Description and Location of Proposed Activity:

The proposed project involves buffer restoration activity including invasive species removal and native species revegetation. Disturbance of the buffer is necessary in order to restore and enhance critical buffer functions. A Buffer Mitigation Plan and erosion control measures will be implemented to address major impacts. The disturbed buffer area will be revegetated with native, multi-trophic riparian species. The proposed project will result in 705 total linear feet (18,278 total square feet) of buffer disturbance lasting approximately 2 months. The project is located on an unnamed tributary to Snapfinger Creek of the Upper Ocmulgee Watershed (03070103).
