The Fire Plan Template and supporting appendices (the Template) were developed by the Georgia Environmental Protection Division (EPD) and is intended for use by mulching operators in the State of Georgia. This Template is composed of two parts; 1) a template for a fire plan as required by Georgia Rule 391-3-4-.04(7)(g), and 2) guidance on recommended best practices to reduce and/or eliminate the risk of fire specific to mulching operations.

The Template is for general informational purposes only and does not specify how a fire plan should be written. Rather, the purpose is to guide mulching operators on how to 1) develop a fire plan and to 2) recommend practices and elements for inclusion. As such, some practices and elements described in the Template may or may not be applicable to an operator’s specific operations. There are practices and elements not included in this Template that an operator may want to include. A fire plan should include the following:

A. Minimum Requirements set forth in Rule 391-3-4.04(7) (See Appendix A).
B. Good housekeeping procedures (See Appendix A).
C. Maintenance activities (See Appendix A).
D. Fire containment equipment (See Appendix A).
E. Personal protective equipment (See Appendix A).
F. Employee training (See Appendix A).
G. Types of fire hazards at the facility (See Appendix B).
H. Checklists for documentation of compliance (see Appendices C-E).
I. Site plan (see Appendix G).
J. Procedures for emergency action.

It is up to the operator to review the contents of this Template and other supporting literature to determine which practices and elements should be included in the fire plan specific to the operation. The result is to create an implementable fire plan that will reduce and/or eliminate the risk of fires and to enact a plan to quickly extinguish fires.

Mulch, as defined by Rule 391-3-4-.01(44), is a product produced by grinding, shredding, or chipping of yard trimmings, land-clearing debris, untreated and unpainted wood, or any combination thereof, that has not undergone controlled aerobic decomposition to produce a stabilized organic product. Mulching, as defined by Rule 391-3-4-.01(45), is the grinding, shredding, or chipping of yard trimmings, land-clearing debris, untreated and unpainted wood, or any combination thereof, that has not undergone controlled aerobic decomposition to produce a stabilized organic product.

The Template is limited in scope to the definitions provided above for mulch and mulching. Mulch piles must only contain the materials as listed in the above definitions and must be segregated from other piles containing other recovered materials.

Fire Plan Template

I. OBJECTIVE

The purpose of this fire plan is to reduce the causes of fire, prevent loss of life and property by fire, and to prevent environmental impact to land, water, and air natural resources. The fire plan should help employees recognize, report, and control fire hazards.

II. SCOPE

This fire plan is applicable to (INSERT MULCHING OPERATION/FACILITY NAME) located at (INSERT ADDRESS). The effective date is (INSERT EFFECTIVE DATE).

III. RESPONSIBLE PARTIES

The responsible party for this fire plan is (INSERT TITLE/NAME OF RESPONSIBLE PARTY). He/she is responsible for ensuring that this plan is executed and that (INSERT MULCHING OPERATION/FACILITY NAME) employees and any contracted vendors involved with operations and related activities are informed of, and adhere to, the procedures outlined in this plan. He/she is responsible for reviewing this plan for any significant changes on the interval specified in the Review Schedule section below.

A. Responsible Parties Contact Information

<table>
<thead>
<tr>
<th>Title</th>
<th>Name</th>
<th>Phone Number</th>
<th>Email Address</th>
</tr>
</thead>
<tbody>
<tr>
<td>(INSERT TITLE)</td>
<td>(INSERT NAME)</td>
<td>(INSERT PHONE NUMBER)</td>
<td>(INSERT EMAIL ADDRESS)</td>
</tr>
</tbody>
</table>

B. Local Fire Authority Contact Information

<table>
<thead>
<tr>
<th>Title</th>
<th>Name</th>
<th>Phone Number</th>
<th>Email Address</th>
</tr>
</thead>
<tbody>
<tr>
<td>(INSERT TITLE)</td>
<td>(INSERT NAME)</td>
<td>(INSERT PHONE NUMBER)</td>
<td>(INSERT EMAIL ADDRESS)</td>
</tr>
</tbody>
</table>

C. Environmental Protection Division Contact Information

For questions on compliance and for further assistance, please contact the Georgia Environmental Protection Division (EPD) Land Protection Branch at (404) 362-2537.
D. Review Schedule

This fire plan shall be reviewed and updated as necessary by the responsible party as designated above every (INSERT REVIEW SCHEDULE TIME FRAME) from effective date, or whenever there are changes to the site layout or operations.

IV. GOOD HOUSKEEPING

The following good housekeeping practices shall be implemented on site (See Appendix A):

A. (INSERT GOOD HOUSEKEEPING PRACTICES)

V. MAINTENANCE ACTIVITIES

Maintenance activities, including but not limited to welding, open burning and fueling vehicles, shall not take place within 25 feet of stockpile without proper fire prevention measures and records.

The maintenance activities at this site include (OR AS DOCUMENTED IN THE FOLLOWING HOT WORK PERMITS. See Appendix F for example):

<table>
<thead>
<tr>
<th>Maintenance Activity name and Description</th>
<th>Fire Prevention Measure Taken</th>
</tr>
</thead>
<tbody>
<tr>
<td>(INSERT MAINTENANCE ACTIVITY)</td>
<td>(INSERT FIRE PREVENTION MEASURE TAKEN)</td>
</tr>
</tbody>
</table>

VI. FIRE CONTAINMENT EQUIPMENT

Below is a list of fire containment equipment and their respective locations on this site:

<table>
<thead>
<tr>
<th>Fire Containment Equipment Type</th>
<th>Location</th>
</tr>
</thead>
<tbody>
<tr>
<td>(INSERT FIRE CONTAINMENT EQUIPMENT TYPE)</td>
<td>(INSERT LOCATION OF EQUIPMENT)</td>
</tr>
</tbody>
</table>

VII. PERSONAL PROTECTIVE EQUIPMENT

Personal Protective Equipment (PPE) will be provided to all employees. The following are examples of PPE available at this site (See Appendix A):

A. (INSERT PPE)
VIII. EMPLOYEE TRAINING

Employee training should include, but not be limited to, the following topics (See Appendix A):

A. (INSERT EMPLOYEE TRAINING TOPIC)

(INSERT RESPONSIBLE PARTY) will be responsible for ensuring that all employees receive the training designated in this section and for maintaining records of employee training.

<table>
<thead>
<tr>
<th>Employee Name</th>
<th>Training Name</th>
<th>Date of Completion</th>
<th>Responsible Party Sign-Off</th>
</tr>
</thead>
<tbody>
<tr>
<td>(INSERT EMPLOYEE NAME)</td>
<td>(INSERT NAME OF TRAINING)</td>
<td>(INSERT DATE OF TRAINING COMPLETION)</td>
<td>(INSERT RESPONSIBLE PARTY SIGN-OFF)</td>
</tr>
</tbody>
</table>

IX. FIRE HAZARD IDENTIFICATION

The following fire hazards have been identified at this site (See Appendix A):

A. (INSERT FIRE HAZARDS)

X. EMERGENCY ACTION PLAN

In case of adverse events, such as those caused by fire or extreme weather, the following procedures shall be enacted as part of an emergency action plan:

A. (INSERT EMERGENCY ACTION PLAN HERE)
Appendix A – Minimum Fire Plan Requirements and Supplemental Information

Appendix A provides information to be used in the development of a Fire Plan.

MINIMUM FIRE PLAN REQUIREMENTS SET FORTH IN RULE 391-3-4.04(7)

A. Maintain a fire plan on site that includes steps to prevent a fire.
B. Describe procedures for emergency action that detail steps to contain and extinguish a fire.
C. Include documentation that the local fire authority or a Georgia State Certified Inspector conducted a fire safety survey
D. Include a site plan that clearly establishes stockpile buffers (see Appendix G).
E. Document that the established stockpile buffers were set by the local fire authority or a Georgia State Certified Fire Inspector or are a minimum of 50 feet.
F. Document where “hot work” (welding or working with an open flame or other ignition source) will be performed at least 25 feet away from stockpiles, unless using a fireproof barrier.

GOOD HOUSEKEEPING

A. Minimize storage of unprocessed wood stockpiles and mulch.
B. Describe procedures for ensuring control of accumulated flammable and combustible materials
C. Dispose of combustible waste (oil rags, miscellaneous paper) in covered, airtight, metal containers.
D. Use and store flammable materials (fuel, oil) in well-ventilated areas away from ignition sources.
E. Identify maintenance activities that require open flames.
F. Keep equipment in good working order; inspect electrical wiring and machinery regularly and keep motors and machine tools free of dust and grease.
G. Ensure that heating units are safeguarded.
H. Report all fuel leaks immediately and ensure they are repaired immediately.
I. Repair and clean up flammable liquid leaks immediately.
J. Keep work areas free of dust, lint, sawdust, scraps, and similar material.
K. Do not rely on extension cords if wiring improvements are needed and take care not to overload circuits with multiple pieces of equipment.
L. Ensure that required hot-work permits are obtained.
M. Turn off electrical equipment when not in use.
G. Provide checklists for documentation of compliance with fire plan (see Appendices C-E).
MAINTENANCE AND FIRE CONTAINMENT EQUIPMENT

Identify fire prevention equipment and ensure regular maintenance to prevent and control of fires.

Ensure proper maintenance, inspection, and testing of the following equipment:

A. Portable fire extinguishers (water truck) and fixed extinguishing systems (water tank, soil).
B. Equipment installed to detect fuel leaks on equipment or storage tanks.
C. Emergency backup systems (generator, backup method) and the equipment they support.

PERSONAL PROTECTIVE EQUIPMENT

Include description on personal protective equipment (PPE) in the Fire Plan and provide PPE to all employees. The following are examples of PPE available at this site:

A. Gloves
B. Masks
C. Hoods/helmets
D. Eye protection

EMPLOYEE TRAINING

Employee training should include, but not be limited to, the following topics:

A. Best management practices for fire prevention
B. Identification/elimination of fire hazards
C. Procedures for fire containment
D. Procedures for fire extinguishment
E. Procedures for fire protection and PPE
Appendix B – Types of Fire Hazards

The following sections address the major workplace fire hazards and the procedures for controlling the hazards.

A. Flammable and Combustible Materials

Regularly evaluate the presence of different types of combustible materials. Certain types of substances can ignite at relatively low temperatures or pose a risk of catastrophic explosion if ignited. Such substances require special care and handling.

1. Class A combustibles

These include common combustible materials (wood, paper, cloth, rubber, and plastics) that can act as fuel. To handle Class A combustibles safely:

a. Frequently inspect areas where stockpiles of woody materials and mulch combustibles are kept.
b. Keep work areas clean and stockpiles of woody materials and mulch free of fuel paths and trash that could allow a fire to spread. Process woody material on a first in first out basis within the 90-day timeframe.
c. Keep combustibles 25 feet away from accidental ignition sources, such as hot plates, soldering irons, or other heat- or spark-producing devices unless fire barriers are in place.
d. Keep combustible trash (paper, oil rags, plastic, rubber) in metal-lined receptacles with tight-fitting covers.

Water, multi-purpose dry chemical (ABC), and halon 1211 are approved fire-extinguishing agents for Class A combustibles.

2. Class B combustibles

These include flammable and combustible liquids (gasoline, oils, greases, tars, oil-based paints, and lacquers), flammable gases, and flammable aerosols. To handle Class B combustibles safely:

a. Store, handle, and use Class B combustibles only in approved locations where vapors are prevented from reaching ignition sources, such as heating or electric
equipment, open flames, or mechanical or electric sparks. Note the location of Class B combustible storage(s) on the site plan.

b. Know the location of and how to use the nearest portable fire extinguisher rated for Class B fire. Note location of fire extinguisher(s) for Class B combustibles on the site plan.

Do not use water to extinguish Class B fires caused by flammable liquids. Water can cause burning liquid to spread, making the fire worse. To extinguish a fire caused by flammable liquids, exclude the air around the burning liquid. The following fire-extinguishing agents are approved for Class B combustibles: carbon dioxide, multi-purpose dry chemical (ABC), halon 1301, and halon 1211. (NOTE: Halon is an ozone-depleting substance and is no longer being manufactured. Existing systems using halon can be kept in place, but employers must post signs indicating where halon or other agents that pose a serious health hazard are used.)

B. Spontaneous Combustion

Spontaneous combustion in a combustible material storage stockpile can occur due to natural biochemical reactions resulting in pile temperatures exceeding 175 degrees Fahrenheit. To prevent fire due to spontaneous combustion the pile temperature should be monitored twice weekly and turned or watered to cool the pile whenever pile temperatures exceed 140 degrees Fahrenheit. Maintain 40-60 percent moisture in the pile.
C. Lightning

Weather should be monitored closely for thunderstorms and lightning, especially after long periods of extremely dry weather. Additional manpower for inspection during these times should be considered.

D. Contamination with Commercial or Municipal Solid Waste

Special inspection procedures for incoming loads of combustible woody material should be implemented to identify contamination from materials such as Class A and B combustibles and electronic equipment with lithium-ion batteries, a potential source of fires. Any commercial solid waste must be removed from woody materials and disposed of appropriately.

E. Smoking

Certain outdoor areas may be designated as no smoking areas. The areas where smoking is prohibited outdoors will be identified by NO SMOKING signs. No smoking in these areas must be strictly enforced.
F. Electrical Fire Hazards

Electrical system failures and the misuse of electrical equipment are leading causes of workplace fires. Fires can result from loose ground connections; wiring with frayed insulation; or overloaded fuses, circuits, motors, or outlets.

G. Portable Heaters

Portable electric heaters must have tip-over protection that automatically shuts off the unit when it is tipped over. A portable heater may only be plugged into a wall outlet and never into an extension cord or cubicle outlet. Always allow adequate clearance between the heater and combustible furnishings or other materials.

H. Cutting, Welding, and Open-Flame Work

Ensure the following:

1. All necessary hot work permits have been obtained before work begins.
2. Fire watch has been established.
3. Documentation of maintenance activities is recorded in this fire plan (see section VI).
4. Cutting and welding are done by authorized personnel in designated areas whenever possible.
5. Torches, regulators, pressure-reducing valves, and manifolds are UL-listed or FM-approved.
6. Oxygen-fuel gas systems are equipped with listed or approved backflow valves and pressure-relief devices.
7. Cutters, welders, and helpers are wearing eye protection and protective clothing, as appropriate.
8. Small tanks, piping, or containers that cannot be entered are cleaned, purged, and tested before cutting or welding on them begins.
Appendix C - Fire Safety Survey

(Date)

Perform a walkthrough of the facility with the local fire department or Georgia State Certified Fire Inspector and other emergency responders to assess the layout of the structures, types and volume of combustible material storage, and other hazards they may encounter when responding to an emergency. Provide a copy of this survey to local authorities for their records.

Appendix F - Example of a Hot Work Permit

HOT WORK PERMIT

All temporary operations involving open flames or producing heat and/or sparks require a Hot Work Permit. This includes, but is not limited to, Brazing, Cutting, Grinding, Soldering, Thawing, and Welding.

INSTRUCTIONS FOR FIRE SAFETY SUPERVISOR

1. Verify precautions listed at right (or do not proceed with the work).
2. Complete page 1 and retain for job files.
3. Post page 2 in vicinity of hot work.

DATE:______________________ JOB NO:______________________

LOCATION/BUILDING & FLOOR (Be Specific)

DESCRIPTION OF WORK BEING PERFORMED

NAME OF PERSON DOING HOT WORK

The above location has been examined, the precautions checked on the Hot Work Checklist have been taken to prevent fire, and permission is authorized for this work.

SIGNED: ________________________

(Permit Authorizing Individual)

SIGNED: ________________________

(Person doing Hot Work)

SIGNED: ________________________

(Fire Watch)

TIME STARTED: Date: ___________ Time: __________ AM/PM

Date: ___________ Time: __________ AM/PM

FIRE WATCH SIGNOFF

Work area and all adjacent areas to which sparks and heat might have spread were inspected during the fire watch period and found fire safe.

Signed: ________________________

FINAL CHECKUP (minimum 30 minutes after Hot Work)

Work area was monitored for _____ hour(s) following Hot Work and found fire safe.

Signed: ________________________

FILL OUT EMERGENCY INFORMATION ON BACK OF PAGE 2.
Appendix G – Sample Site Plan

- Mulching operation must have buffer zone around all stockpiles
- There must also be a buffer between stockpiles and the property line
- Buffer between stockpiles property line may include fire lane
- The buffers must be a minimum of 50 feet unless otherwise designated by the local fire authority or certified state fire inspector

Key:
- Fire Lane
- Unprocessed Stockpile
- Property Line
- Driveway
- Mulch Stockpile
- 50’ Buffer Zone around Mulch Stockpile
- Equipment
- Building
