Selected Variables	State Percentile	EPA Region Percentile	USA Percentile
EJ Indexes			
EJ Index for PM _{2.5}	88	95	94
EJ Index for Ozone	86	93	93
EJ Index for NATA Diesel PM*	N/A	N/A	N/A
EJ Index for NATA Air Toxics Cancer Risk*	N/A	N/A	N/A
EJ Index for NATA Respiratory Hazard Index*	N/A	N/A	N/A
EJ Index for NATA Neurological Hazard Index*	N/A	N/A	N/A
EJ Index for Traffic Proximity and Volume	62	69	69
EJ Index for Lead Paint Indicator	60	67	67
EJ Index for Proximity to NPL sites	97	93	93
EJ Index for Proximity to RMP sites	79	85	84
EJ Index for Proximity to TSDFs	87	81	75
EJ Index for Proximity to Major Direct Dischargers	76	83	82

This report shows environmental and demographic EJ indicator values. It shows environmental and demographic raw data (e.g., the estimated concentration of ozone in the air) and also shows what percentile each raw data value represents. These percentiles provide perspective on how the selected block group or buffer area compares to the entire state, EPA region, or nation. For example, if a given location is at the 95th percentile nationwide, this means that only 5 percent of the US population has a higher block group value than the average person in the location being analyzed. The year for which the data are available and the methods used vary across the indicators. Important caveats and uncertainties apply to this screening-level information. It is essential to understand the limitations on appropriate interpretation and application of these indicators. Please see EJSOREN documentation for discussion of these issues before using reports.

EJSCREEN Report

Screen Area: 2604 W Oakridge Drive, Albany, Ga 31721 with 2 mile radius

Highlights:

- High percentage TSD Proximity - proximity to treatment storage and disposal facilities
- High percentage proximity to National Priorities List (NPL) sites (3 SITES IN DOUGHERTY)
- 60% Demographic Index, low-income and minority
- 75% Minority
- 45% low-income

^{*} The National-scale Air Toxics Assessment (NATA) environmental indicators and EJ indexes, which include cancer risk, respiratory hazard, neurodevelopment hazard, and diesel particulate matter will be added into EJSOREN during the first full public update after the soon-to-be-released 2011 dataset is made available. The National-Scale Air Toxics Assessment (NATA) is EPA's ongoing, comprehensive evaluation of air toxics in the United States. EPA developed the NATA to prioritize air toxics, emission sources, and locations of interest for further study. It is important to remember that NATA provides broad estimates of health risks over geographic areas of the country, not definitive risks to specific individuals or locations. More information on the NATA analysis can be found at: <http://www.epa.gov/ttn/atw/natamain/index.html>.

For additional information, see: www.epa.gov/environmentaljustice

EJSOREN is a screening tool for pre-decisional use only. It can help identify areas that may warrant additional consideration, analysis, or outreach. It does not provide a basis for decision-making, but it may help identify potential areas of EJ concern. Users should keep in mind that screening tools are subject to substantial uncertainty in their demographic and environmental data, particularly when looking at small geographic areas. Important caveats and uncertainties apply to this screening-level information, so it is essential to understand the limitations on appropriate interpretations and applications of these indicators. Please see EJSOREN documentation for discussion of these issues before using reports. This screening tool does not provide data on every environmental impact and demographic factor that may be relevant to a particular location. EJSOREN outputs should be supplemented with additional information and local knowledge before taking any action to address potential EJ concerns.
