# **Drought Indicators Report**

**Georgia Environmental Protection Division** 

November 2022

## Background

Pursuant to the Rules for Drought Management, <u>Section 391-3-3-.04 Drought</u> <u>Indicators and Triggers</u>, the Director of EPD monitors climatic indicators and water supply conditions to assess drought occurrence and severity, and its impact upon the ability of public water systems to provide adequate supplies of water. These indicators and conditions October include, but not be limited, to the following:

- U.S. Drought Monitor;
- Precipitation;
- Streamflow;
- Groundwater;
- Reservoir levels;
- Short term climate predictions;
- Soil moisture; and
- Water supply conditions.

## Background

- The Rules require EPD to report on current climatic indicators at least semi-annually or monthly when any part of the state has experienced at least two consecutive months of severe drought.
- This reports compare current conditions to historical levels (and/or reservoir rule curves) for each of the following indicators:
  - Precipitation during the prior 3, 6, and 12 months;
  - Streamflow at the select United States Geological Survey gages;
  - Groundwater levels at select United States Geological Survey monitoring wells; and
  - Reservoir levels at Allatoona Lake, Lake Hartwell, Clarks Hill Lake, and Lake Lanier.
- The following sections of this presentation provide the data and information sources analyzed by EPD in developing this drought indicators report for conditions as of November 10, 2022.

### Drought Indicator Analysis Summary (slide 1 of 2)

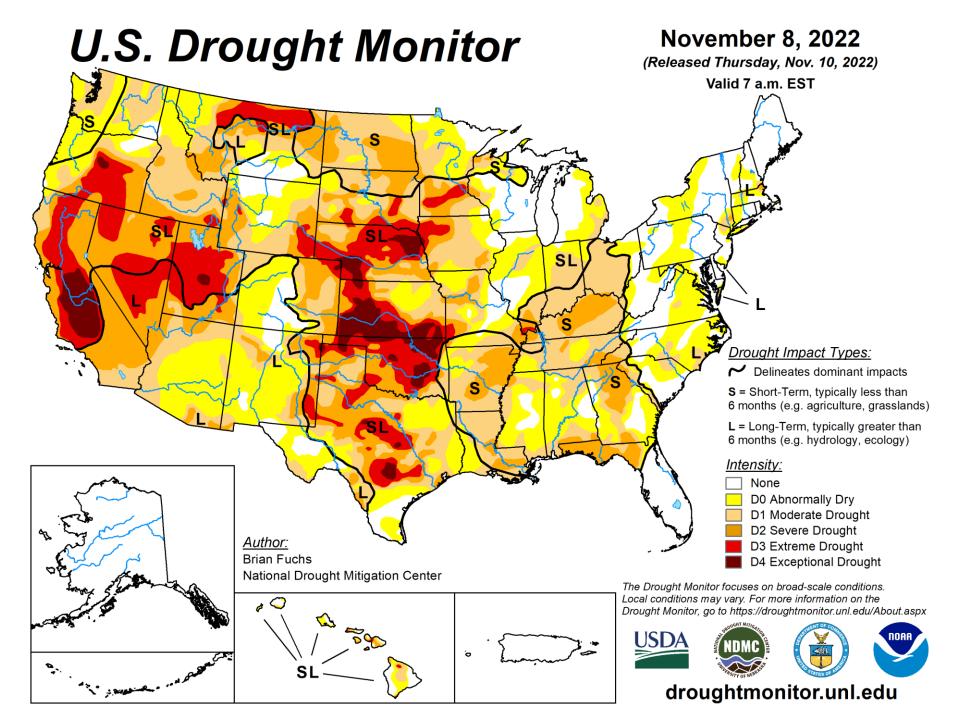

- U.S. Drought Monitor Serve Drought (D2) conditions exist in most areas in North GA and Lower Suwanee Basin. Moderate Drought (D1) conditions exist in Coosa, Upper Flint, Upper Suwanee, and Ochlockonee Basins. Abnormally Dry (D0) exists in Lower Flint, Mid-Chattahoochee, St Mary's Basins, and Coastal Region.
- Precipitation Three-month precipitation is below normal in most areas. Six-month precipitation is slightly below normal in Upper Savannah, Lower Altamaha, and Satilla Basins. Twelve-month precipitation is below normal in most areas except Coosa, Upper Oconee, Lower Satilla, and St Mary's Basins.
- Soil Moisture Soil moisture conditions are below normal statewide.

### Drought Indicator Analysis Summary (slide 2 of 2)

- Streamflow Stream flows at half of selected USGS gages (17 out of 34) are between the lowest 20<sup>th</sup> percentile and median. 14 gages are between the lowest 20<sup>th</sup> and 10<sup>th</sup> percentiles and three gages are between the lowest 10<sup>th</sup> and 5<sup>th</sup> percentiles (in Ocmulgee, Oconee, and Savannah Basins).
- Groundwater Level Groundwater levels are between the lowest 20<sup>th</sup> percentile and median in majority of selected wells (12 out of 17). Two well levels are between the 20<sup>th</sup> and 10<sup>th</sup> percentiles (Floridan Aquifer in Flint Basin and Suwannee Basin). One gage is between the lowest 5<sup>th</sup> percentile and lowest level (Crystalline Rocks Aquifer in Chattahoochee Basin). Other two wells are in normal level.
- Reservoir Levels At the end of October, Carters, Allatoona, West Point, and W F. Georgie are in zone 1. Other federal reservoirs in Georgia are in zone 2. ACF composite storage is in zone 1.
- Short-term Climate Prediction National Climatic Prediction Center projects above normal temperature statewide and below normal precipitation statewide in November 2022 – January 2023. U.S. Drought Outlook predicts drought persists in North Georgia and drought development likely in other areas of GA in November 2022 – January 2023.
- Water Supplies City of Jasper may request temporary variance of Flow Protection Threshold in response to low flow condition in its source stream.

## **US Drought Monitor**

## **Streamflow Conditions**

Data Source: USGS

## **Streamflow Monitoring**

- As shown on the following slide, EPD Monitors 34 USGS stream gages in 13 of the State's major river basins to assess drought conditions.
- These gages were selected because each has:
  - Long-term and relatively complete records for recent decades; and
  - Relatively low consumptive water use implications and streamflows are not heavily influenced by dams.
- Note: Hydrologic conditions of major rivers with streamflows that are heavily influenced by dams can be assessed by reviewing status of major storage reservoirs

# USGS Stream Gages Monitored by EPD to Assess Drought Conditions

GAGE#	BASIN	GAGE NAME
1	TENNESSEE	LOOKOUT CREEK NEAR NEW ENGLAND
2	TENNESSEE	NOTTELY RIVER NEAR BLAIRSVILLE
3	COOSA	CHATTOOGA RIVER AT SUMMERVILLE
4	COOSA	TALKING ROCK CREEK NEAR HINTON
5	COOSA	ETOWAH RIVER AT CANTON
6	CHATTAHOOCHEE	CHATTAHOOCHEE RIVER AT CORNELIA
7	CHATTAHOOCHEE	CHESTATEE RIVER NEAR DAHLONEGA
8	CHATTAHOOCHEE	NEW RIVER AT GA 100 NEAR CORINTH
9	CHATTAHOOCHEE	UPATOI CREEK AT COLUMBUS
10	FLINT	FLINT RIVER AT GA26 NEAR MONTEZUMA
11	FLINT	FLINT RIVER AT ALBANY
12	FLINT	ICHAWAYNOCHAWAY CREEK AT MILFORD
13	FLINT	SPRING CREEK NEAR IRON CITY
14	OCMULGEE	ALCOVY RIVER ABOVE COVINGTON
15	OCMULGEE	OCMULGEE RIVER AT MACON
16	OCMULGEE	TOBESOFKEE CREEK NEAR MACON
17	OCMULGEE	TUCSAWHATCHEE CREEK NEAR
		HAWKINSVILLE
18	OCONEE	MIDDLE OCONEE RIVER NEAR ATHENS
19	OCONEE	LITTLE RIVER NEAR EATONTON
20	OCONEE	OCONEE RIVER AT DUBLIN
21	ALTAMAHA	OHOOPEE RIVER NEAR REIDSVILLE
22	SAVANNAH	CHATTOOGA RIVER NEAR CLAYTON
23	SAVANNAH	BROAD RIVER NEAR BELL
24	SAVANNAH	BEAVERDAM CREEK NEAR SARDIS
25	SAVANNAH	BRIER CREEK AT MILLHAVEN
26	OGEECHEE	CANOOCHEE RIVER NEAR CLAXTON
27	OGEECHEE	OGEECHEE RIVER NEAR EDEN
28	OCHLOCKONEE	OCHLOCKONEE RIVER NEAR THOMASVILLE
29	SUWANEE	WITHLACOOCHEE RIVER NEAR PINETTA FL
30	SUWANEE	ALAPAHA RIVER AT STATENVILLE
31	SUWANEE	SUWANNEE RIVER AT US 441, AT FARGO
32	SATILLA	SATILLA RIVER NEAR WAYCROSS
33	SATILLA	LITTLE SATILLA RIVER NEAR OFFERMAN
34	ST MARY	ST MARYS RIVER NEAR MACCLENNY FL

## Streamflow Graphs

- For each of the 34 gages, EPD has prepared a graph that shows monthly average streamflow from January 2022 through October 2022;
- To help put these streamflow conditions into perspective, for comparison purposes, each graph also shows:
  - Monthly average streamflows for the years 2007 and 2011 when streamflows were at or near recorded low levels across much of the state; and
  - A statistical composite of historical conditions showing the "driest" 50, 20, 10, and 5 percent of all recorded monthly average stream flows at the same gage.

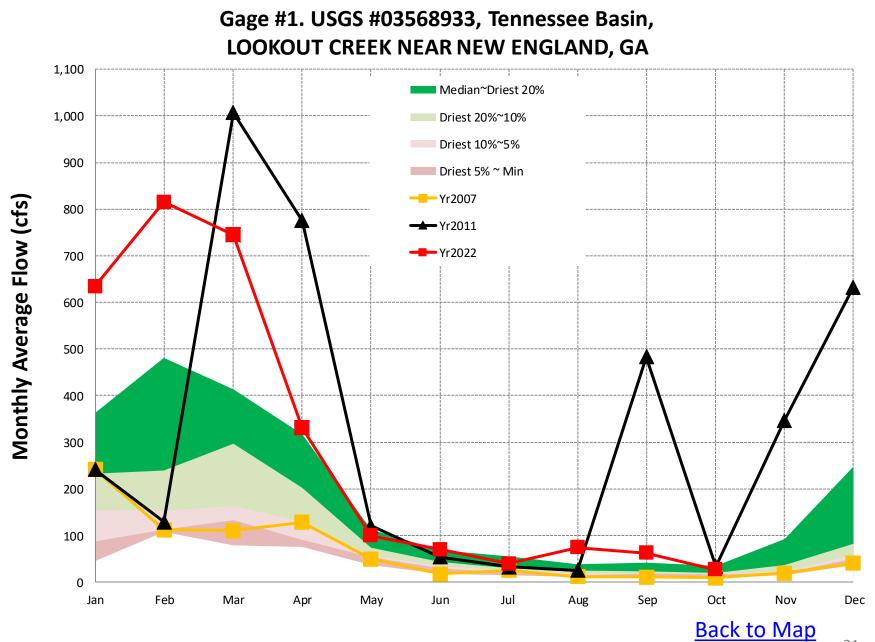

## How to Read the Streamflow Graphs Example #1: Etowah River at Canton

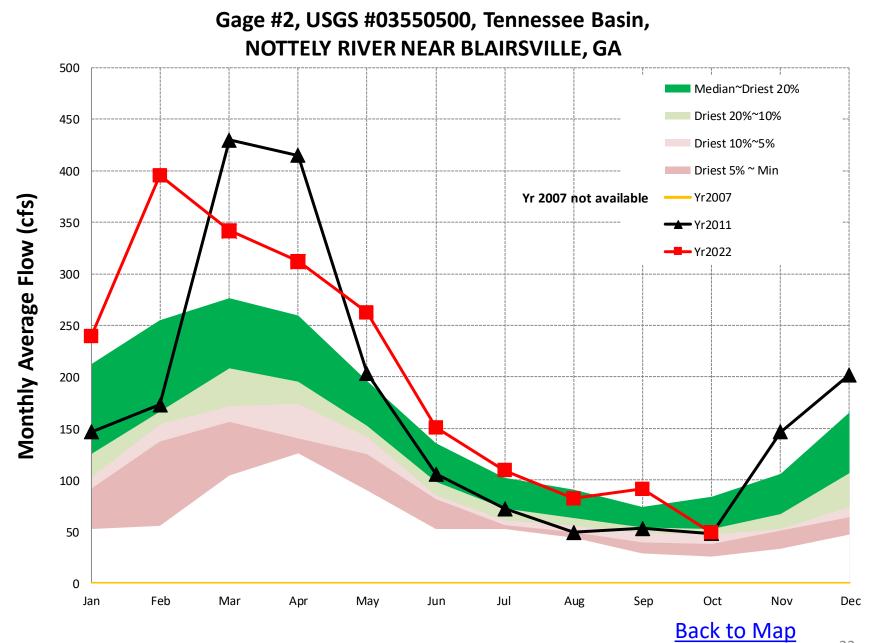

The streamflow graph for Gage #5, <u>USGS Etowah River gage at Canton</u> shows :

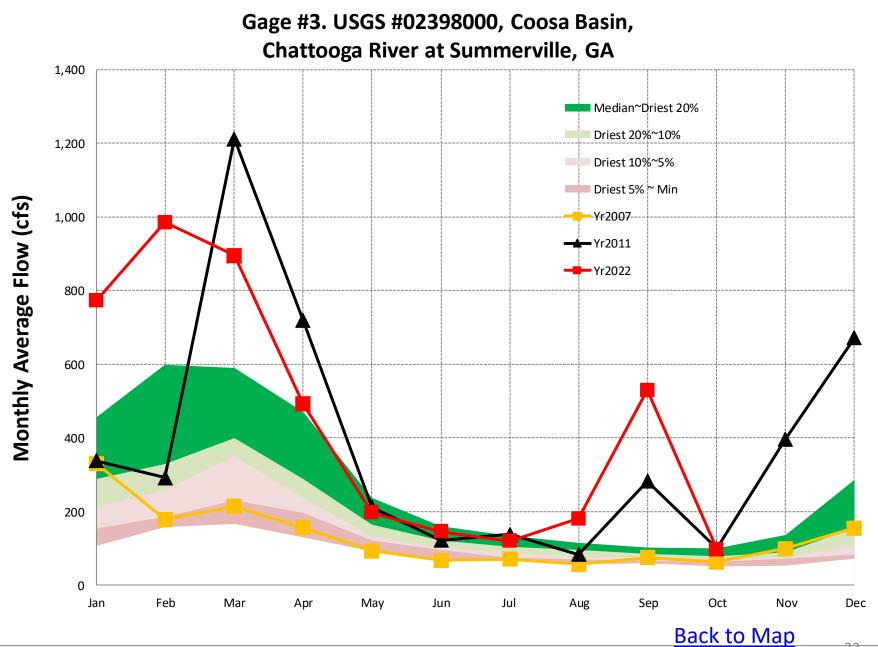

- Average stream flow in October 2022 was 331 cfs. The statistical composite of all historical data for this gage shows that average streamflow in October has historically been lower than October 2022 about 13% of the time; 87% of the time in October it has been higher.
- Average stream flow in October 2011 was 236 cfs. The statistical composite of all historical data for this gage shows that average streamflow in October has historically been lower than October 2011 about 5% of the time; 95% of the time in October it has been higher.
- Average stream flow in October 2007 was 150 cfs. The statistical composite of all historical data for this gage shows that average streamflow in October has historically been lower than October 2007 about 0.1 % of the time; 99.9% of the time in October it has been higher.

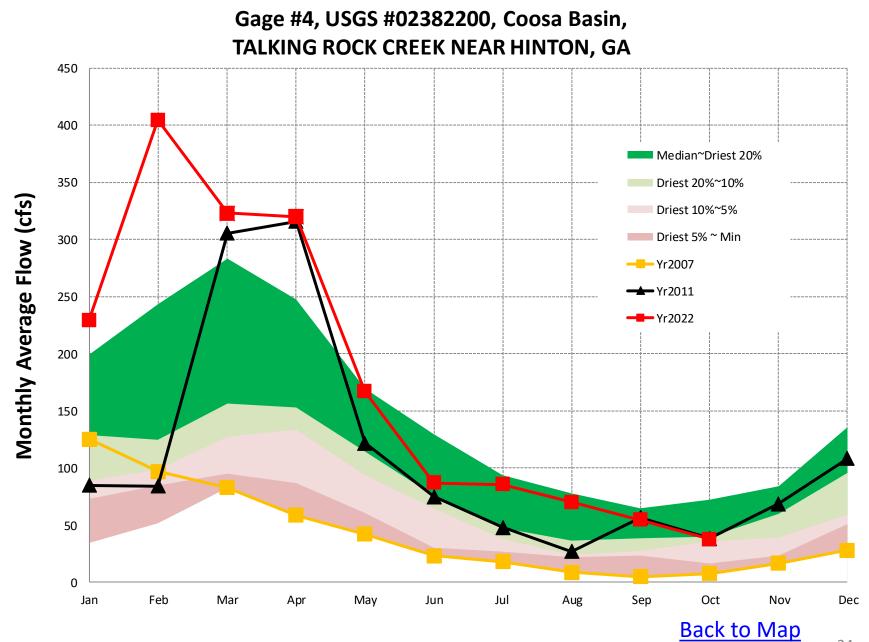

## How to Read the Streamflow Graphs <u>Example #2:</u> Flint River at Albany

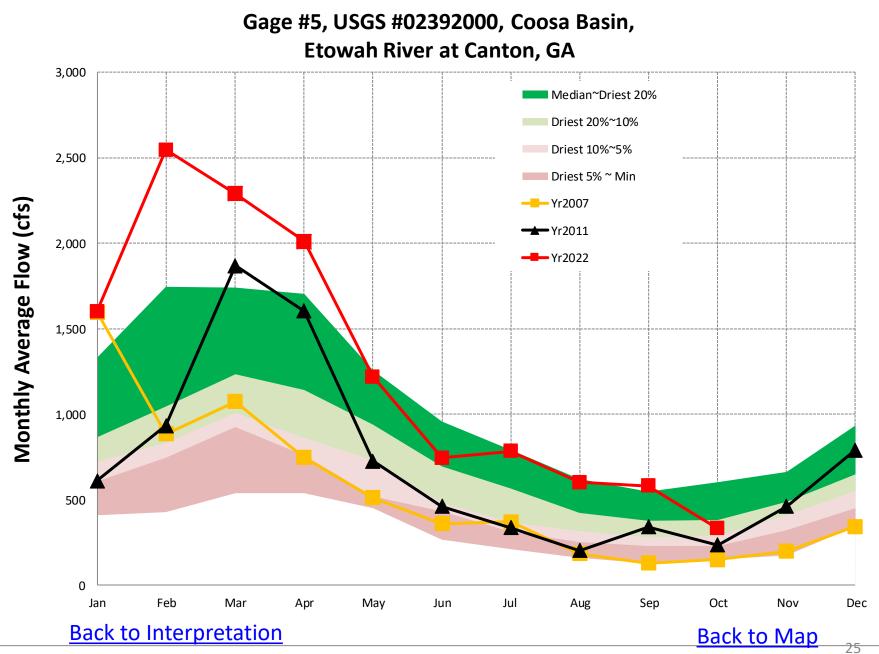

- The streamflow graph for Gage #11, <u>USGS Flint River gage at Albany</u> shows:
- Average stream flow in October 2022 was 1719 cfs. The statistical composite of all historical data for this gage shows that average streamflow in October has historically been lower than October 2022 about 23% of the time; about 77% of the time in October it has been higher.
- Average stream flow in October 2011 was 976 cfs. The statistical composite of all historical data for this gage shows that average streamflow in October has historically been lower than October 2011 about 0.1~1% of the time; about 99~99.9% of the time in October it has been higher.
- Average stream flow in October 2007 was 1104 cfs. The statistical composite of all historical data for this gage shows that average streamflow in October has historically been lower than October 2007 about 2~5% of the time; about 95~98% of the time in October it has been higher.

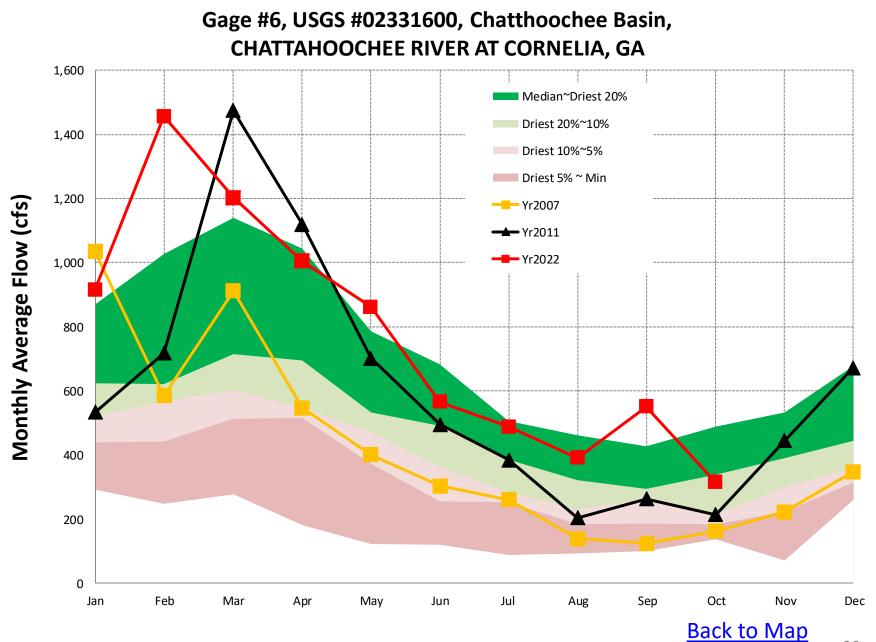

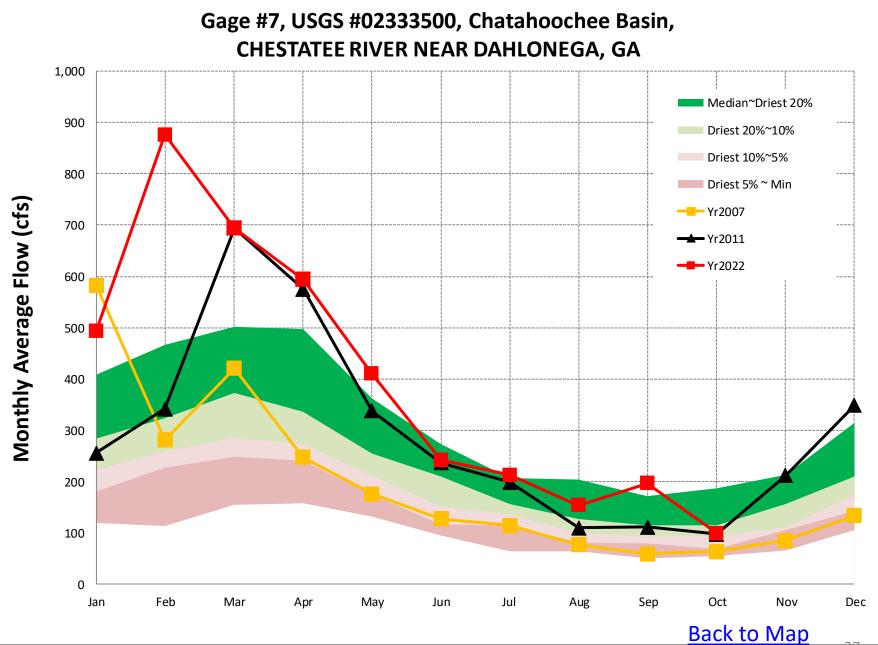

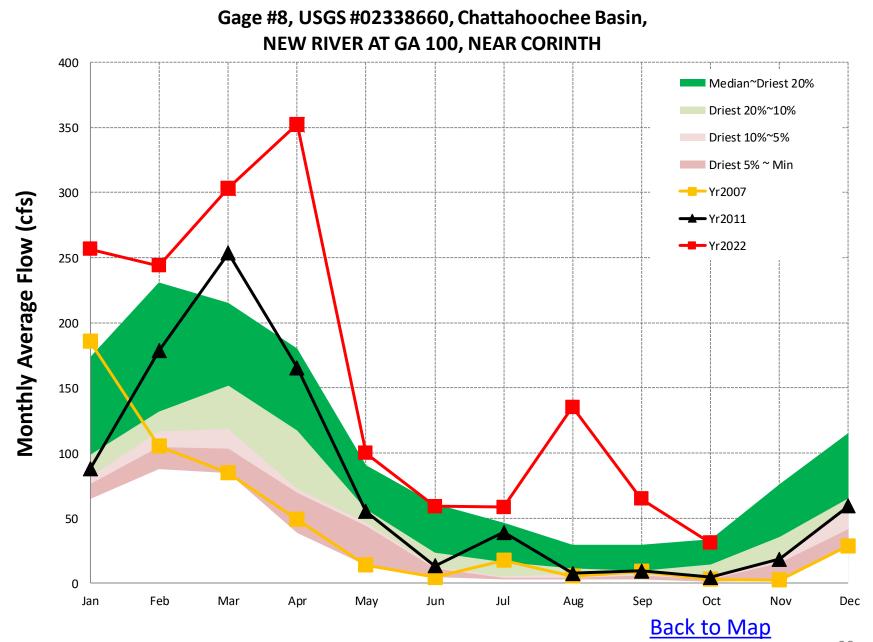

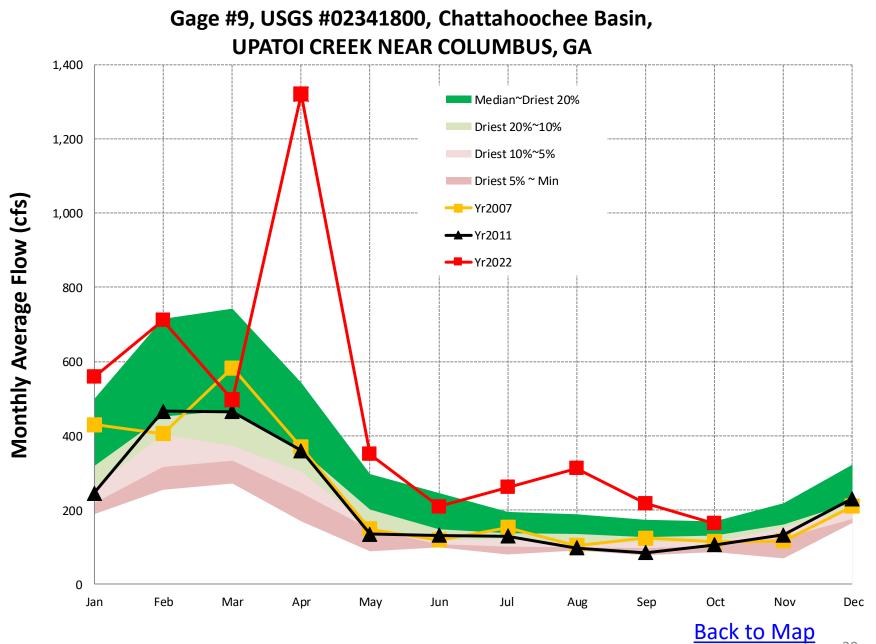

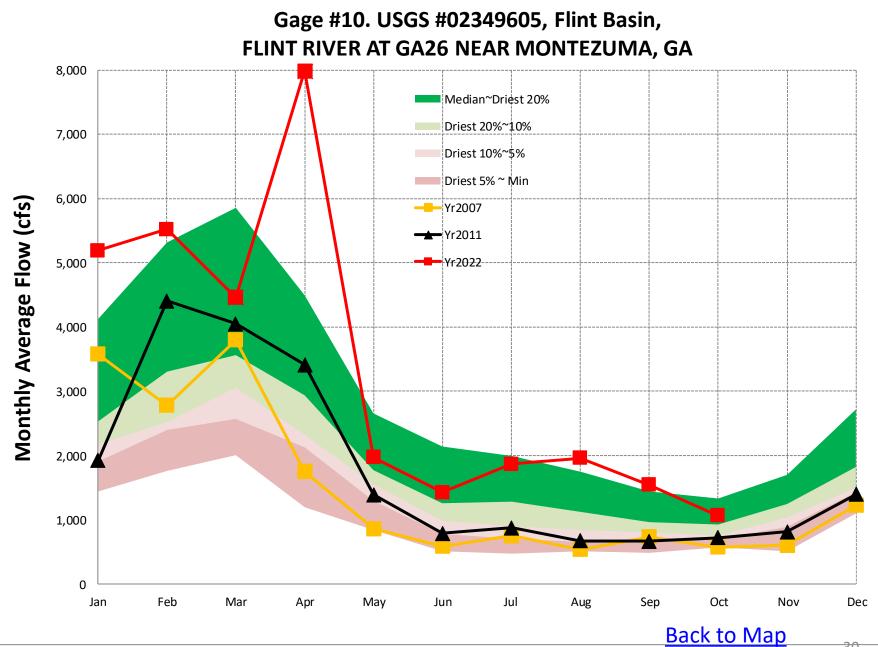

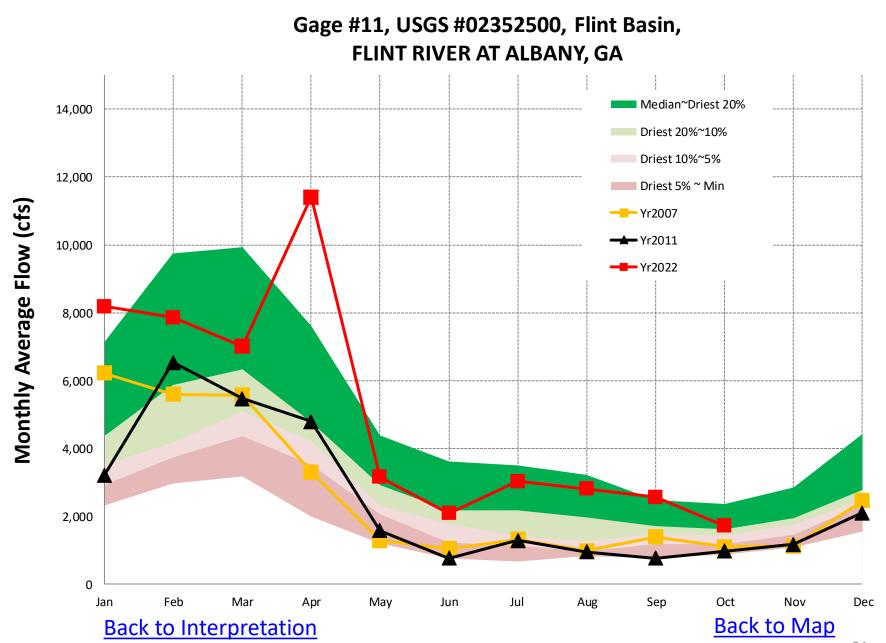

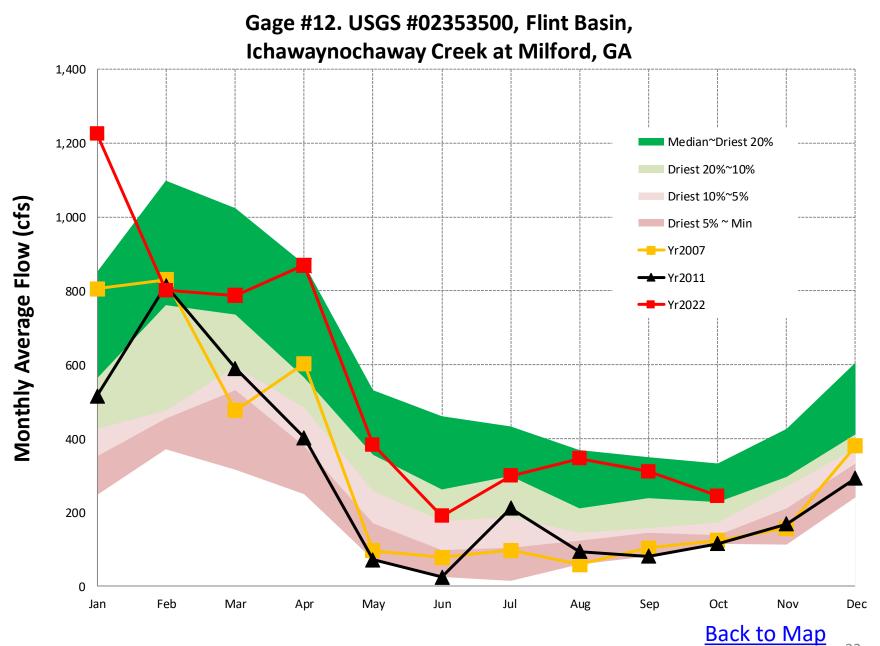

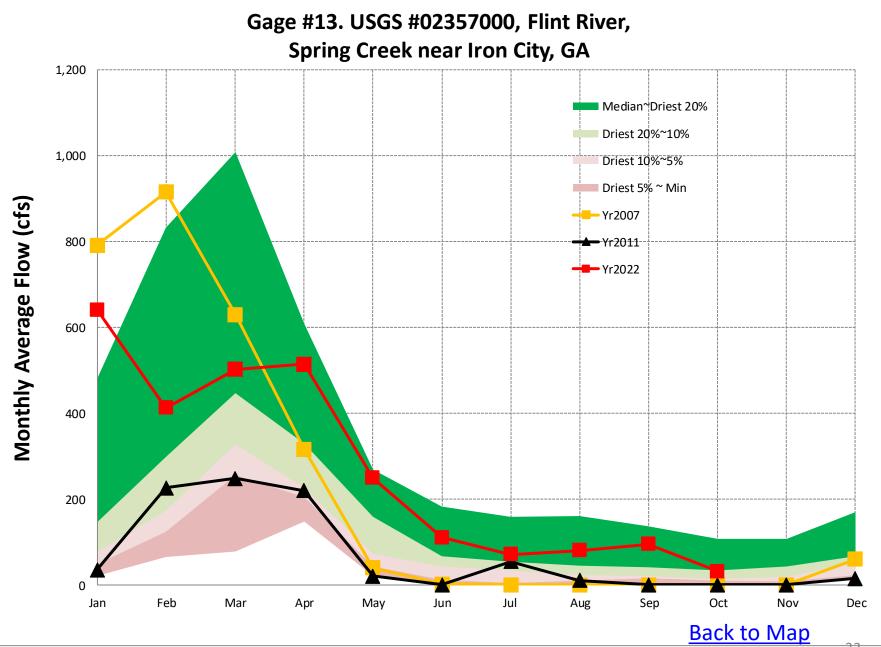

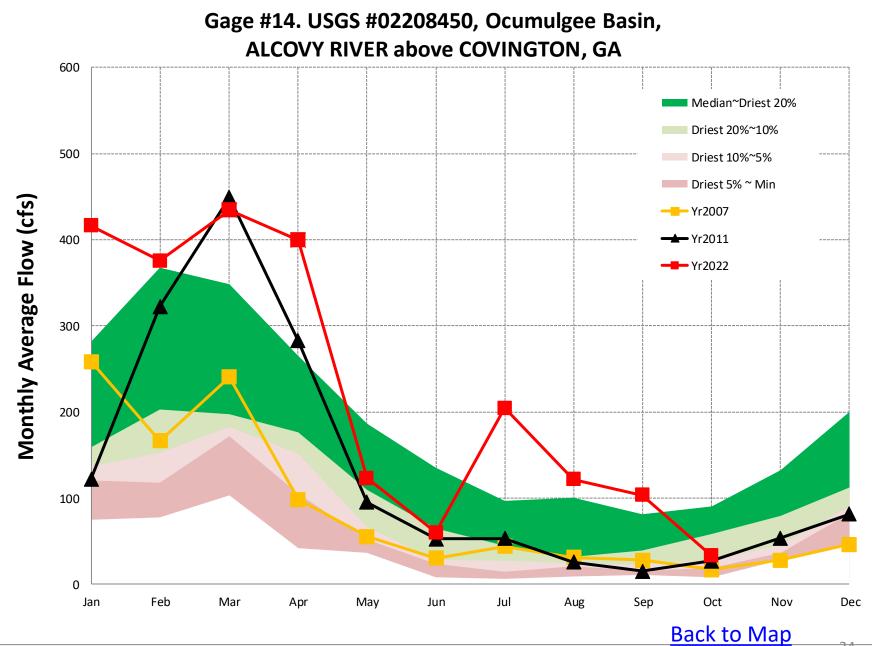

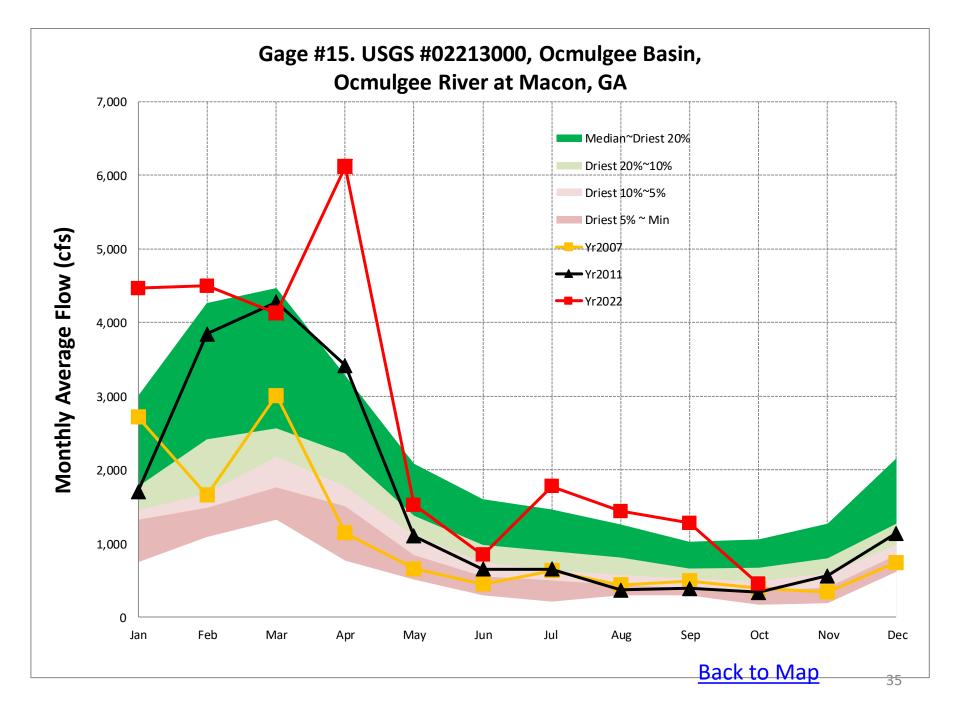

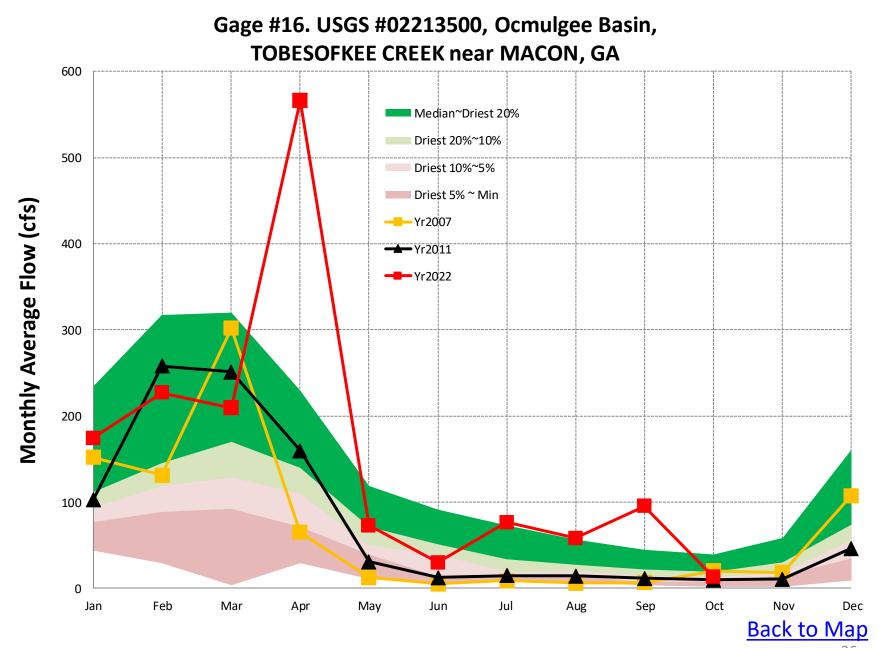

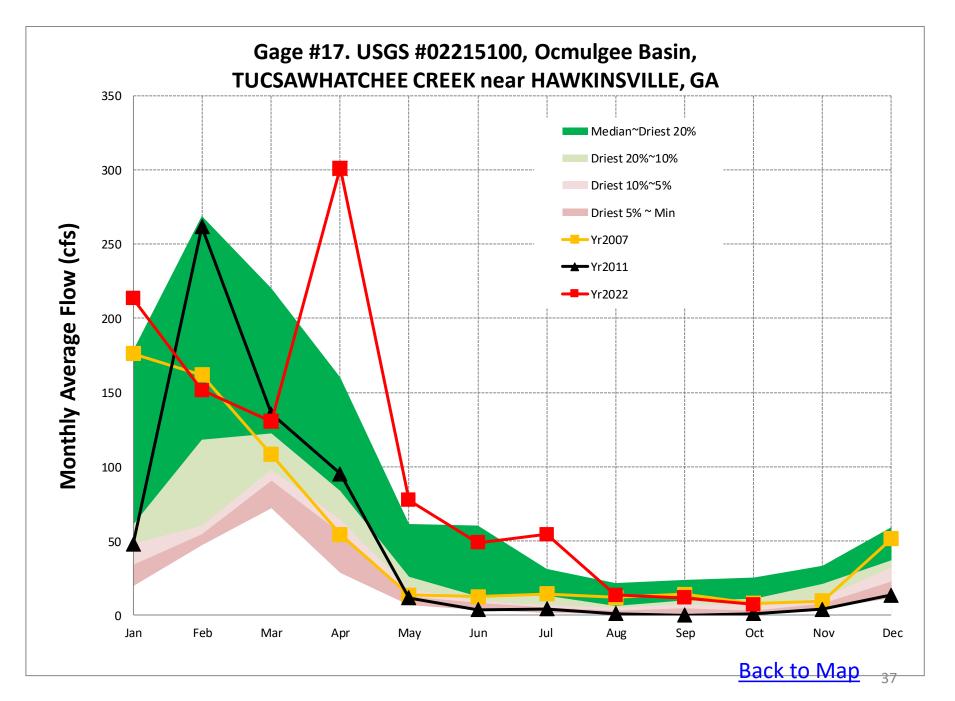

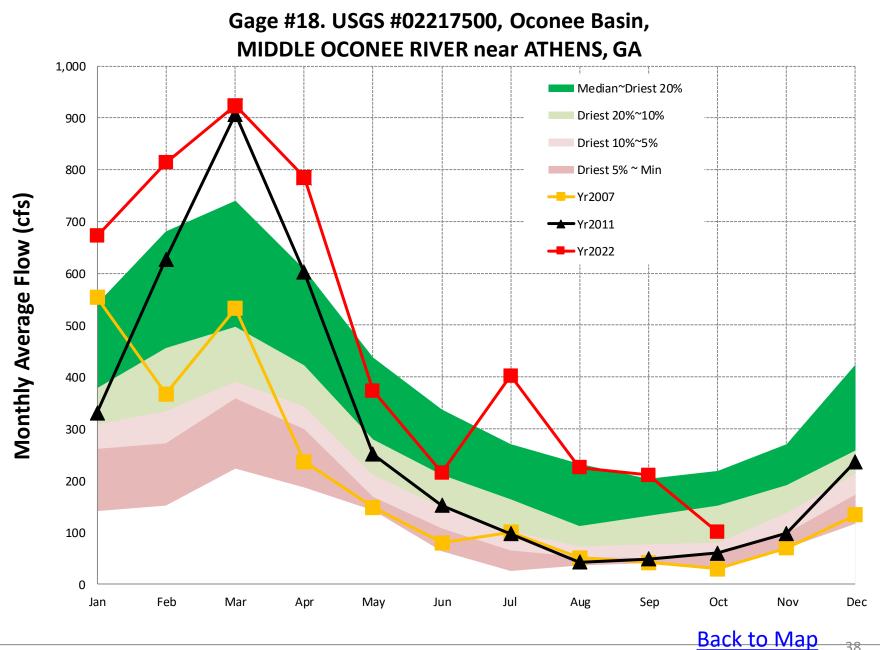

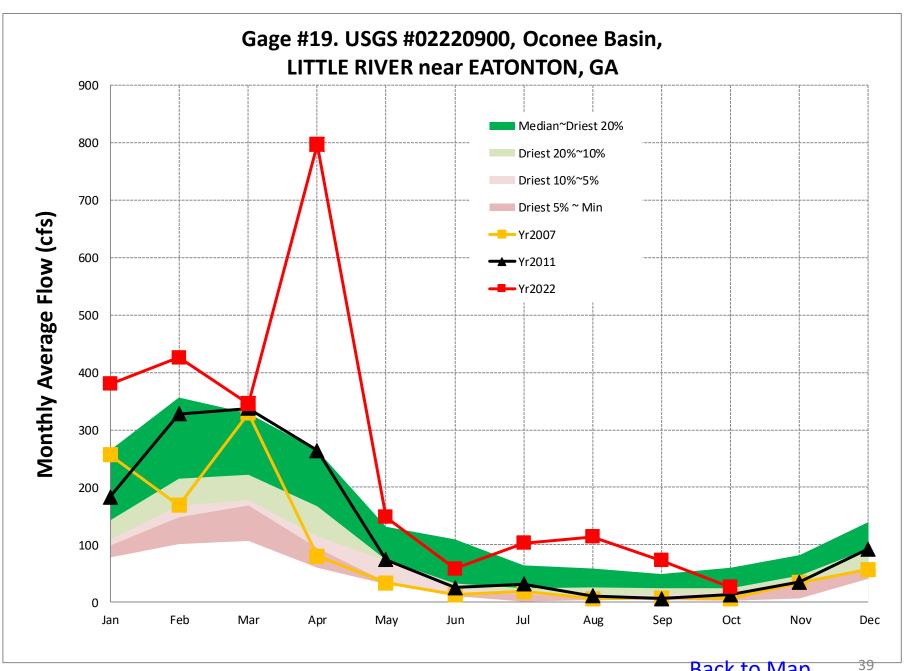

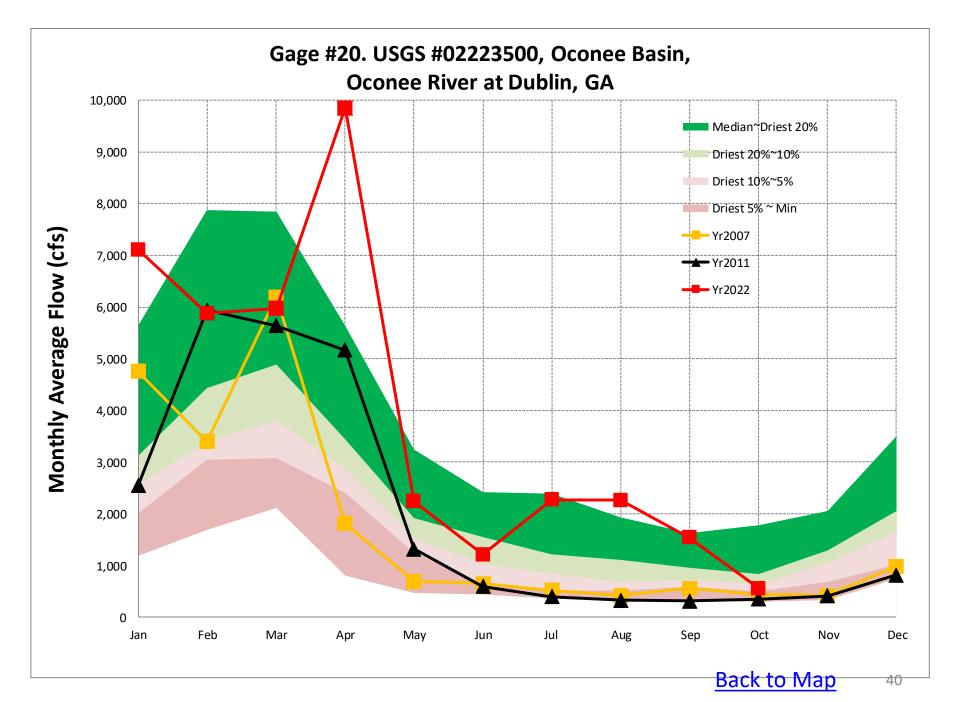

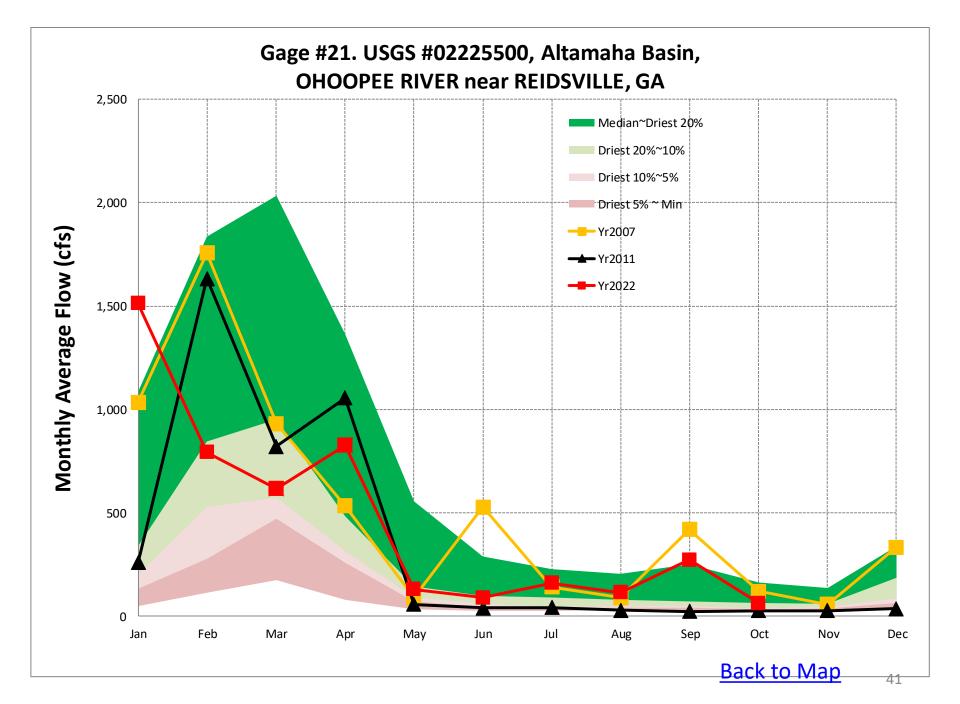

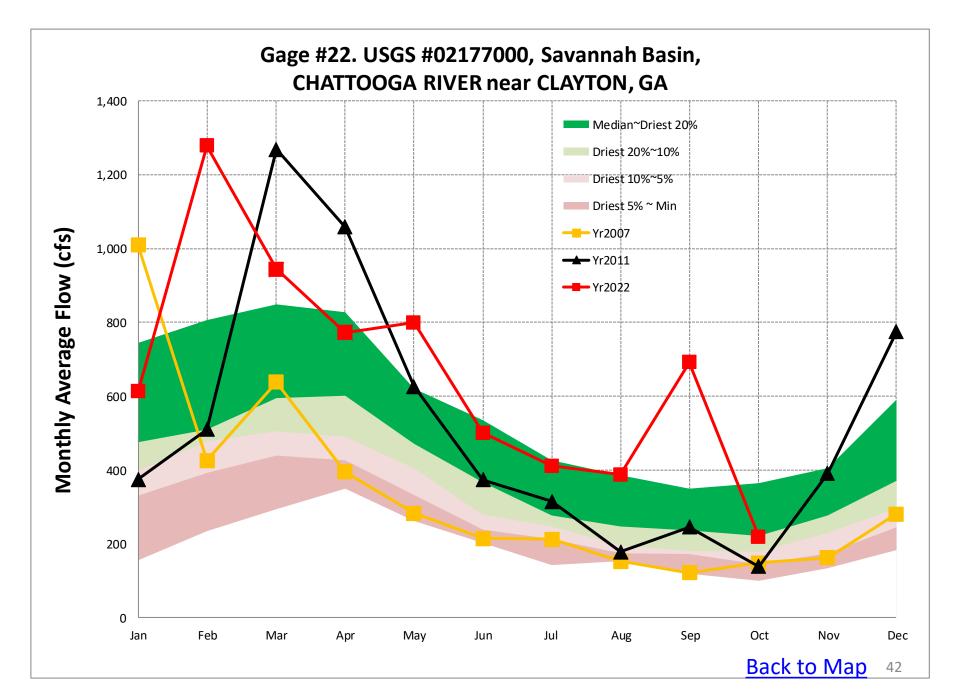

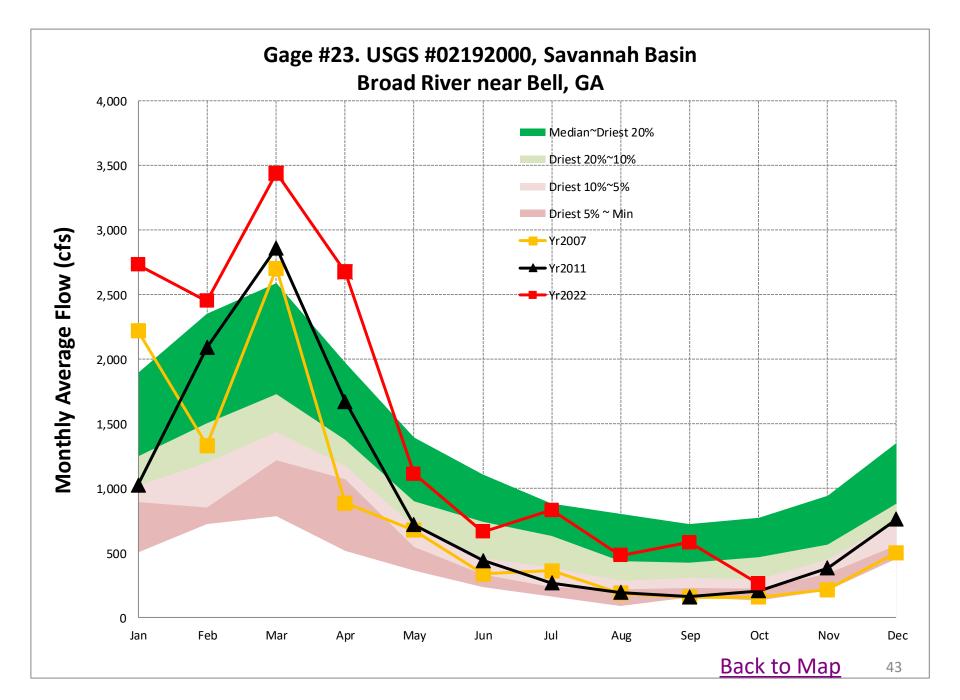

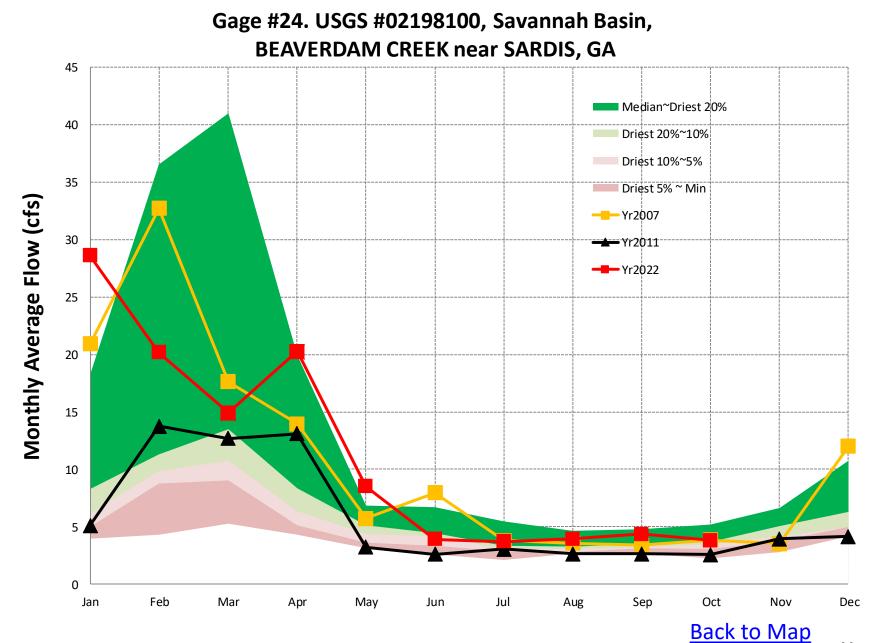

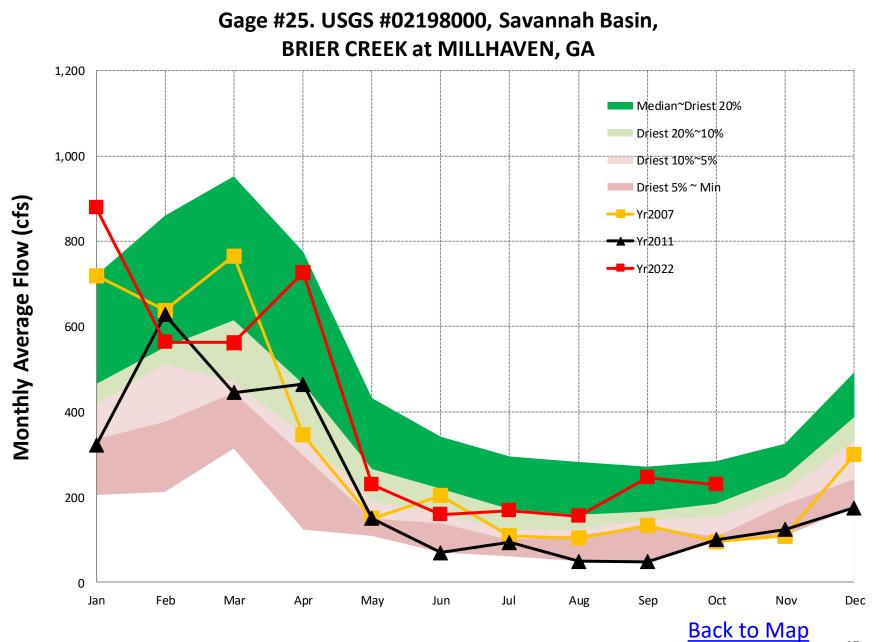

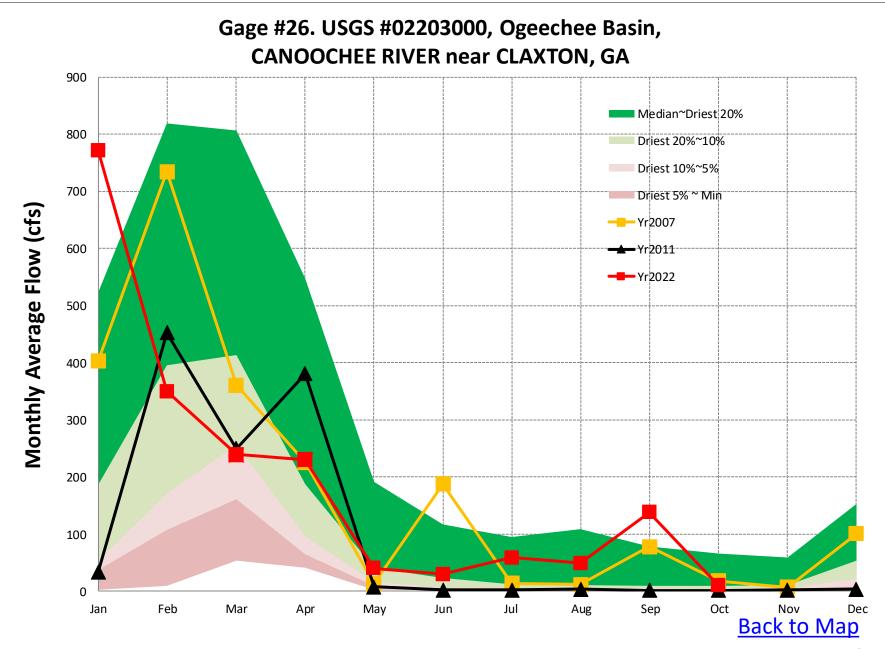

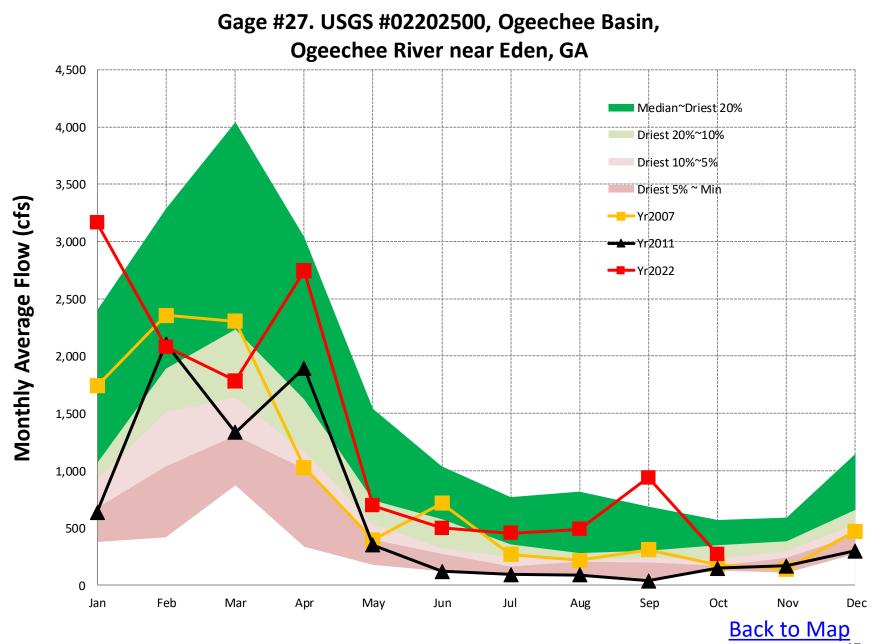

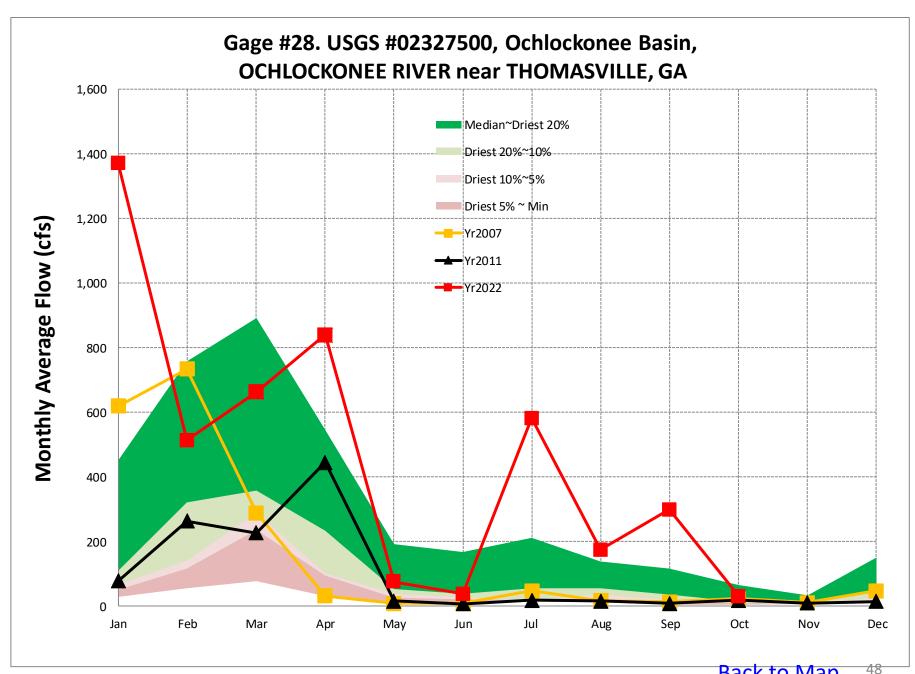

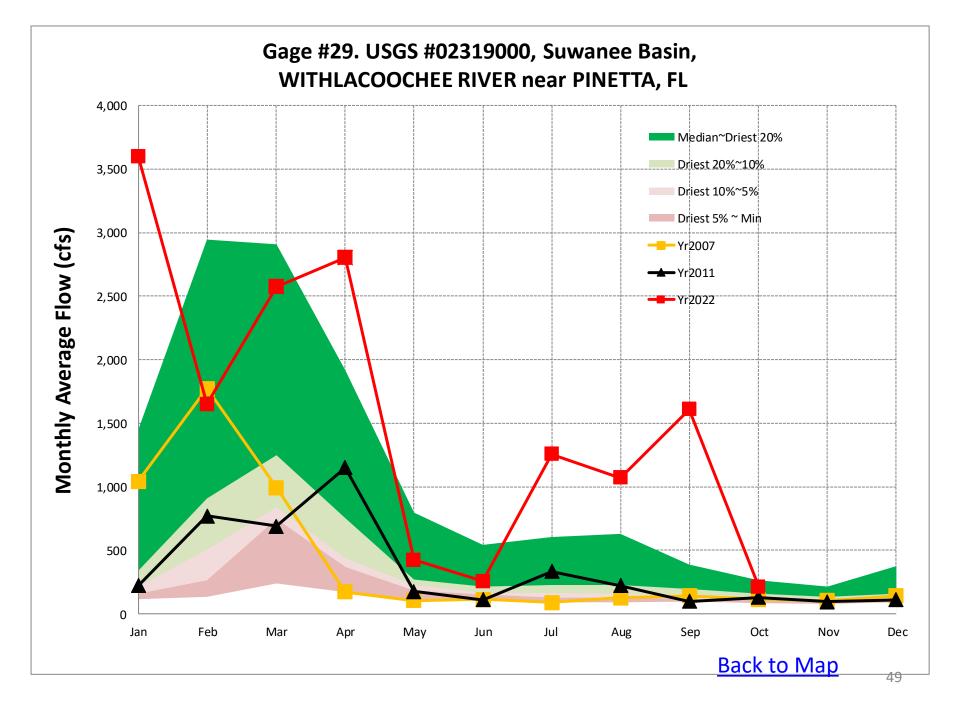

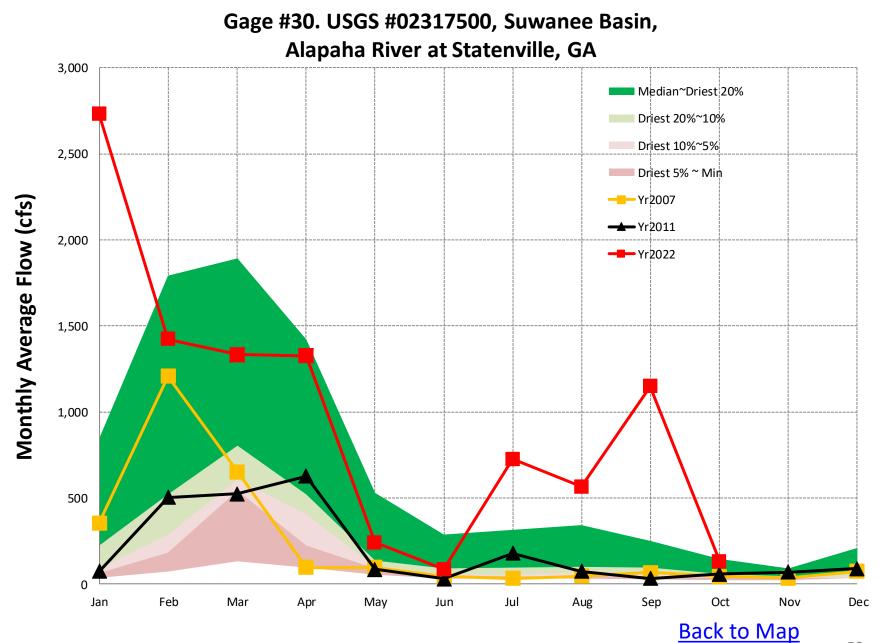

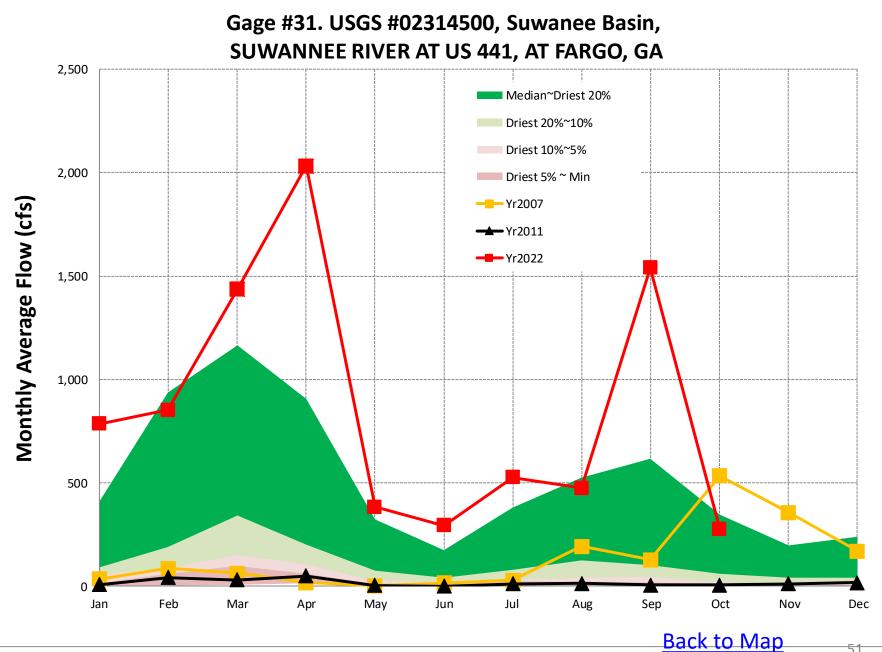

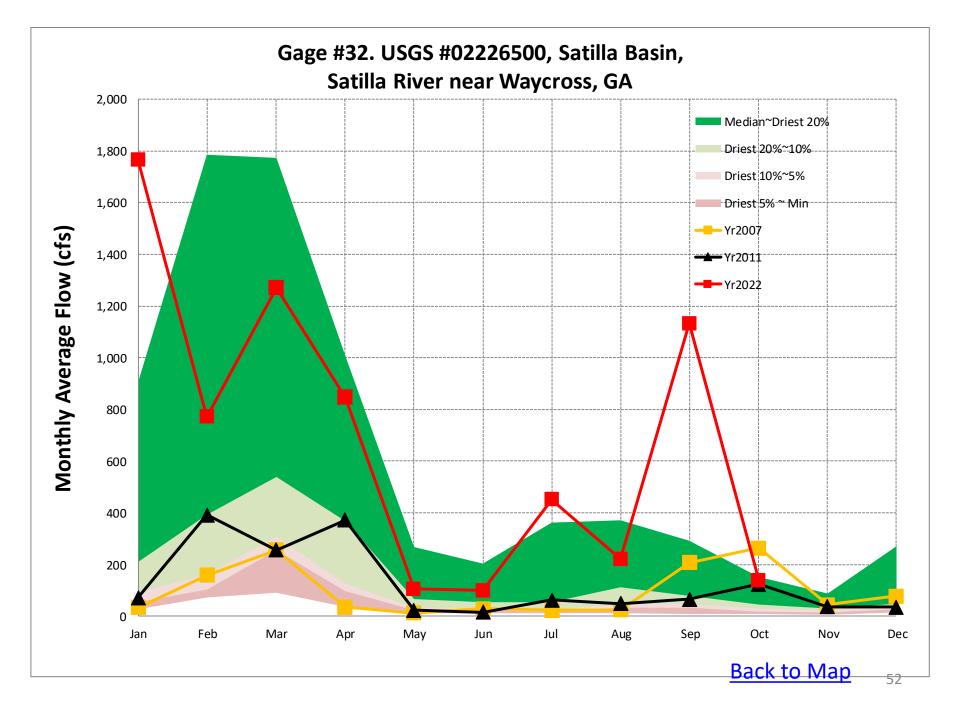

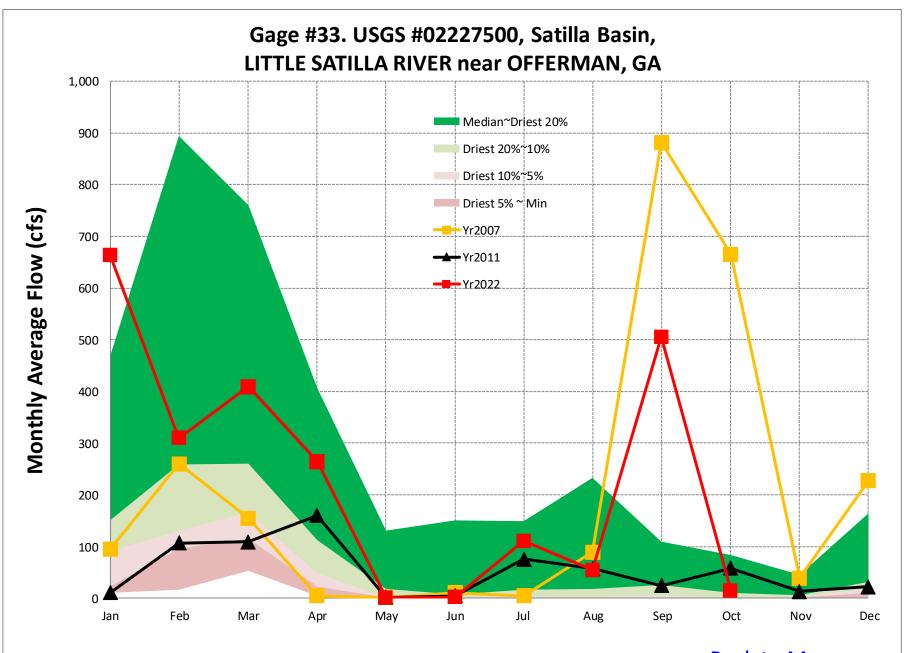

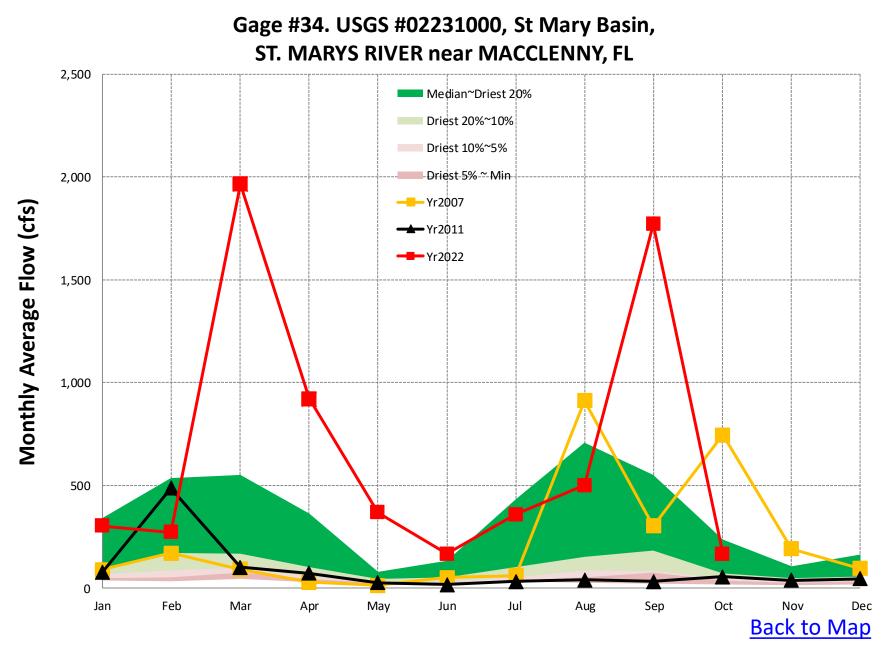

# **Groundwater Levels**

Data Source: USGS

# Rationale for Choosing USGS Monitoring Wells

EPD monitors 17 groundwater USGS monitoring wells shown on the following slide to assess drought conditions. These wells were selected for monitoring because they have:

- Long-term monitoring records consisting of three decades or more of data; and
- Real-time monitoring that represents the most up-to-date conditions.

## **USGS Wells Monitored**

#### **Chattahoochee Basin**

1.16MM03

#### **Flint Basin**

2. 11AA01

# Groundwater Level Graphs

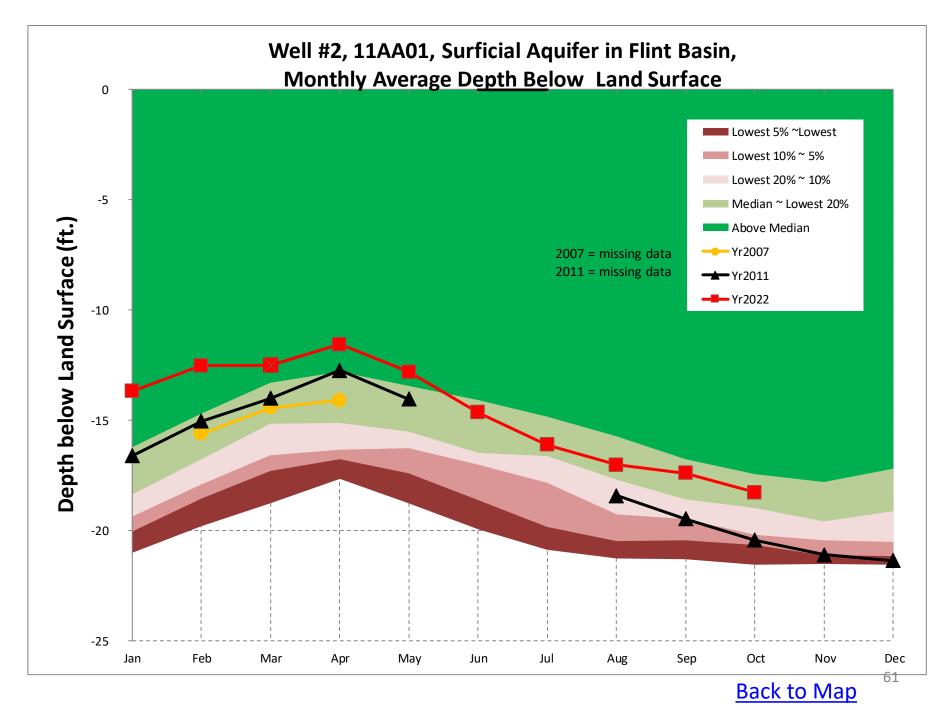

- For each of the 17 groundwater wells, EPD has prepared a graph that shows monthly average groundwater levels from January 2022 through October 2022;
- To help put these levels into perspective, for comparison purposes, each graph also shows:
  - Monthly average levels at that same well for the years 2007 and 2011 when groundwater levels were at or near recorded low levels across much of the state; and
  - And a statistical composite of historical conditions at that same gage showing the "lowest" 50, 20, 10, and 5 percent of all recorded monthly average levels at the same well.

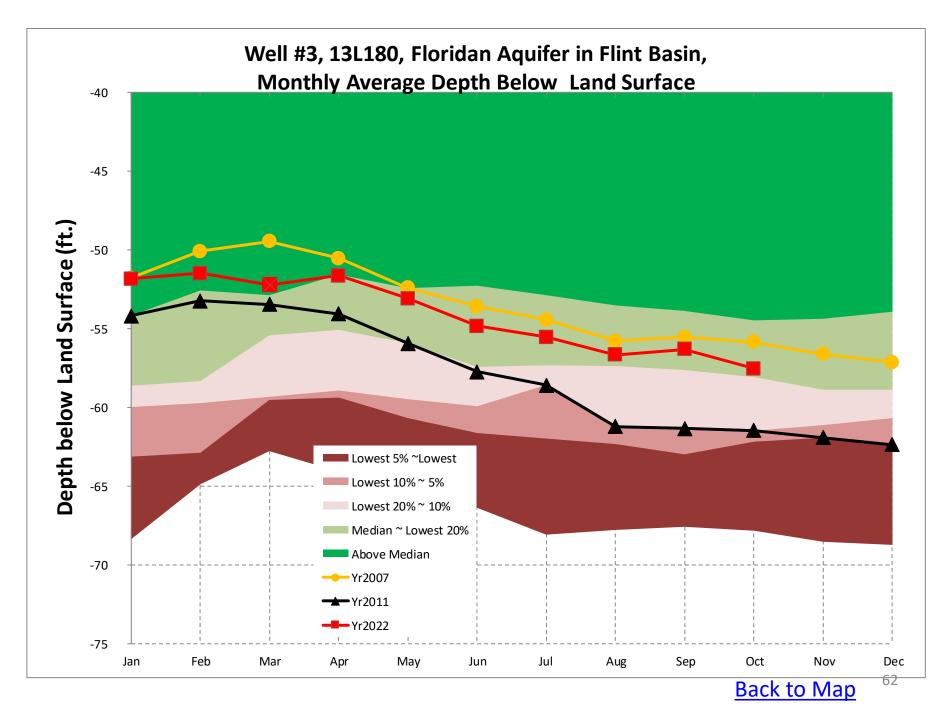

# How to Read the Groundwater Level Graphs Example: Well #11, 09F520, Flint River Basin

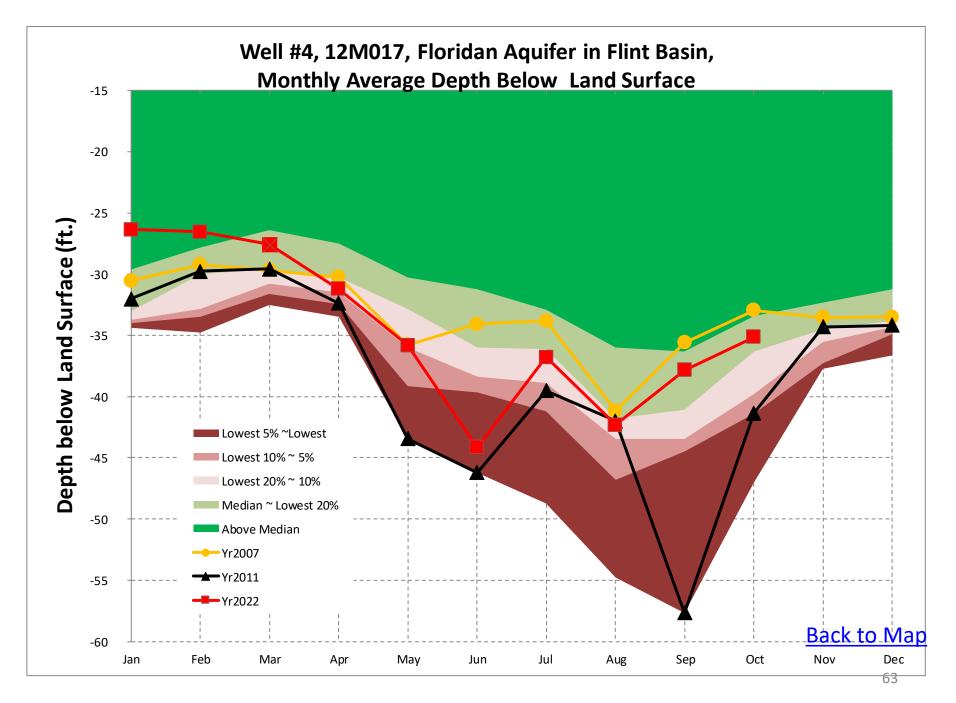

The groundwater level graph for Well #11, USGS 09F520 shows:

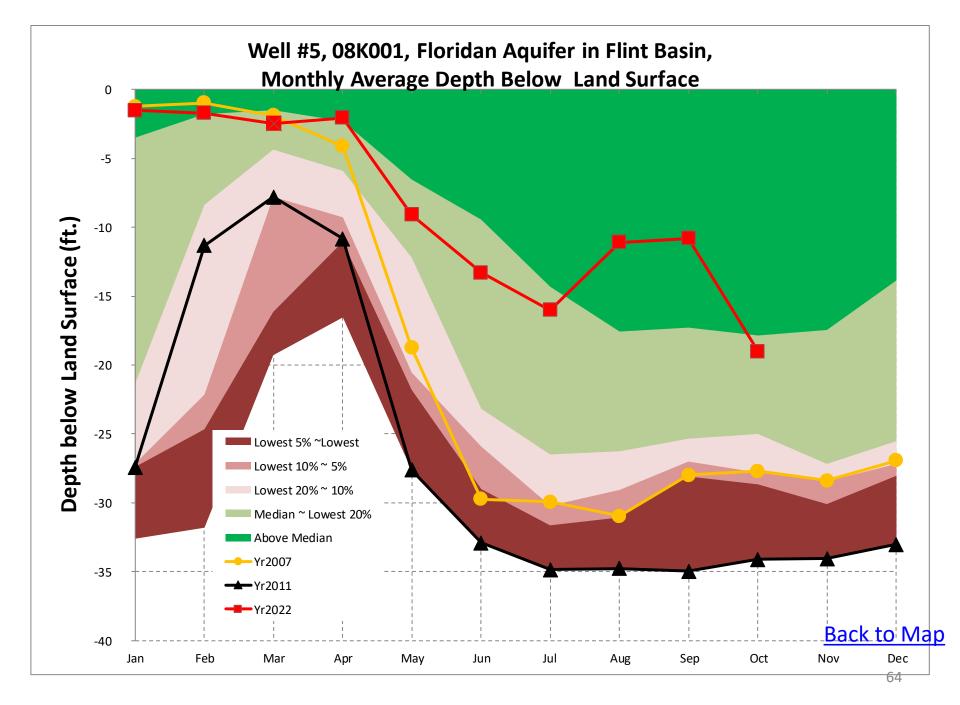

- The average monthly groundwater level in October 2022 was 49 ft below land surface. The statistical composite of all historical data for this well shows that monthly average groundwater levels in October have historically been lower than October 2022 about 26% of the time; about 74% of the time in October they have been higher.
- The average monthly groundwater level in October 2011 was 50.9 ft below land surface. The statistical composite of all historical data for this well shows that monthly average groundwater levels in October have historically been lower than October 2011 about 1% of the time; about 99% of the time in October they have been higher.
- The average monthly groundwater level in October 2007 was 51 ft below land surface. The statistical composite of all historical data for this well shows that monthly average groundwater levels in October have historically been lower than October 2007 about 0.1% of the time; about 99.9% of the time in October they have been higher.

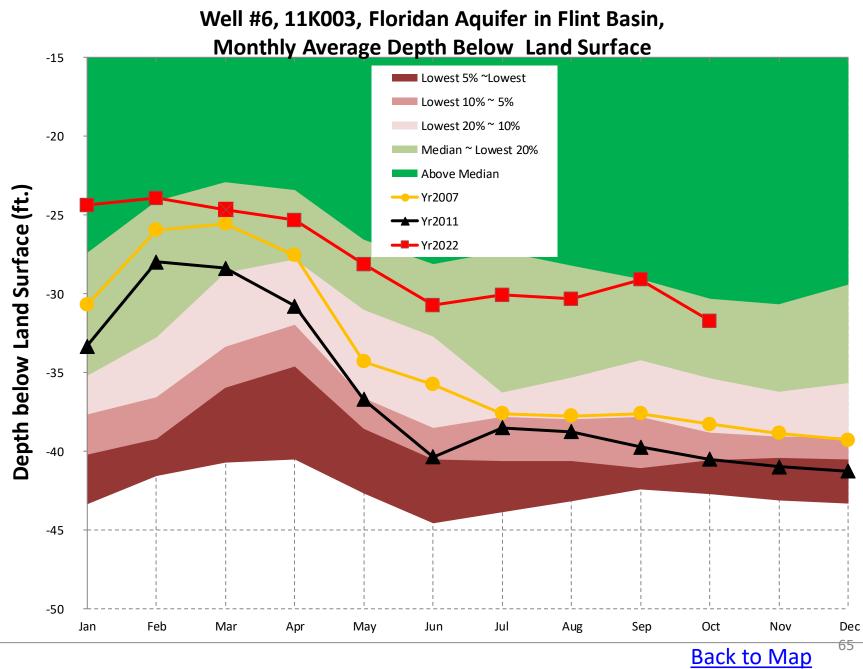

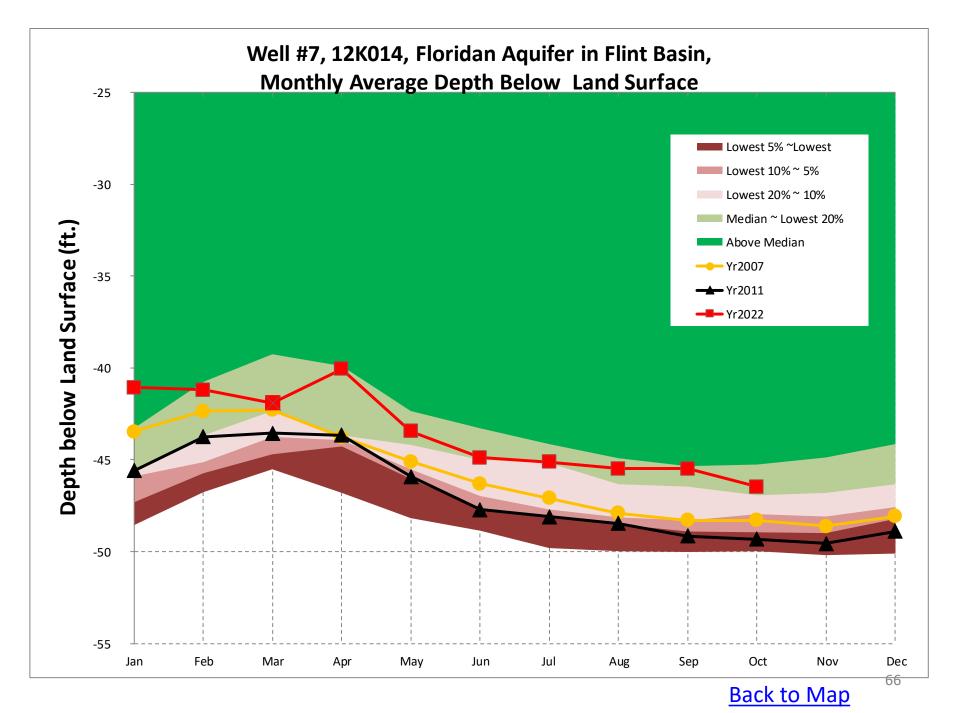

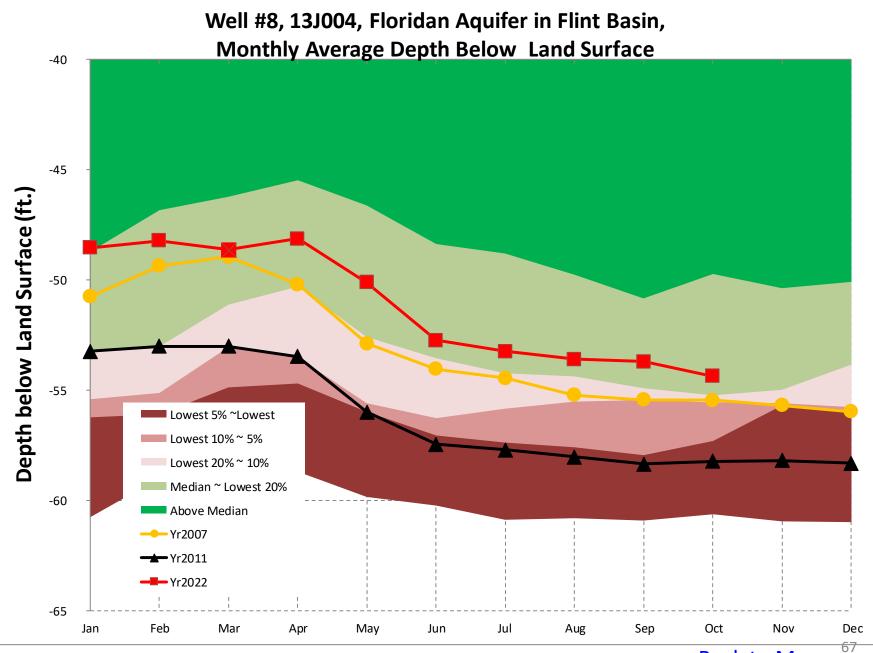

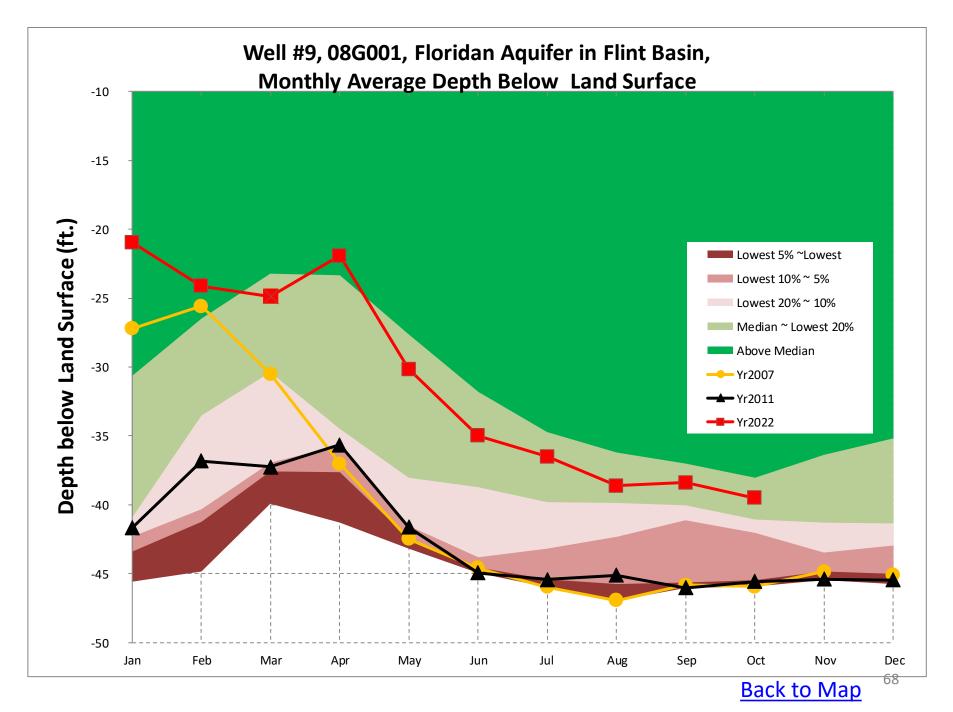

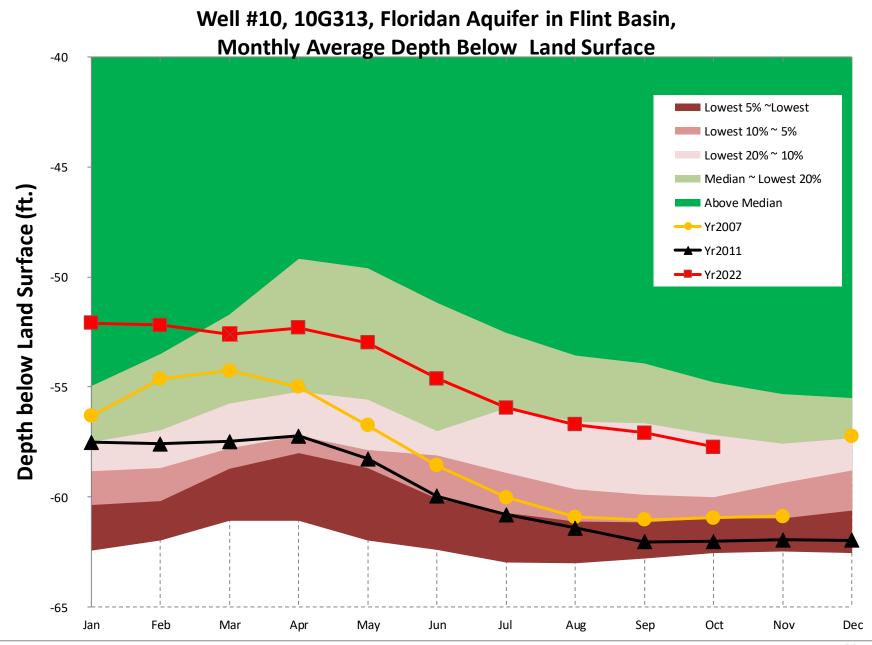

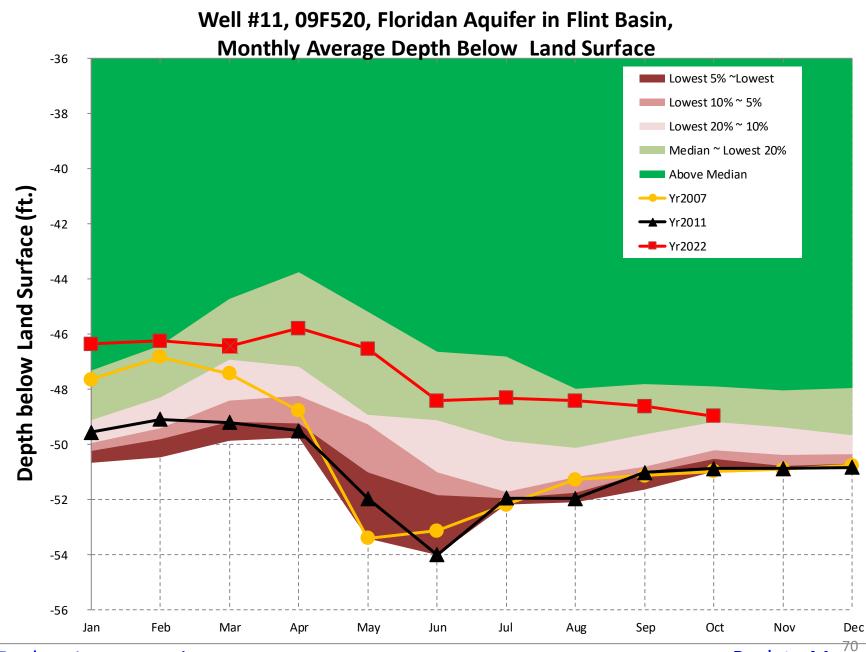

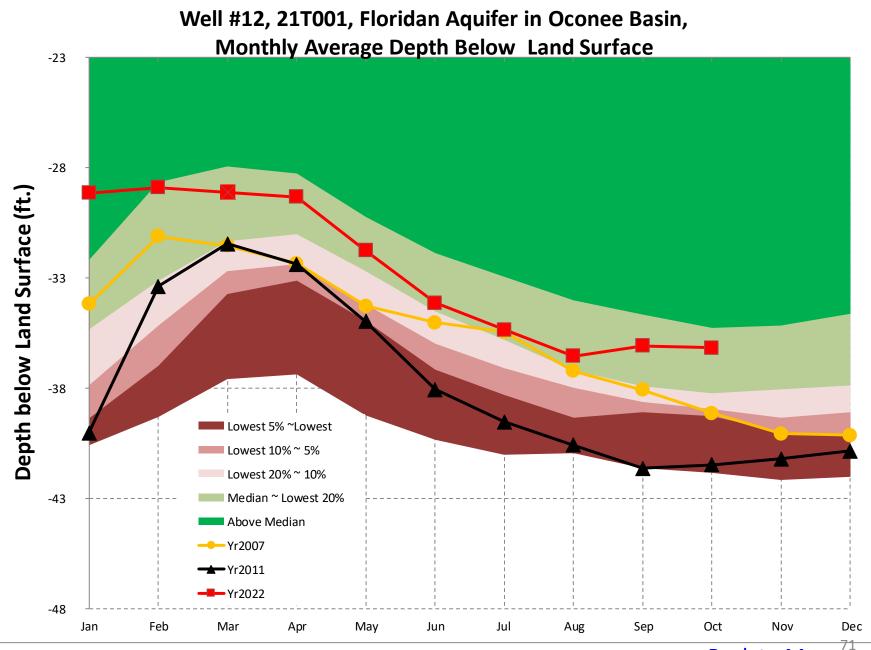

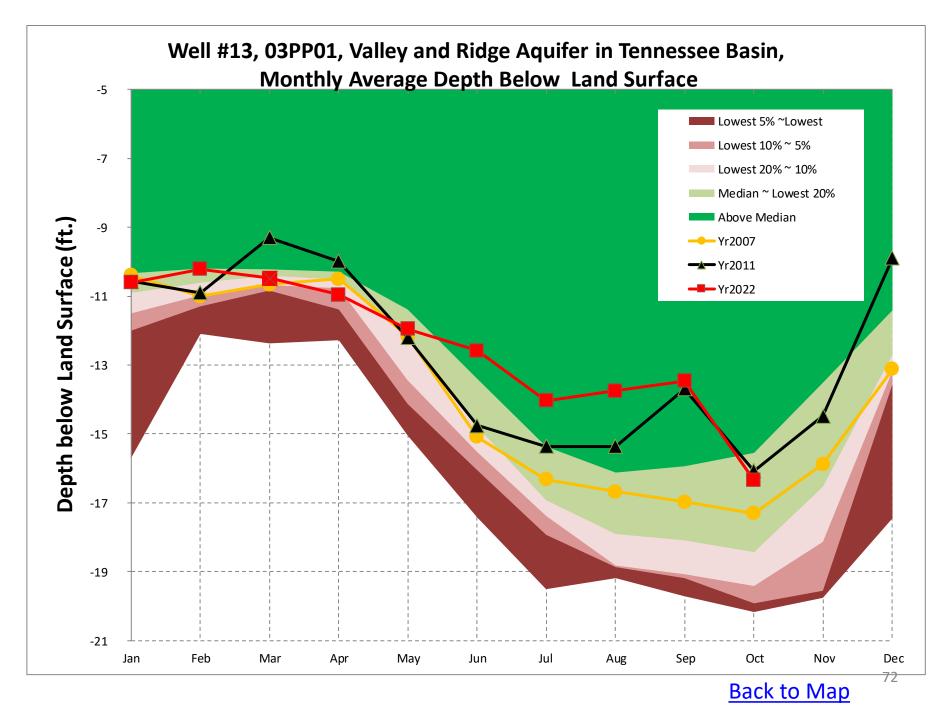

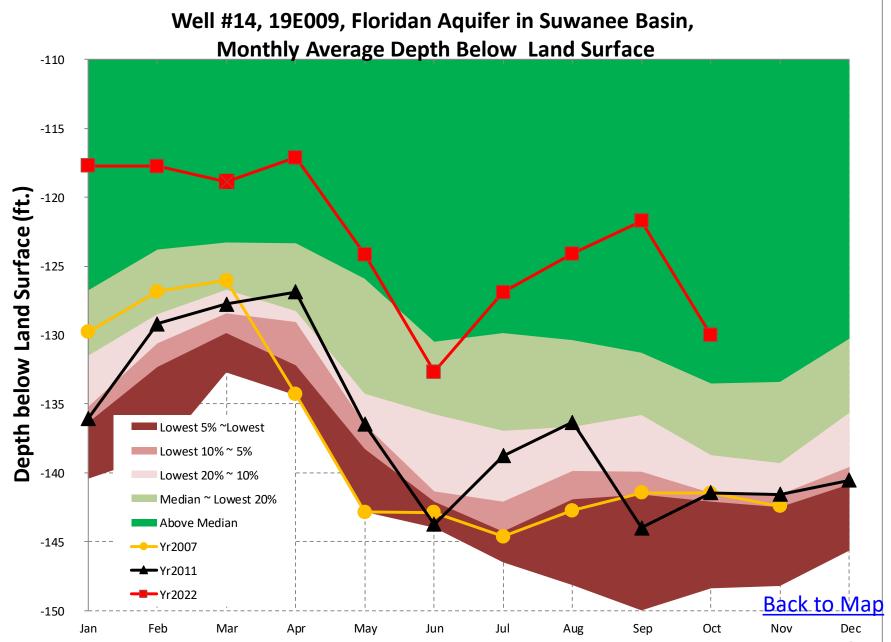

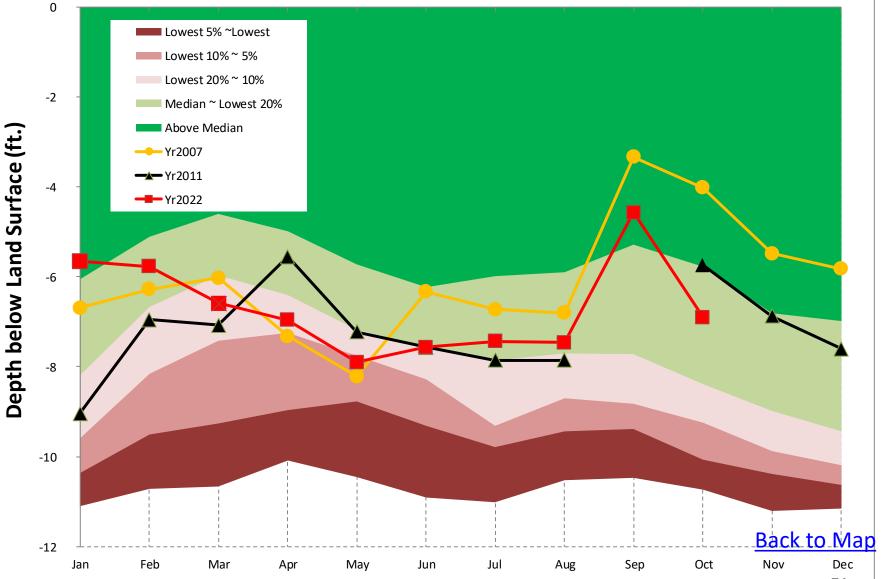

**Back to Interpretation** 

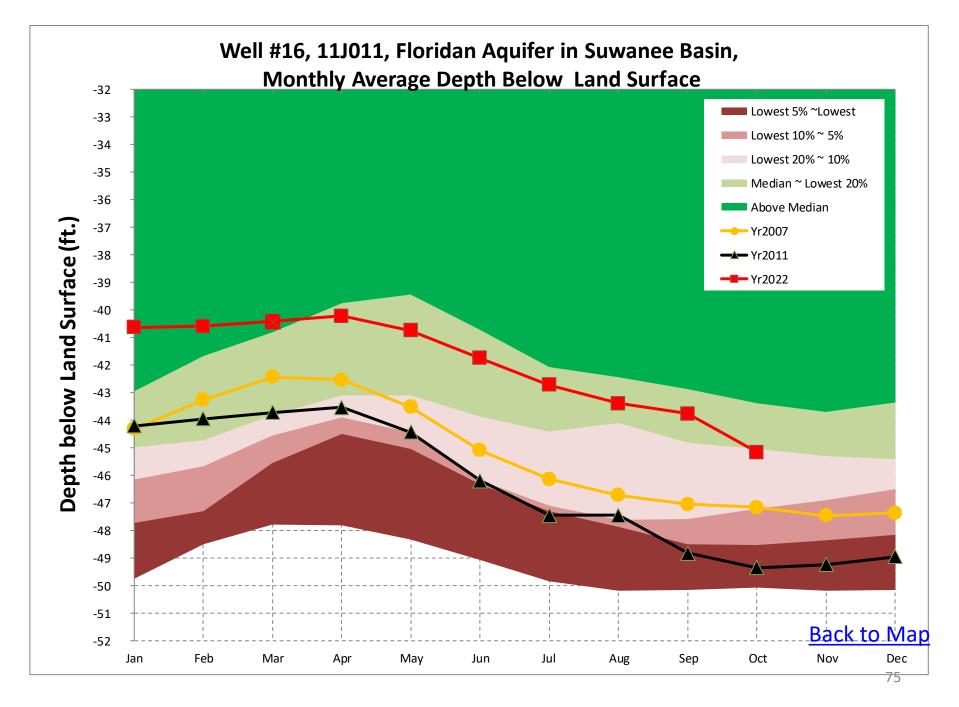

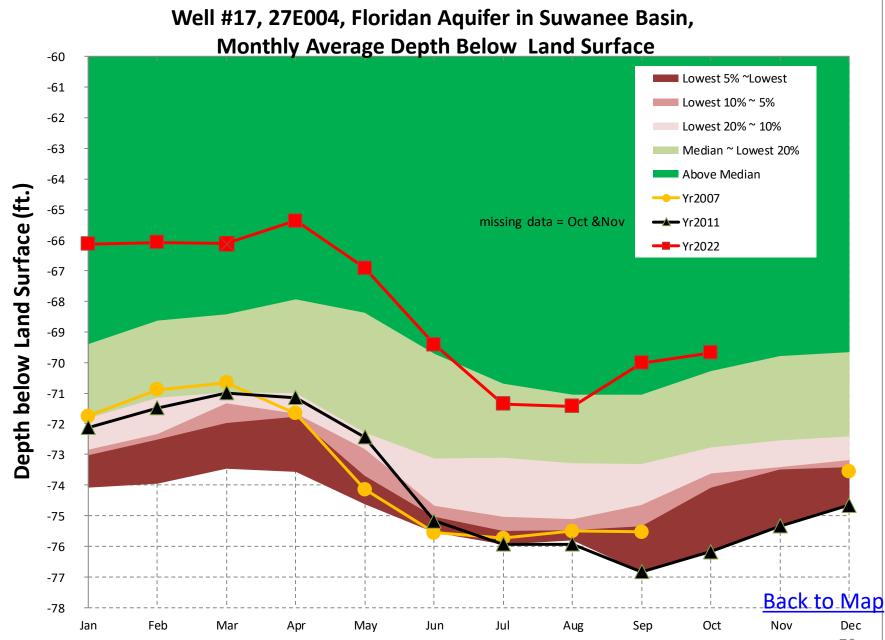

### Well #15, 35P094, Surficial Aquifer in Ogeechee Basin, Monthly Average Depth Below Land Surface

## **Reservoir Levels**

Data Source: US Army Corps of Engineers

#### Coosa Basin

- 1. Carters
- 2. Allatoona

#### **Chattahoochee Basin**

- 3. Lanier
- 4. West Point
- 5. W.F. George

#### Savannah Basin

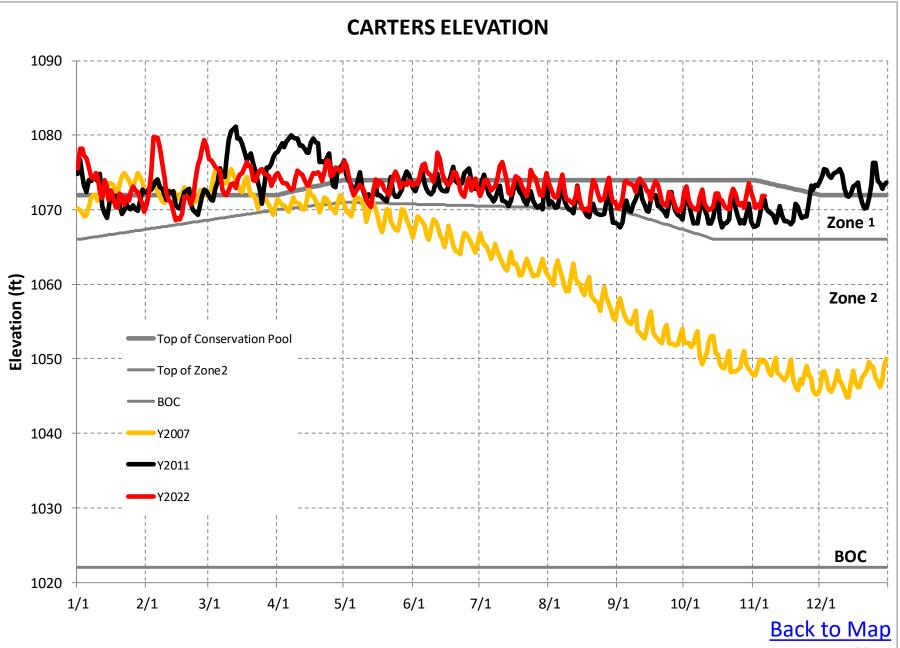

- 6. Hartwell
- 7. Thurmond

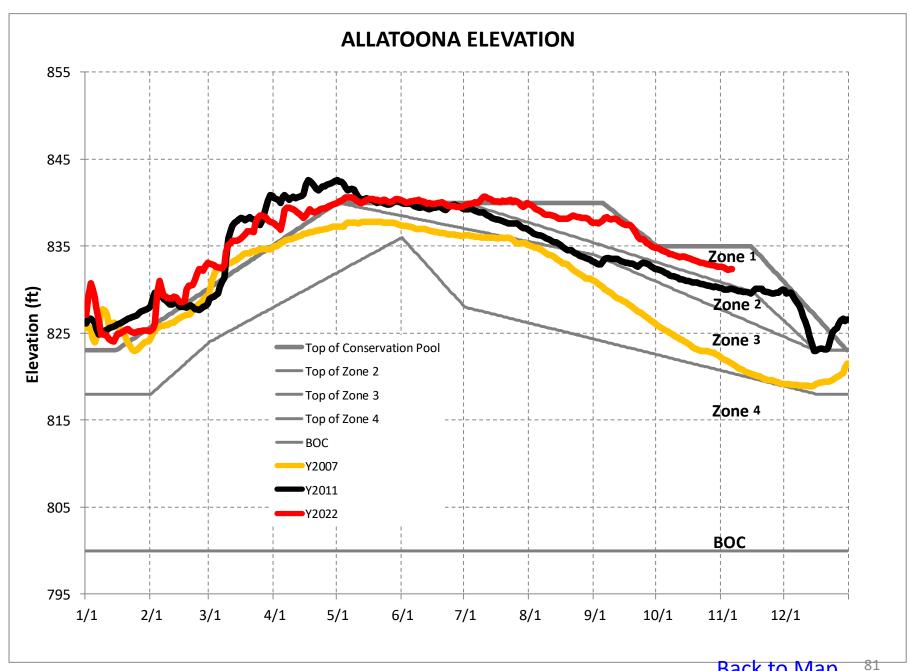

EPD monitors the water levels of seven reservoirs to assess drought conditions.

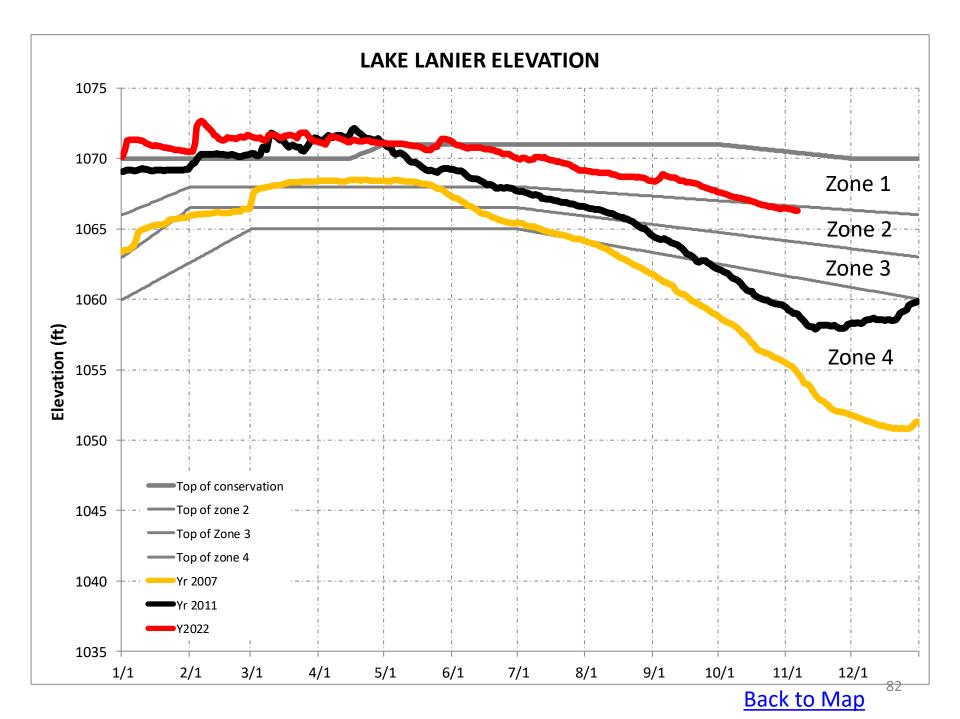

## **Reservoir Elevation Graphs**

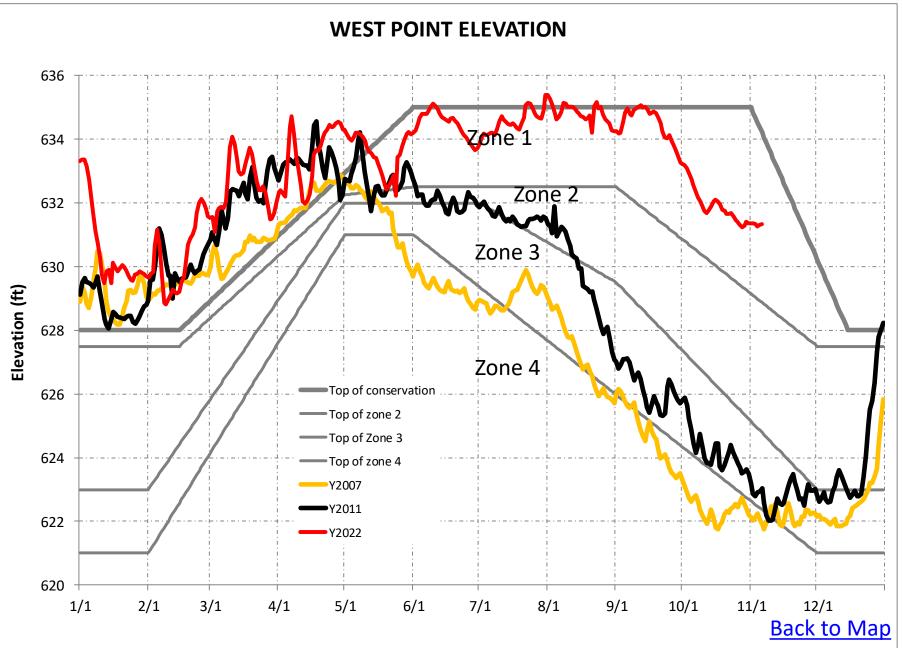

- The following graphs show the reservoir elevation curves for January 2022 through October 2022.
- Each graph also shows the Action Zone Divides (or Levels) for each reservoir
  - Zone 1 is the top layer of the conservation pool
  - Zone 2 is the layer below Zone 1
  - Zone 4 is the lowest layer in the conservation pool
  - There is no conservation storage below the bottom of Zone 4
- To put 2022 reservoir elevations into perspective, elevations for 2007 and 2011 are also shown.
