Re: Request for Information: CONMED Corporation – Lithia Springs, Georgia

Dear Mr Taylor:

I am writing in response to your request of May 27, 2020, on behalf of the Georgia Department of Natural Resources, Environmental Protection Division ("EPD"), for information regarding the CONMED Corporation ("CONMED") distribution center in Lithia Springs, Georgia. CONMED hereby submits this letter and the accompanying attachments in conformance with Section 391-3-1.02(6)(b)(1) of the Georgia Rules for Air Quality Control.

**I. Background**

CONMED is a medical technology company that provides medical devices and equipment for minimally invasive procedures. Headquartered in Utica, New York, CONMED distributes its products worldwide, almost all of which are shipped from its U.S. distribution center located in Lithia Springs, Georgia.

CONMED's medical device products are used by surgeons and physicians in a variety of specialties, including orthopedics, general surgery, gynecology, neurosurgery, thoracic surgery, and

**Redacted Copy: Request for Information – CONMED Lithia Springs**

gastroenterology. Our general surgery product line offers a large range of surgical and other products in laparoscopies and open or general surgery, in gastroenterology (GI) surgeries and in patient monitoring. Some of CONMED's more recognized brands include the AirSeal insufflator and the Buffalo Filter smoke evacuation product line, which are critical to providing enhanced outcomes to patients, and to physicians and operating room staff.

Our sports medicine products include powered resection instruments, arthroscopes, reconstructive systems, tissue repair sets, metal and bioabsorbable implants, as well as related disposable products and fluid management systems. CONMED also manufactures powered instruments, including instruments for use in large and small bone orthopedic, arthroscopic, oral/maxillofacial and podiatric surgeries.

Approximately 30% of CONMED's products, when measured in terms of revenues, are sterilized off-site by third-party sterilizers using ethylene oxide ("EtO"), which is an important sterilization method that is widely used by manufacturers to keep medical devices safe. CONMED does no sterilization at the Lithia Springs distribution center.

Medical devices may be sterilized using a variety of methods, including using steam, dry heat, radiation, ethylene oxide, and, in some cases, other methods. For many medical devices, however, sterilization with ethylene oxide is the only method that provides effective sterilization without damaging the device or packaging during the process. Medical devices made from certain polymers (plastic or resin), metals, or glass, or that have hard-to-reach places, are commonly sterilized using ethylene oxide. Thus, for some products, ethylene oxide is the only viable sterilization method.

Against this background, CONMED is responding to EPD's information request and the specific questions stated therein.

## **II. Requests for Information**

### **1. Products Sterilized with Ethylene Oxide:**

As stated above, Medical devices made from plastic or resin, metals, or glass, or that have hard-to-reach places (such as tubing) are commonly sterilized using ethylene oxide. CONMED products that fall into this category include the following:

- AirSeal tubes sets, used in laparoscopic surgeries;
- Buffalo Filter branded smoke evacuation products, including tube sets;
- Orthopedic implants for knee and shoulder repair surgeries;
- Skin staplers;
- Specimen bags, used in laparoscopic surgery; and
- Active electrodes, used for electrocaustery in laparoscopic and open surgery.

Enclosed with this letter as Attachment A (Confidential) is information responsive to this request regarding the products sterilized with ethylene oxide that are distributed from the Lithia Springs distribution center.

**Redacted Copy:** Request for Information – CONMED Lithia Springs

**2. Total Estimate of Products Sterilized with Ethylene Oxide Stored in Lithia Springs:**

CONMED's distribution center in Lithia Springs consists of a 188,400 square foot facility, which is comprised of approximately 35,000 square feet of loading dock space, 9,300 square feet of office space, and 144,100 square feet of warehouse space. Enclosed with this letter as Attachment B is a facility diagram of the Lithia Springs distribution center.

CONMED does not use or store ethylene oxide at the Lithia Springs distribution center. Further, as shown below, only 37% of medical device products (by count) stored and distributed from Lithia Springs are sterilized with ethylene oxide:

<u>Product Category</u>	<u>As Percent of Products</u>
Non-Sterile	13%
Sterilized (Gamma)	50%
<b>Sterilized (EtO)</b>	<b>37%</b>

Enclosed with this letter as Attachment A (Confidential) is information responsive to this request regarding the quantity of products sterilized with ethylene oxide that were sold by CONMED in 2019. Virtually all of these products passed through the Lithia Springs distribution center, but less than one half of these products were in the building at any one time.

**3. Duration that Products Sterilized with Ethylene Oxide are Stored in Lithia Springs:**

CONMED turns over inventory in the warehouse approximately 2.2 times per year, meaning that products are in the warehouse on average no more than 5.5 months. This is an average across the entire product line; some products are stored there for longer periods, and some for less.

**4. Other Pertinent Information**

EPD seeks to determine if CONMED needs a permit for the Lithia Springs warehouse, citing the regulatory 4,000 pound annual and 15 pound daily SIP permitting threshold for any single hazardous air pollutant. Ga. Comp. R. & Regs § 391-3-1-.03(6)(i)(1)(v). CONMED believes that its warehouse does not reach these thresholds.

Medical devices sterilized with EtO are subject to limits on residual EtO allowed in the product under FDA, international regulations and standards. Those regulations and standards provide that products for which there is less than 24 hours of patient contact can contain no more than 4 milligrams of EtO. Products with longer exposures (such as implantable devices) can contain no more than 60 mg of EtO. ISO 10993-7:2008 (Biological evaluation of medical devices—Part 7: Ethylene oxide sterilization residuals). As shown on Attachment A (confidential), the majority of EtO-sterilized products in the Lithia Springs warehouse are subject to the 4 milligram ceiling. CONMED audits those products and can demonstrate compliance with those levels. Indeed, for many products, EtO is far

**Redacted Copy: Request for Information – CONMED Lithia Springs**

below allowable levels. In Attachment A (confidential), we have calculated those allowable levels for annual sales of CONMED products: the total amounts to only 307 pounds of EtO on an annual basis.

Even those levels may over-estimate the amount of EtO on the premises. First, the calculations use the allowable maximum and the actual amounts are always lower. Second, only about 40% of the annual sales are ever in the warehouse at any one time, so the volume of residual EtO present in the warehouse will be lower at times when fewer products are present. The offsetting factor is that CONMED's quality control and compliance checks only measure for EtO residuals in the product itself, and are not designed to measure EtO in or on packaging. Nevertheless, the testing methods likely capture some of the EtO from the packaging based on the way the samples are prepared for extraction. Even if one assumed that EtO in or on the packaging resulted in a doubling of the allowable maximum EtO mass, the total mass would be 614 pounds.

Further support for the conclusion that CONMED's warehouse is below this threshold is that CONMED's products are aerated at the third party sterilizer for sixty hours following the sterilization cycle. This is longer than required and longer than what some other manufacturers do. CONMED's agreements with the third-party sterilizers contain detailed protocols for that process, including the duration and method of aeration of those products following that sterilization. After they are sterilized, each pallet is left to aerate for 60 hours under heat at the Sterigenics facility before they are shipped to CONMED's Lithia Springs facility.

We are aware that some companies have sought to determine emissions mass from sampling programs which use concentrations derived from interior samples of warehouse air and then multiply those by volumes of air leaving the warehouse. There is complexity to that type of study and the assumptions employed therein. Nevertheless, we note that Becton Dickinson performed such a study for its Covington Global Distribution Center that tends to confirm that CONMED's warehouse would be well under the threshold. The Covington facility is more than three times as large as the CONMED warehouse. EPD calculated that the BD emissions were above 5,300 pounds per year based on the lower average readings. If the higher averages at Covington were used, that would result in calculated emissions of 6,150 pounds per year. If one set aside other differences between the operations and assumed that CONMED had the same rate of emissions per square foot, that would calculate to between 1,660 and 1,900 pounds per year. While higher than the calculations described above based on EtO mass, these numbers are still well under the 4,000 pound annual limit and the 15 pound daily limit.

In summary, the existing data indicates that the facility does not exceed the permitting threshold.

### **III. Confidential Information**

In accordance with O.C.G.A. § 50-18-72(a)(34), O.C.G.A. § 12-9-19, and other applicable authority, CONMED hereby requests that the information contained in the confidential attachment to this letter, Attachment A, be protected from public disclosure under the Georgia Open Records Act, O.C.G.A. § 50-18-70 et seq., as confidential trade secret information. Enclosed with this letter as Attachment C is an affidavit affirmatively declaring that the information contained in Attachment A constitutes trade secret information pursuant to O.C.G.A., Title 10, Chapter 1, Article 27.

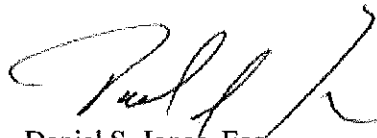

**Redacted Copy:** Request for Information – CONMED Lithia Springs

#### **IV. Testing**

You have requested that we prepare a plan for testing. In view of the information provided in this letter demonstrating that CONMED's Lithia Spring facility's potential EtO emissions are well below the threshold requiring an air permit, we would like to discuss with you whether such testing is necessary.

If you have any questions, please feel free to give me a call.

Very truly yours,

Daniel S. Jonas, Esq.  
Executive Vice President – Legal Affairs,  
General Counsel & Secretary

**AFFIDAVIT OF DANIEL S. JONAS IN SUPPORT OF  
CLAIMS THAT INFORMATION IS PROTECTED  
UNDER GEORGIA LAW FROM DISCLOSURE TO THE PUBLIC**

PERSONALLY APPEARED before the undersigned officer, authorized to administer oaths, Daniel S. Jonas, Affiant who, first being duly sworn, testifies as follows:

1. My name is Daniel S. Jonas. I am of the age of majority and am competent in all respects to give this Affidavit. My testimony herein is based on personal knowledge and upon documents maintained in the files of CONMED Corporation ("CONMED").
2. CONMED Corporation is medical technology company that provides medical devices and equipment for minimally invasive procedures. CONMED is a Delaware corporation with offices in Utica, New York and a warehouse in Lithia Springs, Georgia. I am the Executive Vice President of Legal Affairs, General Counsel and Secretary of CONMED with primary responsibility for the legal affairs of CONMED. In my role as General Counsel, I am authorized to provide this Affidavit on behalf of CONMED.
3. On June 26, CONMED submitted a "Redacted Copy" and a "Protected Copy" of its response to "Request for Information: CONMED Corporation – Lithia Springs, Georgia" (referred to hereinafter as the "Submittal") to the Air Protection Branch of the Georgia Environmental Protection Division ("EPD") in compliance with EPD's Procedures for Submitting Information Pursuant to a Claim that Information in the Submittal is Protected Under Georgia Law from Disclosure to the Public. I affirmatively declare that information contained in the Submittal to EPD is protected under the Georgia Open Records Act, O.C.G.A. § 50-18-70, *et seq.*, O.C.G.A. § 12-9-19, and other applicable authority from disclosure to the public and that the Redacted Copy is submitted to EPD for disclosure to the public as is. Support for this declaration, including citation to the specific provisions of Georgia law, is included below.
4. The Georgia Open Records Act provides in pertinent part that –
  - (a) Public disclosure shall not be required for records that are:
    - (34) Any trade secrets obtained from a person or business entity that are required by law, regulation, bid, or request for proposal to be submitted to an agency. An entity submitting records containing trade secrets that wishes to keep such records confidential under this paragraph shall submit and attach to the records an affidavit affirmatively declaring that specific information in the records constitute trade secrets pursuant to Article 27 of Chapter 1 of Title 10. O.C.G.A. § 50-18-72(a)(34).

5. The Georgia Trade Secrets Act, O.C.G.A. § 10-1-760, *et seq.*, provides that a –

(4) ‘Trade secret’ means information, without regard to form, including, but not limited to, technical or nontechnical data, a formula, a pattern, a compilation, a program, a device, a method, a technique, a drawing, a process, financial data, financial plans, product plans, or a list of actual or potential customers or suppliers which is not commonly known by or available to the public and which information:

(A) Derives economic value, actual or potential, from not being generally known to, and not being readily ascertainable by proper means by, other persons who can obtain economic value from its disclosure or use; and

(B) Is the subject of efforts that are reasonable under the circumstances to maintain its secrecy.

O.C.G.A. § 10-1-761(4).

6. The Submittal was required to be submitted to EPD pursuant to O.C.G.A. § 12-9-6(b) and Section 391-3-1.02(6)(b)(1) of the Georgia Air Rules for Air Quality Control.

7. On behalf of CONMED, I affirmatively declare that the information about the quantity of products sterilized with ethylene oxide that were sold by CONMED in 2019, as listed in Attachment A of the Submittal, constitutes trade secret information as shown herein.

8. CONMED’s confidential product sales information constitutes trade secret information within the meaning of the Georgia Trade Secrets Act, O.C.G.A. § 10-1-761(4), as “financial data, financial plans, product plans . . . which [are] not commonly known by or available to the public.” Disclosure of this information, which is maintained as confidential by CONMED, would publicly disclose CONMED’s business and product planning and marketing strategies. Further, such disclosure, particularly on a product-by-product basis, would harm CONMED’s competitive position in relation to its competitors that manufacture or distribute similar products. Accordingly, the EPD should protect this information from public disclosure because: (A) CONMED derives economic value from maintaining such information as confidential, and its competitors would obtain economic value from its disclosure; and (B) CONMED undertakes reasonable efforts to maintain its secrecy. O.C.G.A. § 10-1-761(4).

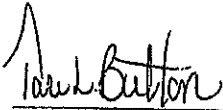

9. CONMED understands that receipt by EPD of this Affidavit and the Submittal does not mean that EPD agrees or has made a determination that the information identified in this Affidavit is protected under the Georgia Open Records Act from disclosure to the public. However, for claims made in this Affidavit that information in the Submittal constitute trade secrets pursuant to the Georgia Trade Secrets Act, I understand that Section 50-18-72(a)(34) of the Georgia Open Records Act proscribes a procedure for producing such information in response to a request under that Act.

FURTHER Affiant saith not.

Daniel S. Jonas, Esq.  
Executive Vice President – Legal Affairs,  
General Counsel & Secretary
