Description and Location of Proposed Activity:

The earthen dam located along an unnamed tributary to Hichitee Creek near Principal Drive in Cusseta had been breached and subsequently stabilized. This project will consist of replacing sections of the existing earthen dam with more appropriate structural fill material and installing riprap along the existing auxiliary spillway channel. All disturbed areas will be stabilized with permanent vegetation. Construction activities will result in approximately 50 linear feet total (995 square feet total) of buffer disturbances along an unnamed pond, a tributary to Hichitee Creek in the Middle Chattahoochee – Walter F. George Reservoir Watershed.
