facility's name and location?

Sumpter County Landfill, Americus, GA

3. If an outside firm removes any of the waste, described in No. 1 above, state the name(s) and addresses) of all waste haulers:

a. Evergreen Waste, LLC

Permit No. (if applicable): GAR 000 034 710

b.

Permit No. (if applicable):

4. If any wastes are stored on site for greater than 90 days provide the following:

Method: [X ] drum, [ ] roll-off container, [ ] tank, [ ] lagoon,

[ ] other (specify)

Typical length of time waste stored: [ ] days [ ] weeks [6 ] months

Typical volume of waste stored: [ ] tons [55 ] gallons

Is storage site diked? [ ] Yes [X] No

Surface drainage collection: [ ] Yes [X] No

5. Have you been issued any Federal, State, or local environmental permits?

[X] No
[ ] Yes

If Yes, please list the permit(s):

6. In the event of discharge to storm sewer or surface water, has an NPDES Permit been applied for? ***NOT APPLICABLE***
[ ] No
[ ] Yes

If Yes, please indicate the permit number or application date:

**SECTION K - AUTHORIZED SIGNATURES**

Compliance Certification:

1. Are all applicable Federal, State, or local pretreatment standards and requirements being met on a consistent basis?

[ ] No
[ ] Yes
[X] Not yet discharging

2. If No:

a. What additional operations and maintenance procedures are being considered to bring the facility into compliance? Also, list additional treatment technology or practice being considered in order to bring the facility into compliance.

b. Provide a schedule for bringing the facility into compliance. Specify major events planned along with reasonable completion dates. Note that if the Georgia Environmental Protection-Division issues a permit to the applicant, it may establish a schedule for compliance different from the one submitted by the facility.

| Milestone Activity | Completion Date |
|---|---|
| | |
| | |
| | |
| | |
| | |
| | |
| | |

Authorized Representative Statement

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

# 1.0 INTRODUCTION

This document describes the proposed multiphase extraction (MPE) and groundwater treatment system (the System) that will be installed at the Avery Dennison Facility located at 4350 Avery Drive Flowery Branch, Georgia (the Site) as part of Avery Dennison's voluntary response per the Voluntary Remediation Program Act. The project background, System components, proposed operations and monitoring schedule, and Best Management Practices are described herein.

## 1.1 BACKGROUND

Several years ago, an accidental release of solvent containing primarily 1,1,1-trichloroethane (1,1,1-TCA) occurred from an above ground storage tank onto the ground surface adjacent to the southern wall of the Avery Dennison Facility. A limited excavation was promptly performed to remove affected soil. As part of a subsequent comprehensive assessment of soil and groundwater performed by Avery Dennison to meet its requirements under the Hazardous Substances Response Act (HSRA), and under the oversight of the Georgia Environmental Protection Division (EPD), a source area of volatile organic compounds (VOC) was delineated near the southern corner of the Avery Dennison Facility (hereinafter referred to as the Southern Source Area (SSA)). The primary constituents of the SSA were determined to be 1,1,1-TCA, 1,1-dichloroethene (1,1-DCE) and 1,4-dioxane (a common stabilizer in 1,1,1-TCA solvent).

Avery Dennison is voluntarily and proactively proceeding with remediation of the soil and groundwater of the SSA. In November 2010, a multiphase extraction (MPE) Pilot test was conducted, and results indicate that MPE is an effective remediation technology for the Site (see the MPE Pilot Test Report in Appendix A). In addition, a treatability study of groundwater from the SSA identified air stripping and advanced oxidation as effective treatment technologies for reducing the VOC and 1,4-dioxane concentrations present in the groundwater. A report describing the treatability study results is provided in Appendix B.

Based on the results of the MPE pilot test and advanced oxidation treatability study, a full-scale MPE and groundwater treatment System (the System) has been designed for implementation in the SSA. The System is described in the following sections.

## 2.0 REMEDIATION SYSTEM DESCRIPTION

The proposed System will simultaneously extract soil vapor and groundwater from the subsurface using a liquid ring vacuum pump attached to approximately ten extraction wells. Figures showing the preliminary proposed system layout and the process flow diagram are provided in Attachment 3 of the Permit Application Package to which this document is attached. The extracted soil vapor and groundwater will flow through 2-inch diameter schedule 40 polyvinyl chloride (PVC) pipes to a manifold located near the proposed treatment system. From the pipe manifold, the extracted groundwater and soil vapor will flow through a single 4-inch diameter PVC header pipe to a liquid/soil vapor separation (knockout) tank. In the knockout tank, groundwater will be separated from the soil vapor. From the knockout tank, soil vapor will pass through the liquid ring pump and flow to a vapor exhaust point located above the roofline of the existing facility. Extracted groundwater will be pumped from the knockout tank to an influent storage tank, an air stripper, and an advanced oxidation treatment system prior to being discharged to an existing on-site sanitary sewer service that flows by gravity to a pump station before entering the Flowery Branch Sewer Collection System.

### 2.1 DESIGN FLOW RATES

Based on the MPE pilot test results (Appendix A), it is anticipated each extraction well will yield approximately 1 gallon per minute (gpm) of groundwater and approximately 30 standard cubic feet per minute (scfm) of soil vapor, resulting in a combined groundwater flow rate of approximately 10 gpm and a combined soil vapor flow rate of 300 scfm through the System. The location of the extraction wells may be modified during the implementation of the remediation effort; however, no more than approximately 10 wells will be in operation at any one time. The discharge agreement in place between the City of Flowery Branch and Avery Dennison (included as Attachment 4 of the Permit Application Package) allows for groundwater

flows of up to 15,000 gallons per day (gpd) (10.4 gpm) to be discharged from the System to the Flowery Branch POTW. The System effluent flow rate will be monitored by the Operator to prevent effluent flows from exceeding the design flow rate. System instrumentation and controls are described in Section 3.

## 2.2 SOIL VAPOR MANAGEMENT

Soil vapor extracted by the MPE System will be separated from extracted groundwater in the knockout tank. From the knockout tank, soil vapor will flow through the liquid ring pump to a vapor exhaust point located above the roofline of the existing building at the Site. A sample port will be installed in the soil vapor exhaust duct to facilitate sample collection and monitoring. Extracted soil vapors will be managed in accordance with Georgia Air Quality Control Rules Chapter 391-3-1.

## 2.3 GROUNDWATER TREATMENT COMPONENTS

The System will include three components to manage extracted groundwater: an influent storage tank to provide hydraulic equalization of influent flows; an air stripper treatment unit to reduce VOC concentrations; and an advanced oxidation treatment unit to reduce 1,4-dioxane concentrations. The influent storage tank will be an above-ground fully enclosed tank designed for holding water. This storage tank will provide hydraulic equalization of the groundwater flow from the knockout tank, allowing water to be withdrawn from the tank at a consistent flow rate. This will improve the operating characteristics of the air stripper and advanced oxidation treatment units.

### *2.3.1 Air Stripper*

Groundwater will be pumped from the influent storage tank to the top of a shallow tray air stripper. The groundwater will flow downward through the air stripper via gravity, passing over a series of shallow perforated trays. Fresh air will flow vertically upwards through perforations the air stripper trays, in the opposite direction of the groundwater. This countercurrent air flow will facilitate mass transfer of VOC from the groundwater to the air

flowing through the stripper. Treated groundwater will collect in the air stripper sump before being pumped to the advanced oxidation transfer tank. The air will exit the top of the air stripper, and flow through an exhaust duct to an air stripper exhaust point located above the building's roofline, near the vapor exhaust point. Air exhausted from the air stripper will be managed in accordance with Georgia Air Quality Control Rules Chapter 391-3-1.

Air stripping is a proven treatment technology for reducing VOC concentrations in groundwater. Air stripper treatment was simulated during the advanced oxidation treatability study performed in 2011. The advanced oxidation treatability study report (Appendix B) indicated bench-scale air stripping was effective at reducing VOC concentrations present in the groundwater. A vendor supplied software model was utilized to evaluate treatment efficiency and predict effluent VOC concentrations from a shallow tray air stripper, based on VOC concentrations reported for samples collected from the Site (JCO, 2010). Results are provided in Appendix C, and indicate air stripping will reduce VOC concentrations to less than 1 microgram per liter (ug/L) in the discharge effluent.

### *2.3.2 Advanced Oxidation*

Liquid effluent in the air stripper will collect in a sump at the bottom of the stripper. From this sump, the effluent will be pumped to the advanced oxidation treatment unit's recirculation tank. The advanced oxidation treatment unit will reduce 1,4-dioxane concentrations using hydroxyl radicals to oxidize 1,4-dioxane to water and carbon dioxide (EPA, 2006). This advanced oxidation process (AOP) is a proven technology for destruction of 1,4-dioxane (and other VOC) in water (EPA, 2006), and does not generate any treatment residuals or waste by-products. An AOP bench scale test was conducted in April 2011 using groundwater collected from the Site. The results of the bench test (Appendix B) indicate that the AOP process can reduce 1,4-dioxane concentrations (maximum anticipated concentration of 500 µg/L) to less than 3 µg/L.

The treated water will then be discharged into the City of Flowery Branch sanitary sewer system. The MPE system is expected operate continuously and discharge up to 15,000 gallons of treated water per day for approximately two to three years.

## 2.4 EFFLUENT CONVEYANCE

The Site is currently connected to the Flowery Branch sewer collection system via an on-site pump station (owned by Avery Dennison) that conveys sewage from the Site. The proposed system will discharge treated groundwater to the existing building sewer pipe that connects to the existing pump station at the Site (see Figure 2 in Attachment 3 to the Pretreatment Permit Application Package). The pump station discharges sewage via a 4-inch diameter force main that terminates at a Flowery Branch sanitary manhole along Avery Drive, approximately 1,000 feet north of the pump station.

The existing pump station is equipped with dual alternating pumps, each capable of pumping approximately 115 gpm. These pumps were designed to operate approximately 54 minutes per day, based on a design flow of 6,540 gallon per day (GPD) (for a fully-occupied building). Available information about the pump station design is included in Appendix D. Currently, the building is substantially vacant. Recent water meter readings indicate the current water use at the Site is 500 gpd, based on the November 2011 water use bill from the City of Gainesville. This flow rate is approximately three percent of the design capacity of the pump station.

The proposed treatment system has a design flow rate of 10 gpm, with a maximum daily flow of 15,000 gpd (10.4 gpm). During peak flows, the proposed discharge from the treatment system will increase the total flow to the pump station by 15,000 GPD. If the pump station were receiving the design flow rate of sewage based on a fully-occupied building (6,540 gpd), the combined flow rate entering the pump station would be 21,540 GPD. For this combined flow, the pumps would operate approximately 169 minutes in a 24 hour period (12 percent of the day).

This evaluation indicates the pump station's capacity is adequate to receive treated groundwater flows from the proposed system in addition to the sewage flows from the building.

The pump station is equipped with a high water level alarm that will activate in the event of a pump failure. The System will include process controls connected to this high level alarm that will prevent System operations when the pump station high level alarm is activated. These controls are described in Section 3.

## 3.0 INSTRUMENTATION AND CONTROLS

The System will be operated by a programmable logic controller (PLC) designed to continuously monitor operating conditions. The PLC will be programmed to automatically shut down the System (stopping discharge of water to the sanitary sewer) if it is not operating properly. The PLC will also allow remote monitoring of key system parameters using a web interface. In addition to the continuous monitoring by the PLC, a trained system operator will conduct routine site visits to inspect and optimize the MPE system. The routine site visits will be conducted in accordance with a system-specific Pretreatment Permit from the State of Georgia Department of Natural Resources Environmental Protection Division (GA EPD), and in accordance with the requirements of the Flowery Branch publicly owned treatment works (POTW). The POTW requirements are described in Attachment 4 of the Permit Application Package, and include collecting grab samples from the System effluent on a 14-day schedule for the first three months of operation.

The pump station is equipped with a high water level alarm that will activate in the event of a pump failure. The proposed groundwater treatment system will include a programmable logic controller (PLC) that will monitor operating parameters and control the operation of treatment system equipment. This PLC will be connected to the high water level alarm associated with the pump station. If the pump station high level alarm becomes activated, the PLC will shut down the system, and prevent the system from operating until the high water level alarm is deactivated.

## EXECUTIVE SUMMARY

A pilot test of multi-phase extraction (MPE) was performed in November 2010 to assess MPE as a potential remediation technology for volatile organic compounds (VOC) present in the unsaturated soil and shallow groundwater portion of the southern source area (SSA) of the Avery Dennison Site in Flowery Branch, Georgia. Specifically, the pilot test provides Site-specific experience and design parameters for application to a full-scale MPE system.

Two separate MPE wells were installed in the SSA for the purposes of the pilot test. Initially, a 'step test' was performed at each MPE well to select an applied vacuum for use in the subsequent 55-hour 'constant rate' portion of the test – the selected vacuum is that which was expected to produce the most efficient capture of water and vapor from the desired target treatment zone. The MPE pilot test results indicate that VOC in unsaturated and shallow saturated soils of the SSA are amenable to treatment using a full-scale MPE system. More specifically, the results from the MPE pilot tests performed at the Site indicate the following:

- A full-scale MPE system is likely to:
  - require a vacuum of up to 270 inches of water be applied at each MPE well;
  - produce an average vacuum radius of influence (ROI) of 30 to 40 feet and an extracted air flow rate of 15 to 40 scfm at each MPE well;
  - produce an extracted groundwater flow rate of 1 to 2 gpm at each MPE well;
  - have an average initial VOC concentration in the air stream of approximately 600 ppmv that decreases to approximately 200 ppmv a few days after startup; and
  - have an average initial VOC concentration in the groundwater stream of approximately 1 ppm that decreases to approximately 0.5 ppm a few days after startup.
- The design spacing of an MPE well field must account for: subsurface vacuum ROI and air extraction flow rates observed in the MPE pilot test; overlapping drawdown of the water table associated with multiple extraction points; and selecting groundwater extraction rates that ensure groundwater drawdown adequately dewaters the portion of shallow groundwater containing elevated VOC mass, exposing it to applied vacuum and air flow.
- The measured VOC concentrations in the air stream and the anticipated air flow rates appear to be amenable to treatment using GAC, thermal oxidation, or catalytic oxidation.
- The measured VOC concentrations in groundwater (excluding 1,4-dioxane) and the anticipated groundwater extraction rates appear to be amenable to treatment using GAC, an air stripper, or advanced oxidation processes.
- The presence of 1,4-dioxane in extracted groundwater will likely require treatment of groundwater using advanced oxidation processes.

## 1.0 INTRODUCTION

This report describes pilot tests of multi-phase extraction (MPE) performed in November 2010 as a potential remediation technology for volatile organic compounds (VOC) present in the unsaturated soil and shallow groundwater portion of the southern source area (SSA)[1] of the Avery Dennison Site in Flowery Branch, Georgia. Procedures, results, and conclusions are summarized herein.

The pilot tests were performed with the following objectives:

- evaluate the effectiveness of MPE as a remedial technology for VOC in the unsaturated soil and shallow groundwater associated with the SSA;
- determine Site-specific MPE system design parameters necessary to design a full-scale MPE system;
- measure concentrations of VOC in extracted groundwater and soil vapor to estimate potential VOC mass removal rates; and
- evaluate the effect of applied MPE vacuum on the elevation of the groundwater table within the MPE treatment zone.

Two separate MPE extraction wells were installed in the SSA for the purposes of the tests. Initially, a 'step test' was performed at each MPE extraction well for which the applied vacuum was sequentially increased in a step-wise fashion over time. For each applied vacuum step, water and vapor flow rates were measured, and the resultant water-table drawdown and distribution of subsurface vacuum were also measured. The purpose of the 'step test' was to determine the apparent optimum applied vacuum to be used for the subsequent 'constant rate' test that would most efficiently result in capture of water and vapor from the desired target treatment zone. The purpose of the constant rate test is to provide Site-specific experience and design parameters for application to a full-scale MPE system.

[1] The Southern Source Area is defined and described in the March 2010 Compliance Status Report prepared for the Site and submitted by Avery to the Georgia Environmental Protection Division.

## 2.0 INSTALLATION OF MULTI-PHASE EXTRACTION WELLS AND PRESSURE TRANSDUCERS

### 2.1 MPE EXTRACTION WELL INSTALLATION

Prior to performing the MPE pilot tests, and in order to provide test wells for the application of vacuum and the withdrawal of vapor and water, two MPE wells were installed within the footprint of the SSA. Figure 1 shows the location of the two extraction wells: MP-1, and MP-2. MP-1 is located within the building footprint, and MP-2 is located outside of the building footprint.

At each installation location, 10.5-inch diameter (approximate) borings were established using hollow stem augers to a refusal depth of approximately 47.2 feet below the floor surface at location MP-1 and 37.5 feet below ground surface at location MP-2. According to past geologic profiles at the Site, these refusal depths are within the weathered bedrock unit that underlies the saprolite residuum soils. The static groundwater table at the time of testing was approximately 15 to 16 feet below surface (ft bs); therefore, the borings extend approximately 31 to 32 feet and 21 to 22 feet into the saturated zone (before application of vacuum), respectively.

Within each boring, a MPE well constructed of 4-inch diameter, schedule 40 polyvinyl chloride (PVC) with #10 (0.010-inch) slot screens was installed with the top of the screen at 6 ft bs and the bottom of the screen located approximately one foot above the terminal depth of the boring. For each MPE well, a 1-inch diameter PVC piezometer was also installed in the boring at a location slightly offset from the MPE well casing in order to receive transducers for groundwater level measurement (see below). Each boring was then completed by surrounding the well and piezometer with #1 silica filter sand from the bottom of the boring up to a depth of 4 ft bs. Above the sand pack, field-hydrated bentonite was installed to within 1.5 ft bs. Each MPE well was then completed with a flush-mount protective cover secured in concrete from the surface to 1.5 ft bs. Following construction, each MPE well was hydraulically developed by bailing, surging, and pumping with a submersible pump until the extracted groundwater was of visibly low turbidity.

## 2.2 PRESSURE TRANSDUCER INSTALLATION

In order to provide groundwater elevation data at points within the target testing zone prior to, during, and after the MPE step tests and constant rate test, a pressure transducer capable of recording data at pre-programmed intervals was installed in a piezometer collocated with each of the MPE wells (MP-1 and MP-2), and in each of eight surrounding groundwater monitoring wells (MW-2, MW-3, MW-4, MW-5, MW-63, MW-64, MW-65S, and MW-65D). The resultant data, which is described in Section 4.0, allows for consideration of the extent and magnitude of water-table drawdown at different applied vacuum rates and measured effluent (water and air) flow rates.

## 3.0 MPE TEST PROCEDURES

### 3.1 STEP TEST

The MPE step tests were conducted using a self-contained, trailer-mounted MPE system provided by Enviro-Equipment, Inc. of Charlotte, North Carolina. Appendix A provides photographs of the MPE system setup. The specifications for the mobile MPE system are summarized below:

- 20-horsepower liquid ring vacuum pump with a nominal air flow capacity of 300 cubic feet per minute and a maximum vacuum of 394 inches of water;
- high vacuum air/water separator (knockout tank);
- 85-gallon vapor phase carbon vessel with 300 pounds (lbs) of granular activated carbon (GAC) for treating VOC in the extracted air;
- transfer pump with in-line flow meter (volume totalizer) for tracking the volume of groundwater extracted and transferred to the on-site "frac" tanks for storage and eventual approved disposal; and

  integrated gauges and/or ports for measuring system vacuum, velocity, temperature, and collecting samples of air and water for VOC concentration (photoionization detector or laboratory sample).

Figure 2 shows a schematic diagram of the wellhead configuration, which consists of a 1-inch diameter 'stinger' (a.k.a. 'slurp') tube that extends through an air-tight insertion port and into the groundwater within the well casing. Step tests were conducted on November 19, 2010 using both MPE wells (MP-1 and MP-2) at the same time. Prior to the start of the MPE step tests, the mobile MPE system was connected to the slurp tube at the applicable MPE well using an instrumented wellhead adaptor and flexible hose. Once the step test began, the vacuum applied to the MPE wells was sequentially increased in three individual steps, and the slurp tubes were periodically lowered into the MPE wells to produce and/or accommodate drawdown of the groundwater table. Table 1 presents a summary of the specific applied vacuums and operation times for each of the step tests.

During each stage of the step test, the vacuum applied to the slurp tube; the vacuum, temperature, and velocity of the air stream; the cumulative volume of groundwater extracted from the MPE wells; and the vacuum present in the MPE wells (MP-1 and MP-2) and 16 surrounding monitoring points were also measured.

### 3.2 CONSTANT RATE TEST

Following the step tests, a MPE constant rate test was conducted using both MPE wells (MP-1 and MP-2) at the same time, and using the same mobile MPE system and wellhead connections that were used for the MPE step tests. Table 2 provides a summary of the applied vacuum and operation times for the MPE constant rate test. The vacuum was applied for approximately 55 hours, beginning at 14:12 on November 19, 2010 and ending at 21:15 on November 21, 2010.

During the constant rate test, measurements of vacuum, velocity, and temperature were recorded at several locations within the MPE system. This included the vacuum applied to the slurp tube at each MPE well; the vacuum, temperature, and velocity of the combined air stream from the two MPE wells; the combined cumulative volume of groundwater extracted from the two MPE wells; and the temperature and velocity of the dilution air stream. The vacuum was also measured in the extraction wells (MP-1 and MP-2) and 28 surrounding monitoring points (see Figure 1). Adjustments to the applied vacuum and slurp tube depths were applied to maintain a relatively constant groundwater extraction rate throughout the test.

In addition, air samples were collected from the effluent air stream prior to treatment in the vapor phase carbon vessel and monitored for VOC, either by using a properly calibrated handheld photoionization detector (PID) or by submission of samples to Lancaster Laboratories, Inc. (Lancaster) for analysis of VOC by EPA Method TO-15. The three vapor samples sent to Lancaster were collected in 6 liter stainless steel Summa canisters at approximately 3, 27, and 54 hours after the start of the constant rate test. The resultant data is important for design of a vapor treatment system for a full-scale MPE application, if necessary.

Similarly, to provide data necessary for design of a water effluent treatment system for a full scale MPE application (if necessary), groundwater samples were collected from the MPE wells before the start of the MPE step test and after the end of the MPE constant rate test. These groundwater samples were submitted to Lancaster for analysis of VOC by EPA Method 8260B. Additional water samples (combined groundwater extracted by the MPE system) were collected from the MPE system discharge line at approximately 3, 27, and 54 hours after the start of the

MPE constant rate test. All three of these samples were analyzed by Lancaster for VOC by EPA Method 8260B, and the third sample was analyzed by Lancaster for select metals (calcium, iron and manganese; by Method 6010B), chloride (by Method 300.0); alkalinity to pH 4.5 and alkalinity to pH 8.3 (by Method 2320B); total hardness (by Method 2340C); and total dissolved solids (by Method 2540C).

# 4.0 MPE TEST RESULTS

## 4.1 STEP TEST

As described in Section 3, step tests were conducted in the MPE wells using average applied slurp tube vacuum steps of approximately 81.6, 180.8, and 263.7 inches of water. Table 3 presents a summary of the resultant average groundwater extraction rates for the individual steps, which were 1.2, 6.4, and 10.1 gallons per minute (gpm), respectively. The resultant average extracted air flow rates were 21.1, 25.9, and 15.7 standard cubic feet per minute (scfm), respectively. The variability in the average extracted air flow rates is the result of adjustments of the applied vacuum and the slurp tube depth during each step. Advancing the slurp tube further below the water level decreases the amount of vacuum transferred to the air phase.

Table 4 provides a summary of the vacuum response patterns measured in the 16 monitoring points used during the MPE step tests. Significant vacuum responses were noted in monitoring points up to approximately 65 feet from the extraction wells. (Note: a significant response is defined as an observed change in measured vacuum of 0.5 inches of water, or greater.) As expected, greater response is typically observed at monitoring points closer to the extraction wells. Inherent heterogeneity and preferential pathways in the subsurface cause some monitoring points closer to the extraction wells to not show a response, or a reduced magnitude of response in comparison to what is observed at more distal monitoring points.

Figures 3 and 4 present the groundwater drawdown data observed in the two MPE wells and eight nearby monitoring wells during the MPE step tests, respectively. The effect of groundwater extraction on the lowering of the water-table elevation is clearly evident, confirming the creation of an expanded vadose zone for the application of vapor recovery. These data will be useful for design of a full-scale MPE system.

Based on the observed response of the subsurface (water table drawdown, groundwater extraction rates, vacuum propagation, and air extraction rates) for each vacuum rate applied during the step tests, the applied vacuum and flow rates from the second of the three steps were selected as reasonable operational targets for the subsequent constant rate test. Available storage for liquid investigation-derived waste was also a consideration.

## 4.2 CONSTANT RATE TEST

As presented in Section 3, a constant rate MPE test was performed over a period of 55 hours using an applied vacuum determined from the outcome of the MPE step tests. After the first hour (the vacuum was gradually increased during start-up), the average vacuums applied to the MPE well slurp tubes by the manifolded system were 232.5 inches of water at MP-1 and 210.7 inches of water at MP-2. Also after the first hour, the average well casing vacuums were 75.9 inches of water in MP-1 and 57.6 inches of water in MP-2, and the average combined air and groundwater extraction rates were 28.9 scfm and 7.2 gpm, respectively. Figure 5 shows the data for these parameters over the 55-hour duration of the test. Some variability was observed in the rate of air flow extracted from the MPE wells during the test; however, this is due to slight adjustments to the applied vacuum and slurp tube depths that were performed in order to keep the groundwater extraction rate relatively constant as planned. The water-table drawdown, vacuum propagation, and water and air effluent quality are discussed below in the following subsections.

### *4.2.1 Water Table Drawdown*

Figures 6 and 7 present the water-table drawdown during the constant rate test, as measured in the MPE wells and monitoring wells, respectively. The maximum drawdown occurred near the end of the test and exceeded 16 feet in MP-1, 11 feet in MP-2, and 1 to 5 feet in the nearby monitoring wells. These data indicate sufficient water table drawdown can be achieved at flow rates that are feasible for full-scale application of MPE.

Figure 8 presents the estimated distribution of the drawdown at the conclusion of the constant rate test, and Table 8 presents a summary of the data. These data show the slight anisotropy present in the subsurface, which, along with the spatial extent of drawdown observed per extraction well, will contribute to the design of the well field orientation and density for a full-scale MPE system, if necessary.

### *4.2.2 Subsurface Vacuum Distribution*

Figure 9 shows the vacuum distribution present in the subsurface at the conclusion of the MPE constant rate test, and Table 8 presents a summary of the data. As illustrated in Figure 9, the propagation of the vacuum response was asymmetrical away from MP-1 and MP-2, with greater vacuum responses noted at monitoring points located under the building slab (near MP-1) compared to those located outside of the building footprint (near MP-2). Based on a desired minimum vacuum of 0.5 inches of water, the radius of influence (ROI) during the constant rate test is estimated at approximately 37 to 44 feet for an applied vacuum of approximately 60 to 80 inches of water.[2] Copies of the ROI analysis and calculations are presented in Appendix B. The data support that sufficient distribution of vacuum can be achieved within the target treatment zone using applied vacuums and flow rates that are feasible for a full-scale application of MPE.

### *4.2.3 Saturated Zone Transmissivity*

Table 9 provides estimates of transmissivity and hydraulic conductivity based on a Theis analysis of the water table drawdown observed in monitoring wells MW-2, MW-4, MW-5 and MW-63 over time during the MPE constant rate test. Estimated hydraulic conductivities from 2005 slug test analysis are also included in Table 9 for comparison. Based on the geometric mean of the hydraulic conductivities from the constant rate test in Table 9, the hydraulic conductivity of the unconsolidated deposits in the SSA is estimated as $1x10^{-3}$ cm/s. Inclusion of the 2005 slug test results gives a similar collective estimated geometric mean hydraulic conductivity of $6x10^{-4}$ cm/s. Copies of the Theis analysis curve matching and calculations are included in Appendix B. Hydraulic conductivity estimates are necessary for the design of the full-scale MPE system and allow for the prediction of the effectiveness of extraction well configuration options, including the number and spatial distribution of extraction wells in the treatment area, the ROI of the pumping wells, and the groundwater extraction rate required to achieve the target drawdown of the water table.

[2] Vacuum measurements from the shallow soil vapor probes (i.e., SV-01S, SV-03S, etc.) were not used for the contours in Figure 7, because the deeper, collocated soil vapor probes are more representative of the anticipated target treatment zone. The shallow soil vapor probes showed a smaller response to the applied vacuum then the deeper soil vapor probes. During a full-scale application, installation of fresh-air supply vents will improve air circulation in the shallow soils beneath the slab.

### *4.2.4 Air Effluent from the MPE System*

As described in Section 3.0, the VOC concentrations in the system's air effluent prior to treatment were determined using two methods: measurement by PID, and measurement by laboratory analyses of Summa canister samples.

Table 5 presents the results of PID measurements performed during the test. The equivalent PID response for an undiluted air stream from the MPE wells was calculated by multiplying the PID concentration measured in the diluted air stream by the ratio of the diluted air flow rate (fresh air at 0 ppmv) to undiluted air flow rate from the MPE wells. These estimates yielded undiluted air stream PID concentrations that decreased from the high of 109.1 ppmv (near the beginning of the test) to the low of 19.3 ppmv (near the end of the 55-hour test).

Table 10 presents a summary of the laboratory measurements of undiluted air effluent samples prior to treatment, and laboratory reports are presented in Appendix C. The total VOC concentration measured in the air samples (pre-treatment) decreased from the high of 595 ppmv (near the beginning of the test) to the low of 161 ppmv (near the end of the 55-hour long test).

Collectively, these results support that a full-scale application of MPE is capable of removing significant VOC mass from the target treatment zone. Of the total measured VOC in air effluent during the MPE pilot test, the composition is primarily 1,1,1-trichloroethene (1,1,1-TCA) and its daughter product (1,1-DCE). Several other VOC are present, but at substantially lower concentrations (see Appendix C). In general, the composition of the air effluent stream measured during the pilot test is considered to be amenable to treatment by GAC, thermal oxidation, or catalytic oxidation at the flow rates that could be generated during a full-scale MPE application.

### *4.2.5 Water Effluent from the MPE System*

Table 11 presents a summary of VOC concentrations measured in water samples collected from the MPE system at three separate times (early, middle, late) during the MPE constant rate test and groundwater samples collected each from extraction wells MP-1 and MP-2 before the start of the step tests, and after it. The total VOC concentrations measured in the

water samples collected during the constant rate test decreased from the high of 1,330 micrograms per liter (µg/L) (near the beginning of the test) to a low of 550 µg/L (near the end of the test). The total VOC concentrations measured in groundwater samples collected from extraction well MP-1 decreased from 4,760 µg/L prior to the step tests to 3,100 µg/L following the constant rate test. Total VOC concentrations measured in groundwater samples collected from extraction well MP-2 remained relatively constant at 96 µg/L (before the step tests) and 110 µg/L (after the constant rate test).

Of the total VOC measured in the groundwater effluent during the MPE pilot test, the VOC mass was primarily 1,1,1-TCA and 1,1-DCE, and additional degradation products. At groundwater extraction rates that are anticipated for a full-scale application of MPE, these compounds are normally amenable to treatment using GAC, an air stripper, or advanced oxidation processes. However, 1,4-dioxane, a common stabilizer used in 1,1,1-TCA and an emerging contaminant of interest for regulators, was also present in the pilot test water effluent (see laboratory reports in Appendix C). The presence of 1,4-dioxane in the extracted groundwater will likely result in a requirement for advanced oxidation treatment of full-scale MPE effluent.

The inorganic analytical results for the last water sample collected from the MPE system were: 1.89, 0.367, and 1.17 milligrams per liter (mg/L) for calcium, iron, and manganese, respectively; 7 mg/L for chloride; 8.1 and less than 2.0 mg/L as $CaCO_3$ for alkalinity to pH 4.5 and pH 8.3, respectively; 13.6 mg/L as $CaCO_3$ for total hardness; and 33.5 mg/L for total dissolved solids. Copies of the analytical laboratory reports are included in Appendix C. These inorganic data will be considered when evaluating water effluent treatment system requirements for a full-scale MPE system.

## 5.0 SUMMARY OF CONCLUSIONS

The MPE pilot test results indicate that VOC in unsaturated and shallow saturated soils of the SSA are amenable to treatment using a full-scale MPE system. More specifically, the results from the MPE pilot tests performed at the Site indicate the following:

- A full-scale MPE system will likely:
  - require a vacuum of up to approximately 270 inches of water be applied to slurp tube at each MPE well;
  - produce an average vacuum ROI of 30 to 40 feet and an extracted air flow rate of 15 to 40 scfm at each MPE well;
  - produce an extracted groundwater flow rate of 1 to 2 gpm at each MPE well;
  - have an average initial VOC concentration in the air stream at approximately 600 ppmv that decreases to approximately 200 ppmv a few days after startup; and
  - have an average initial VOC concentration in the groundwater stream at approximately 1 ppm that decreases to approximately 0.5 ppm a few days after startup.
- The design spacing of an MPE well field must account for: subsurface vacuum ROI and air extraction flow rates observed in the MPE pilot test; overlapping drawdown of the water table associated with multiple extraction points; and selecting groundwater extraction rates that ensure groundwater drawdown adequately dewaters the portion of shallow groundwater containing elevated VOC mass, exposing it to applied vacuum and air flow.
- The measured VOC concentrations in the air stream and the anticipated air flow rates appear to be amenable to treatment using GAC, thermal oxidation, or catalytic oxidation.
- The measured VOC concentrations in groundwater (excluding 1,4-dioxane) and the anticipated groundwater extraction rates appear to be amenable to treatment using GAC, air stripper, or advanced oxidation processes.
- The presence of 1,4-dioxane in extracted groundwater will likely require treatment of groundwater using advanced oxidation processes.

| 11/21/2010 | 20:49 | 18.5 | 231 | 55.9 | 55.9 |

**Notes:**

1) depth relative to set measurement point, which was approximately 2.3 ft above the floor slab for MP-1 and 2.1 ft above ground for MP-2

2) vacuums fluctuated continuously due to multi-phase flow in piping; therefore, all recorded vacuums are approximate

ft = feet

in. water = inches of water

**Table 3: Average Air and Groundwater Extraction Rates**
**MPE Step Test**
Avery Dennison Site, Flowery Branch, GA

| Step | Average Water Flow Rate (gpm) | Average Air Flow Rate (scfm) |
|---|---|---|
| 1 | 1.2 | 21.1 |
| 2 | 6.4 | 25.9 |
| 3 | 10.1 | 15.7 |

**Notes:**
gpm = gallons per minute
scfm = standard cubic feet per minute

**Notes:**
1) PID Dilution Correction Factor = (Air Flow Rate from Well Field + Dilution Air Flow Rate) / Air Flow Rate from Well Field
in. water = inches of water
°F = degrees Farenheit
ft/min = feet per minute
scfm = standard cubic feet per minute
ppmv = parts per million by volume

**Notes:**
1) Totalizer flow meter reading at start of test
gal = gallon
min = minute
gpm = gallons per minute

| VW-4 | 15.8 | NA |
| VW-5 | 34.2 | NA |
| VW-6 | 7.2 | NA |

**Notes:**
1) corrected for subsurface-applied vacuum; drawdown is relative to the water level in the well prior to the start of the test
* vacuum measured in wellhead annulus piezometer where the pressure transducer is located
in. water = inches of water
ft = feet
-- = not measured
NA = not applicable, screen is above the water table

**Table 9: Estimated Hydraulic Conductivity**
**MPE Constant Rate Test**
Avery Dennison Site, Flowery Branch, GA

| | 2010 MPE Constant Rate Test[1] | | 2005 Slug Test |
|---|---|---|---|
| Monitoring Well | Transmissivity[2] ($ft^2/d$) | Estimated Hydraulic Conductivity[3] (cm/s) | Estimated Hydraulic Conductivity[4] (cm/s) |
| MW-2 | 268.1 | 2.4E-03 | 1.7E-03 |
| MW-4 | 107.2 | 9.6E-04 | 1.4E-04 |
| MW-5 | 80.4 | 7.2E-04 | 9.0E-05 |
| MW-63 | 107.2 | 9.6E-04 | -- |

**Notes:**
1) estimated using the Theis method
2) transmissivity = hydraulic conductivity x saturated thickness
3) assumes a saturated thickness of 40 feet
4) estimated using the Bouwer-Rice (1976) solution
$ft^2/d$ = square feet per day
cm/s = centimeters per second
-- = not measured

# APPENDIX A

PHOTOGRAPHS AND SCHEMATICS OF THE MPE SYSTEM SETUP

Portable multi-phase extraction system – side view. The air/water separator is the blue tank on the left. The liquid ring vacuum pump is the cream-colored device on the right. The diesel power generator is in the middle.

Portable multi-phase extraction system – front view. The air/water separator is the blue tank at the rear. The liquid ring vacuum pump is the cream-colored device in the foreground. The granular activated carbon (GAC) air treatment tank is the 85-gallon drum on the right.

Portable multi-phase extraction system setup at the Site.

Intake manifold with vacuum gauges mounted at the rear of the trailer.

An operator inserts the slurp tube through the top port of the MP-2 wellhead. The flexible hose runs back to the manifold at the MPE trailer.

Typical setup of the slurp tube inserted into the wellhead during operation (MP-2 shown). Various valves and gauges allow for the control and monitoring of the applied vacuum at the wellhead.

Typical setup of the slurp tube inserted into the wellhead during operation (MP-1 shown). Various valves and gauges allow for the control and monitoring of the applied vacuum at the wellhead. The collocated piezometer next to the larger extraction well is shown.

Typical indoor vapor well monitoring point instrumented with a vacuum gauge (sitting on top of the bucket).

Typical outdoor monitoring well instrumented with a vacuum gauge (sitting on top of the cooler). Extraction well MP-2 is in the background.

The portable MPE system (left) with the water untreated water discharge line running to the on-Site holding tanks (right).

## General Sample Comments

PA DEP Lab Certification ID 36-00037, Expiration Date: 1/31/11

All QC is compliant unless otherwise noted. Please refer to the Quality Control Summary for overall QC performance data and associated samples.

# Analysis Report

## Quality Control Summary

Client Name: The Johnson Company, Inc. Group Number: 1222532
Reported: 12/07/10 at 01:26 PM

Matrix QC may not be reported if site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD was performed, unless otherwise specified in the method.

## Surrogate Quality Control

Surrogate recoveries which are outside of the QC window are confirmed unless attributed to dilution or otherwise noted on the Analysis Report.

Analysis Name: VOCs TCL 3.2 + 1,4-Dioxane
Batch number: Y103342AA

| | Dibromofluoromethane | 1,2-Dichloroethane-d4 | Toluene-d8 | 4-Bromofluorobenzene |
|---|---|---|---|---|
| 6148580 | 109 | 98 | 104 | 98 |
| 6148582 | 100 | 98 | 104 | 99 |
| 6148583 | 99 | 99 | 104 | 100 |

*- Outside of specification
(1) The result for one or both determinations was less than five times the LOQ.
(2) The unspiked result was more than four times the spike added.

# Quality Control Summary

# Explanation of Symbols and Abbreviations

*The following defines common symbols and abbreviations used in reporting technical data:*

| | | | |
|---|---|---|---|
| **RL** | Reporting Limit | **BMQL** | Below Minimum Quantitation Level |
| **N.D.** | none detected | **MPN** | Most Probable Number |
| **TNTC** | Too Numerous To Count | **CP Units** | cobalt-chloroplatinate units |
| **IU** | International Units | **NTU** | nephelometric turbidity units |
| **umhos/cm** | micromhos/cm | **ng** | nanogram(s) |
| **C** | degrees Celsius | **F** | degrees Fahrenheit |
| **meq** | milliequivalents | **lb.** | pound(s) |
| **g** | gram(s) | **kg** | kilogram(s) |
| **ug** | microgram(s) | **mg** | milligram(s) |
| **ml** | milliliter(s) | **l** | liter(s) |
| **m3** | cubic meter(s) | **ul** | microliter(s) |

**<** less than - The number following the sign is the limit of quantitation, the smallest amount of analyte which can be reliably determined using this specific test.

**>** greater than

**J** estimated value – The result is ≥ the Method Detection Limit (MDL) and < the Limit of Quantitation (LOQ).

**ppm** parts per million - One ppm is equivalent to one milligram per kilogram (mg/kg), or one gram per million grams. For aqueous liquids, ppm is usually taken to be equivalent to milligrams per liter (mg/l), because one liter of water has a weight very close to a kilogram. For gases or vapors, one ppm is equivalent to one microliter of gas per liter of gas.

**ppb** parts per billion

**Dry weight basis** Results printed under this heading have been adjusted for moisture content. This increases the analyte weight concentration to approximate the value present in a similar sample without moisture. All other results are reported on an as-received basis.

*U.S. EPA CLP Data Qualifiers:*

**Organic Qualifiers**

| | |
|---|---|
| **A** | TIC is a possible aldol-condensation product |
| **B** | Analyte was also detected in the blank |
| **C** | Pesticide result confirmed by GC/MS |
| **D** | Compound quantitated on a diluted sample |
| **E** | Concentration exceeds the calibration range of the instrument |
| **N** | Presumptive evidence of a compound (TICs only) |
| **P** | Concentration difference between primary and confirmation columns >25% |
| **U** | Compound was not detected |
| **X,Y,Z** | Defined in case narrative |

**Inorganic Qualifiers**

| | |
|---|---|
| **B** | Value is <CRDL, but ≥IDL |
| **E** | Estimated due to interference |
| **M** | Duplicate injection precision not met |
| **N** | Spike sample not within control limits |
| **S** | Method of standard additions (MSA) used for calculation |
| **U** | Compound was not detected |
| **W** | Post digestion spike out of control limits |
| ***** | Duplicate analysis not within control limits |
| **+** | Correlation coefficient for MSA <0.995 |

Analytical test results meet all requirements of NELAC unless otherwise noted under the individual analysis.

Measurement uncertainty values, as applicable, are available upon request.

Tests results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff. This report shall not be reproduced except in full, without the written approval of the laboratory.

**WARRANTY AND LIMITS OF LIABILITY** - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. THE FOREGOING EXPRESS WARRANTY IS EXCLUSIVE AND IS GIVEN IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED. WE DISCLAIM ANY OTHER WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING A WARRANTY OF FITNESS FOR PARTICULAR PURPOSE AND WARRANTY OF MERCHANTABILITY. IN NO EVENT SHALL LANCASTER LABORATORIES BE LIABLE FOR INDIRECT, SPECIAL, CONSEQUENTIAL, OR INCIDENTAL DAMAGES INCLUDING, BUT NOT LIMITED TO, DAMAGES FOR LOSS OF PROFIT OR GOODWILL REGARDLESS OF (A) THE NEGLIGENCE (EITHER SOLE OR CONCURRENT) OF LANCASTER LABORATORIES AND (B) WHETHER LANCASTER LABORATORIES HAS BEEN INFORMED OF THE POSSIBILITY OF SUCH DAMAGES. We accept no legal responsibility for the purposes for which the client uses the test results. No purchase order or other order for work shall be accepted by Lancaster Laboratories which includes any conditions that vary from the Standard Terms and Conditions, and Lancaster hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

# Analysis Report

## Quality Control Summary

Client Name: The Johnson Company, Inc. Group Number: 1222717
Reported: 12/04/10 at 09:43 AM

Matrix QC may not be reported if site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD was performed, unless otherwise specified in the method.

## Laboratory Compliance Quality Control

# Explanation of Symbols and Abbreviations

*The following defines common symbols and abbreviations used in reporting technical data:*

| | | | |
|---|---|---|---|
| **RL** | Reporting Limit | **BMQL** | Below Minimum Quantitation Level |
| **N.D.** | none detected | **MPN** | Most Probable Number |
| **TNTC** | Too Numerous To Count | **CP Units** | cobalt-chloroplatinate units |
| **IU** | International Units | **NTU** | nephelometric turbidity units |
| **umhos/cm** | micromhos/cm | **ng** | nanogram(s) |
| **C** | degrees Celsius | **F** | degrees Fahrenheit |
| **meq** | milliequivalents | **lb.** | pound(s) |
| **g** | gram(s) | **kg** | kilogram(s) |
| **ug** | microgram(s) | **mg** | milligram(s) |
| **ml** | milliliter(s) | **l** | liter(s) |
| **m3** | cubic meter(s) | **ul** | microliter(s) |

**<** less than - The number following the sign is the limit of quantitation, the smallest amount of analyte which can be reliably determined using this specific test.

**>** greater than

**J** estimated value – The result is ≥ the Method Detection Limit (MDL) and < the Limit of Quantitation (LOQ).

**ppm** parts per million - One ppm is equivalent to one milligram per kilogram (mg/kg), or one gram per million grams. For aqueous liquids, ppm is usually taken to be equivalent to milligrams per liter (mg/l), because one liter of water has a weight very close to a kilogram. For gases or vapors, one ppm is equivalent to one microliter of gas per liter of gas.

**ppb** parts per billion

**Dry weight basis** Results printed under this heading have been adjusted for moisture content. This increases the analyte weight concentration to approximate the value present in a similar sample without moisture. All other results are reported on an as-received basis.

*U.S. EPA CLP Data Qualifiers:*

**Organic Qualifiers**

| | |
|---|---|
| **A** | TIC is a possible aldol-condensation product |
| **B** | Analyte was also detected in the blank |
| **C** | Pesticide result confirmed by GC/MS |
| **D** | Compound quantitated on a diluted sample |
| **E** | Concentration exceeds the calibration range of the instrument |
| **N** | Presumptive evidence of a compound (TICs only) |
| **P** | Concentration difference between primary and confirmation columns >25% |
| **U** | Compound was not detected |
| **X,Y,Z** | Defined in case narrative |

**Inorganic Qualifiers**

| | |
|---|---|
| **B** | Value is <CRDL, but ≥IDL |
| **E** | Estimated due to interference |
| **M** | Duplicate injection precision not met |
| **N** | Spike sample not within control limits |
| **S** | Method of standard additions (MSA) used for calculation |
| **U** | Compound was not detected |
| **W** | Post digestion spike out of control limits |
| ***** | Duplicate analysis not within control limits |
| **+** | Correlation coefficient for MSA <0.995 |

Analytical test results meet all requirements of NELAC unless otherwise noted under the individual analysis.

Measurement uncertainty values, as applicable, are available upon request.

Tests results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff. This report shall not be reproduced except in full, without the written approval of the laboratory.

**WARRANTY AND LIMITS OF LIABILITY** - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. THE FOREGOING EXPRESS WARRANTY IS EXCLUSIVE AND IS GIVEN IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED. WE DISCLAIM ANY OTHER WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING A WARRANTY OF FITNESS FOR PARTICULAR PURPOSE AND WARRANTY OF MERCHANTABILITY. IN NO EVENT SHALL LANCASTER LABORATORIES BE LIABLE FOR INDIRECT, SPECIAL, CONSEQUENTIAL, OR INCIDENTAL DAMAGES INCLUDING, BUT NOT LIMITED TO, DAMAGES FOR LOSS OF PROFIT OR GOODWILL REGARDLESS OF (A) THE NEGLIGENCE (EITHER SOLE OR CONCURRENT) OF LANCASTER LABORATORIES AND (B) WHETHER LANCASTER LABORATORIES HAS BEEN INFORMED OF THE POSSIBILITY OF SUCH DAMAGES. We accept no legal responsibility for the purposes for which the client uses the test results. No purchase order or other order for work shall be accepted by Lancaster Laboratories which includes any conditions that vary from the Standard Terms and Conditions, and Lancaster hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

## 1.0 Executive Summary

**The HiPOx treatment system successfully treated the 1-4 Dioxane contaminated ground water from the Flowery Branch, GA. site to below detection limits. The ground water was first air stripped to remove the VOC's. After air stripping the water was tested at four ozone/hydrogen peroxide doses to develop a destruction response curve based on ozone. The tests demonstrated that the destruction of the 1-4 Dioxane with the HiPOx process can be done efficiently.**

## 1.0 BACKGROUND INFORMATION

### *1.1 Project Specific Information*

The following is background information regarding this project:

- The site is an industrial site in Flowery Branch. Design is underway to treat a ground water stream with a flow rate of 10 gpm.
- The remediation system design is proposed to consist of a multiphase extraction system (MPE) where the extracted groundwater will first be treated by air stripping for VOC removal followed by HiPOx for 1, 4 dioxane destruction;
- The treatment objective is to reduce VOC's, and 1, 4 dioxane to meet the local POTW treatment standards
- The influent 1-4 Dioxane concentration in the ground water stream is approximately 250 ug/L to 500 ug/L and the discharge permit limit is < 3 ug/L;
- The Johnson Co. would like to evaluate HiPOx technology to treat the ground water stream and reduce or eliminate the 1-4 Dioxane ;

### *1.2 Objective of Evaluation*

The primary goals of this evaluation were to determine the following information:

- Generate dose-response curves for the 1-4 Dioxane destruction for the ground water stream;
- To determine the feasibility of using HiPOx $O_3/H_2O_2$ mode to reduce the 1-4 Dioxane concentration below treatment objective;

- If HiPOx is feasible for reducing the 1-4 Dioxane concentration below the treatment objective, then determine the optimal dosing conditions and treatment costs to achieve the objectives.

### *1.3 Process Water Information*

A sample was shipped by FedEx and received at APTwater's Pleasant Hill facility on 4-15-11 and immediately placed in refrigeration until the time of the test. The bench test was conducted on 4-20-11.

## 2.0 RESULTS

Analytical results of the test are summarized in TABLE 1. Dose-response figures for Figure 1. are presented in TABLE 1. All supporting third party analytical data reporting is provided in ATTACHMENT C.

TABLE 1

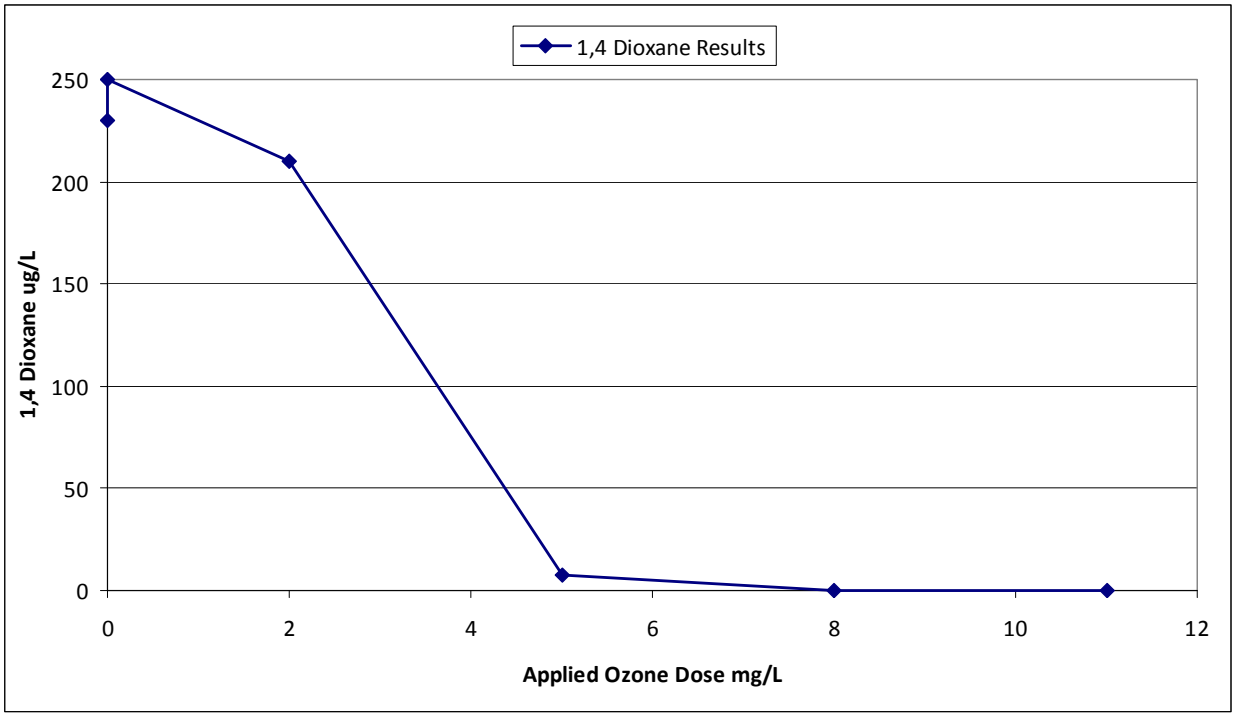
MDL for 1,4 Dioxane = 0.5 ug/L

## 3.0 DISCUSSION

### *3.1 Raw Water*



The raw water provided by The Johnson Co. is reported to have concentration of 1-4 Dioxane at 230 ug/L. The raw water was clear, with few sediments, and a solvent odor. The analytical results from the raw water are presented above in Table 1.

### *3.2 Treatment Testing Results*

**TABLE 1** above summarizes the analytical results for all samples and test runs.

**Figure 1** displays a graphical depiction of 1-4 Dioxane destruction in the form of a dose-response curve. The graph indicates that HiPOx technology was successful at destroying the 1-4 Dioxane in the $O_3/H_2O_2$ mode. In the $O_3/H_2O_2$ mode, the 1-4 Dioxane concentration decreased as the ozone dose increased. The 1-4 Dioxane concentration decreased to < 0.5 ug/L from 230 ug/L with the ozone dose tested of 8.0 mg/L. The water quality is very good and the destruction was better than anticipated resulting in the last two test results being below the detection limit. The graph indicates that the destruction is exponential.

Figure 1

Other observations:
The bench test air stripper demonstrated a good efficiency for removing the VOC's as shown in Table 2 below.

Table 2 VOCs Pre and Post air stripper

| | | |
|---|---|---|
| Chloroethane | 1 (J) | ND |
| 1, 2 - Dichloroethane | 4 (J) | ND |
| 1, 1 - Dichloroethene | 1,600 | ND |
| 1, 1, 1 - Trichlorothane | 570 | ND |
| 1, 1, 2 - Trichlorothane | 2 (J) | ND |
| Vinyl Chloride | 3 | ND |

After a number of days a small amount of red sediment appeared in the bottom of retained samples from run 3 and 4. This material is likely from oxidized iron from both processes the water was subject to air stripping and advanced oxidation.

### *3.3 HiPOx Dosing and Cost Projections for Full-Scale System*

A destruction model was generated within the limitations of the data to project ozone and hydrogen peroxide dosing levels to meet the treatment objective. It is estimated that the full scale system may have 500 µg/l 1-4 Dioxane in the influent. Based on the destruction model for 1-4 Dioxane, the following table represents the dosing levels required. Projections made on the anticipated water quality are shown in Table 3 below.

Table 3 Full scale system dose projection

| | |
|---|---|
| **1-4 Dioxane Dosing Projections** | |
| **1-4 Dioxane Influent** | **500 ug/l** |
| **1-4 Dioxane Effluent** | **< 3 ug/l** |
| **Projected Ozone Dose mg/l** | **11.6** |
| **Projected Hydrogen peroxide Dose mg/l** | **5.2** |
| | |

Note: The projected ozone dose is higher than the bench-scale ozone dose to account for mass transfer inefficiencies in a full-scale process. The project hydrogen peroxide dose is based on the transferred ozone dose.

### *3.4 Recommendations*

***The test met the treatment objectives and was quite successful in the destruction of the 1-4 Dioxane at relatively low ozone doses. APTwater recommends the next step to be to be a preliminary design and firm cost development for a full-scale treatment system, This would include provisions for a performance guarantee based on these results. We do not feel that field pilot-testing is necessary or warranted for this particular application***

End of Report

## 4.0 ATTACHMENTS

**ATTACHMENT A HiPOx Technology**

The HiPOx® process, developed by APTwater, Inc. (APTwater), is an ozone-based plug flow reactor technology that can be used as either an advanced oxidation reactor or a highly efficient ozone dissolution/contacting system. In the advanced oxidation mode, HiPOx maximizes the production of hydroxyl radicals (the most powerful oxidant available for water treatment) with highly efficient injection and mixing of ozone and hydrogen peroxide while minimizing bromate formation. In the ozone only mode, HiPOx maximizes the benefits of ozone with high mass transfer efficiency to ensure ozone is not wasted and reacts completely with the water. HiPOx can be operated in either advanced oxidation or ozone only modes as needed.

HiPOx has many water treatment applications. HiPOx has proven to be a very effective process for destroying organic micropollutants for groundwater remediation, drinking water wellhead treatment, and industrial wastewater treatment. It is well-known that ozone is very beneficial for taste and odor, color, enhanced clarification, disinfection byproduct precursor removal, and disinfection for drinking water surface water treatment. Ozone is also an emerging technology for wastewater treatment and water reuse with respect to micro-pollutants, endocrine disrupting compounds (EDCs), and personal and pharmaceutical care products. HiPOx has received conditional acceptance for disinfection of tertiary filtered wastewater for unrestricted water reuse under the requirements of Title 22 in the state of California.

HiPOx may also be integrated with other treatment technologies such as air stripping, metals removal, filtration, activated carbon, UV, and chlorine to provide a multiple treatment barrier and low cost water treatment solution.

# APPENDIX C

# AIR STRIPPER MODEL INPUTS AND RESULTS

**Air Stripper Model Inputs**

The ShallowTray Modeler software provided by Bisco Environmental Inc (an air stripper vendor) was used to evaluate potential air stripper performance at treating groundwater extracted by the MPE System. Groundwater monitoring data reported in the 2010 Compliance Status Report (JCO, 2010) was used to estimate VOC and target inorganic constituent parameter concentrations that will be present in the groundwater extracted by the MPE System. Table 1 summarizes the estimated VOC concentrations used in the model, shallow tray model results are summarized on Table 2. As shown on Table 2, the model results indicate target VOC concentrations will be less than 1 microgram per liter.

**TABLE 1**

| Contaminant | Estimated Influent Concentration (µg/L or ppb) |
|---|---|
| 1,1 – Dichloroethylene | 2800 |
| 1,1,1 – Trichloroethane | 280 |
| 1,1 – Dichloroethane | 90 |
| 1,2 – Dichloroethane | 6 |
| o-Xylene | 5 |
| Vinyl Chloride | 5 |
| 1,1,2 – Trichloroethane | 3 |
| Methylene Chloride | 3 |
| Tetrachloroethylene | 1 |
| Toluene | 2 |
| Trichloroethylene | 2 |
| 1,4 – Dioxane | 500 |

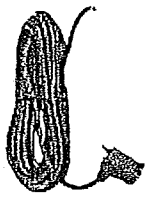
# FLOAT SWITCHES

CONERY MFG INC

## Pump Duty Mercury Wide Angle Switch

Designed for accurate liquid level control in many applications including sewage and wastewater environments. The float switch can be utilized to signify specific water levels or for direct alarm actuation.

The float uses a steel tube mercury switch designed to operate under min/max temperature of 32 -170°f and has an electrical rating of 1/2 HP and 13 AMPS @ 120 VAC or 1 HP @ 240 VAC. The power cord is a chlorinated polyethylene type SJOOW-300 Volt on 16/2 for N/O or N/C switch or 16/3 for SPDT switch. Also, comes optional with a 120 VAC or 240 VAC piggyback plug.



The float is constructed of a durable polypropylene outer shell and a solid polyurethane foam interior. It is tested and proven to be leak proof, shock proof, and impact resistant. For use with intrinsically safe circuits. The cord weight is made of zinc plated cast iron. At 1.22 lbs., the split weight design allows for easy adjustment, and a secure and permanent attachment to the cord.

*Normally open control duty float switch*

As the float rises 45° above horizontal, the contacts become open and actuate (turn on) the switch. This float is generally used in pump down applications.

**Single pole - single throw**

| 13 AMP @ 120/230 VAC - 1/2HP/1HP mercury switch | | 10' | 15' | 20' | 30' | 40' | 50' |

# Sewer Discharge Approval from Flowery Branch

Flowery Branch

January 26, 2012

Glen Kirkpatrick
The Johnson Company
100 State Street, Suite 600
Montpelier, VT 05602

Dear Mr. Kirkpatrick:

Please allow this letter to confirm that the City of Flowery Branch has reached an agreement with the Avery Dennison Corporation to accept, once permitted by the State of Georgia, treated groundwater into the City's Publicly Owned Treatment Works (POTW). This agreement will allow Avery Dennison to send flows at a rate of up to 15,000 gallons per day from their location at 4350 Avery Drive, Flowery Branch, Georgia, to our treatment plant. As further proof of this agreement, I have included a copy of Resolution No. 11-015 and adopted minutes from the City Council meeting of December 15, 2011.

Should you need any additional information, please feel free to contact me at (770) 967-6371.

Respectfully,

Bill Andrew
City Manager

# CITY OF FLOWERY BRANCH
## Work Session
## Thursday, December 15, 2011 6:00 pm.

**CALL TO ORDER:** Mayor Mike Miller called the meeting to order at 6:03 p.m.

**IN ATTENDANCE:** Mayor Mike Miller, Council Members: Amanda Swafford, Chris Fetterman, Joe Anglin and Tara Richards were all present. Also in attendance were City Manager Bill Andrew, City Planner James Riker and City Attorney Ron Bennett

**ABSENT:** None

**PLEDGE OF ALLEGIANCE:** Council Member Tara Richards led the pledge of allegiance

**PUBLIC COMMENTS:**
Ms. Janet Upchurch of 5644 Nagshead Circle approached to thank Council Member Amanda Swafford for standing up for things that people believe in during her service to the City of Flowery Branch.

Mr. Craig Lutz of 8072 Sleepy Lagoon Way approached to thank Council Member Amanda Swafford for her service to the City of Flowery Branch. Mr. Lutz stated that he was glad that a person like Council Member Swafford was able to step in and finish the term that he had started.

Mr. Greg Lyons of 601 Tree Park Circle approached to express thanks to Council Member Swafford from the residents of Tree Park apartments for all of her efforts on their behalf.

**PRESENTATION:**
Council Member Fetterman presented a plaque to Council Member Swafford from the City of Flowery Branch acknowledging her service on the Council from September 2010 to December 2011.

Council Member Swafford stated that she has enjoyed her time on the Council and appreciated the support of the members of the community.

**UNFINISHED BUSINESS:**

- Hearing regarding business license for Flowery Branch Auction and Antiques

City Planner Riker stated that at the previous Council meeting, staff was directed to contact the business owner regarding the business license hearing being postponed to tonight. The business owner, Mr. Tom Schulte, is present at this meeting. The issue with this property is that back in the 90's, the use of the property changed. The code at the time would have required parking lot improvements. The City has been in contact with both the business and property owner regarding requested parking lot improvements for the last 18 months. About a year ago, the property owner indicated in a letter that he would make those improvements. The Council has been provided with a bullet point listing of actions taken on this case and a timeline of those activities. When auctions are held at this location, the attendees park randomly and even park in areas where parking should not be allowed.

make the City look pretty? Some people call the area on Atlanta Highway where this business is located the "Gateway to Flowery Branch". The real Gateway is off of Interstate 985.

Council Member Swafford reminded that a major merchant, Toasted and Tapped, closed in the downtown area of Flowery Branch this past Saturday.

- 2nd reading of Ordinance 461 – Water Conservation Separate and Master Meter Ordinance and Ordinance 462 – Water Conservation Car Wash Ordinance

City Planner Riker indicated that these ordinances are required to be adopted by the Metropolitan North Georgia Water Planning District. One comment at the last meeting was the Council wanted to know if we could require people with master meters now to install individual meters on change of ownership. There is not a legal foothold for the City to require that.

**DRAFT MINUTES:** City Clerk Burney presented the draft minutes from the December 1, 2011 City Council Meeting. Council Member Swafford stated that she had a few changes. On page 2, Ms. Spencer is referred to as Mr. Spencer in error and needs to be corrected in the paragraph. The address is Wade Road, not Waidel Road. In Ms. Smith's letter for the record, there needs to be a space between "60" and "dollars". On page 5, there should not be an apostrophe in "it's" in the comments made by Council Member Fetterman. The corrections will be incorporated.

**NEW BUSINESS:**

- Resolution 11-015 – Allow for leasing of sewer capacity by commercial users for a 24 month period at 15% of the regular rate

City Manager Andrew stated that Avery Dennison on Thurmon Tanner Parkway needs to lease some sewer capacity for a project they are working on. The resolution is to change the code so that other commercial businesses would have the same leasing opportunity if they needed to. There was a spill a few years ago on the property which went into the groundwater and that portion of the plant was shut down. The EPA has ordered Avery Dennison to clean up the site. There was a study completed which shows that there is a volatile organic compound in the groundwater. There are 10 wells on the site which will be drawing out the groundwater and spray air through the water at a high rate, which is called "airstripping". This resolution would allow Avery Dennison to get sewer capacity at a discounted rate for the duration of the project, which is not expected to last more than 24 months. This resolution would allow other businesses the same pricing opportunity, but it is doubtful that it would be used by anyone else. Initially, the water will be tested every 2 weeks to verify the contaminants are gone. This would be for a total of 3 months. EPD feels that due to instability of the volatile organic compound; there is a very small chance of contamination. Bob Troxler, a consultant for the City on sewer matters, stated that he feels the study is very detailed and there is very little risk to the City water. Once the site is cleaned up, the adjacent properties would be more desirable and may sell quicker. Work on this project would begin in January 2012.

**CITY MANAGER REPORT:** None

**CITY CLERK REPORT:**
City Clerk Burney indicated that she had given a list to the Council members of the Council meeting dates for 2012, based on meetings being on the first and third Thursdays.

**CITY OF FLOWERY BRANCH**
**Council Meeting**
**Voting Session**
**Immediately following Work Session**
**Thursday, December 15, 2011**

**OPEN VOTING SESSION:**
Mayor Mike Miller opened the Voting Session at 7:06 p.m.

**CONSENT AGENDA:**
Consider – Draft meeting minutes from December 1, 2011

**Motion: Joe Anglin**
**Second: Chris Fetterman**
Discussion: None
**Unanimous**

**NEW BUSINESS:**

- Consider – Hearing regarding business license for Flowery Branch Auction and Antiques

**Council Member Anglin made a motion to have some sort of a land plan approved and actually started by the specific date of April 5. To clarify, this would be for work to actually begin by April 5.**

**Council Member Anglin clarified his motion: motion to have a land plan submitted and work to actually begin by April 5 on the property of Flowery Branch Auction and Antiques.**

City Planner Riker verified that two different plans have been submitted to the City, but neither plan has been approved. The first plan needed some further work, but is workable. The second plan, which was submitted, last week, does not meet the code.

Council Member Richards requested City Planner Riker clarify what "approval of a plan" would entail in this case. City Planner Riker stated that the process would be that the City would evaluate the provided plan. The plan would then be sent to GDOT for their evaluation. The state will not allow a parking lot to be improved and have the water dumped onto a state highway. The plan would be shared with the Council for approval. There might need to be a variance on the property, which would require a public hearing. In this situation, an approved plan is more important than work beginning on the project because there are other agencies involved. City Planner Riker suggested the motion be for a date for the plan to be submitted.

Council Member Anglin verified that one plan has already been submitted by Mr. Bailey, but that it was pulled back by a letter from Mr. Bailey's attorney. City Attorney Bennett stated that neither plan that has been provided has been submitted to GDOT. The first plan submitted was what the engineer thought would work and the second plan submitted was what Mr. Bailey wanted to do.

City Manager Andrew stated that if the Council wants to be a part of the approval of the plan, the process could drag on for quite some time. The staff is trying to follow an older code for the

At the request of Mayor Miller, City Clerk Burney did the vote as a roll call vote.
**Council Member Swafford: No**
**Council Member Fetterman: No**
**Council Member Anglin: Yes**
**Council Member Richards: Yes**
**As there was a tie, Mayor Miller voted to break the tie.**
**Mayor Miller: Yes**
**Motion passes with a 3-2 vote.**

- Consider – Second reading of Ordinance 461 – An ordinance to amend Chapter 50 Utilities Sections 50-17 and 50-18 of the adopted Municipal Code relating to separate meter and master meter requirements; to provide for an effective date; to repeal conflicting ordinances and for all other lawful purposes.

**Motion: Chris Fetterman**
**Second: Joe Anglin**
Discussion: None
**Unanimous**

- Consider – Second reading of Ordinance 462 – An ordinance requiring new commercial conveyor car washes to install recycled water systems; to provide for codification; to provide for an effective date; to repeal conflicting ordinances and for all other lawful purposes.

**Motion: Joe Anglin**
**Second: Tara Richards**
Discussion: None
**Unanimous**

- Consider – Resolution 11-015 – Establishes the amount of use rates for water and sewer service, the amount of connection fees for water service and the amount of connection/capacity fees for sewer service; repealing conflicting resolutions; providing for severability; providing for an effective date; and for all other lawful purposes. In particular the amendment found on page 6 which creates a capacity fee category for non-residential temporary sewer users. It permits them to purchase capacity for the temporary use of sewer for up to 24 months at a rate equal to 15% of the non-residential sewer rate.

**Motion: Amanda Swafford**
**Second: Chris Fetterman**
Discussion: Council Member Fetterman verified with City Manager Andrew that 24 months is not the proposed time frame for the project, just the maximum amount of time that was requested to cover any problems that may be encountered. The amount being used is 10,000 to 15,000 gallons a day. City Attorney Bennett stated that the ordinance provides for a yearly permit and a refund mechanism.
**Unanimous**

Council Member Fetterman made a motion to adjourn the meeting at 7:29 p.m.
**Motion: Chris Fetterman**
**Second: Joe Anglin**
Discussion: None
**Unanimous**

## Adjournment:

James "Mike" Miller - Mayor

1-5-12
Dated

Marja Burney – City Clerk

**RESOLUTION NO. 11-015**

**A RESOLUTION ESTABLISHING THE AMOUNT OF USE RATES FOR WATER AND SEWER SERVICE, THE AMOUNT OF CONNECTION FEES FOR WATER SERVICE AND THE AMOUNT OF CONNECTION/CAPACITY FEES FOR SEWER SERVICE; REPEALING CONFLICTING RESOLUTIONS; PROVIDING FOR SEVERABILITY; PROVIDING FOR AN EFFECTIVE DATE; AND FOR ALL OTHER LAWFUL PURPOSES.**

**WHEREAS**, the City of Flowery Branch is authorized by Art. IX, §II, ¶ III of the Constitution of the State of Georgia, O.C.G.A. § 36-35-3 and Art. VI, § 6.6 of the Charter of the City of Flowery Branch to assess and collect fees, charges and tolls for sewer, sanitary, health services or any other services within and without the corporate limits of the city for the total cost to the city of providing such services; and

**WHEREAS**, Ordinance No. 100-F authorizes the City Council of the City of Flowery Branch to set the amounts of rates for water and sewer service use, connection fees for water service and connection/capacity fees for sewer service by resolution.

**NOW THEREFORE BE IT RESOLVED** by the City Council of the City of Flowery Branch that the rates for water and sewer service use, the connection fees for water service and the connection/capacity fees for sewer service shall be as follows:

**Section 1. Water and Sewer Use Rates**

# WATER USE RATES

## I. Within the Corporate Limits

### A. Residential Water Users

1. Single Family Residential Water Users

| | |
|---|---|
| 0 – 1,000 gallons | $5.64 minimum charge |
| 1,001 – 2,500 gallons | $14.10 minimum charge |
| 2,501 – 4,500 gallons | $25.38 minimum charge |
| Tier 2 – 4,501 to 7,500 gallons | $7.05 per 1,000 gallons |
| Tier 3 – 7,501 gallons and over | $8.46 per 1,000 gallons |

2. Multi-Family Residential Water Users (Per Unit Rates)*

| | |
|---|---|
| 0 - 3,355 gallons | $18.92 minimum charge |
| Tier 2 – 3,356 to 7,500 gallons | $7.05 per 1,000 gallons |
| Tier 3 – 7,501 gallons and over | $8.46 per 1,000 gallons |

### B. Non-Residential Water Users

| | |
|---|---|
| 0 – 7,000 gallons | $25.41 minimum charge |
| Tier 2 – 7,001 to 60,000 gallons | $4.54 per 1,000 gallons |
| Tier 3 – 60,001 gallons and over | $5.45 per 1,000 gallons |

## II. Outside the Corporate Limits

### A. Residential Water Users

1. Single Family Residential Water Users

| | |
|---|---|
| 0 – 1,000 gallons | $7.51 minimum charge |
| 1,001 – 2,500 gallons | $18.78 minimum charge |
| 2,501 – 4,500 gallons | $33.80 minimum charge |
| Tier 2 – 4,501 to 7,500 gallons | $9.39 per 1,000 gallons |
| Tier 3 – 7,501 gallons and over | $11.27 per 1,000 gallons |

2. Multi-Family Residential Water Users (Per Unit Rates)

| | |
|---|---|
| 0 - 3,355 gallons | $25.20 minimum charge |
| Tier 2 – 3,356 to 7,500 gallons | $9.39 per 1,000 gallons |
| Tier 3 – 7,501 gallons and over | $11.27 per 1,000 gallons |

### B. Non-Residential Water Users

| | |
|---|---|
| 0 – 7,000 gallons | $33.74 minimum charge |
| Tier 2 – 7,001 to 60,000 gallons | $6.03 per 1,000 gallons |
| Tier 3 – 60,001 gallons and over | $7.23 per 1,000 gallons |

* For multi-family residential water users utilizing a master meter, the above per unit rate shall be based on a quarterly talley of occupancy for the first of each month on January, April, July and October. This information should be in the possession of the City of Flowery Branch by the 15th of each month's so the bill may properly reflect occupancy.

# SEWER USE RATES

## I. Within the Corporate Limits

### A. Residential Sewer Users

1. Single Family Residential Sewer Users

| | |
|---|---|
| 0 – 1,000 gallons | $6.77 minimum charge |
| 1,001 – 2,500 gallons | $16.93 minimum charge |
| 2,501 – 4,500 gallons | $30.47 minimum charge |
| 4,501 gallons and over | $6.77 per 1,000 gallons |

2. Multi-Family Residential Sewer Users (Per Unit)

| | |
|---|---|
| 0 – 3,355 gallons | $22.71 minimum charge |
| 3,356 gallons and over | $6.77 per 1,000 gallons |

### B. Non-Residential Sewer Users

| | |
|---|---|
| 0 – 7,000 gallons | $30.52 minimum charge |
| 7,001 gallons and over | $4.36 per 1,000 gallons |

## II. Outside the Corporate Limits

### A. Residential Sewer Users

1. Single Family Residential Sewer Users

| | |
|---|---|
| 0 – 1,000 gallons | $9.01 minimum charge |
| 1,001 – 2,500 gallons | $22.53 minimum charge |
| 2,501 – 4,500 gallons | $40.55 minimum charge |
| 4,501 gallons and over | $9.01 per 1,000 gallons |

2. Multi-Family Residential Sewer Users (Per Unit)

| | |
|---|---|
| 0 – 3,355 gallons | $30.23 minimum charge |
| 3,356 gallons and over | $9.01 per 1,000 gallons |

## B. Non-Residential Sewer Users

| | |
|---|---|
| 0 – 7,000 gallons | $40.53 minimum charge |
| 7,001 gallons and over | $5.79 per 1,000 gallons |

**Section 2. Account Service Fees**

Customers receiving Account Statements for Water and Sewer will be charged $2.75 per month, while customers receiving Account Statements for only water or only sewer will be charged $1.65 per month.

**Section 3. Hardship Rates**

SENIOR CITIZENS: Upon making written application on such forms as provided by the City Manager, a discount of $10.00 monthly will be applied to any water bill exceeding 2,500 gallons per month in usage and in which the head of the household is 65 years of age or older. The applicant must also verify through their latest tax return that total household income is less than 125% of the City's Poverty Rate as determined by the US Census Bureau.

DISABLED: Upon making written application on such forms as provided by the City Manager, a discount of $10.00 monthly will be applied to any water bill exceeding 2,500 gallons per month and in which the head of the household has been declared disabled by the US Social Security Administration or the US Department of Veterans Affairs. The applicant must also verify through their latest tax return that total household income is less than 125% of the City's Poverty Rate as determined by the US Census Bureau.

**Section 4. One-Time Water Leak Adjustment**

Upon repairing a leak a customer may receive an adjustment to the water bill or bills (two consecutive months) that covered the time of the leak. The customer remains responsible for their regular bill and ½ of the leak amount. It is important that the customer understand that the one time leak adjustment is available for an account holder only one time. The customer must provide either a copy of the plumber bill or copies of receipts for the repair to be given the **one time** water leak adjustment.

Only Single Family Residential customers are eligible for the One Time Leak Adjustment Policy. It does not apply to Commercial accounts.

It is important to note that this adjustment **does not** apply to sewer billings for a leak that did **not go into the sewer**. If the water leaked prior to entering the sewer line, you can give the customer an adjustment for the sewer portion of the bill. You may adjust the bill back to the customer's normal sewer billing. A sewer credit can be issued once a year for a maximum of three consecutive months (this is to encourage the customer to make the necessary repairs). The type of customer (residential or commercial) is not relevant to determine if the customer is eligible for the sewer adjustment. All classes of customers are eligible for the sewer credit.

**Section 5. Tampering and Disconnection Fees**

Service that has been scheduled for disconnection or has been disconnected for non-payment of a utility bill will be restored only after the past month and current month bill is paid in full and a $20.00 service charge paid.

Evidence of removing or damaging a lock that has been placed on a meter for non-payment of service will require the City of Flowery Branch to remove the meter from the service address. Service will be restored only after the past month and current month bill is paid in full, a $50.00 tampering fee is paid in full, a $20.00 lock replacement fee is paid in full and a $ 20.00 service charge paid in full.

Evidence of tampering with a meter after service has been disconnected for non-payment of a utility bill will require the City of Flowery Branch to remove the meter from the service address. Service will be restored only after the past month and current month bill is paid in full, a $50.00 tampering fee is paid in full and a $ 20.00 service charge paid in full.

**Section 6. Water Connection Fees.**

**RESIDENTIAL WATER CONNECTION FEES**
**(Fees Are Per Connection)**

| Tap Size/Meter Size In Inches | Tap/Meter and Sizing (TMS) | Administration Fee (A) | Total |
|---|---|---|---|
| ¾ | $4,500.00 | $50.00 | $4,550.00 |
| Larger Than ¾ | To be negotiated and approved by the City of Flowery Branch | $50.00 | TMS+A |

**NON-RESIDENTIAL WATER CONNECTION FEES**
**(Fees Are Per Connection)**

| Tap Size/Meter Size In Inches | Tap/Meter and Sizing (TMS) | Administration Fee (A) | Total |
|---|---|---|---|
| ¾ | $2,000.00 | $50.00 | $2,050.00 |
| 1.0 | $3,220.00 | $50.00 | $3,270.00 |
| 1.5 | $6,200.00 | $50.00 | $6,250.00 |
| 2.0 | $9,200.00 | $50.00 | $9,250.00 |
| 3.0 | Cost of Meter Plus $16,500.00 | $50.00 | TMS+A |
| 4.0 | Cost of Meter Plus $26,000.00 | $50.00 | TMS+A |
| 6.0 | Cost of Meter Plus $52,000.00 | $50.00 | TMS+A |
| Larger Than 6.0 | To be negotiated and approved by the City of Flowery Branch | $50.00 | TMS+A |

**Section 7. Sewer Connection/Capacity Fees.**

**RESIDENTIAL SEWER CONNECTION/CAPACITY FEES**
**(Fees Are Per Connection)**

| Tap Size/Meter Size In Inches | Tap/Meter and Sizing (T, M and S) | Administration Fee (A) | Total |
|---|---|---|---|
| ¾ | $4,500.00 | $50.00 | $4,550.50 |
| Larger Than ¾ | To be negotiated and approved by the City of Flowery Branch | $50.00 | TMS+A |

**NON-RESIDENTIAL SEWER CONNECTION/CAPACITY FEES**

The sewer connection/capacity fee for non-residential users is Twenty Two and No/100 Dollars ($22.00) per gallon subject to the following exceptions:

*Restaurants.* The sewer connection/capacity fees for restaurants as defined by the City of Flowery Branch Zoning Code which are located within the corporate boundary of the City of Flowery Branch shall be in accordance with the following chart:

| | |
|---|---|
| With a license to sell distilled spirits by the drink | $10.00 per gallon |
| With a license to sell beer and/or wine for consumption on the premises | $16.00 per gallon |
| With no license to sell any alcoholic beverage on the premises | $22.00 per gallon |

If any restaurant shall fail to obtain a license to sell alcoholic beverages on the premises for any reason, the difference in the sewer connection/capacity fee shall be paid to the City of Flowery Branch.

*Non-Residential Temporary Sewer Users.* The sewer connection/capacity fee for the temporary use of sewer service for up to 24 months shall be equal to 15% of the sewer connection/capacity fee for non-residential users.

**Section 8. Repeal of Conflicting Resolutions.** Any part of any prior resolutions in conflict with the terms of this Resolution, are hereby repealed to the extent of the conflict; but it is hereby provided, that any resolution, ordinance or law which may be applicable hereto and aid in carrying out and making effective the intent, purpose and provisions hereof, is hereby adopted as a part hereof and shall be legally construed to be in favor of upholding this Resolution on behalf of the City of Flowery Branch.

**Section 9. Severability.** If any paragraph, subparagraph, sentence, clause, phrase or any portion of this Resolution shall be declared invalid or unconstitutional by any court or competent jurisdiction or if the provisions of any part of this Resolution as applied to any particular situation or set of circumstance shall be declared invalid or unconstitutional, such invalidity shall not be construed to affect the portions of this Resolution not so held to be invalid, or the application of the Resolution to other circumstances no so held to be invalid. It is hereby declared to be the intent of the City Council of the City of Flowery Branch to provide for separate and divisible parts, and it does hereby adopt any and all parts hereof as may not be held invalid for any reason.

**Section 10. Effective Date.** This Resolution shall become effective the date it is adopted by the Council of the City of Flowery Branch.

SO RESOLVED

Complete Water Services, LLC

Corporate Profile

# Corporate Profile

The increasing demand on water supplies has created the need for innovative solutions to community, industrial and public water treatment challenges. The Complete Water Services (CWS) group of professionals offers a powerful combination of experience and expertise:

- Water Usage
- Water Supply
- High Purity Systems
- Process Treatment
- Corrosion Control
- Treatment of Wastewater
- Reuse / Recycle Options

## Services include:

- Treatment System Design
- Treatment Equipment/Components
- Treatment System Integration
- Installation
- Construction
- Consulting, Training and Trouble Shooting
- Operational Services
- Custom Fabricated Skid/Package Systems
- Licensed General and Utility Contractors

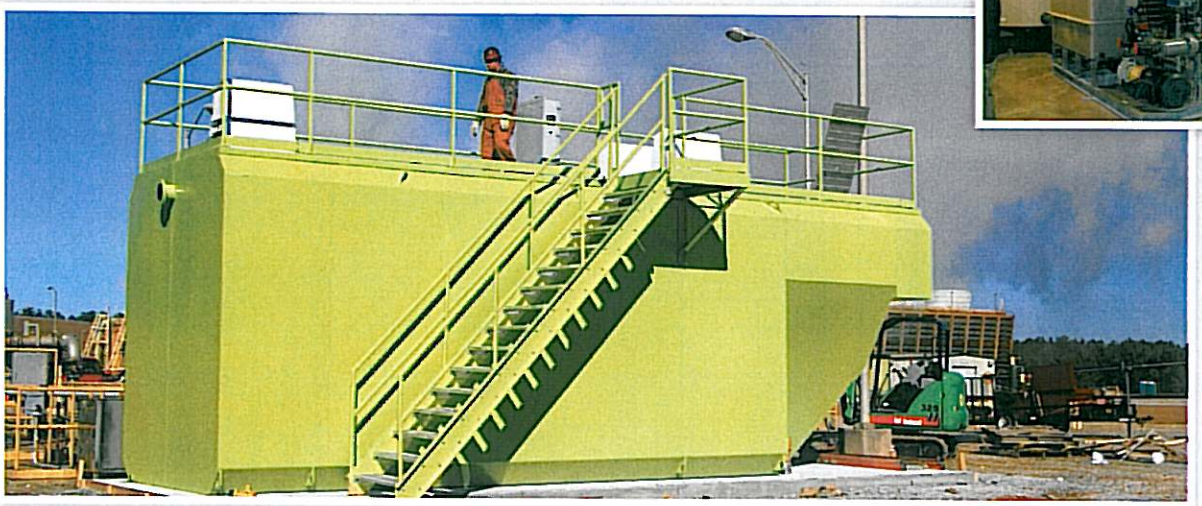
**Skid Mounted Package Systems**

# Skid Mounted Package Systems for Water and Wastewater Treatment

We specialize in providing customized pre-assembled water and wastewater treatment systems that simplify field construction activities. Our systems include package pumping and filtration systems, pH adjustment systems, membrane systems, high purity systems and packaged sanitary wastewater treatment systems.



CWS offers multiple treatment options including;

- pH Adjustment
- Iron Filtration Systems
- Dissolved Air Flotation
- Precipitation and Clarification
- Oil Water Separators
- Membrane Filtration Systems
- Water Softeners
- Package Sanitary Wastewater Systems

Complete Water Services, LLC

**Oil Fields Skid Mounted Package Systems**

# Oil Fields Skid Mounted Package Systems for Water and Wastewater Treatment

With the current global energy situation, more and more, energy companies are making the most out of existing oil fields. Enhanced Oil Recovery (EOR) is a recovery technique that alters the original properties of the oil to increase the productive life of an oil reservoir.

- Polymers help control the mobility of injected water in EOR applications
- Polymer flooding improves the volumetric sweep efficiency, reduces channeling, and reduces breakthrough
- Polymers can be used with surfactants and alkali agents to increase the sweep efficiency

Polymer injection EOR requires dilution water of a specific quality for polymer activation. CWS can develop skid-mounted treatment systems specific to the source water used in these applications to meet the quality needs of the polymer.

- Iron Filtration Systems
- Dissolved Air Flotation
- Induced Gas Flotation
- Precipitation and Clarification
- Oil Water Separators
- Nutshell Filters
- Membrane Filtration Systems

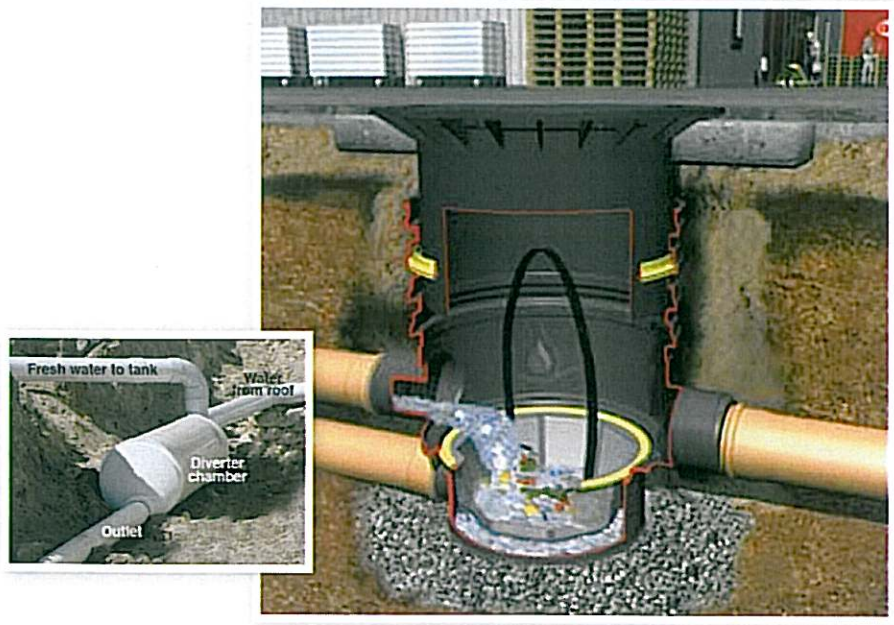
Complete Water Services, LLC

**Rain Water Harvesting**

# Finding Real Value in Rain Water

It has never been more important to work for environmental sustainability. Harvesting rain is a practice that has been around for centuries. Cisterns and other rain harvesting systems are widely used in Europe, Africa, Australia, India, the Bahamas, and countless remote countries - many who depend solely on rain for day to day life. Today right here in the USA, we too can successfully harvest rainwater to meet many of our needs.

Anyone, from the individual who wants to use stored rain for watering plants to large companies that use grey water in toilets and sinks, can make a difference. There is a large array of rainwater catchment systems available.



Rainwater harvesting systems provide distributed storm water runoff containment while simultaneously storing water which can be used for irrigation, flushing toilets, washing clothes, washing cars, pressure washing, or it can be purified for use as everyday drinking water.

Small steps can make a huge impact. The Complete Water Services (CWS) team of professional water treatment experts will help you design the optimal rain water harvest system to meet your specific needs. We will supply the equipment and guidance in designing the ideal filtration system to meet your needs.

From a simple barrel system to a complex underground rain water catchment system to selecting the right filtration and processing systems, CWS is your one stop supplier of material and resources to support your sustainable, efficient and effective rain water harvesting system. Saving you time and money while optimizing your use of one our planets most important resources – water.

What could be better!

# Industrial High Purity Water Systems

The majority of natural waters are not suitable for potable uses. Most municipalities or other entities provide some level of treatment prior to distribution to make the water suitable for consumptive purposes. Often this potable water is not of a quality required for many industrial and most research applications. Additional treatment is required for the water to meet certain quality criteria. Many industries and organizations have established water quality specifications. These include:

- College of American Pathologists
- National Committee for Clinical Laboratory Standards
- American Society for Testing and Materials
- United States Pharmacopoeia
- Semiconductor Equipment and Materials International
- Association for the Advancement of Medical Instrumentation

CWS can design systems to handle the unique challenges of high purity water systems. Components of these systems can include:

## High Purity Water Systems

- Filtration Systems
- Softeners
- Iron and Manganese Removal
- Ultrafiltration
- Reverse Osmosis
- Ion Exchange/Deionization
- EDI - Electrodeionization
- Ultra-violet Disinfection

CWS has the expertise to provide these systems, designed for specific needs of the client and the level of water quality required.

- Design Engineering
- Custom Skid Systems
- Point of Use Systems
- System Installation
- Mechanical/Electrical
- Controls

Complete Water Services, LLC

# Treatment Plant Design and Construction

CWS professionals are hands-on, real world designers and operators. We know what it takes to design and build practical, efficient and effective treatment plants, well suited for their purpose and setting. Sometimes we use the latest, most innovative technologies. Other times we use tried and true methods that have been available for years. At all times, though, our designs are tailored to the needs and budgets of our clients, given present and likely future application requirements.

Our wide range of experience and technical expertise allows us to offer these services in a variety of options, from Turnkey to a la Carte:

- Engineer, Procure and Construct
- Design, Construction Management
- Lump sum Design/Build
- Traditional Design/Bid/Build

CWS designs include the entire range of pre-treatment and treatment options, from skid-mounted package plants to custom designed and fabricated systems, including:

- Zero discharge water recycling systems
- Batch treatment
- Continuous flow
- Physical/chemical
- Biological
- Membrane filtration
- BOD/COD removal
- Oil & Grease removal
- TSS Removal

Complete Water Services, LLC

Turnkey Design/Build WWTP

# Turnkey Design/Build WWTP

Complete Water Services specializes in providing complete turnkey pre-treatment and water treatment systems for industrial clients. CWS has the ability to take a project from concept through startup with the engineering, project management, and construction expertise to provide a quality installation. We pride ourselves in being your one-stop source for water and wastewater projects. Installations from Greenfield (including building, utilities and equipment) to modification of existing systems are within the scope of our capability.

CWS designs include the entire scope and scale of pre-treatment and treatment options from skid mounted package plants to custom designed and fabricated systems. No project is too small, too large, or too complex.

We believe that our expertise, contacts and market focus are unique. When you factor in our experience, technical ingenuity and high level of client service, we know we are unique.

The installed base of Complete Water Services pre-treatment and treatment systems covers a wide variety of industrial sectors, including:

- Metal Manufacturing and Metal Finishing
- Food Processing, Packaging and Preparation
- Specialty Chemical Manufacturing
- Industrial Laundries
- Paint manufacturing

Complete Water Services, LLC

**Wastewater Treatment Plant Operations**

# Wastewater Treatment Plant Operations

Complete Water Services will operate your wastewater treatment or pre-treatment system, allowing you and your staff to concentrate on your core business. Under the direction of their Certified Operators, CWS will manage the operations, maintenance and environmental compliance of this critical process.

We offer this service under a variety of models. Benefits to your company or organization include:

- Prolong the life of plant equipment through proper maintenance and repair
- Reduce plant downtime and its impact on production
- Reduce administrative, management, and training costs
- Ensure the proper use and application of all treatment chemicals
- Avoid costly fines for non-compliance
- Minimize surcharges
- Avoid the potential impacts of staff turnover

Complete Water Services personnel visit treatment plant sites on an appropriate schedule to perform at least the following services:

- Onsite analysis and process operations
- Sample collection, analysis, with required decision making compliance reporting
- Residuals solids management
- Chemical management
- Preventative maintenance
- Emergency Response

## Reference Projects:

### Community College

A 60,000 gpd sanitary treatment system which includes a lift station, activated sludge treatment lagoon, holding pond, and a 36,000 gpd land application system.

### Bakery, Atlanta

A 40,000 gpd industrial treatment system for high strength bakery waste which includes screening, equalization, pH control, activated sludge system, clarification, and belt press operation for solids dewatering.

# Wastewater Treatment Chemical Programs

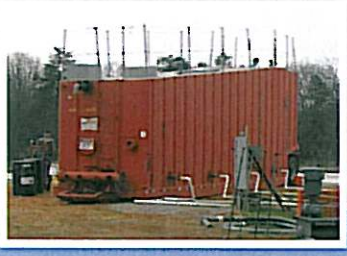
Coupled with our other services or as a stand-alone offering, CWS can deliver significant savings in water treatment chemical costs. Our water professionals make sure that you are buying the correct chemical compounds in the correct concentrations for your particular application, and then deliver these chemicals at competitive prices. We will design/install new or troubleshoot existing chemical feed systems to ensure the most efficient chemical delivery. Take advantage of great savings in all chemical categories, including:

- Polymer flocculants & clarifiers
- Odor control chemicals
- Biodispersants
- Foam control chemicals
- Bacterial inoculants
- Micro-nutrients
- Closed System treatment
- Humidification treatment
- Steam Line Inhibitors
- Water Stabilization treatment
- Cooling Towers
- Boilers
- Corrosion Control
- Micro-organism Contamination Control

IND

Complete Water Services, LLC

Mobile Treatment



# Mobile Treatment System and Services

CWS provides mobile treatment systems and services for emergency wastewater treatment needs, including clarifier systems, solids dewatering and dissolved air flotation. These systems have been successfully used for treatment plants that are not able to meet permit limits due to temporary problems with biological treatment systems, high levels of solids in lagoons, excessive flow rates, etc.

CWS can provide operations and chemistry along with mobile treatment equipment if desired.

IND

340 Cherokee Street • Marietta, Georgia 30060 • Phone: 678-355-9270 • Fax: 678-354-9522 • www.cwaterservices.com

# Water/Utilities Conservation

One of the main reasons our clients hire Complete Water Services is to save money. Our water and utilities conservation services ensure that these savings continue and compound long after the project is completed. Examples of these services include:

- Water audits
- Reduce - water conservation equipment and practices
- Reuse - partial treatment and re-circulation of process water; heat recovery
- Recycle - full treatment and recovery
- Retainage - locally administered Sewer Diversion credit programs
- Zero discharge plant design or re-design

IND

Complete Water Services, LLC

Well Water Supply

# Well Water Supply Residential Development/ Industrial Applications

Complete Water Services is fully capable and experienced in locating and developing groundwater sources for drinking water or process water supply. This can be a critical resource in areas not served by municipal supplies, or as a contingency supply should there be an interruption in municipal water service. In either case, developing and controlling your own water supply can reduce risk and save money.

## Services include:

- Hydrogeological Assessment
- Well Location
- Well Development Project Management
- Permitting
- Design/Build of Storage and Treatment Facilities
- Design of Distribution or Tie-in to Existing Distribution System

## Reference Projects:

### UAHC Camp Coleman, Cleveland, GA

This is a 250 acre recreation area, drawing visitors from around the world. The site includes a 20 acre lake, about 30 family cottages, dining facility, infirmary, etc. Complete Water Services assisted in the design and installation of a groundwater welland treatment system to supply the Camp with drinking and domestic water. Treatment includes sediment filtration, iron and manganese removal, pH adjustment and microbilogical control. Services also included preparation of an OEM Manual and plant startup.

### The Estates at Hawks Landing, Oglethorpe County, GA

This residential development is located in an area which is not served by municipal water. Complete Water Services located and developed a well system, designed and installed a drinking water treatment system including iron and manganese removal and microbiological control, and designed and installed pumps and piping to tie into an existing distribution system.

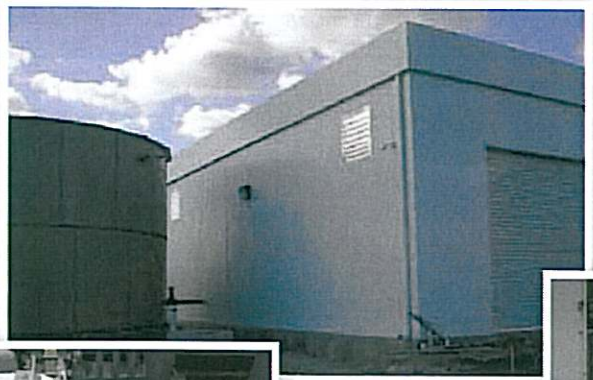
Complete Water Services, LLC

# DESIGN/BUILD PROJECT DESCRIPTION

**CLIENT:** **Excel Corporation, Hazelton, PA**
**Wastewater Treatment Plant (WWTP)**

## BACKGROUND:

Excel Corporation built a new case-ready meat processing plant in Hazelton. PA. The plant takes in sides and sections of beef, and further processes them into select cuts and ground beef, packaged and ready for retail sale. Wastewater produced by washing and rinsing operations is high in solids, fats and oil grease. Because of their prior experience with our firm. Excel specified Complete Water Services as the preferred wastewater treatment subcontractor when they put the plant construction project out to bid.



## PROJECT REQUIREMENTS:

- Influent flow rate of 150 gallons per minute
- Treatment for solids, fats, oils and grease
- Design and construction of new building and all systems, from the ground up
- Schedule to match completion of processing plant construction

## SYSTEM COMPONENTS:

- Flow equalization
- Continuous pH neutralization
- Chemical flocculation/ coagulation
- Dissolved air flotation

- Greenfield installation including building, utilities and equipment
- On time, on budget
- No change orders from original design

IND

Complete Water Services, LLC

# DESIGN/BUILD PROJECT DESCRIPTION

**CLIENT:** **Toyota Industrial Equipment Manufacturing (TIEM) Wastewater Treatment Plant (WWTP)**

## BACKGROUND:

The Toyota Industrial Equipment Manufacturing (TIEM) Plant in Columbus, Indiana manufactures industrial fork lifts. The ferrous metal finishing, phosphatizing and painting operations yield wastewater with high metals concentration.

**Complete Water Services (CWS) was retained to increase the capacity and effectiveness of the plant's WWTP.**

## PROJECT REQUIREMENTS:

- Double the capacity of existing system to 86,400 gpd
- Reuse as much of existing system hardware as possible
- Design/Build system with small footprint (40' x 45')
- Improve stability, efficiency, ease of operation and maintenance
- Effectively treat a wide range of contaminants
- Increase capacity to treat surges of contaminant volume and concentration
- Return as much treated water as possible to the plant for process water
- Aggressive schedule, coincident with planned plant maintenance shutdowns
- Tight budget

**TIEM agreed with CWS' proposal of a cost-saving two phased approach.**

## Phase I

- Flow equalization
- pH neutralization
- Chemical flocculation/ coagulation
- Clarification
- Sludge de-watering
- 40% of original treatment plant equipment was reused
- During the scheduled 5 day plant shutdown, equipment from the original plant was disassembled, moved and incorporated into the new WWTP. Final tie-ins were made, and the new WWTP was operational before the manufacturing plant went back online.

## Phase II

- Ultrafiltration
- Reverse Osmosis
- More than 90% of treated water to be recycled into the plant
- Treated water will exceed TIEM's stringent purity requirements for final-rinse process water
- As with Phase I, the WWTP will be designed to allow all modifications, final tie-ins and start-up to be completed during scheduled plant shut-down

- Design maximized use of existing equipment
- Bought on-line with no interruption of manufacturing

# Hager Hinge Wins AWEA Treatment Excellence Award

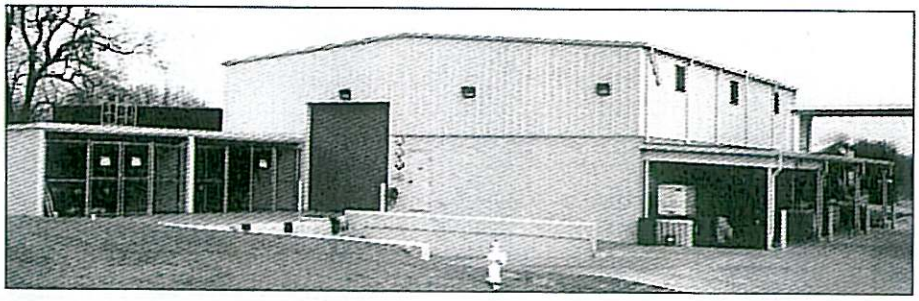

Figure 1. Building that houses the new physical/chemical treatment system.

*By Andy Fischer and Ed Becker*

Hager Hinge of Montgomery was awarded the II AWEA Excellence in Wastewater Treatment Award for its physical/chemical treatment facility at the Annual AWEA Conference on April 29th. Hager was selected from among several nominees submitted to the AWEA Awards Committee by the Alabama Department of Environmental Management for their outstanding performance records for the period October 1, 2000 through September 30, 2001.

As the name suggests, Hager Hinge produces hinges. Actually, Hager produces lots of hinges, up to 85,000 door hinges per day. They also produce a number of door trim products like kickplates, push/pull bars, etc. in a variety of materials and finishes. Hager operates three shifts a day, five days per week and on the production floor you will find employees involved in metal, fabrication, cleaning, polishing, electroplating, painting and lacquer coating, stripping, testing, assembling, packing and shipping.

The collective wastewater stream that enters the treatment building shown in Figure 1 includes wastewater from the electroplating, parts cleaning, stripping and painting/lacquer coating operations. Electroplating operations contribute alkaline cleaners, acid activator solutions and hexavalent chromium, nickel, cyanide and zinc plating solutions. Parts cleaning operations contribute oils and specialty cleaners to the wastewater stream. Stripping yields cyanide and acid-based solutions. Paint and lacquer coating surface preparation solutions complete the 38 million gallons of wastewater elixir that required treatment during the evaluation period prior to disposal to the Montgomery Sewer System.

During the evaluation period Hager Hinge was involved in abandoning its out-dated and inadequate treatment plant, which during prior years had caused violations of their SID Permit. Hager approached ADEM and negotiated a Consent Order that required preparation of an engineering report and implementation of the engineer's recommendations. Some that were in attendance at the 2001 Conference may have heard Hager representatives present a paper entitled "Hager Companies Approach to SID Permit Compliance" that included a historical perspective of their waste treatment problems and the system design that they concluded would bring about a first-class, compliant wastewater treatment program. Construction of the new treatment facilities was completed by Complete Water Services and placed in service shortly after the 2001 Conference.

*Continued on page 3*

# Hager Hinge Wins AWEA Treatment Excellence Award

*Continued from page 1*

A schematic of the new Hager treatment system is shown as Figure 2. Waste treatment is controlled by a customized computer system (Figure 3) with a particularly impressive interactive software package. The waste streams that enter the new treatment system arrive from six segregated input routes: a chromium sump, cyanide sump, pH sump, oil separator, concentrated plating solution sump and a 'batch process' sump. All six segregated the wastewaters are individually treated prior to a common clarification process. For example, the chromium-bearing wastewater that is pumped into a 10,000 gallon tank (sump) is chemically treated with materials fed into the sump by pumps that are computer-controlled based on pH and oxidation reduction potential (ORP) sensor-relayed readings that are interpreted by the computer. Figures 4 and 5 show some of Hager's process equipment, control elements and chemical feed pumps.

The chromium reduction process utilizes caustic soda, sulfuric acid and Redox Ty (a commercial product that replaces sodium bisulfite). Level indicators are used to control liquid transfers into and out of the sumps. Once reduced to trivalent chromium, the chromium wastewater is transferred to one of two 100,000 gallon equalization tanks. Cyanide oxidation occurs in a separate 10,000 gallon tank (sump) with caustic soda, sulfuric acid and sodium hypochlorite additions and then the liquid is transferred to the equalization tank that is receiving the trivalent wastewater. Treatment in the batch process sump is computer-controlled, as well, but the computer prompts the operator to ensure that the correct treatment regime is used; once treated, the batch waste enters the second 100,000 gallon equalization basin.

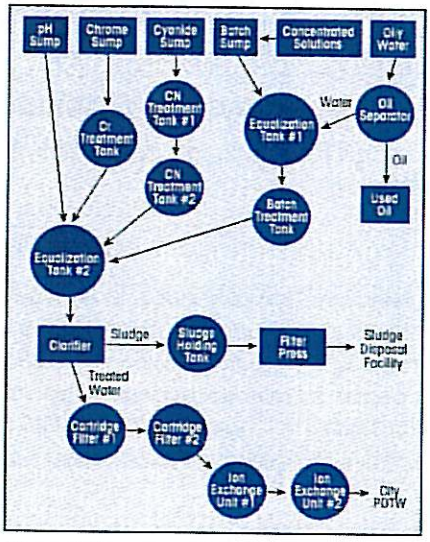

Figure 2. Flow schematic of Hager Hinge's Waste Treatment Facility.

Figure 3. View of the process control center that overlooks the floor of the treatment facility.

The oily wastewater is treated with sulfuric acid and a chemical demulsifier before combining with the treated chromium and cyanide waste streams.

The computer monitors the pH in the large equalization basins and directs appropriate chemical and coagulant additions before transferring the conditioned wastewater onto a fast-mix polymer chamber, a slow-mix flocculation chamber and finally the inclined plate clarifier (Figure 6). The solids removed from the clarifier are dewatered in a 40 cubic foot plate and frame press, which is equipped with a water membrane to 'give it that extra squeeze'. Following clarification, the water passes through two, in-line cartridge-type polishing filters and then onto an ion exchange unit before being discharged to the city sewer.

During the 12 months ending September 30, 2001 while Hager was struggling with its out-dated system and installing and starting up its new system, they experienced no SID Permit violations. No upsets, no power failures, no computer glitches – a real testimony to Hager and Complete Water Service's careful planning and to their quality engineering, construction and operation personnel and programs.

All the unique features that Hager Hinge incorporated into their new system are too numerous to include in this brief article but one to be highlighted is the large equalization tanks they installed that provide a fail-safe place to divert wastewater during the treatment process when the computer determines that the quality of water quality is not what is should be. On such an occasion, an automatic valve to the city sewer is closed, an alarm is sounded and the non-compliant wastewater is sent to an equalization basin.

Truly, Hager Hinge is to be complimented on its commitment to excellence in both treatment design and operations. They have proven to be a worthy recipient of the 2001 AWEA Award in the Category of Physical-Chemical Treatment. The Hager facility and the computer system is a "must see" for any firm that is contemplating updating an inadequate treatment system.

Figure 4. A few of the transfer pumps and piping.

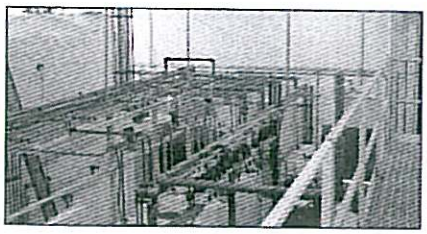

Figure 5. Equalization and processing tanks with chemical feed pumps and piping layout.

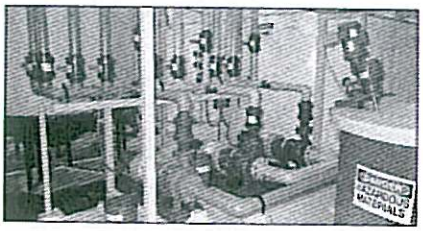

Figure 6. Inclined plate clarifier (foreground) and plate and frame press (background).

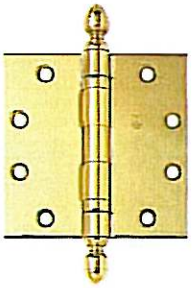

Complete Water Services, LLC

# DESIGN/BUILD PROJECT DESCRIPTION

**CLIENT:** **Hagar Companies, Montgomery, AL**
**Wastewater Treatment Plant (WWTP)**

## BACKGROUND:

Headquartered in St. Louis, Hagar Companies is one of the largest manufacturers of residential and commercial door hardware in the world. The metal finishings, metal plating, and painting operations yield wastewater containing cyanide and high metals concentrations. To keep pace with increased manufacturing operations, the existing WWTP at their Montgomery manufacturing facility needed to be completely replaced with a green field installation, in order to increase both capacity and reliability.

## PROJECT REQUIREMENTS:

- Double the capacity of existing system to 316,800 gpd
- Reuse as much of existing equipment as possible
- Design/Build system including new stand-alone building
- Improve stability, efficiency, ease/cost of operation, and maintenance
- Continuously treat a wide range of contaminants, including cyanide
- Increase capacity to treat surges of contaminant volume and concentration
- Demolish and dispose of existing WWTP (hazardous materials considerations)
- Aggressive schedule, existing WWTP equipment was in very poor condition and was subject to catastrophic failure
- PLC/Computer control system with graphics
- Tight budget

**ALABAMA WATER ENVIRONMENT ASSOCIATION PLANT OF THE YEAR**

## SYSTEM COMPONENTS:

- Flow equalization
- Continuous pH neutralization
- Continuous cyanide destruction
- Chemical flocculation/ coagulation
- Clarification
- Cartridge filtration
- Ion exchange
- Sludge decant and filter press de-watering
- Oil separation from alkaline degreaser
- PLC/Computer control with extensive automation

- Design maximized use of existing equipment
- Brought on-line with no interruption of manufacturing
- Green field installation including building, utilities and equipment
- Demolition/ disposal of existing system

Complete Water Services, LLC

# DESIGN/BUILD PROJECT DESCRIPTION

**CLIENT:** **Estes-Simmons Silverplating, Ltd.**
**Wastewater Treatment Plant (WWTP)**

Estes-Simmons Silverplating Ltd. Since 1891

## BACKGROUND:

Estes-Simmons Silverplating, in Atlanta, GA, specializes in the repair and restoration of precious and semi-precious metal antiques and art objects. The company uses caustic cleaning, metal plating, buffing, polishing, and painting operations, yielding wastewater with high concentration of metals and cyanide.

**Complete Water Services (CWS) was retained to design and build a physically small but effective WWTP to meet stringent local wastewater discharge requirements.**

## PROJECT REQUIREMENTS:

- Low flow rate (4,500 gpd)
- Design/Build system with small footprint
- Minimum operating costs
- Minimum operator attention and maximum ease of operations
- Effectively treat a wide range of contaminants including precious metals and cyanide
- Recover precious metals such as silver and gold
- Aggressive schedule, coincident with planned building refurbishment
- Tight budget

## SYSTEM COMPONENTS:

- Flow equalization
- pH neutralization
- Safe cyanide destruction
- Chemical flocculation/ coagulation
- Clarification
- Cartridge filtration
- Ion exchange
- Precious metal precipitation and recovery

- Design maximized ease of operation
- Brought on-line with no interruption of business
- Stringent effluent standards met under low-flow conditions

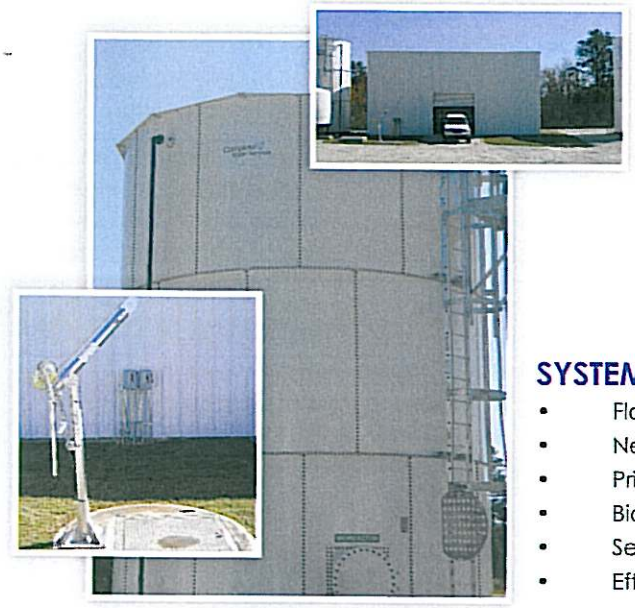
Complete Water Services, LLC

# DESIGN/BUILD PROJECT DESCRIPTION

**CLIENT:** **King's Hawaiian Bakery, Inc., Oakwood, GA**
**Wastewater Pretreatment System**



## BACKGROUND:

In the 1950's, Robert's Bakery of Hilo, Hawaii, developed the famous Original Recipe of King's Hawaiian Sweet Bread. Nearly a decade later, the well-known bakery expanded and moved to King's Street in Honolulu. The bakery and cafe immediately turned into a destination location for locals and tourists who shipped the bread back to the mainland as gifts. In the late 1970s, some aloha was shared with the mainlanders by the construction of a commercial bakery in California.

In 2004, King's Hawaiian continued to expand with a 150,000 square foot, state of the art baking facility and corporate headquarters in Torrance, CA. King's Hawaiian Bakery decided to expand to the east coast and, in the summer of 2011, constructed a new baking facility in Georgia.

Wastewater from the bakery is generated as a normal daily activity, mostly of from plant and equipment wash water. The wastewater is high in dissolved sugars and carbohydrates which exert a high biochemical oxygen demand (BOD). The bakery wastewater is also high in fats, oils, greases (FOG), and Total Suspended Solids (TSS).

## PROJECT REQUIREMENTS:

- Design/build of a biological treatment process to educe BOD
- Storage capacity for wastewater generated over the weekend and process it during the following week
- Influent rate of 30 gallons per minute
- Treatment for fats, oils, greases, solids, and dissolved BOD

## SYSTEM COMPONENTS:

- Flow equalization with aeration
- Neutralization/coagulation/flocculation
- Primary dissolved air flotation
- Bioreactor – Activated Sludge
- Secondary Dissolved air flotation
- Effluent monitoring

**WASTEWATER FACILITY WAS FILMED AND SHOWN ON NATIONAL TELEVISION.**

- Design and construction of a new wastewater facility
- Efficient and cost effective design using the same dissolved air flotation unit for primary and secondary separation
- DAF for sludge removal allows higher mixed liquor concentrations
- Higher mixed liquor concentrations result in smaller tank requirements

# DESIGN/BUILD PROJECT DESCRIPTION

## CLIENT: Voith Paper Fabric & Roll Systems, Inc., West Monroe, LA
## Wastewater Pretreatment System

VOITH

## BACKGROUND:

Voith Paper Fabric & Roll Systems, Inc. is a German-owned company that repairs, refurbishes and maintains large rollers for the paper industry. These repairs/ maintenance include:

- Repair or replacement of journals
- Rubber roll covers
- Mechanical repairs
- Balancing

Repair activities are different for each roller that enters the facility. Any combination of the above can be conducted on the roller or its associated parts. These activities can be comprised of any of the following:

- Solvent cleaning
- Burning bar/lancing to remove journal
- Lathe removal of existing cover material
- Machining
- Welding
- Thermal metal spraying
- Abrasive blasting
- Application of rubber cover material
- Wet grinding of new cover
- Application of surface coating

These repair activities generate process wastewater which is constantly changing. CWS completed a design/build of a flexible pretreatment system that removes grit, adjusts pH, removes oil & grease, removes Total Suspended Solids, and removes metals to levels that consistently meet the required discharge limits.

## PROJECT REQUIREMENTS:

- Design/build of a multi-staged treatment process
- Small space for treatment system (20' x 40')
- Influent rate of 40 gallons per minute
- Increase the capability to treat surges of flow volume and contaminant concentrations

## SYSTEM COMPONENTS:

- Oil separation and grit removal
- Flow equalization
- Neutralization/coagulation/flocculation
- Dissolved air flotation
- Effluent monitoring

- Maximized the layout of process equipment in limited space
- Effluent concentrations meet discharge limits

Complete Water Services, LLC

# DESIGN/BUILD PROJECT DESCRIPTION

**CLIENT: CeramTec North America, Laurens, SC**
**Wastewater Pretreatment System**

CeramTec
THE CERAMIC EXPERTS

## BACKGROUND:

CeramTec is a leader in manufacturing "high-performance ceramics". The Laurens, SC, facility has been continuously producing technical ceramic products since 1961. These products support automotive, aerospace, cryogenics, high-energy physics, telecommunications, electronics, structural, textile, microwave and nuclear applications. During the manufacture of these technical ceramics, wastewater is generated that is high in metals and Total Suspended Solids. CWS was retained to upgrade and replace the existing pretreatment system with one that would continually meet discharge requirements.

## PROJECT REQUIREMENTS:

- Influent flow rate of 10 gallons per minute
- Pretreatment for metals and solids
- Design/build of new system in limited space allotted while existing system remained online
- Reuse of some of the existing equipment

## SYSTEM COMPONENTS:

- Filtration
- Flow equalization
- Tank for emergency flow or high concentration wastewater holding
- Neutralization/coagulation/flocculation
- Clarification/sedimentation
- Sludge dewatering

- CWS completed the system with no interruption in plant operations
- Design maximized the use of existing equipment
- Effluent consistently meets discharge limits

Mr. Patrick Smart, PE
Project Engineer
The Johnson Company
100 State Street, Suite 600
Montpelier, VT 05602

RE: Flowery Branch, GA

Dear Mr. Smart,

We are pleased to offer, for your consideration and approval, our proposal to provide operations for the wastewater systems at the above referenced location.

This proposal is based upon our discussion of a ground water remediation system that is to be installed in the Flowery Branch, GA area.

Our proposal is based upon providing the following services:

Provide a Georgia Certified Wastewater to manage the system operations and to submit a signed EPD monitoring report each month when the new wastewater permit is issued.
Monthly Fee-$300

Provide site visit and labor to operate treatment system, make adjustment as necessary, perform preventative maintenance, maintain chemical feed systems, etc.
Monthly fee-$45 per hour for onsite services

This service may be cancelled at any time with 30 days notice.

CWS provides water and wastewater operations and support over twenty facilities in Georgia; we can provide you with references if desired.

Should this proposal meet with your approval, please sign and return one copy for our files.

I appreciate the opportunity to be of service and we look forward to working with you on this project. Please let me know if you have any questions.

Sincerely, Accepted by_____

Jim Lewis Date _____

Assumptions

- Treatment chemical required to maintain system will be purchased separately or provided by client
- Laboratory analysis fees are not included in monthly fees quoted
- Spare parts are not included in monthly fees quoted
- System will be designed and installed so that no unsafe conditions are created

## SUMMARY

This preliminary draft Best Management Practices Plan has been prepared as an accompaniment to the industrial pretreatment permit application submitted to the State of Georgia. This document describes the chemicals that will be associated with the proposed multiphase extraction system, spill prevention procedures, and emergency response procedures to be implemented in the event of a discharge of process liquids from the multiphase extraction and treatment system (the System).

This preliminary draft BMP will be reviewed and revised following procurement of the multiphase extraction system components and construction of the System at the Site. The revised BMP will be incorporated into the System Operations and Maintenance Manual (OMM), which will be prepared prior to System startup.

## 1.0 INTRODUCTION

This Best Management Practices Plan (BMP) exists to foster awareness and implement practices to reduce and mitigate potential spills of hazardous or toxic materials to the ground during operation of the Multiphase Extraction and Groundwater Treatment System (the System) at the Avery Dennison Corporation (Avery Dennison) Facility located at 4350 Avery Drive, Flowery Branch, Georgia. The System is being voluntarily implemented and operated by Avery Dennison in response to its commitment per the Voluntary Remediation Program Act. This BMP also serves to recommend procedures to reduce the potential for discharges of hazardous or toxic materials, if any, to reach surface water or groundwater receptors. This BMP will be reviewed annually and updated if significant changes are implemented to System components or processes.

The BMP Implementation Committee is comprised of the System Operator, Complete Water Services, LLC; the Engineer and Project Manager, The Johnson Company, Inc.; and the System Owner, Avery Dennison Corporation, and its representative, Mr. Bruce Martin, Manager of Remediation Services. Table 1 provides contact information for the committee.

## 2.0 SYSTEM DESCRIPTION

The System extracts a combined flow of groundwater and soil vapor from on-Site extraction wells via vacuum created by a liquid-ring pump. The extracted groundwater and soil vapor flow will be separated in a knockout tank. The soil vapor will be exhausted to a stack above the roof line of the facility. From the knockout tank, the groundwater will be treated by an air stripper to reduce target volatile organic compound concentrations followed by an advanced oxidation process (AOP) to reduce 1,4-dioxane concentrations prior to discharge to the Flowery Branch sewer collection system. The Operation and Maintenance Manual will describe the System in detail. Electricity needed for the System operation will be provided from the adjacent on-Site building. The System will require the storage and handling of three chemical materials:

- Sealant oil will be used by the liquid ring pump. This sealant oil will be contained in a closed loop within the liquid ring pump. This closed loop includes an oil storage reservoir with a nominal capacity of approximately 20 gallons. During routine operations, the sealant oil will be replaced approximately once per year.

- Hydrogen peroxide is used in the AOP treatment process. Three percent (by weight) hydrogen peroxide solution will be stored in a double-walled storage tank located inside the AOP enclosure. It is currently projected the System will consume approximately 50 gallons of hydrogen peroxide solution per month.

- Ozone is also used during the AOP treatment process. Liquid oxygen will be used to generate ozone. Liquid oxygen will be stored on-Site in dewars provided by the chemical supplier. The liquid oxygen storage area will be located near the AOP enclosure.

Preliminary material safety data sheets (MSDS) for the sealant oil, hydrogen peroxide solution, and liquid oxygen are provided in Appendix A. None of the liquids or gases associated with the System possesses physical and/or chemical characteristics of a hazardous material. Descriptions of the chemical storage, spill prevention, and emergency response actions are provided in the following sections.

# 3.0 CHEMICAL STORAGE AND HANDLING

## 3.1 CHEMICAL STORAGE

As described in Section 2, sealant oil, hydrogen peroxide, and liquid oxygen will be utilized by the System. Approximate storage volumes and containers for these materials are described below.

Sealant oil will be contained within the liquid ring vacuum pump assembly. The sealant oil reservoir within the vacuum pump assembly will be approximately 20 gallons. This sealant oil will be utilized in a closed loop, and will not be consumed by the pump during routine operations. The sealant oil will be replaced approximately once per year. Oil replacement will be performed as part of the preventative maintenance recommend by the manufacturer, procedures and documentation will be provided in the Operations and Maintenance Manual (OMM), which will be kept with the System.

The three percent hydrogen peroxide solution will be stored in a double-walled tank with a nominal capacity of 100-gallons. Hydrogen peroxide solution will be delivered to the Site in drums provided by the chemical supplier. Drums will be stored on containment pallets in a dedicated chemical storage area located within the remediation system enclosure. The hydrogen peroxide storage areas will be clearly labeled with appropriate signs and placards.

Liquid oxygen will be stored in dewars provided by the chemical supplier. The dewars will be stored in a dedicated storage area within the remediation system enclosure. The storage area will have the capacity to store four dewars; only one dewar will be used at a time. The liquid oxygen storage area will include signage and placards necessary to identify the storage area and communicate any associated hazards. This storage area will meet the requirements of NFPA 50 (Standard for Bulk Oxygen Systems at Consumer Sites).

In addition, the treatment System includes two above-ground tanks that will store extracted groundwater. Groundwater will also be contained in process piping, the air stripper, and the AOP reactor. Routine operations will not require handling of the groundwater.

Groundwater will be handled during sample collection, and may be encountered during maintenance of treatment system components. Sample collection and system maintenance procedures will be provided in the OMM.

## 3.2 CHEMICAL HANDLING

Sealant oil will be contained within a closed loop system within the liquid ring pump assembly, and will not be handled during routine operations. The OMM will describe procedures for performing maintenance activities that may involve handling sealant oil.

Hydrogen peroxide solution will be metered into the AOP via a metering pump connected to the storage tank. The Programmable Logic Controller (PLC) for the System will automatically control the operation of the metering pump; hydrogen peroxide will be handled only when transferring the solution from the containers (drums) provided by the chemical supplier to the storage tank, and when moving the drums from the drum storage area to the tank loading area.

The Hydrogen peroxide solution will be manually transferred from the drums to the storage tank using a drum pump. Specific procedures for transferring the hydrogen peroxide solution will be included in the OMM, and will include the following best practices:

- An Operator or designee shall be present during all hydrogen peroxide transfer activities, the transfer pump shall not be operated unattended.
- A spill response kit shall be readily available.
- The Operator or designee shall monitor the liquid inventory of the storage tank, and cease transfer activities if the liquid inventory in the tank is greater than 95 percent.

The chemical supplier will deliver hydrogen peroxide solution to the Site in drums; liquid oxygen will be delivered in dewars. The Operator will be required to transport these containers to storage areas located within the remediation system enclosure. Drums shall be moved by hand using a truck or dolly specifically designed for transporting drums; dewars shall be transported using a dolly or hand truck. The following best management practices shall be employed during transportation of drums and dewars:

- Inspect the item to be moved for physical defects. Ensure that all openings are closed.
- Walk the planned transportation route and remove any obstacles or trip hazards encountered.
- Load the item onto the transport mechanism, secure the drum using the straps/attachments provided.
- Move the item cautiously and deliberately along the planned route.

## 4.0 SPILL PREVENTION

A multi-faceted approach will be utilized to prevent spills and uncontrolled releases of materials from the System. This approach employs process controls, good housekeeping, preventative maintenance, routine system inspections, training, and records management requirements, as described in the following subsections.

### 4.1 PROCESS CONTROLS

The System will be equipped with process instrumentation and a programmable logic controller (PLC) to control and monitor System operations. Process instrumentation includes flow meters installed on groundwater influent and effluent pipelines and water level float switches installed in all storage tanks. The PLC will include process controls that will maintain the groundwater flow rates through the System to be less than the maximum allowable daily flow rate (15,000 gallons per day), and controls that will activate alarms and shutdown the System if the groundwater flow rate approaches the maximum allowable daily flow. The PLC will also monitor the water level float switches, and will activate alarms if these float switches are activated. In the event of an influent pipeline or storage tank failure, the respective flow meter or float switch will indicate the upset condition, and the PLC will activate an alarm, and disable the appropriate System components. The PLC will also activate the telemetry system to notify the Operator and the Engineer of the alarm condition so that corrective measures can be undertaken.

## 4.2 GOOD HOUSEKEEPING

The following BMP housekeeping measures will be employed:

- Hazardous materials will not be used for System operations, and will not be stored in the System compound.
- The area surrounding the aboveground influent groundwater storage tank and its associated connections will be kept clear of other equipment to facilitate observation for leaks, and to prevent damage to the tank and connections.
- Walkways and pathways will be maintained free of obstruction.
- The Operator will routinely inspect the components of the system for evidence of leakage, damage, or degradation.
- Spill Response Kits, including sorbent pads, booms, and other related materials to address any spilled liquids will be maintained in all chemical storage areas.
- Preventative maintenance will be performed, as described below.

## 4.3 PREVENTIVE MAINTENANCE

Preventative maintenance will be performed on System components as recommended by the manufacturer. A System Operations and Maintenance Manual (OMM) will be prepared following construction of the System. The OMM will include a schedule of preventative maintenance activities, and manufacturer-provided documentation for System components.

## 4.4 INSPECTIONS AND RECORDS

Routine System inspections will be performed by the Operator. The inspection activities, documentation requirements, and inspection schedule will be described in the OMM. The OMM, this BMP, inspection documentation, and copies of completed field forms will be stored within the remediation system enclosure at the Site and will be available to the Operator, Engineer, and Authorized Site Visitors.

## 4.5 TRAINING

All personnel will familiarize themselves with this BMP, the OMM, and their site-specific Health and Safety Plan before conducting any work on the System. The Operator will

review this BMP on an annual basis and/or following any revisions. All Contractors that may do work on or around the System will be made aware of this BMP.

### 4.6 SECURITY

The System will be maintained under locked conditions when the Operator is not present. The treatment system will be located within a fenced enclosure with a locked gate, and the treatment enclosures will be equipped with locking doors. All extraction wells and piping will be enclosed within a fenced enclosure; therefore, the System will not be accessible to unauthorized personnel. Keys for System will be held by the Operator, the Engineer, and Avery Dennison.

## 5.0 SPILL RESPONSE

Hazardous materials identified by 40 CFR Part 302 will not be used by the System or stored within the System enclosure at the Site. Therefore, discharges of hazardous materials related to the System should not occur. However, if any person attending to the System observes a discharge of groundwater or other materials from the System, they will promptly take immediate steps to mitigate and report the discharge, including:

- Shut down the System (if the PLC has not already done so).
- Assess the size and scope of the discharge.
- Conduct response actions to mitigate the spill, if practical.
- Report the discharge to the entitles described in Section 5.1.

### 5.1 INCIDENT REPORTING

All spills shall be immediately reported to the Spill Response Emergency Contacts identified in Table 2.

**Table 2**
**Spill Response Emergency Contacts**

| Organization | Contact | Phone |
|---|---|---|
| Flowery Branch POTW | 24-Hour Emergency Line | (678) 776-3475 |
| Flowery Branch POTW | Jimmy Dean | (678) 776-1074 |
| The Johnson Company | Patrick Smart, P.E. | (802) 229-4600 |

| Table 2<br>Spill Response Emergency Contacts | | |
|---|---|---|
| **Organization** | **Contact** | **Phone** |
| The Johnson Company | Joel Behrsing, P.E. | (802) 229-4600 |
| The Johnson Company | Glen Kirkpatrick, P.G. | (802) 229-4600 |

| Avery Dennison Corporation | Bruce Martin | (508) 476-5041 |
| Complete Water Services LLC | To Be Determined | (678) 355-9270 |

If the person observing the discharge cannot readily mitigate the spill, the designated Spill Response Contractor, Roadrunner Express Inc. (Roadrunner) will be contacted to respond and/or assist with managing any spill response residual. Roadrunner's contact information is:

Roadrunner Express Inc,

24-hour Emergency Line - (770) 967-6501

In the event of a reportable spill from the System as identified by the State of Georgia (see Appendix B), including a spill where material is discharged to the on-Site Storm Drain or the Unnamed Tributary to Mud Creek, the spill shall be immediately reported to Georgia EPD, the National Response Center, and the emergency contacts described above. Table 3 provides emergency contact information for reportable spills.

# APPENDIX A
# MATERIAL SAFETY DATA SHEETS

# DEKKER
## VACUUM TECHNOLOGIES, INC.

## MATERIAL SAFETY DATA SHEET

**Vmaxol STANDARD**

**Sealant for oil-sealed vacuum pump systems**

### PRODUCT INFORMATION:
**DEKKER PART No's: 5220**-0010-**000** (1 gal) - **5220**-0050-**000** (5 gal) - **5220**-0550-**000** (55 gal)
**CHEMICAL NAME:** hydrotreated, paraffinic mineral oil - **CHEMICAL FAMILY:** semi-synthetic hydrocarbon
**FORMULA:** proprietary - **CAS#:** proprietary

### COMPONENTS AND HAZARD STATEMENT:
This material has **no known hazards** under applicable laws. The product contains **no known carcinogens**. No special warning labels are required under OSHA 29CFR 1910.1200. Product is TSCA (Toxic Substance Control Act), EU (European Union) and METI (Ministries of Economy, Trade and Industry (Far East)) compliant.

### HANDLING, PROTECTION, HEALTH HAZARD DATA AND FIRST AID:
**AVOID BREATHING OIL MISTS** (threshold limit value: 5 mg/m$^3$ ACGIH for oil mists). Product is not toxic by inhalation. Use in **well ventilated area** with local exhaust. **If** oil mist is **inhaled**, **move to fresh air and consult physician.**
**DO NOT TAKE INTERNALLY**. **If ingested: DO NOT INDUCE VOMITING**. If conscious, give 2 glasses of water and consult physician.**Do not give anything by mouth** if person is **unconscious** or having convulsions. May cause nausea and diarrhea.
**AVOID CONTACT WITH SKIN, EYES AND CLOTHING**. Protective **gloves** not required, but **recommended**, especially for prolonged exposure. **Upon contact** with skin, **wash exposed area with soap and water**. Wash contaminated clothing before re-use. **Eye/face protection: safety glasses or goggles. If product enters the eyes: flush with water for 15 minutes** and **consult physician.**

### STORAGE, SPILL OR LEAK PROCEDURES AND WASTE DISPOSAL METHOD:
**STORAGE:** Keep **container** tightly **sealed** when not in use.
**IN CASE OF SPILL: Wear** suitable **protective equipment**, especially **goggles**. **Stop the source of the spill**. **Dike** the spill area. Use **absorbent materials** to soak up fluid (i.e. sand, sawdust and commercially available materials). **Wash spill area** with large amounts of water. **Properly dispose of all materials.**
**DISPOSAL: Incinerate this product** and all associated wastes in a licensed facility **in accordance with Federal, State and local regulations.** This material is **not hazardous waste under RCRA Regulation 40 CFR 261.**

### PHYSICAL DATA:
**Appearance:** clear liquid, light amber tint. **Odor:** slight. **Boiling point:** >300°F.
**Vapor pressure:** <0.01 mmHg @ 20°C. **Specific gravity** (water = 1): 0.87 - 0.89.
**Volatiles:** 0% by volume. **Solubility in water:** insoluble. **Evaporation rate** (butyl acetate = 1): nil.

### REACTIVITY DATA:
**Stability:** stable. **Hazardous polymerization:** will not occur. **Incompatible materials:** strong oxidizers.
**Conditions to avoid:** excessive heat.
**Hazardous decomposition products:** analogous compounds evolve carbon monoxide, carbon dioxide and other unidentified chemicals when burned (see below).

### FIRE AND EXPLOSION HAZARDS:
**Flash point** (by Cleveland Open Cup): 465 - 515°F
**Flammable limits:** not established. **Auto-iginition temperature:** no data.
**HMIS ratings:** Health: 0 - Flammability: 1 - Reactivity : 0. **NFPA ratings:** not established.
**Extinguishing media:** dry chemical, $CO_2$ foam, water spray (fog).
**Unusual fire and explosion hazards:** none.
**Special fire fighting techniques:** Toxic fumes, gases or vapors may evolve on burning. Firefighters should use NIOSH/MNSA-approved self-contained breathing apparatus. Use water to cool fire-exposed containers. Use water carefully near exposed liquid to avoid frothing and splashing of hot liquid.

**The information in this material safety data sheet should be provided to all who use, handle, store, transport, or are otherwise exposed to this product. DEKKER VACUUM TECHNOLOGIES, INC. believes the information in this document to be reliable and up to date as of the date of publication, but makes no guarantee that it is.**

## Section 2 Component Mixture

| Sara 313 | Component | CAS Number | % | Dim | Exposure Limits: |
|---|---|---|---|---|---|
| ☐ | Water, Deionized ASTM Type II | CAS# 7732-18-5 | Balance | v/v | None Established |
| ☐ | Hydrogen Peroxide Solution, 50% | CAS# 7722-84-1 | 6% | V/V | OSHA TWA 1 ppm (1.4 mg/m*f*) |

## Section 3 Hazard Identification (Also see section 11)

Generally not hazardous in normal handling, however good laboratory practices should always be used. Avoid long term exposure to skin or by inhalation.

## Section 4 First Aid Measures

Generally not hazardous in normal handling, however good laboratory practices should always be used. Avoid long term exposure to skin or by inhalation.

FIRST AID: SKIN: Wash exposed area with soap and water. If irritation persists, seek medical attention.

EYES: Wash eyes with plenty of water for at least 15 minutes, lifting lids occasionally. Seek Medical Aid. INHALATION: Remove to fresh air. If not breathing, give artificial respiration. If breathing is difficult, give oxygen

INGESTION: Give several glasses of milk or water. Vomiting may occur spontaneously, but it is not necessary to induce. Never give anything by mouth to an unconscious person.

## Section 5 Fire Fighting Measures

| | |
|---|---|
| Fire Extinguisher Type: | Any means suitable for extinguishing surrounding fire |
| Fire/Explosion Hazards: | Oxidizer. Contact with combustible materials may cause a fire. |
| Fire Fighting Procedure: | Wear self-contained breathing apparatus and protective clothing to prevent contact with skin and clothing. |

## Section 6 Accidental Release Measures

Dilute with water. Flush excess down drain.

## Section 7 Handling and Storage

Store in a cool dry place. Do not get in eyes, on skin, on clothing. Wash thoroughly after handling

## Section 8 Exposure Controls & Personal Protection

Respiratory Protection:None required

Ventilation: Mechanical: ☐ Local Exhaust: ☑

Hand Protection: Gloves to prevent skin exposure as latex or vinyl

Eye Protection: Splash Goggles

Other Protective Equipment: Wear appropriate clothing to prevent skin exposure

## Section 9 Physical and Chemical Properties

| | | | |
|---|---|---|---|
| Melting Point: | ~0° C | Specific Gravity | ~1.0 |
| Boiling Point: | ~100° C | Percent Volatile by Volume: | 100% |
| Vapor Pressure: | not available | Evaporation Rate: | not available |
| Vapor Density: | not available | Evaporation Standard: | |
| Solubility in Water: | Soluble | Auto ignition Temperature: | Not applicable |
| Appearance and Odor: | Colorless, odorless liquid | Lower Flamm. Limit in Air: | Not applicable |
| Flash Point: | not flammable | Upper Flamm. Limit in Air: | Not applicable |

## Section 10 Stability and Reactivity Information

Stability: Stable

Conditions to Avoid: Temperature extremes, heat, light

Materials to Avoid:
Flammables, combustibles, Cyanides, Acids, permanganates, Reducing agents

Hazardous Decomposition Products:
Hydrogen, Oxygen

Hazardous Polymerization:not expected to occur

Condition to Avoid:None known

## Section 11 Additional Information

Solution has oxidizing properties. Skin contact may cause irritation, burns, Eye contact may cause irritation, discomfort, burns. Ingestion may release large amounts of oxygen, Cause burns to GI and intestinal tract. Treat symptomatically. Persons with preexisting skin, eye or mucous membrane disorders may be more susceptible.

DOT Classification: Not Regulated

DOT regulations may change from time to time. Please consult the most recent version of the relevant regulations.

Revision No:0 Date Entered: 9/1/2006 Approved by: WPF

## 3. Hazards Identification

**EMERGENCY OVERVIEW**

**WARNING! High-pressure, oxidizing gas.**
**Vigorously accelerates combustion.**
**Self-contained breathing apparatus may be required by rescue workers.**
**Odor: None**

**THRESHOLD LIMIT VALUE:** None currently established— ACGIH 1997 recommends a TLV-TWA of 0.5 mg/m$^3$ for welding fumes not otherwise classified (NOC) thatmay be generated during welding with this product. See section 16 for more information on welding hazards.

**EFFECTS OF A SINGLE (ACUTE) OVEREXPOSURE:**

**INHALATION–**Breathing 80% or more oxygen at atmospheric pressure for more than a few hours may cause nasal stuffiness, cough, sore throat, chest pain and breathing difficulty. Breathing oxygen at

Copyright 1978, 1985, 1992, 1997 Praxair Technology, Inc.
All rights reserved.

higher pressure increases the likelihood of adverse effects within a shorter time period. Breathing pure oxygen under pressure may cause lung damage and also central nervous system effects resulting in dizziness, poor coordination, tingling sensation, visual and hearing disturbances, muscular twitching, unconsciousness and convulsions. Breathing oxygen under pressure may cause prolongation of adaptation to darkness and reduced peripheral vision.
**SKIN CONTACT–**No harm expected.
**SWALLOWING–**This product is a gas at normal temperature and pressure.
**EYE CONTACT–**No harm expected.

**EFFECTS OF REPEATED (CHRONIC) OVEREXPOSURE:** No harm expected.

**OTHER EFFECTS OF OVEREXPOSURE:** See section 11, Toxicological Information.

**MEDICAL CONDITIONS AGGRAVATED BY OVEREXPOSURE:** See section 11, Toxicological Information.

**SIGNIFICANT LABORATORY DATA WITH POSSIBLE RELEVANCE TO HUMAN HEALTH HAZARD EVALUATION:** None known.

**CARCINOGENICITY:** Oxygen is not listed by NTP, OSHA, or IARC.

## 4. First Aid Measures

**INHALATION:** Remove to fresh air. If not breathing, give artificial respiration. Keep victim warm and at rest. Call a physician. Advise the physician that the victim has been exposed to a high concentration of oxygen.**SKIN CONTACT:** No emergency care anticipated.

**SWALLOWING:** This product is a gas at normal temperature and pressure.

**EYE CONTACT:** No emergency care anticipated.

***NOTES TO PHYSICIAN:*** *Supportive treatment should include immediate sedation, anti-convulsive therapy if needed, and rest. See section 11, Toxicological Information.*

## 5. Fire Fighting Measures

| | | | | |
|---|---|---|---|---|
| **FLASH POINT (test method)** | Not applicable | **AUTOIGNITION TEMPERATURE** | Not applicable | |
| **FLAMMABLE LIMITS IN AIR, % by volume** | **LOWER** | Not applicable | **UPPER** | Not applicable |

**EXTINGUISHING MEDIA:** Vigorously accelerates combustion. Use media appropriate for surrounding fire. Water (e.g. safety shower) is the preferred extinguishing media for clothing fires.

**SPECIAL FIRE FIGHTING PROCEDURES:**
**WARNING! High-pressure, oxidizing gas.** Evacuate all personnel from danger area. Immediately deluge cylinders with water from maximum distance until cool, then move them away from fire area if without risk. Self-contained breathing apparatus may be required by rescue workers. On-site fire brigades must comply with OSHA 29 CFR 1910.156.

**UNUSUAL FIRE AND EXPLOSION HAZARDS:** Oxidizing agent; vigorously accelerates combustion. Contact with flammable materials may cause fire or explosion. Heat of fire can build pressure in cylinder and cause it to rupture. Oxygen cylinders are equipped with a pressure relief device (Exceptions may exist where authorized by DOT.) No part of a cylinder should be subjected to a temperature higher than

125F (52C). Smoking, flames, and electric sparks in the presence of enriched oxygen atmospheres are potential explosion hazards.

**HAZARDOUS COMBUSTION PRODUCTS:** None known.

## 6. Accidental Release Measures

**STEPS TO BE TAKEN IF MATERIAL IS RELEASED OR SPILLED:**
**WARNING! High-pressure, oxidizing gas.** Shut off flow if without risk. Ventilate area or move cylinder to well-ventilated area. Remove all flammable materials from vicinity. Oxygen must never be permitted to strike an oily surface, greasy clothes, or other combustible material.

**WASTE DISPOSAL METHOD:** Prevent waste from contaminating the surrounding environment. Keep personnel away. Discard any product, residue, disposable container or liner in an environmentally acceptable manner, in full compliance with federal, state, and local regulations. If necessary, call your local supplier for assistance.

## 7. Handling and Storage

**PRECAUTIONS TO BE TAKEN IN STORAGE:** Store and use with adequate ventilation, away from oil, grease, and other hydrocarbons. Separate oxygen cylinders from flammables by at least 20 feet or use a barricade of noncombustible material. This barricade should be at least 5 feet high and have a fire resistance rating of at least ½ hour. Firmly secure cylinders upright to keep them from falling or being knocked over. Screw valve protection cap firmly in place by hand. Store only where temperature will not exceed 125°F (52°C). Store full and empty cylinders separately. Use a first-in, first-out inventory system to prevent storing full cylinders for long periods.

**PRECAUTIONS TO BE TAKEN IN HANDLING:** Protect cylinders from damage. Use a suitable hand truck to move cylinders; do not drag, roll, slide, or drop. Never attempt to lift a cylinder by its cap; the cap is intended solely to protect the valve. Never insert an object (e.g., wrench, screwdriver, pry bar) into cap openings; doing so may damage the valve and cause a leak. Use an adjustable strap wrench to remove over-tight or rusted caps. Open valve slowly. If valve is hard to open, discontinue use and contact your supplier. Never apply flame or localized heat directly to any part of the cylinder. High temperatures may damage the cylinder and could cause the pressure relief device to fail prematurely, venting the cylinder contents. Never strike an arc on a compressed gas cylinder or make a cylinder part of an electrical circuit. For other precautions in using oxygen, see section 16.

**Precautions when using oxygen in welding and cutting:** Read and understand the manufacturer's instructions and the precautionary labels on the products. See American National Standards Institute (ANSI) Z49.1, *Safety in Welding and Cutting*, published by the American Welding Society, PO Box 351040, Miami, Florida 33135 and National Fire Protection Association (NFPA) 51,*Oxygen Fuel Gas Welding and Cutting*.

## 8. Exposure Controls/Personal Protection

**VENTILATION/ENGINEERING CONTROLS:**

**LOCAL EXHAUST–**Use a local exhaust system, if necessary, to prevent increased oxygen concentration and, in welding, to keep hazardous fumes and gases below applicable TLVs in the worker's breathing zone.

**MECHANICAL (general)**–General exhaust ventilation may be acceptable if it can maintain a supply of air that is not too rich in oxygen and, during welding, can keep hazardous fumes and gases below the applicable TLVs in the worker's breathing zone.
**SPECIAL–**None
**OTHER–**None

**RESPIRATORY PROTECTION:** None required under normal use. However, air-supplied respirators are required while working in confined spaces with this product. For welding, use air-purifying or air-supplied respirators, as appropriate, where local or general exhaust ventilation is inadequate. Adequate ventilation must keep worker exposure below applicable TLVs for fumes, gases and other by-products of welding with oxygen. See sections 3, 10, and 16 for details. The respiratory protection use must conform with OSHA rules as specified in 29 CFR 1910.134.

**SKIN PROTECTION:** Wear work gloves when handling cylinders; welding gloves for welding. Gloves must be free of oil and grease.

**EYE PROTECTION:** Wear safety glasses when handling cylinders. For welding, wear goggles with filter lens selected as per ANSI Z49.1. Provide protective screens and goggles, if necessary, to protect others. Select as per OSHA 29 CFR 1910.33

**OTHER PROTECTIVE EQUIPMENT:** Metatarsal shoes for cylinder handling. Select in accordance with OSHA 29 CFR 1910.132 and 1910.133. As needed for welding, wear hand, head, and body protection to help prevent injury from radiation and sparks. (See ANSI Z49.1.) At a minimum this includes welder's gloves and protective goggles, and may include arm protectors, aprons, hats, shoulder protection, as well as substantial clothing. Regardless of protective equipment, never touch live electrical parts.

## 9. Physical and Chemical Properties

| | |
|---|---|
| **MOLECULAR WEIGHT:** 31.9988 | **EXPANSION RATIO:** Not applicable |
| **SPECIFIC GRAVITY (air=1):** At 70°F (21.1°C) and 1 atm: 1.105 | **SOLUBILITY IN WATER:** vol/vol at 32°F (0°C): 0.0491 |
| **GAS DENSITY:** At 70°F (21.1°C) and 1 atm: 0.083279 lbs/ft$^3$(1.326 kg/m3) | **VAPOR PRESSURE:** AT 68°F (20°C): Not applicable |
| **PERCENT VOLATILES BY VOLUME:** 100 | **EVAPORATION RATE (Butyl Acetate=1):** Gas, not applicable |
| **BOILING POINT (1 atm):** -297.33°F (182.96°C) | **pH:** Not applicable |
| **FREEZING POINT (1 atm):** -361.8°F (-218.78°C ) | |

**APPEARANCE, ODOR, AND STATE:** Colorless, odorless, tasteless gas at normal temperature and pressure.

## 10. Stability and Reactivity

| | | | | |
|---|---|---|---|---|
| **STABILITY:** | **Unstable** | | **Stable** | **X** |

**7INCOMPATIBILITY (materials to avoid):** Combustible materials, asphalt, flammable materials, especially oils and greases. Oxygen reacts with many materials. See NFPA 491M,*Manual of Hazardous Chemical Reactions* for details.

**HAZARDOUS DECOMPOSITION PRODUCTS:** None.

| | | | | |
|---|---|---|---|---|
| **HAZARDOUS POLYMERIZATION:** | **May Occur** | | **Will Not Occur** | **X** |

**CONDITIONS TO AVOID:** None currently known.

## 11. Toxicological Information

At atmospheric concentration and pressure, oxygen poses no toxicity hazards. At high concentrations, newborn premature infants may suffer delayed retinal damage (retrolental fibroplasia) that can progress to retinal detachment and blindness. Retinal damage may also occur in adults exposed to 100% oxygen for extended periods (24 to 48 hours) or at greater than atmospheric pressure, particularly in individuals whose retinal circulation has been previously compromised. All individuals exposed for long periods to oxygen at high pressure and all who exhibit overt oxygen toxicity should have ophthalmologic examinations.

At two or more atmospheres, toxicity to the Central Nervous System (CNS) occurs. Symptoms include nausea, vomiting, dizziness or vertigo, muscle twitching, vision changes, and loss of consciousness and generalized seizures. At three atmospheres, CNS toxicity occurs in less than two hours; at six atmospheres, in only a few minutes.

Patients with chronic obstructive pulmonary disease retain carbon dioxide abnormally. If oxygen is administered, raising their blood oxygen concentration, their breathing becomes depressed and retained carbon dioxide rises to a dangerous level.

Animal studies suggest that the administration of certain drugs, including phenothiazine drugs and chloroquine, increases the susceptibility to toxicity from oxygen at high concentrations or pressures. Animal studies also indicate that vitamin E deficiency may increase susceptibility to oxygen toxicity.

Airway obstruction during high oxygen tension may cause alveolar collapse following absorption of the oxygen. Similarly, occlusion of the eustachian tubes may cause retraction of the eardrum and obstruction of the paranasal sinuses may produce vacuum-type headache.

## 12. Ecological Information

No adverse ecological effects expected. Oxygen does not contain any Class I or Class II ozone-depleting chemicals. Oxygen is not listed as a marine pollutant by DOT.

## 13. Disposal Considerations

**WASTE DISPOSAL METHOD:** Do not attempt to dispose of residual or unused quantities. Return cylinder to supplier. For emergency disposal, secure cylinder in a well-ventilated area or outdoors, then slowly discharge gas to the atmosphere.

## 14. Transport Information

| | |
|---|---|
| **DOT/IMO SHIPPING NAME:** Oxygen, compressed | **HAZARD CLASS:** 2.2 |
| **IDENTIFICATION NUMBER:** UN 1072 | **PRODUCT RQ:** Not applicable |

**SHIPPING LABEL(s):** OXYGEN. An oxygen label may be used for domestic shipment in the United States and Canada in place of the NONFLAMMABLE GAS and OXIDIZER labels (49 CFR Part 172).

**PLACARD (When required):** Nonflammable gas or oxygen

**SPECIAL SHIPPING INFORMATION:** Cylinders should be transported in a secure position, in a well-ventilated vehicle. Cylinders transported in an enclosed, nonventilated compartment of a vehicle can present serious safety hazards.
Shipment of compressed gas cylinders that have been filled without the owner's consent is a violation of federal law [49 CFR 173.301(b)].

## 15. Regulatory Information

The following selected regulatory requirements may apply to this product. Not all such requirements are identified. Users of this product are solely responsible for compliance with all applicable federal, state, and local regulations.

**U.S. FEDERAL REGULATIONS:**

**EPA (Environmental Protection Agency)**

**CERCLA:** Comprehensive Environmental Response, Compensation, and Liability Act of 1980 (40 CFR Parts 117 and 302):

**Reportable Quantity (RQ):** None

**SARA:** Superfund Amendment and Reauthorization Act:

- **SECTIONS 302/304:** Require emergency planning based on Threshold Planning Quantity (TPQ) and release reporting based on Reportable Quantities (RQ) of extremely hazardous substances (40 CFR Part 355):

  **Threshold Planning Quantity (TPQ):** None.
  **Extremely Hazardous Substances (40 CFR 355):** None.

- **SECTIONS 311/312:** Require submission of Material Safety Data Sheets (MSDSs) and chemical inventory reporting with identification of EPA hazard categories. The hazard categories for this products are as follows:

  IMMEDIATE: No
  DELAYED: No
  PRESSURE: Yes
  REACTIVITY: No
  FIRE: Yes

- **SECTION 313:** Requires submission of annual reports of release of toxic chemicals that appear in 40 CFR Part 372.

  Oxygen does not require reporting under Section 313.

**40 CFR 68:** Risk Management Program for Chemical Accidental Release Prevention: Requires development and implementation of risk management programs at facilities that manufacture,

use, store, or otherwise handle regulated substances in quantities that exceed specified thresholds.

Oxygen is not listed as a regulated substance.

**TSCA:** Toxic Substances Control Act: Oxygen is listed on the TSCA inventory.

**OSHA (OCCUPATIONAL SAFETY AND HEALTH ADMINISTRATION):**

**29 CFR 1910.119:** Process Safety Management of Highly Hazardous Chemicals: Requires facilities to develop a process safety management program based on Threshold Quantities (TQ) of highly hazardous chemicals.

Oxygen is not listed in Appendix A as a highly hazardous chemical.

**STATE REGULATIONS:**

**CALIFORNIA:** This product is not listed by California under the Safe Drinking Water Toxic Enforcement Act of 1986 (Proposition 65).

**PENNSYLVANIA:** This product is subject to the Pennsylvania Worker and Community Right-To-Know Act (35 P.S. Sections 7301-7320).

## 16. Other Information

Be sure to read and understand all labels and instructions supplied with all containers of this product.

**WARNING:** Medical grades of Oxygen are subject to strict federal regulation, and are for use only under the control of a licensed physician or clinician, familiar with the product and its hazards.

**ADDITIONAL SAFETY AND HEALTH HAZARDS:** ***High-pressure, oxydizing gas***. Clean all gauges, valves, regulators, piping, and equipment to be used in oxygen service in accordance with CGA pamphlet G-4.1. Keep cylinders and their valves free of oil and grease. Use piping and equipment adequately designed to withstand pressures to be encountered. Close cylinder valve after each use; keep closed even when empty.***Never use oxygen as a substitute for compressed air.*** Never use an oxygen jet for cleaning purposes of any sort, especially for clothing. Oxygen increases the likelihood of an engulfing fire. ***Prevent reverse flow.*** Reverse flow into cylinder may cause rupture. Use a check valve or other protective device in any line or piping from the cylinder***Never work on a pressurized system.*** If there is a leak, close the cylinder valve. Blow the system down in a safe and environmentally sound manner in compliance with all federal, state and local laws; then repair the leak***Never ground a compressed gas cylinder or allow it to become part of an electrical circuit.***

***Personnel who have been exposed to high concentrations of oxygen*** should stay in a well-ventilated or open area before going into a confined space or near an ignition source.

**SPECIAL PRECAUTIONS:** ***Use in welding and cutting.*** Read and understand the manufacturer's instructions and the precautionary label on the product. See American Standard Z49.1, Safety in Welding and Cutting, published by the American Welding Society, PO Box 351040, Miami, FL 33135, and OSHA Publication 2206 (29CFR 1910), US Government Printing Office, Washington, DC 20402, for more information.

***Arcs and sparks can ignite combustible materials.*** Prevent fires. Refer to NFPA 51B, "Cutting and Welding Processes."***Do not strike an arc on the cylinder.*** The defect produced by an arc burn could lead to cylinder rupture.

**MIXTURES:** When you mix two or more gases or liquefied gases, you can create additional, unexpected hazards. Obtain and evaluate the safety information for each component before you produce the mixture. Consult an industrial hygienist, or other trained person when you evaluate the end product. Remember, gases and liquids have properties that can cause serious injury or death.

**HAZARD RATING SYSTEMS:**

| **NFPA RATINGS:** | | **HMIS RATINGS:** | |
|---|---|---|---|
| HEALTH | = 0 | HEALTH | = 0 |
| FLAMMABILITY | = 0 | FLAMMABILITY | = 0 |
| REACTIVITY | = 0 | REACTIVITY | = 0 |
| SPECIAL | = OX (Oxidizer) | | |

**STANDARD VALVE CONNECTIONS FOR U.S. AND CANADA:**

| | | |
|---|---|---|
| **THREADED**: | 0-3000 psig | CGA-540 |
| | 3001-4000 psig | CGA-577 |
| | 4001-5500 psig | CGA-701 |
| **PIN-INDEXED YOKE:** | 0-3000 psig | CGA-870 (Medical Use) |
| **ULTRA-HIGH-INTEGRITY CONNECTION:** | 0-3000 psig | CGA-714 |

Use the proper CGA connections. **DO NOT USE ADAPTERS.**

Ask your supplier about free Praxair safety literature as referenced on the label for this product; you may also obtain copies by calling 1-800-PRAXAIR. Further information about oxygen can be found in the following pamphlets published by the Compressed Gas Association, Inc. (CGA), 1725 Jefferson Davis Highway, Arlington, VA 22202-4102, Telephone (703) 412-0900.

Praxair asks users of this product to study this Material Safety Data Sheet (MSDS) and become aware of product hazards and safety information. To promote safe use of this product, a user should (1) notify employees, agents and contractors of the information on this MSDS and of any other known product hazards and safety information, (2) furnish this information to each purchaser of the product, and (3) ask each purchaser to notify its employees and customers of the product hazards and safety information.

The opinions expressed herein are those of qualified experts within Praxair, Inc. We believe that the information contained herein is current as of the date of this Material Safety Data Sheet. Since the use of this information and the conditions of use of the product are not within the control of Praxair, Inc., it is the user's obligation to determine the conditions of safe use of the product.

Praxair MSDSs are furnished on sale or delivery by Praxair or the independent distributors and suppliers who package and sell our products. To obtain current Praxair MSDSs for these products, contact your Praxair sales representative or local distributor or supplier. If you have questions regarding Praxair MSDSs, would like the form number and date of the latest MSDS, or would like the names of the Praxair suppliers in your area, phone or write the Praxair Call Center ( **Phone:** 1-800-PRAXAIR; **Address:** Praxair Call Center, Praxair, Inc., PO Box 44, Tonawanda, NY 14150-7891).

# APPENDIX B
# FLOW CHART AND REPORTING FORM FOR OIL OR HAZARDOUS MATERIAL SPILLS AND RELEASES IN THE STATE OF GEORGIA

# Georgia Oil or Hazardous Material Spills and Releases Reporting

**Every spill must be cleaned up**, whether or not it is reportable. [OCGA §12-8-2]
It is the duty to immediately take all reasonable and necessary steps to prevent injury to property and downstream users of waters of the State of Georgia. [Chapter 391-3-6-.05(3)]

## OCGA §12-14-1 [Law] Oil or Hazardous Material Spill or Release Act

**Who Reports:**

Anyone who **owns** or **has control** of a spilled/released substance

**What to Report:**

Oil*
**Unknown amount**
OR
Amount that creates a **significant sheen on top of state waters** or creates an **emulsion or sludge under state waters****

**What to Report:**

Hazardous Materials***
**Unknown amount** spilled/released **into environment**
OR
Amount **exceeding the reportable quantity** (RQ)

**When to Report:**

**Immediately** upon having knowledge of a spill/release. EPA has determined immediately to mean **within 15 minutes**

**Whom to Report to:**

Georgia EPD Emergency Operations Center
**800-241-4113**

## 391-3-6-.05(3) [Rule] Water Quality Control Emergency Actions

**Who Reports:**

The **person in charge** of a spilled/released substance

**What to Report:**

Any **toxic or taste and color producing substance, or any other substance which would endanger downstream users** of the waters of the State or would damage property, is **discharged** into such waters, or is so **placed that it might flow, be washed, or fall into** them

**When to Report:**

At the time **forthwith (15 minutes)**

**Whom to Report to:**

Georgia EPD Emergency Operations Center
**800-241-4113**
or local district/branch office

## 391-3-15-.08 [Rule] Underground Storage Tank Petroleum Spills

**Who Reports:**

**Owner or operator** of UST system

**What to Report:**

Spill or overfill of petroleum that exceeds **25 gallons**
OR
Amount that creates a **significant sheen on state waters**

**When to Report:**

Within **24 hours**

**Whom to Report to:**

UST Program **404-362-2687** during business hours or Georgia EPD Emergency Operations Center **800-241-4113** after hours

* OIL: includes but is not limited to gasoline, crude oil, fuel oil, diesel oil, lubricating oil, sludge, oil refuse, oil mixed with wastes, and any other petroleum related product.
** EXEMPTION: Accidental discharges of oil made by an individual during maintenance of that individual's personal vehicle or farm machinery shall be exempt.
*** EXEMPTION: A hazardous substance does not include: natural gas, natural gas liquids, liquefied natural gas, synthetic gas usable for fuel, or mixtures of natural gas and such synthetic gas.

This document is intended to provide a brief informational summary of responsibility for spill reporting in accordance with state regulations. It is not intended to be complete legal guidance on the issue. [Revised: February 2010]

## Release and Remediation Report

## Instructions

This report should be used by the responsible party in conjunction with the responsible party's environmental contractor to document the circumstances surrounding the release, release reporting, and efforts taken which resulted in the containment of the release and the clean up of free product and contaminated materials. It is not meant to be used to detail long-term actions that might include soil or groundwater remediation. Other Branches within the Environmental Protection Division will handle long-term remediation actions. If needed following the submission of this report, you will be contacted by the appropriate Branch to determine the way forward for these long-term remedial actions. Should you be asked by the State On Scene Coordinator (SOSC) or Division Duty Officer (DDO) to submit a report concerning a particular release, it is recommended that you use this reporting form. If you are requested to submit a release and remediation report, it is requested that the report be submitted no later than thirty (30) days of completion of your emergency response activities. The preferred method of submission of this report is via an electronic submission directly to the Emergency Response Program State On-Scene Coordinator who responded to the spill. Their names and e-mail addresses are located below. Alternately, this report can be mailed to the appropriate State On-Scene Coordinator at one of the addresses indicated below:
