## Document Submittal Form

**Instructions:** This form should be completed and included with any document submitted to the Response and Remediation Program, Response Development Units 1 – 3, that is greater than 25 pages in length or that contains paper sizes larger than 11"x17". This includes Release Notifications and documents related to Hazardous Site Inventory and Voluntary Remediation Program sites. Contact Brownfield Unit staff for Brownfield submittal guidelines. Your cooperation helps to ensure that documents are filed correctly, completely, and efficiently.

Name of Document: March 2019 VRP Progress Report

Date of Document: April 3, 2019

Site Name: Cessna Aircraft Company GA1 Facility

Site ID Number: VRP1460391735

Document Submittal Checklist. Please certify that the submittal includes the following by checking each box as appropriate. Items 1 – 3 should be checked / included / certified for each submittal:

- 1. One paper copy of the document (double-sided is preferred)
- 2. Two compact discs (CDs), each containing an electronic copy of the document as a single, searchable, Portable Document Format (PDF) file. Only one CD is needed for Release Notifications. CDs should be labeled at a minimum with the following: 1) Name of Document, 2) Date of Document, 3) Site Name, and 4) Site Number. Any scanned images should have a resolution of at least 300 dpi and should be in color if applicable.
- 3. The electronic copies are complete, virus free, and identical to the paper copy except as described in Item 4 below.
- 4. (Optional) To reduce the size of the paper copy, certain voluminous information has been omitted from the paper copy and is included only with the electronic copies:
  - laboratory data sheets
  - manifests
  - other: NA

I certify that the information I am submitting is, to the best of my knowledge and belief, true, accurate, and complete.

Subject: March 2019 Semi-Annual Voluntary Remediation Program Progress Report  
Cessna Aircraft Company – Tax Parcel 112 003 002  
Underground Injection Control Well Operating Permit GAW000724  
Columbus, Muscogee County, Georgia

Dear Mr. Hayes:

This Progress Report documents the activities completed for the Cessna Aircraft Company facility in Columbus, Georgia, from September 2018 through February 2019. This reporting schedule follows that prescribed by the Georgia Environmental Protection Division (EPD) in a letter dated September 27, 2016. This Progress Report includes the following:

- Work Performed This Period;
- Work Anticipated for the Next Period;
- Schedule; and
- Professional Certification.

## **Work Performed This Period**

The following activities were performed during the current reporting period and described further below:

- September 18, 2018: Received EPD comments on the August 1, 2018 Pre-Design Investigation Report & Final Design and the September 2018 Semi-Annual Progress Report;
- September 25, 2018: Underground Injection Control (UIC) Permit Application submitted;
- October 19, 2018: UIC Permit GAW000724 was issued for the facility to implement the groundwater bioremediation;

Mr. David Hayes  
April 3, 2018  
Page 2

- January 22 – February 1, 2019: Installation of 14 injection wells and 1 monitoring well;
- February 19 – 20, 2019: Sampling of the new injection wells for volatile organic compound (VOC) analyses;
- February 18 – 22, 2019: Semi-annual groundwater and soil vapor extraction (SVE) system monitoring; and
- September 2018 – February 2019: Ongoing SVE system operation and maintenance (O&M).

### **EPD September 18, 2018 Progress Report Comments**

- EPD identified a conflict between the project schedule included in the September 2018 progress report and the final design. The project schedule currently in effect is discussed in the Schedule section below.
- EPD requested that all detected constituent concentrations be posted on figures and tables and figures include the laboratory detection limits. These changes have been made to the semi-annual reports.
- EPD pointed out that the Vapor Intrusion Screening Levels in the Semi-Annual SVE System Monitoring Report used a Target Hazard Quotient of 0.1 while EPD utilizes a cumulative Hazard Index of 1.0 to evaluate potential risks. CDM Smith has included the cumulative risks in the Semi-Annual SVE System Monitoring Report.

### **EPD September 18, 2018 Pre-Design Investigation & Final Design Report Comments**

- EPD noted that where present, clay in lower Unit A could inhibit efficient treatment in Unit B. While the Unit B treatment may be less efficient than the Unit A treatment, the VOC mass flux in groundwater is believed to be the greatest in Unit A and efficient treatment in Unit A is expected to result in an effective barrier to VOC migration in groundwater. The treatment is also expected to significantly reduce the overall VOC mass in both units over time.
- EPD recommended surface water monitoring in the offsite tributary to Bull Creek, but access limitations have been imposed by the property owner, Kemira. As recommended by EPD, MW-7A and MW-7A/B will be monitored to assess the effects of the corrective action.
- EPD recommended that care be exercised with the pH adjustment dosing to prevent mineralization and permeability loss in the aquifer. CDM Smith used site-specific pH testing during the final design to maintain the sodium bicarbonate dosing to a minimum.

### **Semi-Annual Groundwater Monitoring**

Semi-annual groundwater sampling is required to monitor groundwater conditions. The first 2019 semi-annual groundwater monitoring event and sampling of the newly installed injection wells was conducted during February 18 – 22, 2019. These sample results were used to establish the pre-

Mr. David Hayes  
April 3, 2018  
Page 3

treatment conditions in groundwater and reassess the area needing treatment. The groundwater monitoring report is provided in **Attachment A**.

The groundwater levels and flow direction in February 2019 were consistent with previous observations with the flow to the southeast. Previously, the trichloroethene (TCE) concentrations in groundwater immediately downgradient of the former vapor degreaser at the MW-3 well cluster were declining but increased during the current sampling event. CDM Smith believes that this increase could be a result of VOC shifts caused by the pre-design tracer test injections and/or the more recent injection well installations and development. Offsite wells MW-5A/B, MW-7A/B, and MW-7A continue to decrease in TCE, and TCE continues to be the only VOC that exceeds the Risk Reduction Standards (RRSs) in groundwater. As previously reported, the decreasing trends are possibly a result of the former vapor degreaser being decommissioned in 2010 and/or VOC mass removal by the SVE system. VOCs in bedrock groundwater at MW-3C were all below the RRSs.

### **SVE System O&M**

CDM Smith began operation of the SVE system in February 2017. The fifth semi-annual SVE system monitoring event was conducted on February 18, 2019. The SVE monitoring report is provided in **Attachment B**.

The VOC concentrations in the extracted soil vapors have continued to decrease and TCE is the VOC in soil vapor at the highest concentration. TCE in the combined SVE system discharge has been reduced from 510 mg/m<sup>3</sup> in February 2017 to 0.69 mg/m<sup>3</sup> in February 2019. CDM Smith will continue to monitor the SVE system progress toward a potential endpoint in the future.

### **Well Installation**

Injection wells for the biobarrier were installed at 14 locations from January 22 through February 1, 2019. Additional information on the well installation is provided in Attachment A. Including the two injection wells installed during the pre-design investigation, a total of 16 injection wells are available. The injection wells were installed as planned and described in the final design. However, INJ-5, which was planned to be located within the warehouse adjacent to the former vapor degreaser, encountered concrete debris beneath the warehouse floor and a borehole could not be constructed. As a result, INJ-5 was relocated immediately outside of the warehouse.

In addition, MW-8A was installed in the warehouse adjacent to the former vapor degreaser to monitor treatment effectiveness. The new wells plus the SVE wells were surveyed during this reporting period. A compressive well location map is provided in **Attachment C**.

Mr. David Hayes  
April 3, 2018  
Page 4

## Work Anticipated for the Next Period

The following activities are planned for the March 2019 - August 2019 reporting period:

- Injection event #1 will be completed using emulsified vegetable oil and sodium bicarbonate;
- Quarterly performance monitoring will commence;
- Bioaugmentation and a reduced-scale injection event will be completed, if necessary;
- SVE system operation will continue; and
- The second 2019 semi-annual SVE monitoring event will occur in August.

### Injection Event #1

Injection event #1 will be a full-scale injection. Wells INJ-2, -7, -8, and -10 will not be used because these wells did not contain VOCs and will not support the bacterial growth necessary for treatment. These wells may be sampled in the future to ensure VOCs have not migrated to these wells.

### Schedule

**Figure 1** shows the updated project schedule and includes the actions that are dependent on the injection event #1 completion in March 2019. Remediation performance monitoring will continue into early 2020 and the Compliance Status Report is planned to be submitted to EPD in early 2021.

### Professional Certification

**Attachment D** contains the professional certification and summary of incurred professional engineer and geologist hours for the period during September 2018 – February 2019.

If you have any questions related to this Progress Report or other related matters do not hesitate to contact me at (502) 217-7924 or by email at [Hendershotpt@cdmsmith.com](mailto:Hendershotpt@cdmsmith.com).

Sincerely,

Philip T. Hendershot, CHMM

# 1<sup>st</sup> 2019 Semi-Annual Groundwater Monitoring Report

---

## Cessna Aircraft Company GA1 Facility Columbus, Muscogee County, Georgia

The Georgia Environmental Protection Division (EPD) accepted this site into Georgia's Voluntary Remediation Program (VRP) on September 27, 2016, and approved the Voluntary Investigation and Remediation Plan (VIRP) and VRP application dated March 24, 2016. EPD's acceptance and approval conditions currently require semi-annual groundwater monitoring and reporting. This report fulfills the first 2019 semi-annual reporting requirement.

Remediation is underway at the site consisting of soil vapor extraction (SVE) beneath the warehouse and installation of a biobarrier to treat groundwater. Injection wells were installed for the biobarrier during this reporting period and the first emulsified vegetable oil (EVO) injection will be completed in March 2019.

### Monitoring Program Description

The groundwater monitoring well network consists of 13 wells (**Figure A-1**). MW-8A was installed in January 2019 to support monitoring of groundwater treatment beneath the warehouse. The monitoring program is summarized in **Table A-1**. VRP semi-annual monitoring is required that includes water levels from all monitoring wells, volatile organic compound (VOC) analyses for 11 wells, and analyses for select metals from 7 wells. The metals include arsenic, barium, chromium, lead, and manganese and these metals are of interest because they could potentially be mobilized from soil by EVO. Monitoring well GW-8 is not sampled because of its shallow depth and MW-1A is not sampled because it is upgradient and historically below the laboratory reporting level. Quarterly performance monitoring will also be completed for eight wells for a period of one year following the first EVO injection event that is currently underway. The quarterly events will include VOCs, laboratory bioremediation parameters, and field Hach analyses. During the first quarterly event, Census (qPCR) analyses will be completed for MW-3A, MW-3B, and INJ-4. These Census (qPCR) measures *Dehalococcoides spp.*, the bacteria responsible for VOC biodegradation.

CDM Smith has identified three zones of hydrogeologic interest at the site, as summarized below.

- Unit A – Unconsolidated coastal plain sediments and recent alluvium. The upper 20-25 feet is interbedded sand, silty sand, and silty clay. The lower portion of Unit A is permeable sand and permeable sand and gravel to a depth of approximately 30-35 feet below land surface (bls).
- Unit B – Piedmont saprolite. Unit B is below Unit A at depths ranging from approximately 30-35 feet bls and ranges in thickness from less than 1 foot up to 15 feet. Unit B is primarily silt.
- Unit C – Piedmont biotite gneiss bedrock. The bedrock depth ranges from approximately 30 feet to 45 feet bls. One boring, MW-3C, has been completed into bedrock and the rock was dense biotite gneiss with few fractures.

## Well Installation and Testing

Bioremediation injection wells were installed at 14 locations and one additional groundwater monitoring well, MW-8A, was installed from January 22 through February 1, 2019. The well locations are shown on Figure A-1 and the well construction and the boring logs for the new wells are in **Attachment A-1**.

The well construction procedures were detailed in the Pre-Design Investigation Report & Final Design (CDM Smith, August 1, 2018). Prior to well installation, continuous soil cores were collecting using direct-push techniques for final well design purposes. The wells were installed using conventional hollow-stem auger techniques. The screens and casings are 2-inch diameter PVC.

Sand pack was installed throughout the screen interval and a bentonite seal was emplaced on top of the sand pack. The wells were completed with flush-mount, bolt-down protective covers. The injection wells were developed by over pumping.

Groundwater samples were collected from the new injection wells on during February 19-20, 2019 and analyzed for VOCs. Well purge records are in **Attachment A-2**. The laboratory data are summarized in **Table A-2** and the laboratory report is in **Attachment A-3**. Short-term injection tests were performed on each new injection well on February 25 and 26, 2019, to assess injection capacity prior to use as an injection well.

Drums were used for the collection of soil cuttings and the development water. The soil cuttings and development water have been characterized for disposal purposes and will be transported to an appropriate offsite disposal facility.

## Semi-Annual Monitoring Results

The semi-annual groundwater monitoring event was completed during February 18-22, 2019. The water level records are summarized in **Table A-3**, VOC analytical results are summarized in **Table A-4**, and metals analytical results are summarized in **Table A-5**. The well purge records are in Attachment A-2 and the full laboratory report is in Attachment A-3.

## Conclusions

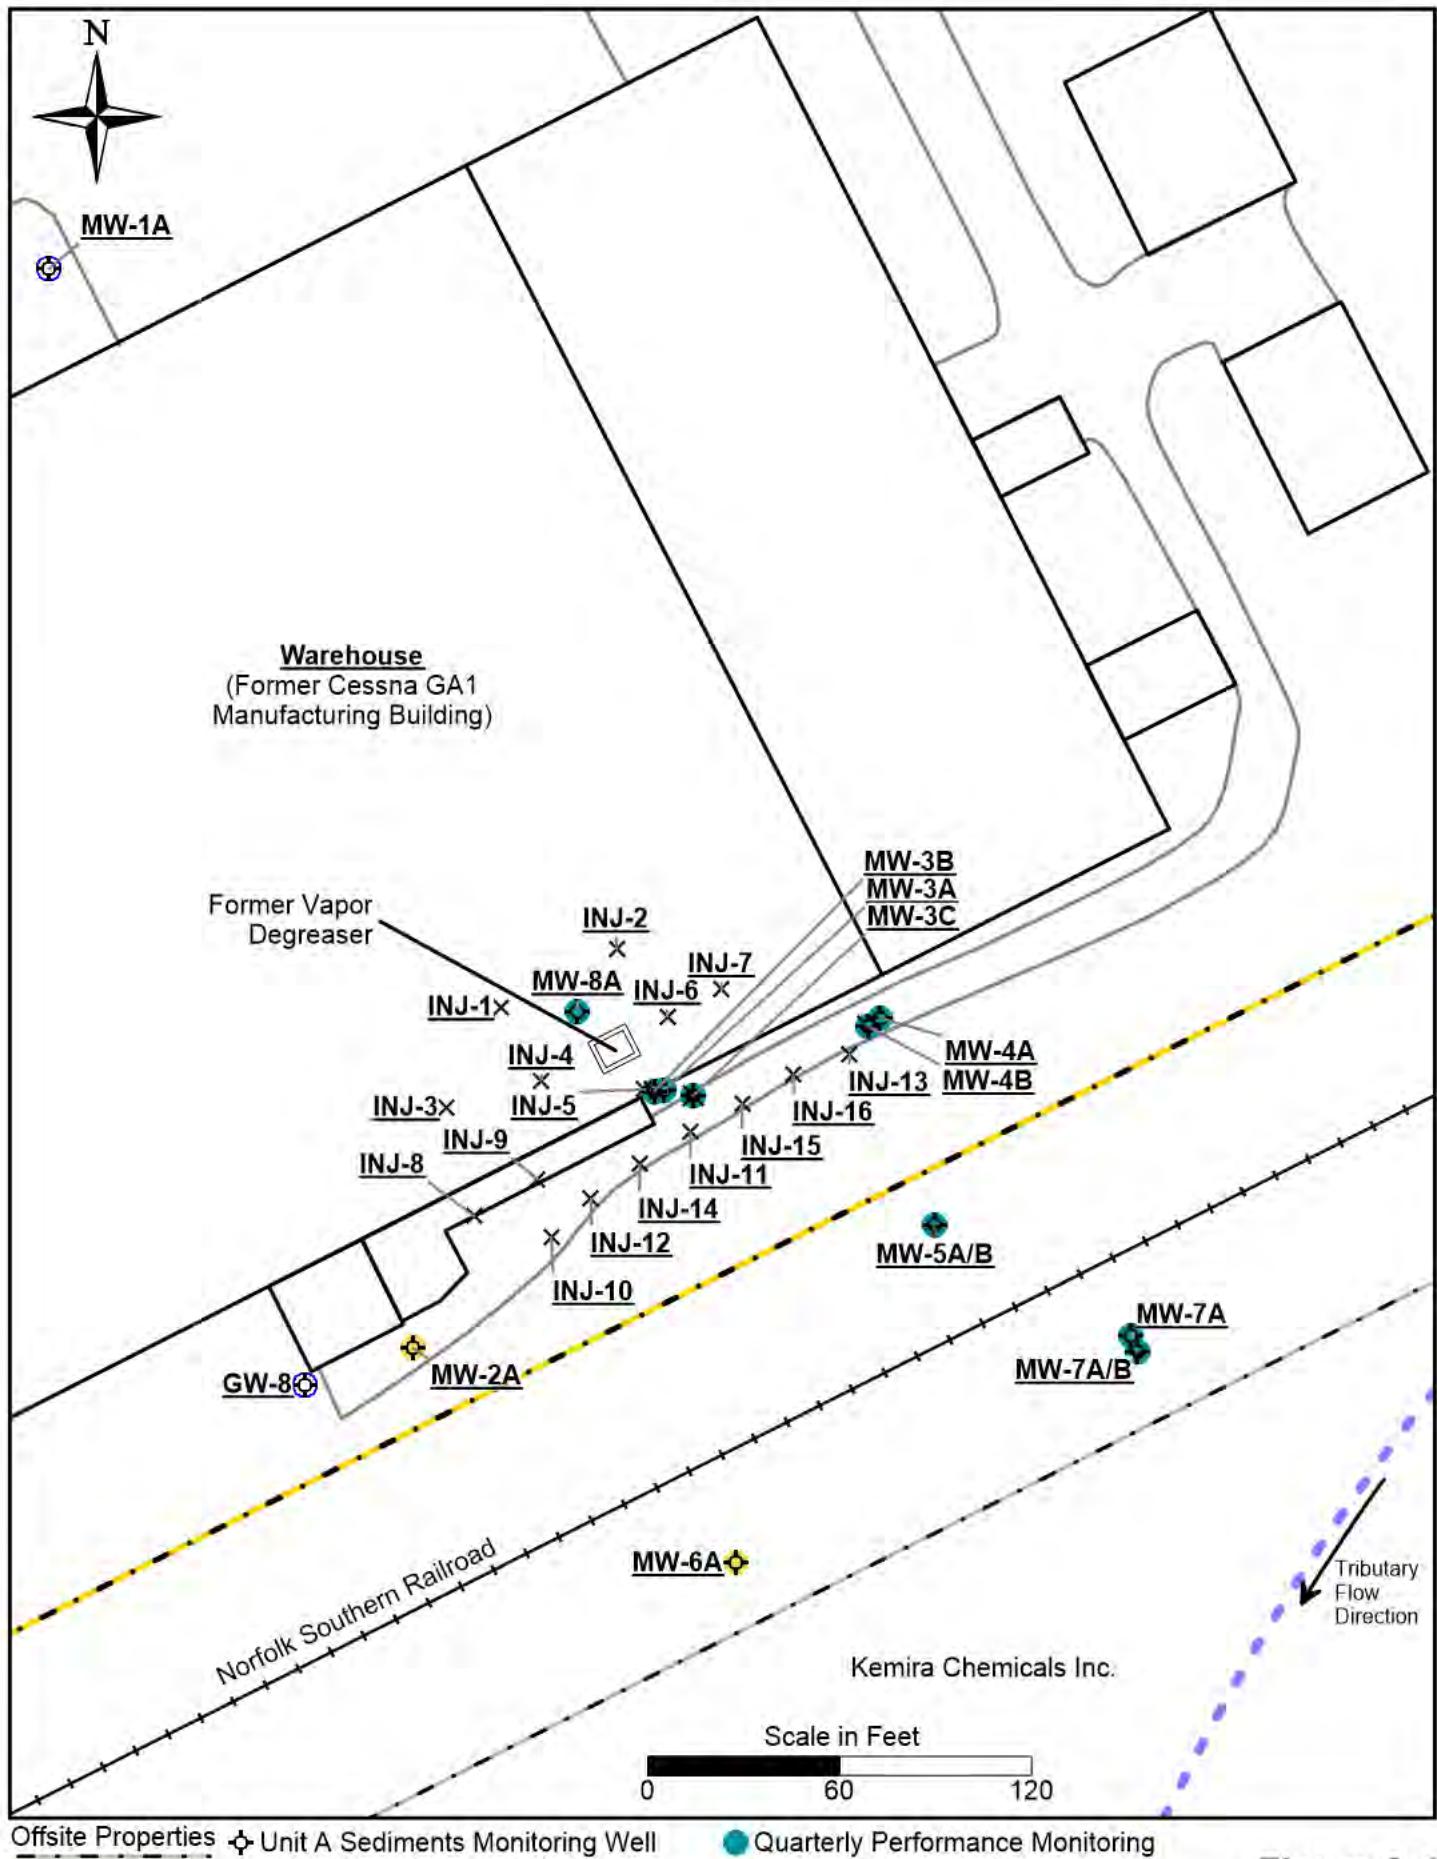

Four VOCs were detected in the 2019 1<sup>st</sup> semi-annual sampling event: trichloroethene (TCE), cis-1,2-dichloroethene (DCE), methyl ethyl ketone, and carbon disulfide. 1,1-dichloroethane; 1,1-DCE; acetone; and chloroform were also detected in groundwater samples collected from the injection wells and these compounds have been detected previously at concentrations below the Risk Reduction Standards (RRSs). TCE is the only VOC that exceeded the Type 1 default residential RRS, and TCE is also the only VOC exceeding the site-specific RRSs applicable to remediation for the site, as established in the Voluntary Investigation & Remediation Plan (CDM Smith, June 2016).

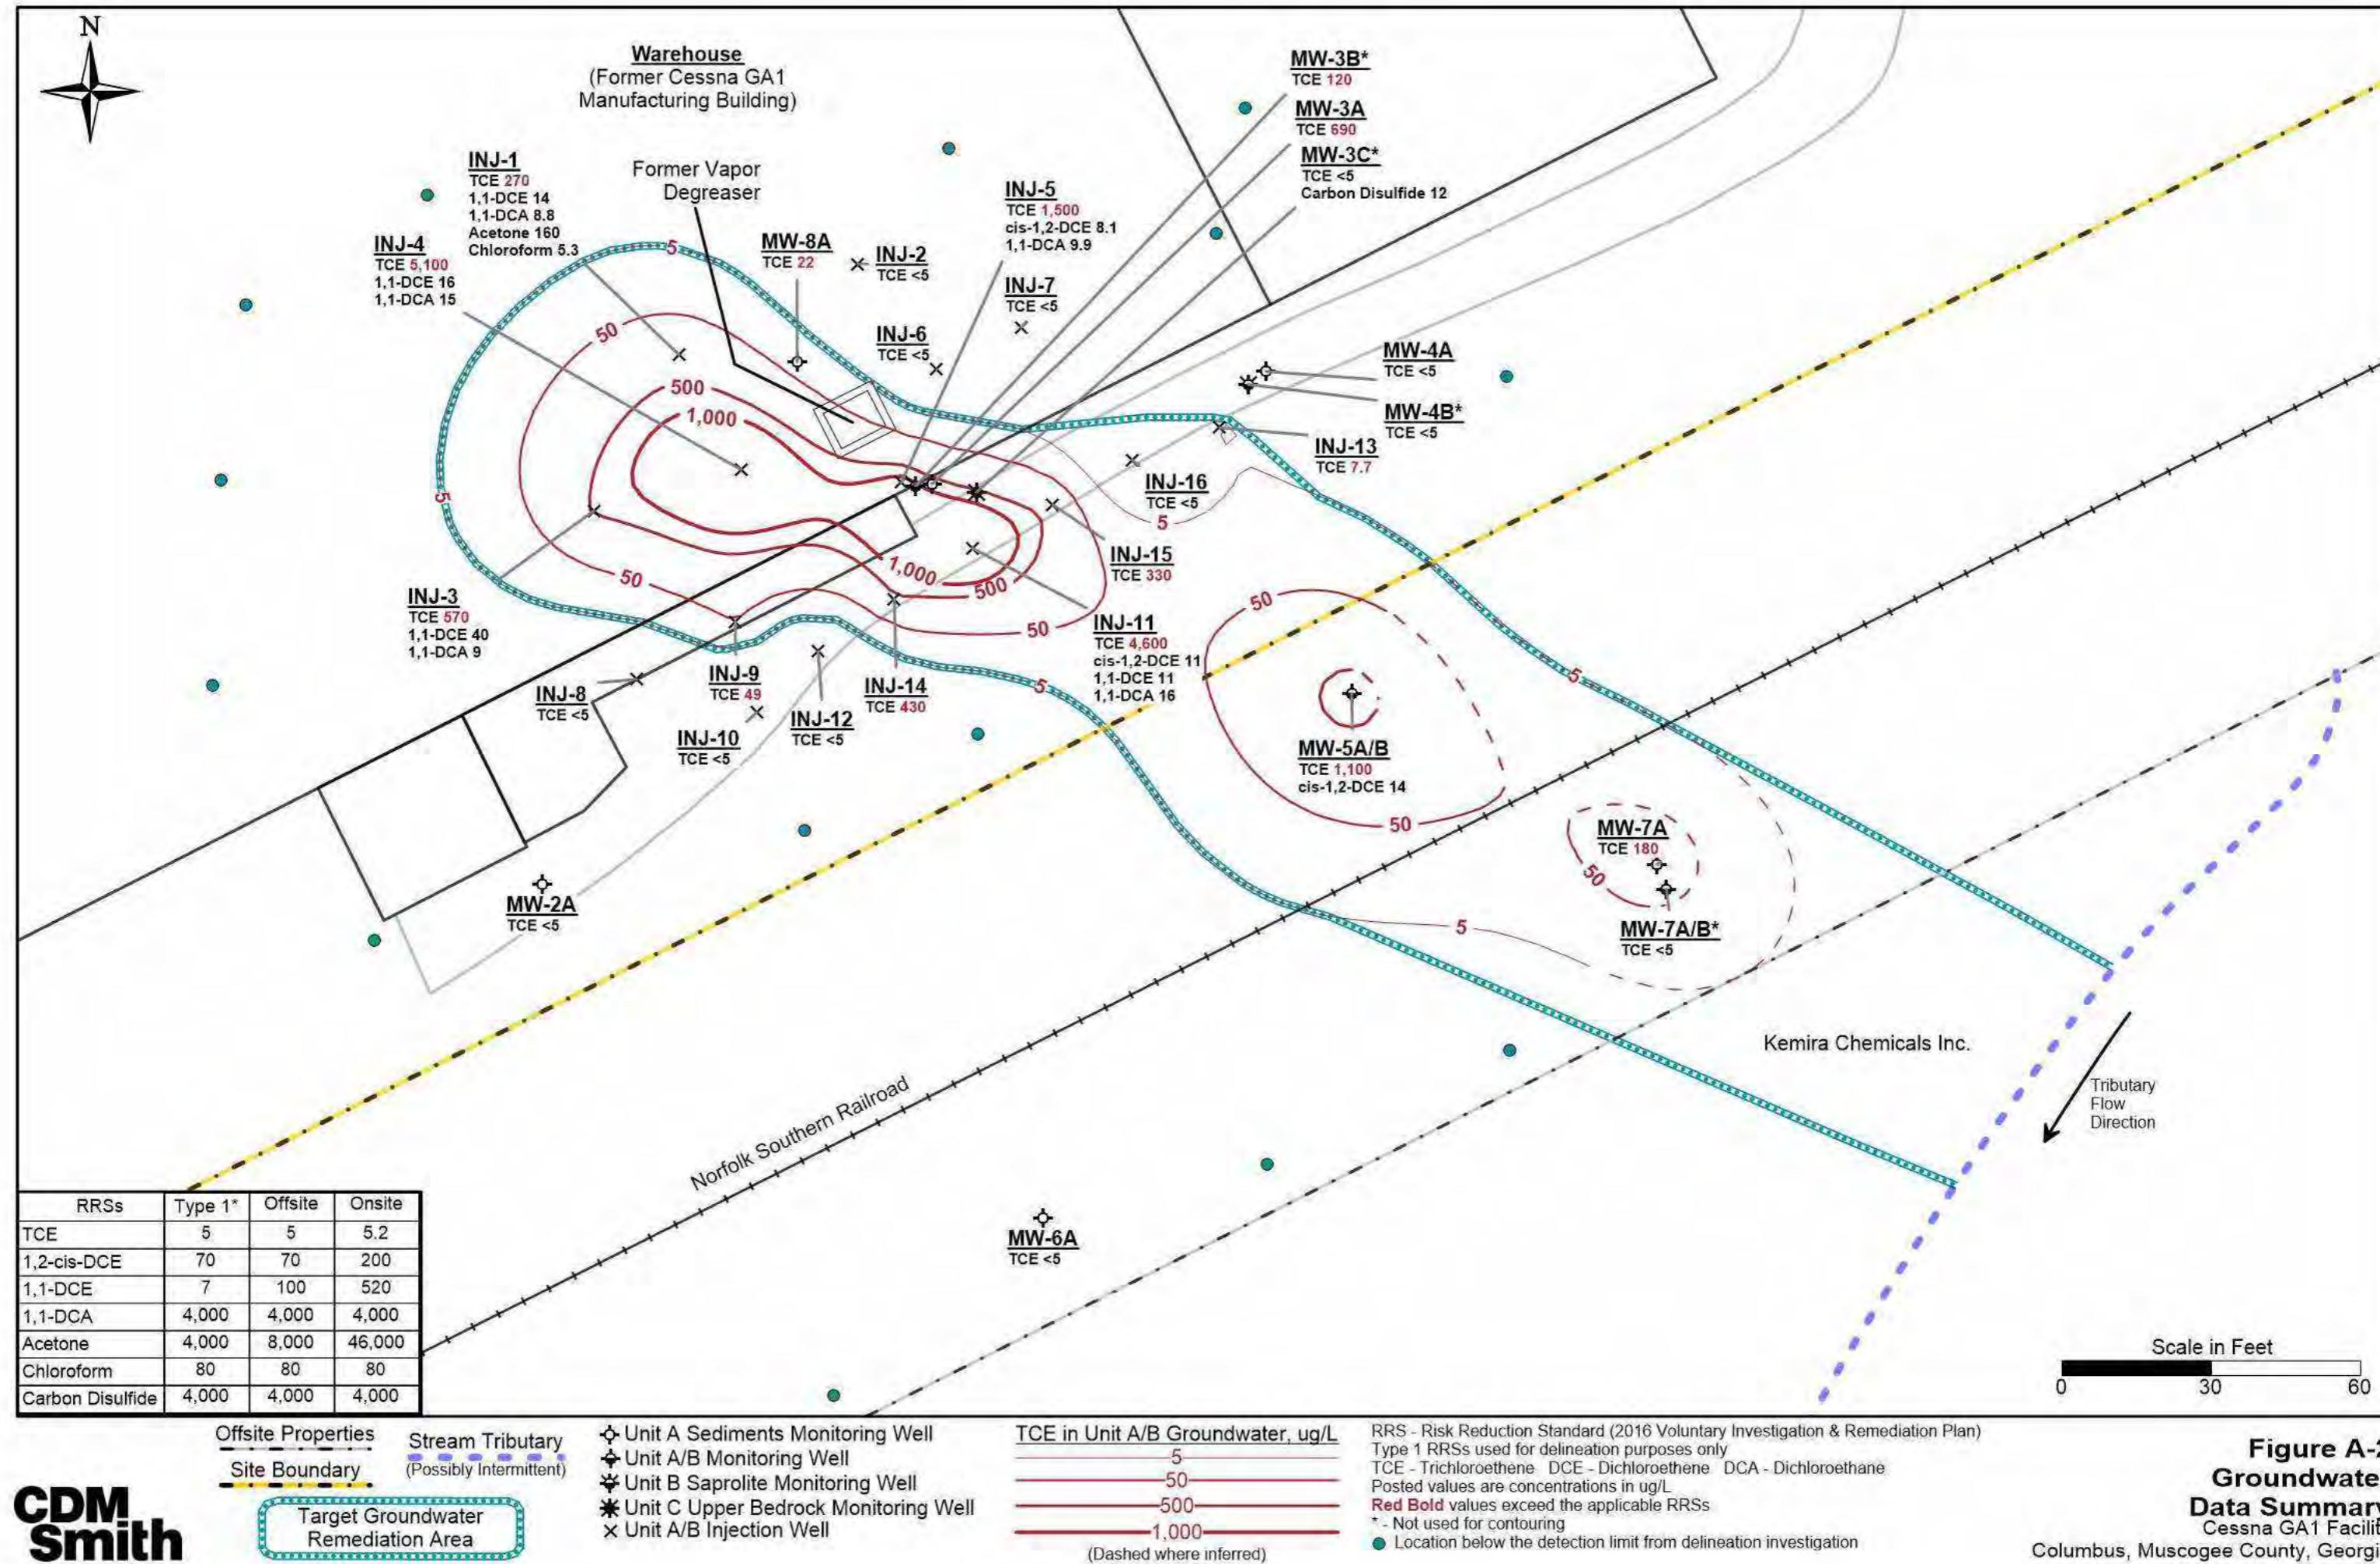

**Figure A-2** shows the current VOC concentrations in groundwater, TCE isoconcentration contours, and the revised groundwater treatment area based on the additional data from the injection wells. The metals in groundwater remained below the RRSs and were relatively stable in concentration. **Figure A-3** shows potentiometric surface prepared for combined Units A and B. The groundwater flow direction is east and southeast and consistent with previous events.

**ANALYTICAL ENVIRONMENTAL SERVICES, INC.**

March 04, 2019

Tom Duffey  
CDM Smith Inc.

3200 Windy Hill Road  
Atlanta GA 30339

RE: Cessna

Dear Tom Duffey:

Order No: 1902M18

Analytical Environmental Services, Inc. received 35 samples on 2/23/2019 10:24:00 AM for the analyses presented in following report.

No problems were encountered during the analyses. Additionally, all results for the associated Quality Control samples were within EPA and/or AES established limits. Any discrepancies associated with the analyses contained herein will be noted and submitted in the form of a project Case Narrative.

AES's accreditations are as follows:

-NELAP/State of Florida Laboratory ID E87582 for analysis of Non-Potable Water, Solid & Chemical Materials, Air & Emissions Volatile Organics, and Drinking Water Microbiology & Metals, effective 07/01/18-06/30/19.

State of Georgia, Department of Natural Resources ID #800 for analysis of Drinking Water Metals, effective 07/01/18-06/30/19 and Total Coliforms/ E. coli, effective 04/25/17-04/24/20.

-AIHA-LAP, LLC Laboratory ID: 100671 for Industrial Hygiene samples (Metals and PCM Asbestos), Environmental Lead (Paint, Soil, Dust Wipes, Air), and Environmental Microbiology (Fungal) Direct Examination, effective until 11/01/19.

These results relate only to the items tested. This report may only be reproduced in full.

If you have any questions regarding these test results, please feel free to call.

Sincerely,

Ioana Pacurar

Ioana Pacurari  
Project Manager

Submission of samples to the laboratory constitutes acceptance of AES's Terms & Conditions. Client assumes sole responsibility for damage or loss of samples before we accept them. Samples received after 3PM or on Saturday are considered as received the following business day. If no TAT is marked on COC, AES will proceed with standard TAT. Samples are disposed of 30 days after completion of report unless other arrangements are made.

**SAMPLE/COOLER RECEIPT CHECKLIST**

1. Client Name: \_\_\_\_\_

AES Work Order Number: \_\_\_\_\_

2. Carrier: FedEx  UPS  USPS  Client  Courier  Other \_\_\_\_\_

	Yes	No	N/A	Details	Comments
3. Shipping container/cooler received in good condition?				damaged <input type="checkbox"/> leaking <input type="checkbox"/> other <input type="checkbox"/>	
4. Custody seals present on shipping container?					
5. Custody seals intact on shipping container?					
6. Temperature blanks present?					
7. Cooler temperature(s) within limits of 0-6°C? [See item 13 and 14 for temperature recordings.]				Cooling initiated for recently collected samples / ice present <input type="checkbox"/>	
8. Chain of Custody (COC) present?					
9. Chain of Custody signed, dated, and timed when relinquished and received?					
10. Sampler name and/or signature on COC?					
11. Were all samples received within holding time?					
12. TAT marked on the COC?				If no TAT indicated, proceeded with standard TAT per Terms & Conditions. <input type="checkbox"/>	

13. Cooler 1 Temperature \_\_\_\_\_ °C    Cooler 2 Temperature \_\_\_\_\_ °C    Cooler 3 Temperature \_\_\_\_\_ °C    Cooler 4 Temperature \_\_\_\_\_ °C  
 Cooler 5 Temperature \_\_\_\_\_ °C    Cooler 6 Temperature \_\_\_\_\_ °C    Cooler 7 Temperature \_\_\_\_\_ °C    Cooler 8 Temperature \_\_\_\_\_ °C

15. Comments: \_\_\_\_\_

I certify that I have completed sections 1-15 (dated initials). \_\_\_\_\_

	Yes	No	N/A	Details	Comments
16. Were sample containers intact upon receipt?					
17. Custody seals present on sample containers?					
18. Custody seals intact on sample containers?					
19. Do sample container labels match the COC?				incomplete info <input type="checkbox"/> illegible <input type="checkbox"/> no label <input type="checkbox"/> other <input type="checkbox"/>	
20. Are analyses requested indicated on the COC?					
21. Were all of the samples listed on the COC received?				samples received but not listed on COC <input type="checkbox"/> samples listed on COC not received <input type="checkbox"/>	
22. Was the sample collection date/time noted?					
23. Did we receive sufficient sample volume for indicated analyses?					
24. Were samples received in appropriate containers?					
25. Were VOA samples received without headspace (< 1/4" bubble)?					
26. Were trip blanks submitted?				listed on COC <input type="checkbox"/> not listed on COC <input type="checkbox"/>	

27. Comments: \_\_\_\_\_

I certify that I have completed sections 16-27 (dated initials). \_\_\_\_\_

	Yes	No	N/A	Details	Comments
28. Have containers needing chemical preservation been checked? *					
29. Containers meet preservation guidelines?					
30. Was pH adjusted at Sample Receipt?					

I certify that I have completed sections 28-30 (dated initials).

Attachment B: 2<sup>nd</sup> 2018 Semi-Annual  
SVE System Monitoring Report

# 1<sup>st</sup> 2019 Semi-Annual SVE System Monitoring Report

---

## Cessna Aircraft Company GA1 Facility Columbus, Muscogee County, Georgia

The Georgia Environmental Protection Division (EPD) accepted this site into Georgia's Voluntary Remediation Program (VRP) on September 27, 2016, and approved the Voluntary Investigation and Remediation Plan (VIRP) and VRP application dated March 24, 2016. As part of Cessna's voluntary remediation efforts, a soil vapor extraction (SVE) system was installed beneath the building to mitigate volatile organic compounds (VOCs) in soil gas from potentially migrating into the building. The SVE system began operation on February 1, 2017. This report summarizes the SVE system monitoring data for the first 2019 semi-annual reporting period.

### SVE System Description

The SVE system consists of four SVE wells and three vapor monitoring points (**Figure B-1**). The SVE wells are 2-inch diameter PVC and screened from 5 to 15 feet below the floor slab. The vapor monitoring points are small diameter tubes that are sealed and extend beneath the floor slab. The extracted vapors are carried in PVC piping from floor level up to the roof rafters and then to the exterior wall and down to ground level to the SVE blower located on the exterior of the building. System monitoring is performed semi-annually.

### Results

The SVE system logged 3,958 hours from September 1, 2018, through February 28, 2019. This represents 386 hours of downtime, or approximately 9 percent. Minor downtime was incurred because of a full condensate knockout tank on three occasions.

SVE well sampling was completed on February 18, 2019. The analytical results for each SVE well are summarized in **Table B-1** through **Table B-4**. The combined flow at the SVE discharge is sampled to calculate emission rates (**Table B-5**). The full laboratory reports are in **Attachment B-1**. The following vacuum measurements were recorded from the vapor monitoring points.

- VMP-1 – 2.43 Inches of water
- VMP-2 – 3.62 Inches of water
- VMP-3 – 0.03 Inches of water

### Conclusions

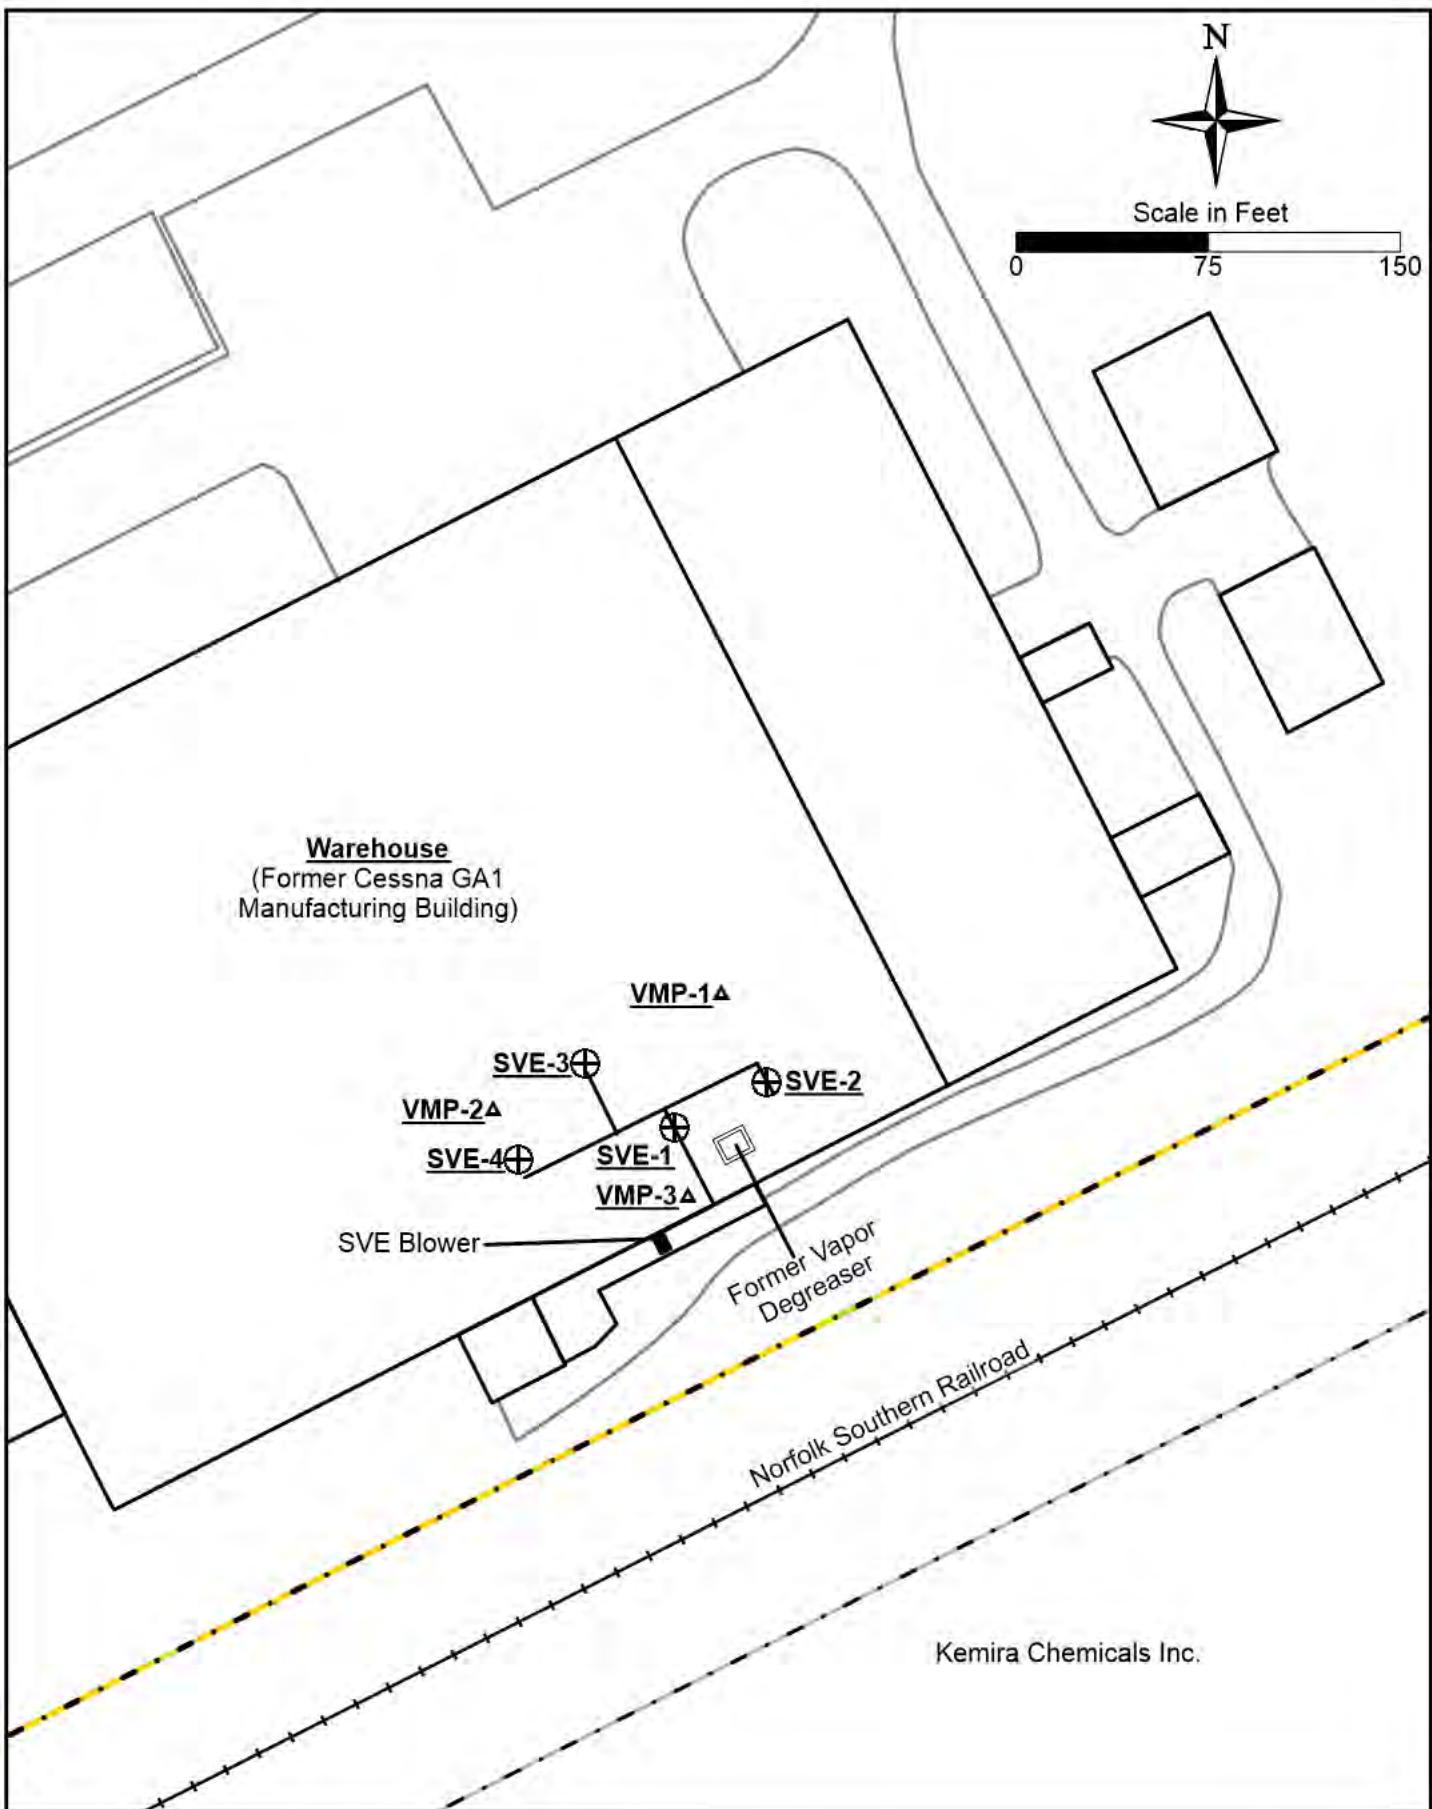

The measured vacuums continue to show that the SVE system is creating negative pressure beneath the floor slab, which should reduce or eliminate sub-slab vapor intrusion into the building. The laboratory analyses show that trichloroethene continues to be the dominant VOC in soil gas and it remains the highest at SVE-1 near the former vapor degreaser location. TCE has been reduced by approximately 99.9% over the period of SVE system operation in the combined discharge. The combined discharge from the system remains below the permitting requirements.

TCE exceeded the Vapor Intrusion Screening Level (VISL) in SVE-1 and SVE-2 but did not exceed in SVE-3 and SVE-4. The cumulative vapor intrusion risks were calculated for the maximum VOC concentrations reported for this sampling event (**Attachment B-2**) and using the Environmental Protection Agency's VISL Calculator on March 22, 2019. The cumulative risks exceeded the Target Hazard Quotient of 1 and the Target Risk of 1.0E-05. The risk exceedances were driven by TCE.

## ANALYTICAL ENVIRONMENTAL SERVICES, INC.

February 27, 2019

Tom Duffey  
CDM Smith Inc.

3200 Windy Hill Road, Suite 210 West  
Atlanta                GA        30339

RE:     Cessna

Dear   Tom Duffey:    Order No:    1902H32

Analytical Environmental Services, Inc. received                5        samples on    2/19/2019 1:47:00 PM  
for the analyses presented in following report.

No problems were encountered during the analyses. Additionally, all results for the associated Quality Control samples were within EPA and/or AES established limits. Any discrepancies associated with the analyses contained herein will be noted and submitted in the form of a project Case Narrative.

AES' certifications are as follows:

-NELAC/Florida Certification number E87582 for analysis of Air & Emissions for Volatile Organics effective 07/01/18-06/30/19.

These results relate only to the items tested. This report may only be reproduced in full.

If you have any questions regarding these test results, please feel free to call.

Sincerely,

Ioana Pacurar  
Project Manager

## APPENDIX

Compound	CAS #	Alternate Name	TO-14A	TO-15	SOP

Submission of samples to the laboratory constitutes acceptance of AES's Terms & Conditions. Client assumes sole responsibility for damage or loss of samples before we accept them. Samples received after 3PM or on Saturday are considered as received the following business day. If no TAT is marked on COC, AES will proceed with standard TAT. Visit our website at [www.aesatlanta.com](http://www.aesatlanta.com) for downloadable COCs and to log in to your AESAccess account.

## Sample Receipt Checklist for Air Canisters

Client C DM Smith Inc.

Work Order Number 1902H32

Checklist completed by M. WANG 2/20/19

Signature

Date

Carrier name: FedEx  UPS  Courier  Client  US Mail  Other

Shipping container in good condition?	Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> Not Present <input type="checkbox"/>
Custody seals intact on shipping container?	Yes <input type="checkbox"/> No <input type="checkbox"/> Not Present <input checked="" type="checkbox"/>
Chain of custody present?	Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>
Chain of custody signed when relinquished and received?	Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>
Chain of custody agrees with sample labels?	Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>
Field data sheets present?	Yes <input type="checkbox"/> No <input checked="" type="checkbox"/>
Sample containers intact?	Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>

If no, explain: \_\_\_\_\_

All samples received within holding time?	Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>
Was TAT marked on the COC?	Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>
Proceed with Standard TAT as per project history?	Yes <input type="checkbox"/> No <input type="checkbox"/> Not Applicable <input checked="" type="checkbox"/>
All canisters received per Bottle Order issued?	Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>

**See Case Narrative for resolution of the Non-Conformance.**

Vapor Intrusion Risks

# Site-specific VISL Results

## Commercial Equation Inputs

\* Inputted values different from Commercial defaults are highlighted.

Output generated 22MAR2019:07:57:11

Variable	Commercial Air Default Value	Value
Groundwater) unitless	0.001	0.001
AF <sub>ss</sub> (Attenuation Factor Sub-Slab) unitless worker)	0.03	0.03
composite worker) yr	365	365
composite worker) day/yr	25	25
worker) hr	250	250
unitless	8	8
LT (lifetime) yr	0.1	1
TR (target risk) unitless	70	70
	0.000001	0.000001

Site Sub-Slab Soil Gas Concentration is the maximum reported for February 18, 2019.

## Commercial Vapor Intrusion Risk

Output generated 22MAR2019:07:57:11

Chemical	CAS Number	Site Sub-Slab and Exterior Soil Gas Concentration C <sub>sg</sub> (µg/m <sup>3</sup> )	Site Indoor Air Concentration C <sub>i,a</sub> (µg/m <sup>3</sup> )	VI Carcinogenic Risk CR	VI Hazard HQ	IUR (ug/m <sup>3</sup> ) <sup>-1</sup>	IUR Ref	Chronic RfC (mg/m <sup>3</sup> )	RfC Ref	Temperature (°C) for Groundwater Vapor Concentration	Mutagen?
Acetone	67-64-1	20	0.6		4.43E-06			30.9	U	19.4	No

## Attachment B-2: Cumulative Vapor Intrusion Risk

Cessna GA1 Facility  
Columbus, Muscogee County, Georgia

## Attachment C: Well Location Map

## Attachment D: Professional Certification and Professional Hours

## Professional Certification

I certify under penalty of law that this report and all attachments were prepared by me or under my direct supervision in accordance with the Voluntary Remediation Program Act (O.C.G.A. Section 12-8-101, et seq.). I am a professional engineer / professional geologist who is registered with the Georgia State Board of Registration for Professional Engineers and Land Surveyors / Georgia State Board of Registration for Professional Geologists and I have the necessary experience and am in charge of the investigation and remediation of this release of regulated substances.

Furthermore, to document my direct oversight of the Voluntary Remediation Plan development, implementation of corrective action, and long term monitoring, I have attached a monthly summary of hours invoiced and description of services provided by me to the Voluntary Remediation Program participant since the previous submittal to the Georgia Environmental Protection Division.

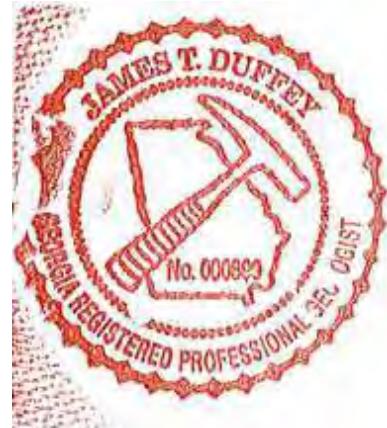

The information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

---

J. Thomas Duffey, P.G.  
Vice President  
CDM Smith

Date: April 3, 2019
