

EPD is not releasing exact locations of the testing sites during the study to protect the integrity of the samples. Samples are collected every week at locations that capture the predominant wind directions in the area. The distances range from within a ¼ mile to about ½ mile from the facility. The map below shows the approximate locations of the two sites. The colored rings indicate distances of ¼ mile, ½ mile and 1 mile from the facility.

Site ID	Distance from facility	Why this site was selected
F1	About ½ mile	Captures primary downwind direction
F2	Less than ¼ mile	Captures primary downwind direction
F3	Less than ¼ mile	Captures primary downwind direction

Ethylene Oxide Sampling
Fulton County, GA

Sampled By: Georgia Environmental Protection Division
Analyzed By: Eastern Research Group
