RE: Voluntary Remediation Plan Status Report No. 13
Former Estech General Chemicals Site - Atlanta, Georgia
HSI Site No. 10196 Parcels 17-0191-LL0244 and 17-0191-LL0400
Wood Project 6122-08-0154

Dear Mr. Hayes:

Wood Environment & Infrastructure Solutions, Inc. (Wood), on behalf of BFEL Indemnitor, Inc. (BFEL), is hereby submitting the attached Status Report No.13 for Voluntary Remediation Program activities for the Former Estech General Chemicals Site in Atlanta, Fulton County, Georgia (HSI Site No. 10196, Tax Parcels 17-0191-LL0244 and 17-0191-LL0400). This status report is required by the Voluntary Remediation Program statute and requested by the Georgia Environmental Protection Division (EPD) in their approval letter dated February 8, 2012. This status report covers the period from February to August 2018. The report includes information on the recent site-wide groundwater and surface water monitoring, further evaluation of the M&J Solvent site VOC plume impact on the Estech site, update of the human health and ecological risk assessments, and status of proposed corrective action. BFEL and Wood would like to meet with EPD in the near term to discuss the recent risk assessment updates and the path forward for the site.

Please review the attached report and contact Greg Wrenn at (770) 421-3472 or greg.wrenn@woodplc.com with any questions you may have and to schedule a meeting.

Sincerely,

Wood Environment & Infrastructure Solutions, Inc.

Rhonda N. Quinn, P.G.
Senior Geologist
Georgia Registration# 1031

1.0 PE CERTIFICATION

"I certify under penalty of law that this report and all attachments were prepared by me or under my direct supervision in accordance with the Voluntary Remediation Program Act (O.C.G.A. Section 12-8-101, et seq.). I am a professional engineer/professional geologist who is registered with the Georgia State Board of Registration for Professional Engineers and Land Surveyors/Georgia State Board of Registration for Professional Geologists and I have the necessary experience and am in charge of the investigation and remediation of this release of regulated substances.

Furthermore, to document my direct oversight of the Voluntary Remediation Plan development, implementation of corrective action, and long-term monitoring, I have attached a monthly summary of hours invoiced and description of services provided by me to the Voluntary Remediation Program participant since the previous submittal to the Georgia Environmental Protection Division.

The information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."

2.0 INTRODUCTION AND BACKGROUND

This Voluntary Remediation Program Semi-Annual Status Report No. 13 (Status Report) was prepared, on behalf of BFEL Indemnitor, Inc. (BFEL), in accordance with the Voluntary Remediation Program (VRP) for the Former Estech General Chemicals site, Hazardous Site Inventory (HSI) No. 10196/Tax Parcel Parcels 17-0191-LL0244 and 17-0191-LL0400. The Georgia Environmental Protection Division (EPD) requested in their February 8, 2012 approval letter that status reports be submitted in August and February. This thirteenth Status Report covers the activities conducted from February 2018 until shortly before the submittal of this status report (July 2018).

The Former Estech General Chemicals site is located at 1551 Marietta Road in Atlanta, Fulton County, Georgia inside of the Inman Railyards. The CSX Transportation Tilford Yard is within the Inman Railyards and surrounds the Estech property. The site soil and groundwater impacts for site constituents (organochlorine-pesticides, arsenic, lead, and polynuclear aromatic hydrocarbons) were delineated under the Georgia Hazardous Site Response Act (HSRA) and certified to risk reduction standards (RRS). The most recent HSRA Compliance Status Report (CSR) was prepared and submitted October 19, 2007. EPD issued comments on the CSR, dated November 18, 2008. BFEL responded to the comments on February 27, 2009. EPD commented on the responses on December 18, 2009 and requested a Corrective Action Plan (CAP). An initial VRP Application, dated March 18, 2010 and an Addendum, dated March 16, 2011, were submitted to EPD to enter the site into the VRP. The VRP Application and Addendum were submitted in lieu of a HSRA CAP. The VRP Application Addendum contained a revised Voluntary Investigation and Remediation Plan (VIRP) and addressed the EPD VRP Application comment letter dated July 23, 2010. On February 8, 2012, EPD approved the VIRP and accepted the Former Estech General Chemicals site into the VRP. The activities conducted after the date the site was accepted into the VRP have been documented in semi-annual VRP Status Reports.

In accordance with the VIRP, a pilot test was conducted from January 2013 through April 2014 to evaluate the effectiveness of an EHC-M permeable reactive barrier (PRB) to address groundwater impacts. Because the EHC-M injections did not demonstrate that the EHC-M PRB was effective, VRP Status Report No. 5 (August 2014) presented a Revised Remediation Plan. The Revised Remediation Plan proposed a groundwater recirculating system with a limestone infiltration gallery treatment process on the BFEL property in conjunction with a surficial limestone PRB near the seep drainage feature near the unnamed stream on CSX property. A Type 5 RRS was also proposed to address impacted soil via engineering and institutional controls to limit human exposure potential until a viable re-use for the property is identified. The Revised Remediation Plan was discussed with EPD in a meeting on September 18, 2014, and EPD subsequently issued comments on VRP Status Reports Nos. 4 and No. 5 in correspondence dated October 7, 2014

and December 1, 2014. Based upon concerns regarding the groundwater recirculating system potentially exacerbating the spread of the M&J Solvent site's up-gradient volatile organic compound (VOC) plume, BFEL has put that portion of the proposed remedy on hold and is focusing on implementing the surficial PRB in the seep drainage feature. EPD provided comments on VRP Status Reports Nos. 6 through 9 in correspondence dated September 22, 2016 and BFEL responded to those comments in Status Report No. 10. A meeting with BFEL and EPD was held on June 22, 2017 to discuss the path forward for the site and review the conceptual design of the surficial PRB. The conceptual design drawings for the surficial PRB were submitted to EPD in Status Report No. 11. In a letter dated June 29, 2018, EPD provided comments on Status Reports Nos. 10, 11, and 12. Responses to those comments are provided in Appendix E of this report.

3.0 WORK PERFORMED FROM FEBRUARY TO JULY 2018

The activities currently identified to be performed at the Estech site under the VRP are outlined in the VIRP, dated March 16, 2011, the EPD VIRP approval letter dated February 8, 2012, and the EPD VIRP comment letter dated February 8, 2012. The activities conducted from February 2018 through July 2018 include semi-annual groundwater and surface water sampling and analysis, surface soil sampling and analysis, update of the ecological and human health risk assessments, and permitting for the construction of the permeable reactive barrier. These activities are described in the following sections.

3.1 Semi-Annual Groundwater Sampling and Analysis

Groundwater samples were collected from 39 permanent monitoring wells located on the Estech and CSX properties from May 8 through 17, 2018 (Figure 1). The following monitoring wells were sampled:

MW-22	MW-25	MW-26	MW-1B	MW-101	MW-102
MW-104A	MW-104D	MW-105	MW-106D	MW-107D	MW-108
MW-109	MW-110	MW-111	MW-112	MW-113	MW-114
MW-115	MW-116	MW-117	MW-119	MW-120	MW-121
TW-1	TW-2	TW-3	TW-4	TW-5	TW-6
TW-7	TW-8	TW-9	TW-10	TW-11	TW-12
OW-1	OW-2	OW-3			

Well MW-21 was dry and was not sampled in May 2018. The PVC casing for well MW-24 was broken off below the ground surface and could not be sampled. This well will be abandoned in the future. Adjacent well MW-25 screens the same interval as MW-24 and is used to monitor this location. A summary of the groundwater sample data is presented on Table 1. The depth to water was measured in the monitoring wells and the groundwater elevations were calculated. The groundwater elevations are summarized on Table 2 and were used to generate the potentiometric surface map on Figure 2. Groundwater analytical results are summarized on Table 3.

The monitoring wells were purged using low flow/low stress methodology and were sampled following Region 4 USEPA Science and Ecosystem Support Division (SESD) procedure SESDPROC-301-R4. Submersible or peristaltic pumps were used to purge the wells. The depth of water determined which pump type was used. Three well volumes were purged from each well. Water quality parameters pH, conductivity, temperature, turbidity, dissolved oxygen (DO) and oxidation-reduction potential (ORP) were measured and recorded. Groundwater samples were collected after pH, specific conductivity, turbidity, and temperature parameters had

stabilized, and the water was visibly free of sediment (Appendix A). In accordance with SESDPROC-301-R4, the groundwater samples were collected using the submersible and peristaltic pumps. The temporary wells TW-1 through TW-12 are one-inch diameter monitoring wells and are purged and sampled using either a submersible bladder or peristaltic pump, depending on the depth to water below casing. The permanent monitoring wells (MWs) are two-inch diameter wells and were purged and sampled with a submersible Grundfos Redi-Flo2 pump or peristaltic pump. If the depth to water was less than 25 feet, a peristaltic pump was used to purge and sample. The Grundfos pump was used when the depth to water was deeper than 25 feet. The groundwater samples were collected and analyzed for the following constituents:

- Organochlorine pesticides using USEPA Method 8081B
- Arsenic, Lead, Copper, and Zinc using USEPA Method 6020B (total and dissolved analyses)
- Nitrate and Sulfate using USEPA Method 9056A

To further investigate if VOCs from the upgradient M&J Solvents' site are potentially impacting the Estech site, groundwater samples from select monitoring wells were analyzed for VOCs using USEPA method 8260B. The wells sampled and analyzed for VOCs are:

MW-22	MW-25	MW-26	MW-1B	MW-101	MW-102
MW-104A	MW-104D	MW-106D	MW-107D	MW-108	MW-109
MW-110	MW-111	MW-112	MW-113	MW-114	MW-115
MW-116	MW-117	MW-119	MW-120	MW-121	TW-1
TW-2	TW-3	TW-4	TW-5	TW-6	TW-7
TW-8	TW-9	TW-10	OW-1	OW-2	OW-3

3.2 Semi-Annual Surface Water Sampling and Analysis

Eight surface water samples were collected on May 18, 2018 from the un-named stream and seep drainage feature on CSX property. The sample identifications are:

SW-2010-5	SW-2010-10	SW-2010-11	SW-2010-14
SW-2010-15	SW-2010-17	SW2014-20 (seep)	SW2014-21 (seep)

Surface water sample SW-2010-5 was collected in the stream adjacent to well location MW-106D/MW-121. Samples SW-2010-10 and SW-2010-11 were collected from the stream, upstream and downstream, respectively, of the culvert beneath the "pork-barrel" rail line. Samples SW-2010-14, SW-2010-15, and SW-2010-17 were collected in the stream downstream of the culvert and upstream of Marietta Boulevard (Figure 1). Two water samples (SW2014-20 and SW2014-21) were collected in May 2018 from groundwater seepage that discharges to a

drainage feature on the west side of the railroad tracks and upstream of the culvert. The surface water samples were collected by filling the sample containers directly from the stream. The surface water collection data are summarized on Table 1, analytical results are summarized on Table 4, and the laboratory reports are provided in Appendix A. The surface water samples were analyzed for the following constituents:

- Organochlorine pesticides using USEPA Method 8081B
- Dissolved Arsenic, Lead, Copper, and Zinc using USEPA Method 6020B
- Nitrate and Sulfate using USEPA Method 9056A

3.3 Results of the Semi-Annual Groundwater and Surface Water Investigation

The first semi-annual groundwater and surface-water sampling event for 2018 was conducted from May 8 to 18, 2018. The sampling event consisted of measuring the depth to water in monitoring wells, gauging the surface water elevation at four locations along the un-named stream, and sampling and analyzing groundwater samples from monitoring wells and surface water samples from the un-named stream. The interpreted groundwater flow direction and gradients and groundwater and surface water analytical results are discussed below.

3.3.1 Groundwater Flow Direction, Gradients and Velocity

The depth to water was measured in 39 monitoring wells on May 7, 2018 at locations on the Estech and CSX properties. The data were used to generate a potentiometric surface map to evaluate the groundwater flow direction and velocity. The groundwater elevations are summarized on Table 2. The highest elevation was 897.72 feet in well MW-101 and the lowest elevation was 836.47 feet in well MW-107D. The May 2018 groundwater elevations are on average about 1.8 feet higher than the October 2017 elevations and are on average about 0.9 feet higher than the May 2017 groundwater elevations. The higher groundwater elevations in the first half of 2018 are attributed to increased precipitation during the period October 2017 to April 2018, 30.05 inches total rainfall, versus 28.58 inches total rainfall from May to October 2017. Figure 2 is a site potentiometric surface map indicating the groundwater flow direction is from the west side of the Estech property to the east and discharging to the un-named stream.

The horizontal gradient across the site is estimated to be 0.034 to 0.045 feet per foot based on the May 2018 potentiometric map. The groundwater seepage velocity was estimated using an average hydraulic conductivity of 0.84 feet /day or $3x10^{-4}$ cm/sec from the residuum soils based on slug tests performed in monitoring wells MW-1, MW-4, MW-12, DW-2A, and MW-22 and a site-specific effective porosity of the residuum of 0.23. An average seepage velocity through residual soils is calculated to be 0.12 to 0.16 feet per day or 44 to 58 feet per year which is consistent with previous velocities.

The vertical gradients were evaluated in monitoring well pairs MW-104A/MW-104D, MW-110/ MW-111, MW-106D/MW-121, and MW-119/MW-120. The vertical gradients were calculated by dividing the difference in the groundwater elevations by the distance between the mid-points of each well's screen. There was very little difference in the groundwater elevations in well pair MW-104A/MW-104D with a slight upward gradient of 0.007 feet/foot. A downward gradient (0.29 and 0.15 feet/foot) from the residual soil to the fractured bedrock was present at well pairs MW-110/MW-111 and MW-119/MW-120, respectively. There was also a downward gradient (0.5 feet/foot) at well pair MW-106D/MW-121.

The groundwater elevation in well MW-121 (862.85 feet), screening the uppermost fractured bedrock next to the un-named stream was about 0.1 feet higher than the surface water elevation (862.73 feet) in the stream next to the well pair. The groundwater elevation in well MW-106D (843.77 feet), screening a deeper depth in the fractured bedrock was about 18 feet lower than the surface water elevation. The surface water elevation (839.62 feet) at Staff Gauge #3 was about 9 and 7 feet lower, respectively, than the groundwater elevations in well MW-119 (849.35 feet) and the groundwater elevation (847.10 feet) in bedrock well MW-120 which is screened deeper in the fractured bedrock. The groundwater elevation in well MW-107D (836.47 feet), screened just below the soil/bedrock interface, was about 0.3 feet higher than the stream elevation at Staff Gauge #4 (836.20 feet). The data indicate groundwater in the deep residual soil, soil/bedrock interface, and shallow fractured bedrock interact with the stream. Groundwater in the deeper fractured bedrock does not appear to be in communication with the surface water.

3.3.2 Groundwater Analytical Results for Estech Site Constituents

Groundwater samples were collected from the site monitoring wells and analyzed for organochlorine pesticides, total and dissolved arsenic, copper, lead, zinc, total nitrate and sulfate. The BHC isomers were the predominant pesticides detected with beta-BHC being detected most often in the May 2018 samples. Copper and zinc were the predominant metals detected, followed by lead. The dissolved metal concentrations were similar, though generally lower than the total metals concentrations. Nitrate and sulfate were also detected. Monitoring well TW-8 had the highest pesticide concentrations. Well TW-7 had the highest metals. Well TW-7 also had the highest nitrate and sulfate concentrations during the May 2018 event.

The groundwater analytical results are summarized on Table 3, and the laboratory reports are provided in Appendix A. Total copper concentrations ranged from 0.00272 to 124 mg/L while dissolved copper ranged from 0.00216 to 128 mg/L. Total zinc concentrations ranged from 0.0123 to 359 mg/L while dissolved zinc ranged from 0.0157 to 381 mg/L. Well TW-7 had the highest copper and zinc concentrations. Figure 3 presents the metals data for the monitoring wells from May 2018. The metals in groundwater are delineated based on the Type 1 RRS as

shown on Figure 3. The groundwater plume as indicated on Figure 3 is located on the northern and eastern portions of the Estech property and the CSX property abutting the Estech eastern property boundary. The data indicates the lower pH readings generally correlate to higher metals concentrations, particularly copper and zinc. The lower pH groundwater coincides with groundwater metals concentrations that are greater than the Type 1 RRS. The copper and zinc concentrations above the Type 1 RRS are primarily located on the eastern portion of the Estech property and the western portion of the CSX property adjacent to Estech, and north of well MW-117 and south of wells MW-104A/MW-104D. Metals concentrations in groundwater on the western and southern portions of the Estech property and on the eastern portion of the CSX property near the stream are either non-detect or below the Type 1 RRS. Downgradient wells (MW-105, MW-106D, MW-107D, MW-119, MW-120, and MW-121) adjacent to the stream are less than Type 1 RRS. The area with metal concentrations above the Type 1 RRS is bounded by areas that are either non-detect or below the Type 1 RRS. Generally, the surface water concentrations were less than the site groundwater concentrations.

Total and dissolved arsenic and lead were also analyzed in the groundwater samples. Arsenic and lead concentrations were either non-detect or slightly above the Type 1 RRS and were generally less than the copper and zinc concentrations (Table 3). The total arsenic concentrations ranged from 0.00555 to 0.206 mg/L, while the dissolved concentrations ranged from 0.00585 to 0.199 mg/L. The total lead concentrations ranged from 0.00101 to 0.453 mg/L, while the dissolved concentrations ranged from 0.00138 to 0.0187 mg/L. Well MW-109 had the highest arsenic and lead concentrations. The extent of arsenic and lead in groundwater is defined based on Type 1 RRS values (Figure 3). The May 2018 total metals concentrations were lower than the October-November 2017 total metals concentrations.

Pesticides in groundwater are generally delineated based on Type 1 RRS values, as is shown on Figure 4. One to four of the BHC isomers were detected in 27 wells across the site. Alpha-BHC concentrations ranged from 0.000052 to 0.74 mg/L. Beta-BHC concentrations ranged from 0.0001 to 0.078 mg/L. Delta-BHC concentrations ranged from 0.000058 to 2.0 mg/L while gamma-BHC concentrations ranged from 0.000053 to 1.7 mg/L. The May 2018 BHC concentrations were higher than the October-November 2017 concentrations. BHC concentrations in well TW-8 increased from the October-November 2017 sampling event and concentrations were similar to May 2017 and earlier concentrations. Pesticides were detected for the first time in wells TW-10 and TW-11 in November 2015, the wells had been non-detect for the previous five to six sampling events. Wells TW-10 and TW-11 pesticide concentrations were non-detect for the May 2018 sampling event.

DDD, DDE, and DDT were detected at concentrations ranging from 0.00014 to 0.013 mg/L in wells TW-1, TW-8, TW-9, and MW-108 which have a history of these constituents' detections.

DDE was detected for the first time in TW-7 in November 2017, and was non-detect for DDE in May 2018. Dieldrin (0.00012 to 0.004 mg/L) was detected in wells TW-8, TW-9, and MW-111. In May 2018, gamma-chlordane was detected in well TW-8, previously in November 2017 alpha and gamma-chlordane were detected in well TW-8. The May 2018 total pesticide concentrations were higher than the October/November 2017 total concentrations.

Nitrate and sulfate do not have Type 1 RRS because they are not regulated constituents under HSRA or VRP. The extent of nitrate and sulfate in groundwater is shown on Figure 5. The higher sulfate concentrations generally coincide with lower pH values and higher metals concentrations in the groundwater. Nitrate concentrations in May 2018 ranged from 0.27 to 110 mg/L and were higher than the October-November 2017 results. Sulfate concentrations in May 2018 ranged from 28 to 4400 mg/L and were higher than the October/November 2017 results. Wells TW-7, MW-109, and MW-113 had the highest concentrations, respectively.

3.3.3 Groundwater Analytical Results for M&J Solvents' Volatile Organic Compounds

In May 2018, 36 monitoring wells on the Estech and CSX properties were sampled and analyzed for VOCs (Table 5). The sampling was conducted at the request of EPD because of concern that a proposed pump-and-treat remediation could potentially pull the M&J Solvents site VOC groundwater plume toward or onto the Estech property. This is the seventh site-wide sampling for M&J Solvents' VOCs on the Estech site. The purpose of this sampling was to further evaluate the extent of VOCs, previously detected in June 2016 and earlier on the Estech property, from the M&J Solvents site and their potential impact on the construction of an Estech site pump-and-treat groundwater remediation system. Monitoring wells located across the Estech property and wells on the CSX property associated with the Estech pesticide and metals plumes were sampled and analyzed. The May 2018 data indicated the M&J Solvents site VOC groundwater plume was present across the northern third of the Estech property and in the area of well TW-8. Figure 6 indicates the horizontal extent of the VOCs detected in Estech monitoring wells.

As shown on Figure 6, potentiometric surface contours indicate groundwater on the M&J Solvents site is flowing radially to the east, southeast, south, and southwest toward the Estech and CSX properties. The Estech property groundwater flow is from the west to the east toward the stream. The M&J site potentiometric surface contours show groundwater flow toward the unnamed stream and generally toward the northern and western Estech property boundaries. However, there are no groundwater wells or groundwater elevation data from the southern portion of the Whitaker Oil property to confirm the direction of groundwater flow from the southern portion of the Whitaker Oil property in relation to the Estech property. Eighteen VOCs were detected and included benzene, ethylbenzene, toluene, xylenes (BTEX), to chlorinated VOCs (chlorobenzene, chloroform, trichloroethene, tetrachloroethene, cis-1,2-dichloroethene,

tetrahydrofuran, 1,2,4-trichlorobenzene, 1,1,1-trichloroethane, 1,1-dioxane, naphthalene, and vinyl chloride) to ketones (acetone, 2-butanone and 4-methyl-2-pentanone) (Table 5). Well MW-104D, located on CSX property and sidegradient to the Estech property, but directly downgradient of M&J Solvents, had the highest concentrations of VOCs, including tetrahydrofuran, toluene and xylenes with the ketones comprising the majority of the constituents. Wells MW-113, MW-119, and MW-120, also on CSX property and downgradient of M&J, had elevated VOCs, mostly chlorinated VOCs. Wells MW-22, TW-1, TW-2, and TW-3, located on Estech and downgradient of M&J also had elevated concentrations of chlorinated VOCs (cis-1,2-dichloroethene, trichloroethene, tetrachloroethene, and vinyl chloride). Wells OW-1 to OW-3 were sampled for the fifth time in May 2018 and had low concentrations of chlorobenzene with well OW-2 having the higher concentrations. 1,2,4-Trichlorobenzene was detected in OW-2 and TW-8. The VOC impact to these 13 wells is very likely from the M&J Solvents site.

Wells TW-8, MW-111, OW-1, OW-2, and OW-3 located in the former pond area of Estech had detections of chlorobenzene (0.015 to 1.1 mg/L). Well TW-3 also had a detection of chlorobenzene (0.02 mg/L) and is side gradient to wells TW-8, OW-1 to OW-3, and MW-111. Upgradient wells MW-112, MW-26, and MW-101 did not detect VOCs. There are several wells surrounding TW-8, OW-1 to OW-3 and MW-111 that are non-detect for VOCs (Figure 6). In November 2017, trichloroethene was detected for the first time in bedrock wells MW-110 and MW-121. Trichloroethene was not detected in May 2018 in wells MW-110 and MW-121. In November 2017, there were also first time trichloroethene detections in soil wells MW-22 and MW-108, but trichloroethene was not detected in May 2018 in wells MW-22 and MW-108. VOCs will continue to be monitored to evaluate concentration trends.

3.3.4 Surface Water Analytical Results

Eight surface water samples were collected from the unnamed stream in May 2018 and analyzed for site constituents. The four metals were analyzed for dissolved phase concentrations. BHCs, arsenic, lead, copper, zinc, nitrate, and sulfate were detected. The analytical results are summarized on Table 4. The BHCs ranged in concentrations of alpha-BHC 0.052 to 0.26 µg/L, beta-BHC 0.033J to 1.2 µg/L, delta-BHC 0.024J to 0.21 µg/L, and gamma-BHC 0.035J to 0.11 µg/L based on a laboratory quantitation limit of 0.05 µg/L. Dieldrin was only detected in samples SW2014-20 and SW2014-21 at 0.023J to 0.03J µg/L, respectively. The May 2018 BHC concentrations were higher than the November 2017 concentrations.

The May 2018 dissolved metals concentrations in SW-2010-5, SW-2010-10, SW-2010-17, and SW-2014-21 showed some increase above the November 2017 concentrations. In samples SW-2010-11, SW-2010-14, SW-2010-15, and SW-2014-20 May 2018 concentrations decreased from

November 2017 concentrations. Dissolved arsenic concentrations (0.00211 J to 0.00434 J mg/L) were below the laboratory reporting limit of 0.005 mg/L in the eight samples. Dissolved copper was detected at concentrations ranging from 0.00966 to 0.14 mg/L, and dissolved zinc was detected at concentrations ranging from 0.182 to 3.41 mg/L. Lead concentrations were below the laboratory reporting limit of 0.001 mg/L and below the method detection limit of 0.000621 mg/L in the eight surface water samples in May 2018.

Nitrate was detected at 1.0 to 5.4 mg/L, sulfate was detected at 62 to 200 mg/L, and both increased compared to the November 2017 concentrations. The SW-2014-20 and SW2014-21 samples were collected from water in the drainage feature on the west side of the railroad tracks upstream of the culvert and had higher concentrations for beta and gamma-BHCs, copper and zinc than the four samples collected downstream in the main channel of the unnamed stream. Sample SW-2010-11, immediately downstream of the SW-2014-21 and SW-2014-20 locations, had pesticide and inorganics concentrations that were lower than the other four channel samples collected further downstream.

Dissolved copper and zinc concentrations are greater than the Georgia Instream Water Quality Criteria (ISWQC) for aquatic life receptors (Table 4) and are less than the human health criteria. There is no ISWQC for nitrate and sulfate. Constituent concentrations in samples (SW2010-5 and SW-2010-10) collected upstream of the railroad culvert on the east side of the railroad track are lower than the concentrations of samples (SW2010-11 to SW2010-17) collected downstream of the railroad culvert on the west side of the tracks. The highest concentrations were detected at seep sample locations (SW2014-20 and SW2014-21) and main stream channel surface water samples SW2010-14 to SW2010-17. The drainage feature that branches off the main channel upstream of the culvert on the west side of the tracks has been identified as a point of discharge for elevated concentrations of constituents, particularly zinc. The unnamed stream located on CSX property is not an exposure point for human receptors because the stream is not a source of drinking water, is not accessible to the public, and does not have habitat for a fishery for human consumption. Aquatic receptors are more likely to be exposed to the stream than humans, and as such the aquatic life water quality criteria are the more appropriate criteria.

The concentrations were compared to the ISWQC for aquatic life and human health receptors. Concentrations of alpha and beta-BHCs are greater than the ISWQC for human health exposure. The gamma-BHC concentrations were less than the criteria for human and aquatic exposures. The dissolved arsenic concentrations are below the ISWQC while the copper and zinc are above the ISWQC. As described in Section 3.6, site constituents in the surface water of the un-named stream do not pose unacceptable risk for ecological receptors.

The May 2018 data were also evaluated using concentrations normalized based on annual average stream flow. Appendix B provides an explanation of the evaluation method and the calculations for normalizing the concentrations. The pesticides and arsenic have annual average or higher flow criteria under the Georgia ISWQC. The normalized pesticides concentrations of alpha and beta-BHC, like the un-normalized pesticide concentrations are above the human health criteria of ISWQC. The normalized and un-normalized dissolved arsenic and gamma-BHC concentrations were below the ISWQC. The un-normalized dieldrin concentrations were below the ISWQC.

3.4 Surface Soil Investigation

EPD expressed concern about the Type 5 RRS soil remedy regarding direct exposure to contaminants in surficial soils on the Estech property. Site isolation and the property fence currently limit human access and thereby reduce human exposure to direct contact with site constituents. However, direct exposure to surficial soils by ecological receptors is not controlled. To obtain EPD's approval of the Type 5 remedy, additional surface soil sampling and analysis was conducted to obtain new surficial soil data across the Estech property that is representative of current site conditions. New data were needed because most of the site surficial soil data were from the 1980s and 1990s. The new data were used to update the human health and the screening level ecological risk assessments.

The 18-acre Estech Property was gridded into one-acre sections and eight sampling locations were distributed per each acre. The one-acre sample area is based on using smaller exposure domains to better define areas needing exposure controls to comply with the Type 5 remedy. A surveying team staked the positions of the soil sampling locations to evenly distribute the borings per acre and across the site. On February 6 to 14, 2018, a total of 144 soil borings were sampled across the Estech Property 18-acres. Hand-augers were used to advance the borings from 0 to 1 foot in depth (ecological bioactive interval) and to collect one soil sample per boring. The soil samples were analyzed for the following:

- Site-specific Organochlorine pesticides using USEPA Method 8081A
- Arsenic, Lead, Copper, and Zinc using USEPA Method 6020

Soil samples were shipped under chain-of-custody protocol to AES Analytical in Atlanta, Georgia for analysis. Upon completion of sampling, the boreholes were backfilled with soil previously removed from the boring. The actual sampling locations were staked and surveyed. The laboratory reports are provided in Appendix A.

3.5 Human Health Risk Assessment

As presented in Appendix C, BFEL has completed an investigation to update surficial soil concentrations for a potential Type 5 Risk Reduction Standard (RRS) closure. RRS were previously calculated for soil and groundwater and approved by EPD (February 2015 Status Report). Site groundwater continues to exceed RRS and the intention is to complete an environmental covenant to control the use of groundwater at the site. There is no direct exposure to groundwater at the site. One potential exposure point is a surface stream, which is downgradient and off-property. A permeable reactive barrier is planned to address the groundwater to surface water migration pathway. Because the groundwater pathway is incomplete and will remain incomplete, soil RRS for Type 2 and 4 are based on direct contact only. Soil Type 1 and Type 3 RRS are calculated per the HSRA Rule. These RRS values were compared to the analytical results reported for the soil samples collected during the 2018 sampling event. Surface soil samples were collected at a rate of eight samples per acre to support area averaging into four separate exposure domains (EDs) (Figure HH-1 in Appendix C). Area averages were developed using USEPA ProUCL software to develop domain-specific exposure point concentrations (EPCs).

The potential for Site development is still restricted by limited Site access, i.e., no road access through surrounding properties. A 4.5-acre exposure domain is considered protective of potential future receptors that include industrial/commercial and construction workers (per the approved Site RRS). Per the VRP statute, the use of exposure domains and area averaging techniques were used to evaluate the constituents and media that may result in exposure to receptors through a specified exposure pathway. For Site workers, this includes incidental ingestion, dermal contact, and inhalation of fugitive dust.

Based on the comparison to RRS values presented in Table HH-2 in Appendix C, the primary constituents of concern (COCs) (i.e., reported concentrations greater than the constituents that exceed the highest of the Type 1 through 4 surface soil RRS, which are protective of construction workers) and secondary COCs (i.e., reported concentrations greater than the constituents that exceed the highest of the Type 1 through 3 surface soil RRS), which are protective of industrial/commercial workers, are as follow:

Area 1 – arsenic, lead, beta-BHC, and 4,4'-DDT
Area 2 – arsenic, lead, beta-BHC, dieldrin, and heptachlor
Area 3 – arsenic, lead, beta-BHC, 4,4'-DDT, dieldrin, and heptachlor
Area 4 – arsenic, lead, 4,4'-DDT, and dieldrin

Based on this comparison, Areas 1, 3, and 4 (Figure HH-2 in Appendix C) would require corrective action to be protective of construction workers. All four Areas would require additional action to

be protective of commercial or industrial workers. Arsenic, lead, and 4,4'-DDT are the primary human health COCs. Dieldrin, beta-BHC, and heptachlor are secondary human health COCs that have more limited distribution in surface soils.

Sampling points that were associated with higher concentrations of COCs and were contributing the majority of the risks were identified. This step was accomplished by sorting the data sets from low to high concentrations. Higher concentrations were systematically removed and UCLs (or means for lead) were recalculated repeatedly until the EPC was less than the targeted RRS (Appendix C, Attachments B and C). Based on this evaluation, after corrective action, the surface soil UCL concentrations for 4,4'-DDT, arsenic, beta-BHC, and heptachlor will comply with Type 3 RRS. Surface soil mean concentrations for lead will comply with Type 3 RRS. For Area 2 and 3 EPCs, dieldrin will comply with Type 3 RRS. One sample in Area 1 at a concentration of 2.1 mg/kg and one sample in Area 4 at a concentration of 1.1 mg/kg would exceed the Type 3 RRS for dieldrin of 0.66 mg/kg. However, the site as a whole would have a UCL EPC of 0.22 mg/kg for Dieldrin and would comply with Type 3 RRS. Regardless, dieldrin in all areas will comply with a Type 4 RRS of 27 mg/kg.

3.6 Screening Level Ecological Risk Assessment

A Screening Level Ecological Risk Assessment (SLERA) was initially conducted in 2007 as required under HSRA and updated in 2011 in response to EPD comments on the VRP Application. The 2011 findings indicated the potential for unacceptable risk to ecological receptors from exposure to site surface soils. Exposure to the un-named stream did not present the potential for unacceptable risk to ecological receptors and additional study of the stream was not warranted. Additional ecological risk evaluation was not recommended for site surface soils because site remediation was anticipated to control or remove ecological exposures.

The updated 2018 SLERA presented in Appendix D evaluated the potential environmental risks and/or effects associated with current site conditions on the Estech Property and the un-named stream located on the adjacent CSX railroad property. The un-named stream located on the CSX railroad property is a discharge boundary for site groundwater. The SLERA identified constituents that might pose a hazard to ecological receptors, and evaluates the magnitude of potential adverse impacts to ecological receptors due to exposure to those constituents. The methodology used in the SLERA is presented in Appendix D. The SLERA was conducted in accordance with USEPA's Region 4 Ecological Risk Assessment Supplemental Guidance (USEPA, 2018) and USEPA's Ecological Risk Assessment for Superfund: Process for Designing and Conducting Ecological Risk Assessment (ERAGS; USEPA, 1997).

Surface soil data from the 2018 investigation, existing 2000 and 2004 sediment data, and 2016 through 2018 surface water data from the un-named streamed were used in the update of the SLERA. The findings of the updated SLERA indicated there is the potential for unacceptable risk for terrestrial mammals (shrew) and terrestrial birds (quail) exposed to site surface soil. Comparison of Estech Property surface soil concentrations to ecological Preliminary Remediation

Goals indicates corrective action is required to be protective of ecological receptors. The areas identified under the human health and ecological risk assessments as needing corrective actions to be protective of human health and ecological receptors do overlap (Appendix C, Figure HH-2 and Appendix D, Figures D-5 and D-6). Surface water and/or sediment exposure to site constituents in the un-named stream do not pose unacceptable risk for ecological receptors. Further evaluation of ecological exposure to the un-named stream is not warranted.

3.7 Revised Remediation Approach

BFEL and Amec Foster Wheeler (now Wood) representatives met with EPD representatives on September 18, 2014 to discuss the proposed Revised Remediation Plan presented in VRP Status Report No. 5. The Revised Remediation Plan called for a groundwater recirculating system with a limestone infiltration gallery treatment process. The recirculating system would capture contaminated groundwater, treat the water by raising the pH, and allow the treated water to re-infiltrate back into the subsurface to help flush contaminants in soil and groundwater toward the pumping-induced capture zone while raising the pH in the subsurface soil and groundwater to reduce solubility and mobility of dissolved constituents, particularly zinc. A surficial limestone PRB was also proposed to be installed at the seep area (sample locations SW-2014-20 and SW-2014-21) and drainage feature near the unnamed stream on CSX property. A Type 5 Risk Reduction Standard was proposed to address impacted soil via engineering and institutional controls to limit human exposure potential until a viable re-use for the property is identified. During a June 22, 2017 meeting with EPD, a Type 5 remedy for prevention of exposure to the site soils without a site re-development was discussed. A surface soil investigation was conducted in February 2018 to obtain data representative of current site conditions to evaluate if further corrective actions are needed for implementing the Type 5 remedy based on elimination of human and ecological receptor exposure.

Because implementation of these remedies will extend beyond the VRP five-year time frame, a revised project schedule and potential consent order to replace the existing administrative order were also discussed. A tentative schedule is included as Figure 7.

Previous groundwater sampling has confirmed VOC impacts on the Estech property (Figure 6) and a VOC source has been identified on the upgradient M&J Solvents' site. The VOC source on the M&J site has been treated with air-sparge/soil vacuum extraction while enhanced monitored natural attenuation is being applied to the dissolved-phase groundwater plume downgradient of the M&J Solvents site. M&J Solvents' representatives proposed installing additional wells downgradient of their site on the Estech and CSX properties as part of their on-going step-wise delineation of their groundwater plume. As of this report, M&J Solvents has not installed wells on the Estech property. Implementation of the proposed pump-and-treat system is currently on-hold due to concerns by BFEL and EPD that a pump-and-treat system on the Estech property

could exacerbate the M&J Solvents' VOCs groundwater plume currently impacting the Estech property.

BFEL plans to implement the surficial PRB in the drainage feature and evaluate its performance while keeping the pump-and-treat system on hold. A meeting with BFEL and EPD on June 22, 2017 provided an overview of the conceptual design of the PRB and discussed the path forward for the site. The draft conceptual design drawings for the PRB were submitted to EPD in Status Repot No. 11. From July 2017 to July 2018 the following activities were conducted for the design and construction of the surficial PRB.

- Preparation of the design drawings of the surficial PRB were completed.
- A Pre-Construction Notification (PCN) for coverage under the U.S. Army Corps of Engineers (USACE) Nationwide Permit 38 was submitted in August 2017, and approved by the USACE in correspondence dated October 26, 2017.
- A Stream Buffer Variance Application was submitted to the City of Atlanta in October 2017, and approved in correspondence dated November 8, 2017.
- A Stream Buffer Variance Application was submitted to the Georgia EPD on November 9, 2017.

Initial comments on the Stream Buffer Variance Application were received from EPD in late January 2018, and revisions to address the comments were completed and submitted to CSX on February 9, 2018 because EPD requested that a CSX representative sign the stream buffer variance application as the property owner. In several subsequent communications with Wood, CSX has expressed a willingness to sign the stream buffer variance application and grant access to the property for installation of the surficial PRB. However, as of this report, CSX signature of the variance application is still pending and access to the property to install the surficial PRB has not been granted by CSX.

3.8 CSX Railroad Property

CSX Transportation is in the process of changing their railroad operations at the Tilford Yard. As of May 2018, CSX has removed several of the railroad tracks, including the "pork-barrel" track to the east of the Estech property. The hump yard, at the north end of Tilford Yard, used for sorting and combining trains has been closed. The main line tracks on the west side of Estech remain in-place. CSX is in the process of evaluating re-development or selling the Tilford Yard property.

4.0 WORK TO BE PERFORMED

On-going activities include semi-annual groundwater and surface water monitoring and reporting. Additional activities include implementation of remedial measures previously proposed in light of the upgradient VOC groundwater plume. The sections below describe the status of the activities yet to be performed. Figure 7 is the updated Gantt Chart Schedule of VRP Activities.

4.1 Groundwater and Surface Sampling and Analysis

Groundwater and surface water samples will be collected in October-November 2018 as part of the next semi-annual monitoring event for the site. The following monitoring wells will be sampled and analyzed for site constituents:

MW-22	MW-25	MW-26	MW-1B	MW-101	MW-102
MW-104A	MW-104D	MW-105	MW-106D	MW-107D	MW-108
MW-109	MW-110	MW-111	MW-112	MW-113	MW-114
MW-115	MW-116	MW-117	MW-119	MW-120	MW-121
TW-1 to TW-12		OW-1 to OW-3			

Constituents to be analyzed: Organochlorine Pesticides, Total and Dissolved Metals (Arsenic, Lead, Copper, Zinc), Nitrate, and Sulfate, and VOCs.

Surface Water Sampling and Analysis

Eight surface water locations in the unnamed stream located on CSX property will be sampled and analyzed for the site constituents:

SW2010-5 SW2010-10 SW2010-11 SW2010-14 SW2010-15 SW2010-17
SW2014-20 SW2014-21

Constituents analyzed: Organochlorine Pesticides, Dissolved Metals (Arsenic, Lead, Copper, and Zinc), Nitrate, and Sulfate.

4.2 Surficial Permeable Reactive Barrier

As described in Section 3.7, the design of the surficial PRB has been completed, permitting is in progress, and BFEL continues to work with CSX for access to construct the PRB and execute the stream buffer variance application. After completing the permitting process and obtaining access permission from CSX, BFEL plans to proceed with installation of the surficial limestone PRB to evaluate the efficacy of the limestone/pH adjustment treatment concept. An estimated schedule in included as Figure 7. It is estimated to take approximately a year following installation to evaluate the performance of the surficial PRB and its effects on surface water quality. As discussed in the June 2017 meeting with EPD, an extension to the initial 5-year VRP implementation period is

necessary due to the changing remediation plans, changing property conditions, and up-gradient impacts from M&J Solvents.

Evaluation of corrective actions for a potential Type 5 RRS remedy to control exposure to surface soils on the Estech Property will be conducted.

5.0 PROFESSIONAL SERVICES HOURS THIS PERIOD

Approximately 964.1 professional service hours have been provided by Wood from January 27, 2018 to June 15, 2018. A table of the breakdown of Wood's hours by month along with a description of the services provided is presented on Table 6. The registered professional engineer responsible for implementation of the VRP at this site is Mr. Gregory Wrenn. Mr. Wrenn has personally charged 29.0 labor hours to the project to direct and review the various aspects of implementation of the VRP during this period.

TABLES

TABLE 1: SUMMARY OF GROUNDWATER AND SURFACE WATER COLLECTION DATA

WELL SAMPLED	TOTAL BORING AND WELL DEPTH (FT, BGS)	GROUND SURFACE ELEVATION/ TOP OF CASING ELEVATION (FT, NGVD)	SCREENED INTERVAL (FT, BGS)	ANALYSES PER SAMPLE	SAMPLE DATE	PURPOSE

Notes:

ft. = feet
NGVD = National Geodetic Vertical Datum
Monitoring wells MW-1, MW-1A, MW-2 through MW-15, MW-18, MW-19, MW-20, MW-23, MW-27, DW-1A, DW-2A, DW-2B, MW-103A, MW-103D, MW-104, and MW-118 have been
Monitoring wells MW-7, MW-103, MW-106 and MW-107 were not installed.
Monitoring wells MW-5, MW-10, MW-16 and MW-17 could not be located and assumed to have been destroyed.
(1) new staff gauges installed and surveyed on 5/24/2013
(2) Monitoring wells MW-106D, MW-107D, MW-119, MW-120, and MW-121 were remeasured on 5/30/2013 when new staff gauges were surveyed and measured.
2013 Groundwater levels in OW-1, OW-2, and OW-3 were measured on 4/15/2013 and 10/19/2013 as part of the quarterly EHC-M pilot test study (shown under 5/20/2013 and 11/11-12/2013, respectively)

Notes:

<0.00005 = constituent not detected above laboratory quantitation limit
BDL = Below Detection Limit (below laboratory quantitation limit)
NA = not analyzed
Bolded concentrations indicate detection above laboratory quantitation limit
[ ] Concentration above the Type 1 RRS
NR = not regulated under HSRA or VRP
DL = Detection limit
mg/L = milligrams per liter
P = Identification of target analytes using gas chromatography (GC) is based on retention time. Although 2 dissimilar GC columns confirmed the presence of the target analyte in the sample, relative percent difference is >40%.
J = Estimated, based on QC criteria
JB = Estimated, based on blank contamination
JH = Estimated, possibly biased high
JL = Estimated, possibly biased low
UJ = Not Detected, estimated based on QC criteria
UL = Not Detected, estimated possibly biased low

Notes:

<0.025 = Constituent not detected above the detection limit shown
ug/L = micrograms per liter
mg/L = milligrams per liter
J = Result reported between the method detection limit (MDL) and reporting limit (RL). Result is a quantitative estimate.
J Q= Estimated, detected between the method detection limit (MDL) and reporting limit (RL).
J H= Estimated, possibly biased high
P = Identification of target analytes using gas chromatography (GC) is based on retention time. Although 2 dissimilar GC columns confirmed the presence of the target analyte in the sample, relative percent difference is >40%.
NA = constituent not analyzed
* = criteria is based on an average hardness of 186 mg/L from November 2016
Bolded = indicates a positive detection in the 2012 through 2018 results
2012 through 2018 Sampling Results that exceeded Georgia Instream Concentrations (GEPD 2013) for Ecological Exposure
2012 through 2018 Sampling Results that exceeded Georgia Instream Concentrations (GEPD 2013) for Human Health Exposure (used when there was not an ecological exposure criteria)

Notes
ug/L = micrograms per liter
<5.0 = constituent not detected above laboratory quantitation limit
Bolded concentrations are postive detection of constituents
VOCs = volatile organic compounds analyzed by USEPA method 8260B
BDL = below detection limit (below laboratory quantitation limit)
1,1,1,2-Tetrachloroethane has not been analyzed since September 2010

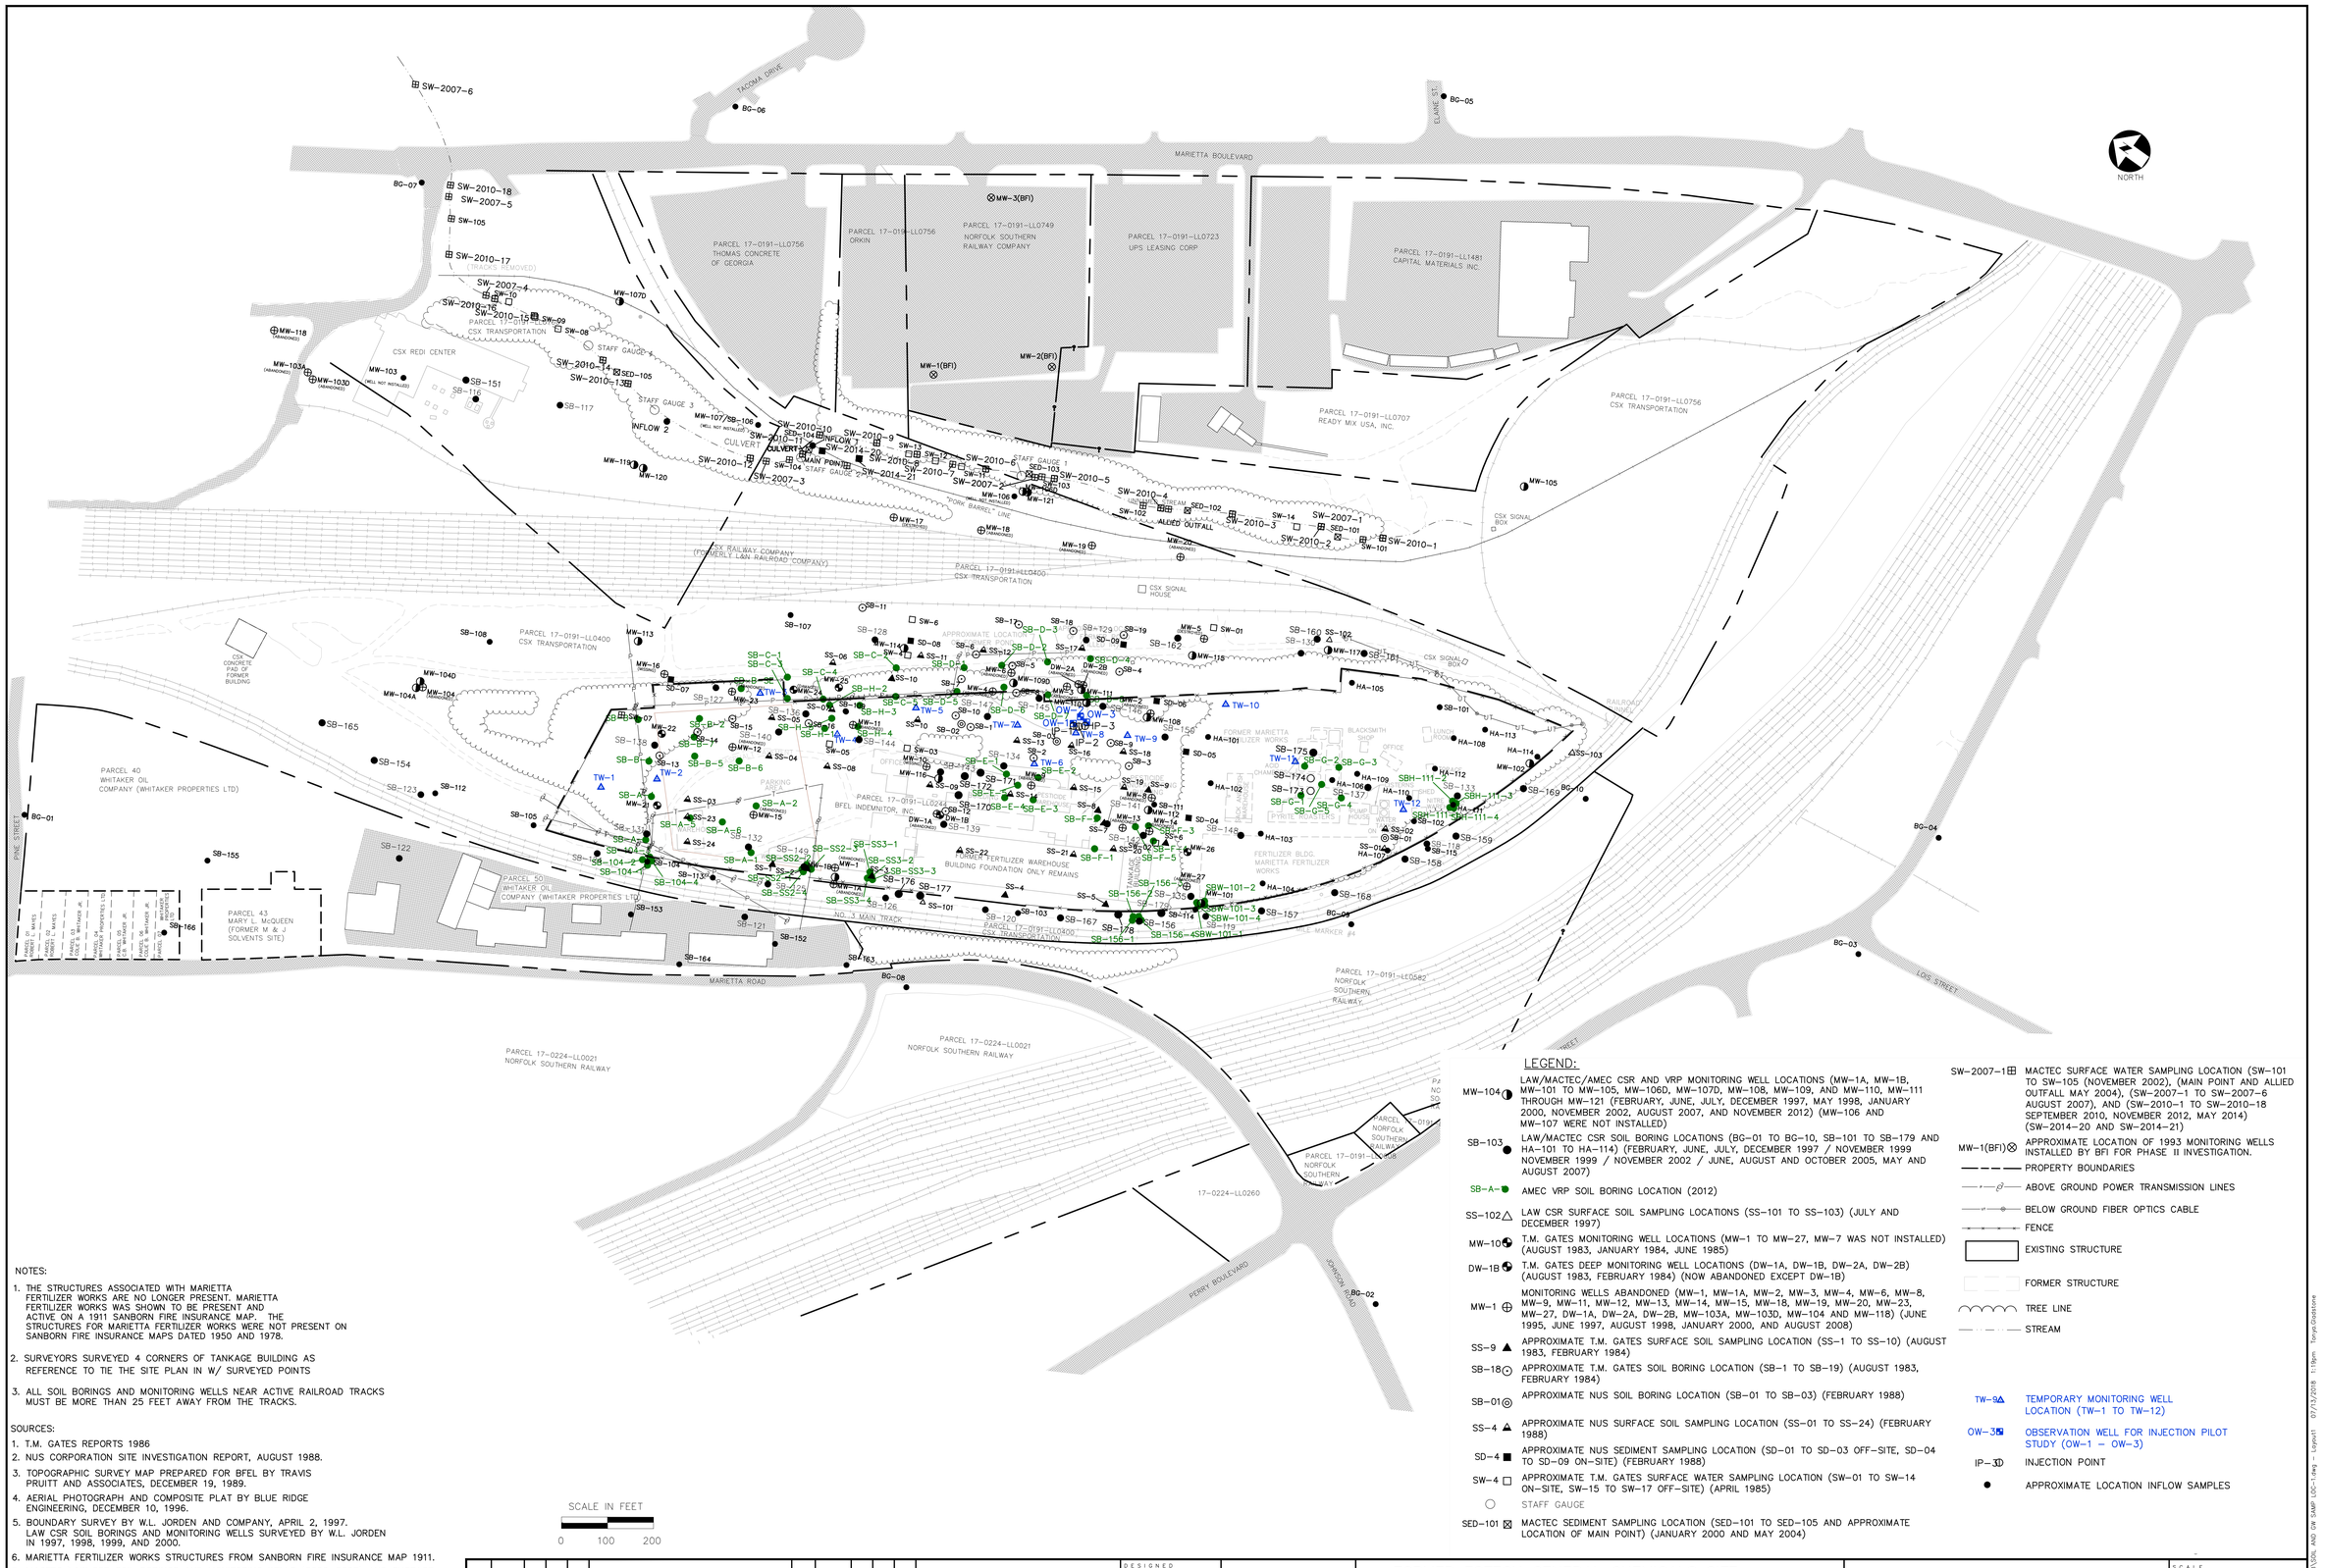
TABLE 6: SUMMARY OF HOURS INVOICED AND DESCRIPTION OF SERVICES FOR DOCUMENTATION OF PE DIRECT OVERSIGHT FOR VOLUNTARY REMEDIATION PROGRAM ACTIVITIES

	Hours Invoiced	Billing Period	Invoice # Invoice Date	Description of Services
Gregory J. Wrenn, P.E.	11.0	1/27/2018-2/23/2018	H09101108	Finalized VRP Status Report No. 12 and submitted to EPD. Conducted surveying to lay out grid for surface soil sampling. Conducted surface soil investigation, sample analysis, and initiated data management/risk assessment for Type 5 soil remedy. Addressed EPD comments to stream buffer variance.
Total Project Hours for Billing Period	377.0		3/6/2018	
Gregory J. Wrenn, P.E.	4.0	2/24/2018-3/23/2018	H09101159	Communications with CSX regarding access agreement and approval and signature of stream buffer variance. Conducted surface soil investigation sample analysis and data management.
Total Project Hours for Billing Period	7.0		4/4/2018	
Gregory J. Wrenn, P.E.	3.0	3/24/2018-4/20/2018	H09101262	Communications with CSX regarding access agreement and signature on stream buffer variance. Conducted surface soil investigation data management/mapping.
Total Project Hours for Billing Period	12.1		5/2/2018	
Gregory J. Wrenn, P.E.	9.0	4/21/2018-5/18/2018	H09101356	Data management, evaluation, and reporting for surface soil risk assessment. Submitted revised Stream Buffer Variance Application to CSX for signature. Coordinated field team and laboratory for first semi-annual 2018 water sampling event. Conducted first semi-annual groundwater and surface water sampling event in May 2018, including additional VOC sampling and analysis to evaluate impacts from M&J Solvents site.
Total Project Hours for Billing Period	376.3		6/4/2018	
Gregory J. Wrenn, P.E.	2.0	5/19/2018 to 6/15/2018	H09101416	Prepared surface soil human health and ecological receptor risk assessment reports. Data management and validation and reporting for August 2018 VRP Status Report.
Total Project Hours for Billing Period	191.7		6/22/2018	
Total Hours for PE Gregory J. Wrenn	**29.0**			
Total Project Hours	**964.1**			

FIGURES



NOTES:

1. THE STRUCTURES ASSOCIATED WITH MARIETTA FERTILIZER WORKS ARE NO LONGER PRESENT. MARIETTA FERTILIZER WORKS WAS SHOWN TO BE PRESENT AND ACTIVE ON A 1911 SANBORN FIRE INSURANCE MAP. THE STRUCTURES FOR MARIETTA FERTILIZER WORKS WERE NOT PRESENT ON SANBORN FIRE INSURANCE MAPS DATED 1950 AND 1978.
2. SURVEYORS SURVEYED 4 CORNERS OF TANKAGE BUILDING AS REFERENCE TO TIE THE SITE PLAN IN W/ SURVEYED POINTS
3. ALL SOIL BORINGS AND MONITORING WELLS NEAR ACTIVE RAILROAD TRACKS MUST BE MORE THAN 25 FEET AWAY FROM THE TRACKS.

SOURCES:

PESTICIDES, IN GROUND WATER ARE DELINEATED PER THE VRP DELINEATION CRITERIA 12-8-108(E) DEFAULT RESIDENTIAL CLEANUP STANDARDS (TYPE I RRS).

GROUNDWATER CONCENTRATION IS GREATER THAN TYPE I RRS

SURFACE WATER CONCENTRATION IS GREATER THAN GEORGIA INSTREAM WATER QUALITY CRITERIA (HUMAN HEALTH CRITERIA FOR ALPHA AND BETA BHC)

HORIZONTAL DELINEATION OF GROUNDWATER CONTAMINATION BASED ON TYPE I RRS

OBSERVATION WELL FOR PILOT INJECTION STUDY

ALL CONCENTRATIONS EXPRESSED IN MILLIGRAMS PER LITER (MG/L)

J = ESTIMATED BASED ON QC CRITERIA
JH = ESTIMATED, POSSIBLY BIASED HIGH
JL = ESTIMATED, POSSIBLY BIASED LOW
JQ = ESTIMATED, DETECTED BETWEEN THE METHOD DETECTION LIMIT (MDL) AND THE REPORTING LIMIT (RL)
* INSUFFICIENT WATER TO SAMPLE WELL

RE: BFEL Atlanta

Dear Rhonda Quinn: Order No: 1805A43

Analytical Environmental Services, Inc. received 9 samples on 5/9/2018 5:55:00 PM
for the analyses presented in following report.

No problems were encountered during the analyses. Additionally, all results for the associated Quality Control samples were within EPA and/or AES established limits. Any discrepancies associated with the analyses contained herein will be noted and submitted in the form of a project Case Narrative.
AES's accreditations are as follows:
-NELAP/State of Florida Laboratory ID E87582 for analysis of Non-Potable Water, Solid & Chemical Materials, Air & Emissions Volatile Organics, and Drinking Water Microbiology & Metals, effective 07/01/17-06/30/18.
State of Georgia, Department of Natural Resources ID #800 for analysis of Drinking Water Metals, effective 07/01/17-06/30/18 and Total Coliforms/ E. coli, effective 04/25/17-04/24/20.
-NELAP/Louisiana Agency Interest No. 100818 for or analysis of Non-Potable Water and Solid & Chemical Materials, effective 07/01/17-06/30/18.
-AIHA-LAP, LLC Laboratory ID: 100671 for Industrial Hygiene samples (Organics, Metals, PCM Asbestos, Gravimetric), Environmental Lead (Paint, Soil, Dust Wipes, Air), and Environmental Microbiology (Fungal) Direct Examination, effective until 11/01/19.
These results relate only to the items tested. This report may only be reproduced in full.

If you have any questions regarding these test results, please feel free to call.

Sincerely,

Ioana Pacurar

Case Narrative

Volatiles Organic Compounds Analysis by Method 8260B:

Due to sample matrix, samples 1805A43-006A, & -007A required dilution during preparation and/or analysis resulting in elevated reporting limits.

Pesticide Analysis by Method 8081B:

Due to sample matrix, sample 1805A43-004D required dilution during preparation and/or analysis resulting in elevated reporting limits.

Metals Analysis by Method 6020B:

Due to sample matrix, samples 1805A43-003A, -006B and -009B required dilution during preparation and/or analysis resulting in elevated reporting limits for Copper and Zinc.

		Yes	No	N/A	Details	Comments
3.	Shipping container/cooler received in good condition?	○	○	○	damaged ☐ leaking ☐ other ☐	
4.	Custody seals present on shipping container?	○	○	○		
5.	Custody seals intact on shipping container?	○	○	○		
6.	Temperature blanks present?	○	○	○		
7.	Cooler temperature(s) within limits of 0-6°C? [See item 13 and 14 for temperature recordings.]	○	○	○	Cooling initiated for recently collected samples / ice present ☐	
8.	Chain of Custody (COC) present?	○	○	○		
9.	Chain of Custody signed, dated, and timed when relinquished and received?	○	○	○		
10.	Sampler name and/or signature on COC?	○	○	○		
11.	Were all samples received within holding time?	○	○	○		
12.	TAT marked on the COC?	○	○	○	If no TAT indicated, proceeded with standard TAT per Terms & Conditions. ☐	

13. Cooler 1 Temperature 0.6 °C Cooler 2 Temperature 0.1 °C Cooler 3 Temperature 0.6 °C Cooler 4 Temperature _____ °C

14. Cooler 5 Temperature _____ °C Cooler 6 Temperature _____ °C Cooler 7 Temperature _____ °C Cooler 8 Temperature _____ °C

15. Comments: _____

I certify that I have completed sections 1-15 (dated initials). MJ 2/15/18

		Yes	No	N/A	Details	Comments
16.	Were sample containers intact upon receipt?	○	○	○		
17.	Custody seals present on sample containers?	○	○	○		
18.	Custody seals intact on sample containers?	○	○	○		
19.	Do sample container labels match the COC?	○	○	○	incomplete info ☐ illegible ☐ no label ☐ other ■	
20.	Are analyses requested indicated on the COC?	○	○	○		
21.	Were all of the samples listed on the COC received?	○	○	○	samples received but not listed on COC ☐ samples listed on COC not received ☐	
22.	Was the sample collection date/time noted?	○	○	○		
23.	Did we receive sufficient sample volume for indicated analyses?	○	○	○		
24.	Were samples received in appropriate containers?	○	○	○		
25.	Were VOA samples received without headspace (< 1/4" bubble)?	○	○	○		
26.	Were trip blanks submitted?	○	○	○	listed on COC ☐ not listed on COC ☐	

27. Comments: _____

I certify that I have completed sections 16-27 (dated initials). TR 2/16/18

This section only applies to samples where pH can be checked at Sample Receipt.

		Yes	No	N/A	Details	Comments
28.	Have containers needing chemical preservation been checked? *	○	○	○		
29.	Containers meet preservation guidelines?	○	○	○		
30.	Was pH adjusted at Sample Receipt?	○	○	○		

* Note: Certain analyses require chemical preservation but must be checked in the laboratory and not upon Sample Receipt such as Coliforms, VOCs and Oil & Grease/TPH.

I certify that I have completed sections 28-30 (dated initials). TR 2/16/18

Kennesaw GA 30144

RE: BFEL Atlanta

Dear Rhonda Quinn: Order No: 1805C21

Analytical Environmental Services, Inc. received 8 samples on 5/10/2018 5:40:00 PM for the analyses presented in following report.

No problems were encountered during the analyses. Additionally, all results for the associated Quality Control samples were within EPA and/or AES established limits. Any discrepancies associated with the analyses contained herein will be noted and submitted in the form of a project Case Narrative.
AES's accreditations are as follows:
-NELAP/State of Florida Laboratory ID E87582 for analysis of Non-Potable Water, Solid & Chemical Materials, Air & Emissions Volatile Organics, and Drinking Water Microbiology & Metals, effective 07/01/17-06/30/18.
State of Georgia, Department of Natural Resources ID #800 for analysis of Drinking Water Metals, effective 07/01/17-06/30/18 and Total Coliforms/ E. coli, effective 04/25/17-04/24/20.
-NELAP/Louisiana Agency Interest No. 100818 for or analysis of Non-Potable Water and Solid & Chemical Materials, effective 07/01/17-06/30/18.
-AIHA-LAP, LLC Laboratory ID: 100671 for Industrial Hygiene samples (Organics, Metals, PCM Asbestos, Gravimetric), Environmental Lead (Paint, Soil, Dust Wipes, Air), and Environmental Microbiology (Fungal) Direct Examination, effective until 11/01/19.
These results relate only to the items tested. This report may only be reproduced in full.

If you have any questions regarding these test results, please feel free to call.

Sincerely,

Ioana Pacurar

Case Narrative

Pesticide Analysis by Method 8081B:

Due to sample matrix, sample 1805C21-005D required dilution during analysis resulting in elevated reporting limits.

Dissolved Metals Analysis by Method 6020B:

Due to sample matrix, samples 1805C21-003C and -006B required dilution during preparation and/or analysis resulting in elevated reporting limits.

SUMMARY OF ANALYTES DETECTED

Analyses	Result	Qual	MDL	Reporting Limit	Units	BatchID	Dilution Factor
Client Sample ID: MW-117				**Lab ID:** 1805C21-008			
Collection Date: 5/10/2018 4:30:00 PM				**Matrix:** Groundwater			
ION SCAN SW9056A							
Nitrate	3.9		0.055	0.25	mg/L	R370121	1
Sulfate	140		1.2	10	mg/L	R370121	10
Dissolved Metals by ICP/MS SW6020B				**(SW3005A)**			
Copper	0.0287		0.0186	0.0200	mg/L	260691	10
Zinc	0.791		0.0168	0.100	mg/L	260691	10

Qualifiers:

- * Value exceeds maximum contaminant level
- BRL Below reporting limit
- H Holding times for preparation or analysis exceeded
- N Analyte not NELAC certified
- B Analyte detected in the associated method blank
- > Greater than Result value
- E Estimated (value above quantitation range)
- S Spike Recovery outside limits due to matrix
- Narr See case narrative
- NC Not confirmed
- < Less than Result value
- J Estimated value detected below Reporting Limit

SAMPLE/COOLER RECEIPT CHECKLIST

1. Client Name: **AMEC Foster Wheeler** AES Work Order Number: **1802E95**

2. Carrier: FedEx ☐ UPS ☐ USPS ☐ Client ■ Courier ☐ Other _____

		Yes	No	N/A	Details	Comments
3.	Shipping container/cooler received in good condition?	○	○	○	damaged ☐ leaking ☐ other ☐	
4.	Custody seals present on shipping container?	○	○	○		
5.	Custody seals intact on shipping container?	○	○	○		
6.	Temperature blanks present?	○	○	○		
7.	Cooler temperature(s) within limits of 0-6°C? [See item 13 and 14 for temperature recordings.]	○	○	○	Cooling initiated for recently collected samples / ice present ☐	
8.	Chain of Custody (COC) present?	○	○	○		
9.	Chain of Custody signed, dated, and timed when relinquished and received?	○	○	○		
10.	Sampler name and/or signature on COC?	○	○	○		
11.	Were all samples received within holding time?	○	○	○		
12.	TAT marked on the COC?	○	○	○	If no TAT indicated, proceeded with standard TAT per Terms & Conditions. ☐	

13. Cooler 1 Temperature 0.6 °C Cooler 2 Temperature 0.1 °C Cooler 3 Temperature 0.6 °C Cooler 4 Temperature _____ °C

14. Cooler 5 Temperature _____ °C Cooler 6 Temperature _____ °C Cooler 7 Temperature _____ °C Cooler 8 Temperature _____ °C

15. Comments: _____

I certify that I have completed sections 1-15 (dated initials). MJ 2/15/18

		Yes	No	N/A	Details	Comments
16.	Were sample containers intact upon receipt?	○	○	○		
17.	Custody seals present on sample containers?	○	○	○		
18.	Custody seals intact on sample containers?	○	○	○		
19.	Do sample container labels match the COC?	○	○	○	incomplete info ☐ illegible ☐ no label ☐ other ■	
20.	Are analyses requested indicated on the COC?	○	○	○		
21.	Were all of the samples listed on the COC received?	○	○	○	samples received but not listed on COC ☐ samples listed on COC not received ☐	
22.	Was the sample collection date/time noted?	○	○	○		
23.	Did we receive sufficient sample volume for indicated analyses?	○	○	○		
24.	Were samples received in appropriate containers?	○	○	○		
25.	Were VOA samples received without headspace (< 1/4" bubble)?	○	○	○		
26.	Were trip blanks submitted?	○	○	○	listed on COC ☐ not listed on COC ☐	

27. Comments: _____

I certify that I have completed sections 16-27 (dated initials). TR 2/16/18

This section only applies to samples where pH can be checked at Sample Receipt.

		Yes	No	N/A	Details	Comments
28.	Have containers needing chemical preservation been checked? *	○	○	○		
29.	Containers meet preservation guidelines?	○	○	○		
30.	Was pH adjusted at Sample Receipt?	○	○	○		

* Note: Certain analyses require chemical preservation but must be checked in the laboratory and not upon Sample Receipt such as Coliforms, VOCs and Oil & Grease/TPH.

I certify that I have completed sections 28-30 (dated initials). TR 2/16/18

AES

ANALYTICAL ENVIRONMENTAL SERVICES, INC.

June 26, 2018

Rhonda Quinn
Wood Environment & Infrastructure
1075 Big Shanty Rd NW
Kennesaw GA 30144

RE: BFEL Atlanta

Dear Rhonda Quinn: Order No: 1805D34

Analytical Environmental Services, Inc. received 5 samples on 5/11/2018 4:25:00 PM
for the analyses presented in following report.

No problems were encountered during the analyses. Additionally, all results for the associated Quality Control samples were within EPA and/or AES established limits. Any discrepancies associated with the analyses contained herein will be noted and submitted in the form of a project Case Narrative.
AES's accreditations are as follows:
-NELAP/State of Florida Laboratory ID E87582 for analysis of Non-Potable Water, Solid & Chemical Materials, Air & Emissions Volatile Organics, and Drinking Water Microbiology & Metals, effective 07/01/17-06/30/18.
State of Georgia, Department of Natural Resources ID #800 for analysis of Drinking Water Metals, effective 07/01/17-06/30/18 and Total Coliforms/ E. coli, effective 04/25/17-04/24/20.
-NELAP/Louisiana Agency Interest No. 100818 for or analysis of Non-Potable Water and Solid & Chemical Materials, effective 07/01/17-06/30/18.
-AIHA-LAP, LLC Laboratory ID: 100671 for Industrial Hygiene samples (Organics, Metals, PCM Asbestos, Gravimetric), Environmental Lead (Paint, Soil, Dust Wipes, Air), and Environmental Microbiology (Fungal) Direct Examination, effective until 11/01/19.
These results relate only to the items tested. This report may only be reproduced in full.

If you have any questions regarding these test results, please feel free to call.

Sincerely,

Ioana Pacurar

Case Narrative

Dissolved Metals Analysis by Method 6020B:

Due to sample matrix, samples 1805D34-002C, -003C, and -004C required dilution during preparation and/or analysis resulting in elevated reporting limits.

26.	Were trip blanks submitted?	○	○	○	listed on COC ☐ not listed on COC ☐	

27. Comments: _____

I certify that I have completed sections 16-27 (dated initials). TR 2/16/18

This section only applies to samples where pH can be checked at Sample Receipt.

		Yes	No	N/A	Details	Comments
28.	Have containers needing chemical preservation been checked? *	○	○	○		
29.	Containers meet preservation guidelines?	○	○	○		
30.	Was pH adjusted at Sample Receipt?	○	○	○		

* Note: Certain analyses require chemical preservation but must be checked in the laboratory and not upon Sample Receipt such as Coliforms, VOCs and Oil & Grease/TPH.

I certify that I have completed sections 28-30 (dated initials). TR 2/16/18

Checklist 6.9.17 Rev 2

Kennesaw GA 30144

RE: BFEL Atlanta

Dear Rhonda Quinn: Order No: 1805E48

Analytical Environmental Services, Inc. received 6 samples on 5/14/2018 5:17:00 PM
for the analyses presented in following report.

No problems were encountered during the analyses. Additionally, all results for the associated Quality Control samples were within EPA and/or AES established limits. Any discrepancies associated with the analyses contained herein will be noted and submitted in the form of a project Case Narrative.
AES's accreditations are as follows:
-NELAP/State of Florida Laboratory ID E87582 for analysis of Non-Potable Water, Solid & Chemical Materials, Air & Emissions Volatile Organics, and Drinking Water Microbiology & Metals, effective 07/01/17-06/30/18.
State of Georgia, Department of Natural Resources ID #800 for analysis of Drinking Water Metals, effective 07/01/17-06/30/18 and Total Coliforms/ E. coli, effective 04/25/17-04/24/20.
-NELAP/Louisiana Agency Interest No. 100818 for or analysis of Non-Potable Water and Solid & Chemical Materials, effective 07/01/17-06/30/18.
-AIHA-LAP, LLC Laboratory ID: 100671 for Industrial Hygiene samples (Organics, Metals, PCM Asbestos, Gravimetric), Environmental Lead (Paint, Soil, Dust Wipes, Air), and Environmental Microbiology (Fungal) Direct Examination, effective until 11/01/19.
These results relate only to the items tested. This report may only be reproduced in full.

If you have any questions regarding these test results, please feel free to call.

Sincerely,

Ioana Pacurar

Ioana Pacurar

DATA PACKAGE: I ○ II ○ III ○ IV ○

Submission of samples to the laboratory constitutes acceptance of AES's Terms & Conditions. Samples received after 3PM or on Saturday are considered as received the following business day. If no TAT is marked on COC, AES will proceed with standard TAT. Samples are disposed of 30 days after completion of report unless other arangements are made.

Matrix Codes: A = Air GW = Groundwater SE = Sediment SO = Soil SW = Surface Water WW = Waste Water W = Water (Blanks) DW = Drinking Water (Blanks) O = Other (specify)

Preservative Codes: H+I = Hydrochloric acid + ice I = Ice only N = Nitric acid S+I = Sulfuric acid + ice S/M+I = Sodium Bisulfate/Methanol + ice O = Other (specify) NA = None

Lab ID: 1805E48

Case Narrative

Metals Analysis by Method 6020B:

Due to sample matrix, sample 1805E448-006B required dilution during preparation and/or analysis resulting in elevated reporting limits.

SAMPLE/COOLER RECEIPT CHECKLIST

1. Client Name: **AMEC Foster Wheeler** AES Work Order Number: **1802E95**

2. Carrier: FedEx ☐ UPS ☐ USPS ☐ Client ■ Courier ☐ Other _____

		Yes	No	N/A	Details	Comments
3.	Shipping container/cooler received in good condition?	○	○	○	damaged ☐ leaking ☐ other ☐	
4.	Custody seals present on shipping container?	○	○	○		
5.	Custody seals intact on shipping container?	○	○	○		
6.	Temperature blanks present?	○	○	○		
7.	Cooler temperature(s) within limits of 0-6°C? [See item 13 and 14 for temperature recordings.]	○	○	○	Cooling initiated for recently collected samples / ice present ☐	
8.	Chain of Custody (COC) present?	○	○	○		
9.	Chain of Custody signed, dated, and timed when relinquished and received?	○	○	○		
10.	Sampler name and/or signature on COC?	○	○	○		
11.	Were all samples received within holding time?	○	○	○		
12.	TAT marked on the COC?	○	○	○	If no TAT indicated, proceeded with standard TAT per Terms & Conditions. ☐	

13. Cooler 1 Temperature 0.6 °C Cooler 2 Temperature 0.1 °C Cooler 3 Temperature 0.6 °C Cooler 4 Temperature _____ °C

14. Cooler 5 Temperature _____ °C Cooler 6 Temperature _____ °C Cooler 7 Temperature _____ °C Cooler 8 Temperature _____ °C

15. Comments: _____

I certify that I have completed sections 1-15 (dated initials). MJ 2/15/18

		Yes	No	N/A	Details	Comments
16.	Were sample containers intact upon receipt?	○	○	○		
17.	Custody seals present on sample containers?	○	○	○		
18.	Custody seals intact on sample containers?	○	○	○		
19.	Do sample container labels match the COC?	○	○	○	incomplete info ☐ illegible ☐ no label ☐ other ■	
20.	Are analyses requested indicated on the COC?	○	○	○		
21.	Were all of the samples listed on the COC received?	○	○	○	samples received but not listed on COC ☐ samples listed on COC not received ☐	
22.	Was the sample collection date/time noted?	○	○	○		
23.	Did we receive sufficient sample volume for indicated analyses?	○	○	○		
24.	Were samples received in appropriate containers?	○	○	○		
25.	Were VOA samples received without headspace (< 1/4" bubble)?	○	○	○		
26.	Were trip blanks submitted?	○	○	○	listed on COC ☐ not listed on COC ☐	

27. Comments: _____

I certify that I have completed sections 16-27 (dated initials). TR 2/16/18

This section only applies to samples where pH can be checked at Sample Receipt.

		Yes	No	N/A	Details	Comments
28.	Have containers needing chemical preservation been checked? *	○	○	○		
29.	Containers meet preservation guidelines?	○	○	○		
30.	Was pH adjusted at Sample Receipt?	○	○	○		

* Note: Certain analyses require chemical preservation but must be checked in the laboratory and not upon Sample Receipt such as Coliforms, VOCs and Oil & Grease/TPH.

I certify that I have completed sections 28-30 (dated initials). TR 2/16/18

Kennesaw GA 30144

RE: BFEL Atlanta

Dear Rhonda Quinn: Order No: 1805H49

Analytical Environmental Services, Inc. received 7 samples on 5/16/2018 5:32:00 PM for the analyses presented in following report.

No problems were encountered during the analyses. Additionally, all results for the associated Quality Control samples were within EPA and/or AES established limits. Any discrepancies associated with the analyses contained herein will be noted and submitted in the form of a project Case Narrative.
AES's accreditations are as follows:
-NELAP/State of Florida Laboratory ID E87582 for analysis of Non-Potable Water, Solid & Chemical Materials, Air & Emissions Volatile Organics, and Drinking Water Microbiology & Metals, effective 07/01/17-06/30/18.
State of Georgia, Department of Natural Resources ID #800 for analysis of Drinking Water Metals, effective 07/01/17-06/30/18 and Total Coliforms/ E. coli, effective 04/25/17-04/24/20.
-NELAP/Louisiana Agency Interest No. 100818 for or analysis of Non-Potable Water and Solid & Chemical Materials, effective 07/01/17-06/30/18.
-AIHA-LAP, LLC Laboratory ID: 100671 for Industrial Hygiene samples (Organics, Metals, PCM Asbestos, Gravimetric), Environmental Lead (Paint, Soil, Dust Wipes, Air), and Environmental Microbiology (Fungal) Direct Examination, effective until 11/01/19.
These results relate only to the items tested. This report may only be reproduced in full.

If you have any questions regarding these test results, please feel free to call.

Sincerely,

Ioana Pacurar

26.	Were trip blanks submitted?	○	○	○	listed on COC ☐ not listed on COC ☐	

27. Comments: _____

I certify that I have completed sections 16-27 (dated initials). TR 2/16/18

This section only applies to samples where pH can be checked at Sample Receipt.

		Yes	No	N/A	Details	Comments
28.	Have containers needing chemical preservation been checked? *	○	○	○		
29.	Containers meet preservation guidelines?	○	○	○		
30.	Was pH adjusted at Sample Receipt?	○	○	○		

* Note: Certain analyses require chemical preservation but must be checked in the laboratory and not upon Sample Receipt such as Coliforms, VOCs and Oil & Grease/TPH.

I certify that I have completed sections 28-30 (dated initials). TR 2/16/18

Kennesaw GA 30144

RE: BFEL Atlanta

Dear Rhonda Quinn: Order No: 1805H68

Analytical Environmental Services, Inc. received 3 samples on 5/17/2018 4:50:00 PM for the analyses presented in following report.

No problems were encountered during the analyses. Additionally, all results for the associated Quality Control samples were within EPA and/or AES established limits. Any discrepancies associated with the analyses contained herein will be noted and submitted in the form of a project Case Narrative.
AES's accreditations are as follows:
-NELAP/State of Florida Laboratory ID E87582 for analysis of Non-Potable Water, Solid & Chemical Materials, Air & Emissions Volatile Organics, and Drinking Water Microbiology & Metals, effective 07/01/17-06/30/18.
State of Georgia, Department of Natural Resources ID #800 for analysis of Drinking Water Metals, effective 07/01/17-06/30/18 and Total Coliforms/ E. coli, effective 04/25/17-04/24/20.
-NELAP/Louisiana Agency Interest No. 100818 for or analysis of Non-Potable Water and Solid & Chemical Materials, effective 07/01/17-06/30/18.
-AIHA-LAP, LLC Laboratory ID: 100671 for Industrial Hygiene samples (Organics, Metals, PCM Asbestos, Gravimetric), Environmental Lead (Paint, Soil, Dust Wipes, Air), and Environmental Microbiology (Fungal) Direct Examination, effective until 11/01/19.
These results relate only to the items tested. This report may only be reproduced in full.

If you have any questions regarding these test results, please feel free to call.

Sincerely,

Ioana Pacurar

PROJECT INFORMATION

PROJECT NAME: BFEL Atlanta

PROJECT #: 6122080154.28

SITE ADDRESS: 1525 Pine St Atlanta, GA

SEND REPORT TO: Rhonda Quinn

INVOICE TO: (IF DIFFERENT FROM ABOVE)

QUOTE #: PO#:

RECEIPT

Total # of Containers

Turnaround Time Request

- [X] Standard 5 Business Days
- [ ] 2 Business Day Rush
- [ ] Next Business Day Rush
- [ ] Same Day Rush (auth req.)
- [ ] Other

STATE PROGRAM (if any):

E-mail? Fax?

DATA PACKAGE: I ○ II ○ III ● IV ○

SPECIAL INSTRUCTIONS/COMMENTS:

Lab will Filter dissolved metals

Metals: As, Pb, Cu, Zn

SHIPMENT METHOD:

OUT / / VIA:

IN / / VIA:

CLIENT FedEx UPS MAIL COURIER

GREYHOUND OTHER

SAMPLES RECEIVED AFTER 3PM OR SATURDAY ARE CONSIDERED AS RECEIVED ON THE NEXT BUSINESS DAY. IF NO TAT IS MARKED ON COC AES WILL PROCEED AS STANDARD TAT.

SAMPLES ARE DISPOSED OF 30 DAYS AFTER COMPLETION OF REPORT UNLESS OTHER ARRANGEMENTS ARE MADE.

MATRIX CODES: A = Air GW = Groundwater SE = Sediment SO = Soil SW = Surface Water WW = Waste Water W = Water (Blanks) DW = Drinking Water (Blanks) O = Other (specify)

PRESERVATIVE CODES: H+I = Hydrochloric acid + ice I = Ice only N = Nitric acid S+I = Sulfuric acid + ice S/M+I = Sodium Bisulfate/Methanol + ice O = Other (specify) NA = None

SAMPLE/COOLER RECEIPT CHECKLIST

1. Client Name: **AMEC Foster Wheeler** AES Work Order Number: **1802E95**

2. Carrier: FedEx ☐ UPS ☐ USPS ☐ Client ■ Courier ☐ Other _____

		Yes	No	N/A	Details	Comments
3.	Shipping container/cooler received in good condition?	○	○	○	damaged ☐ leaking ☐ other ☐	
4.	Custody seals present on shipping container?	○	○	○		
5.	Custody seals intact on shipping container?	○	○	○		
6.	Temperature blanks present?	○	○	○		
7.	Cooler temperature(s) within limits of 0-6°C? [See item 13 and 14 for temperature recordings.]	○	○	○	Cooling initiated for recently collected samples / ice present ☐	
8.	Chain of Custody (COC) present?	○	○	○		
9.	Chain of Custody signed, dated, and timed when relinquished and received?	○	○	○		
10.	Sampler name and/or signature on COC?	○	○	○		
11.	Were all samples received within holding time?	○	○	○		
12.	TAT marked on the COC?	○	○	○	If no TAT indicated, proceeded with standard TAT per Terms & Conditions. ☐	

13. Cooler 1 Temperature 0.6 °C Cooler 2 Temperature 0.1 °C Cooler 3 Temperature 0.6 °C Cooler 4 Temperature _____ °C

14. Cooler 5 Temperature _____ °C Cooler 6 Temperature _____ °C Cooler 7 Temperature _____ °C Cooler 8 Temperature _____ °C

15. Comments: _____

I certify that I have completed sections 1-15 (dated initials). MJ 2/15/18

		Yes	No	N/A	Details	Comments
16.	Were sample containers intact upon receipt?	○	○	○		
17.	Custody seals present on sample containers?	○	○	○		
18.	Custody seals intact on sample containers?	○	○	○		
19.	Do sample container labels match the COC?	○	○	○	incomplete info ☐ illegible ☐ no label ☐ other ■	
20.	Are analyses requested indicated on the COC?	○	○	○		
21.	Were all of the samples listed on the COC received?	○	○	○	samples received but not listed on COC ☐ samples listed on COC not received ☐	
22.	Was the sample collection date/time noted?	○	○	○		
23.	Did we receive sufficient sample volume for indicated analyses?	○	○	○		
24.	Were samples received in appropriate containers?	○	○	○		
25.	Were VOA samples received without headspace (< 1/4" bubble)?	○	○	○		
26.	Were trip blanks submitted?	○	○	○	listed on COC ☐ not listed on COC ☐	

27. Comments: _____

I certify that I have completed sections 16-27 (dated initials). TR 2/16/18

This section only applies to samples where pH can be checked at Sample Receipt.

		Yes	No	N/A	Details	Comments
28.	Have containers needing chemical preservation been checked? *	○	○	○		
29.	Containers meet preservation guidelines?	○	○	○		
30.	Was pH adjusted at Sample Receipt?	○	○	○		

* Note: Certain analyses require chemical preservation but must be checked in the laboratory and not upon Sample Receipt such as Coliforms, VOCs and Oil & Grease/TPH.

I certify that I have completed sections 28-30 (dated initials). TR 2/16/18

Kennesaw GA 30144

RE: BFEL Atlanta

Dear Rhonda Quinn: Order No: 1805K73

Analytical Environmental Services, Inc. received 9 samples on 5/18/2018 2:20:00 PM
for the analyses presented in following report.

No problems were encountered during the analyses. Additionally, all results for the associated Quality Control samples were within EPA and/or AES established limits. Any discrepancies associated with the analyses contained herein will be noted and submitted in the form of a project Case Narrative.
AES's accreditations are as follows:
-NELAP/State of Florida Laboratory ID E87582 for analysis of Non-Potable Water, Solid & Chemical Materials, Air & Emissions Volatile Organics, and Drinking Water Microbiology & Metals, effective 07/01/17-06/30/18.
State of Georgia, Department of Natural Resources ID #800 for analysis of Drinking Water Metals, effective 07/01/17-06/30/18 and Total Coliforms/ E. coli, effective 04/25/17-04/24/20.
-NELAP/Louisiana Agency Interest No. 100818 for or analysis of Non-Potable Water and Solid & Chemical Materials, effective 07/01/17-06/30/18.
-AIHA-LAP, LLC Laboratory ID: 100671 for Industrial Hygiene samples (Organics, Metals, PCM Asbestos, Gravimetric), Environmental Lead (Paint, Soil, Dust Wipes, Air), and Environmental Microbiology (Fungal) Direct Examination, effective until 11/01/19.
These results relate only to the items tested. This report may only be reproduced in full.

If you have any questions regarding these test results, please feel free to call.

Sincerely,

Ioana Pacurar

Ioana Pacurar
Project Manager

		Yes	No	N/A	Details	Comments
3.	Shipping container/cooler received in good condition?	○	○	○	damaged ☐ leaking ☐ other ☐	
4.	Custody seals present on shipping container?	○	○	○		
5.	Custody seals intact on shipping container?	○	○	○		
6.	Temperature blanks present?	○	○	○		
7.	Cooler temperature(s) within limits of 0-6°C? [See item 13 and 14 for temperature recordings.]	○	○	○	Cooling initiated for recently collected samples / ice present ☐	
8.	Chain of Custody (COC) present?	○	○	○		
9.	Chain of Custody signed, dated, and timed when relinquished and received?	○	○	○		
10.	Sampler name and/or signature on COC?	○	○	○		
11.	Were all samples received within holding time?	○	○	○		
12.	TAT marked on the COC?	○	○	○	If no TAT indicated, proceeded with standard TAT per Terms & Conditions. ☐	

13. Cooler 1 Temperature 0.6 °C Cooler 2 Temperature 0.1 °C Cooler 3 Temperature 0.6 °C Cooler 4 Temperature _____ °C

14. Cooler 5 Temperature _____ °C Cooler 6 Temperature _____ °C Cooler 7 Temperature _____ °C Cooler 8 Temperature _____ °C

15. Comments: _____

I certify that I have completed sections 1-15 (dated initials). MJ 2/15/18

		Yes	No	N/A	Details	Comments
16.	Were sample containers intact upon receipt?	○	○	○		
17.	Custody seals present on sample containers?	○	○	○		
18.	Custody seals intact on sample containers?	○	○	○		
19.	Do sample container labels match the COC?	○	○	○	incomplete info ☐ illegible ☐ no label ☐ other ■	
20.	Are analyses requested indicated on the COC?	○	○	○		
21.	Were all of the samples listed on the COC received?	○	○	○	samples received but not listed on COC ☐ samples listed on COC not received ☐	
22.	Was the sample collection date/time noted?	○	○	○		
23.	Did we receive sufficient sample volume for indicated analyses?	○	○	○		
24.	Were samples received in appropriate containers?	○	○	○		
25.	Were VOA samples received without headspace (< 1/4" bubble)?	○	○	○		
26.	Were trip blanks submitted?	○	○	○	listed on COC ☐ not listed on COC ☐	

27. Comments: _____

I certify that I have completed sections 16-27 (dated initials). TR 2/16/18

This section only applies to samples where pH can be checked at Sample Receipt.

		Yes	No	N/A	Details	Comments
28.	Have containers needing chemical preservation been checked? *	○	○	○		
29.	Containers meet preservation guidelines?	○	○	○		
30.	Was pH adjusted at Sample Receipt?	○	○	○		

* Note: Certain analyses require chemical preservation but must be checked in the laboratory and not upon Sample Receipt such as Coliforms, VOCs and Oil & Grease/TPH.

I certify that I have completed sections 28-30 (dated initials). TR 2/16/18

AES

ANALYTICAL ENVIRONMENTAL SERVICES, INC.

June 26, 2018

Rhonda Quinn
Wood Environment & Infrastructure
1075 Big Shanty Rd NW
Kennesaw GA 30144

RE: BFEL Atlanta

Dear Rhonda Quinn: Order No: 1805882

Analytical Environmental Services, Inc. received 4 samples on 5/8/2018 5:40:00 PM
for the analyses presented in following report.

No problems were encountered during the analyses. Additionally, all results for the associated Quality Control samples were within EPA and/or AES established limits. Any discrepancies associated with the analyses contained herein will be noted and submitted in the form of a project Case Narrative.
AES's accreditations are as follows:
-NELAP/State of Florida Laboratory ID E87582 for analysis of Non-Potable Water, Solid & Chemical Materials, Air & Emissions Volatile Organics, and Drinking Water Microbiology & Metals, effective 07/01/17-06/30/18.
State of Georgia, Department of Natural Resources ID #800 for analysis of Drinking Water Metals, effective 07/01/17-06/30/18 and Total Coliforms/ E. coli, effective 04/25/17-04/24/20.
-NELAP/Louisiana Agency Interest No. 100818 for or analysis of Non-Potable Water and Solid & Chemical Materials, effective 07/01/17-06/30/18.
-AIHA-LAP, LLC Laboratory ID: 100671 for Industrial Hygiene samples (Organics, Metals, PCM Asbestos, Gravimetric), Environmental Lead (Paint, Soil, Dust Wipes, Air), and Environmental Microbiology (Fungal) Direct Examination, effective until 11/01/19.
These results relate only to the items tested. This report may only be reproduced in full.

If you have any questions regarding these test results, please feel free to call.

Sincerely,

Ioana Pacurar

Ioana Pacurar
Project Manager

Case Narrative

Metals Analysis by Method 6020B:

Due to sample matrix, samples 1805882-003B and -004B required dilution during preparation and/or analysis resulting in elevated reporting limits for Copper.

SAMPLE/COOLER RECEIPT CHECKLIST

1. Client Name: **AMEC Foster Wheeler** AES Work Order Number: **1802E95**

2. Carrier: FedEx ☐ UPS ☐ USPS ☐ Client ■ Courier ☐ Other _____

		Yes	No	N/A	Details	Comments
3.	Shipping container/cooler received in good condition?	○	○	○	damaged ☐ leaking ☐ other ☐	
4.	Custody seals present on shipping container?	○	○	○		
5.	Custody seals intact on shipping container?	○	○	○		
6.	Temperature blanks present?	○	○	○		
7.	Cooler temperature(s) within limits of 0-6°C? [See item 13 and 14 for temperature recordings.]	○	○	○	Cooling initiated for recently collected samples / ice present ☐	
8.	Chain of Custody (COC) present?	○	○	○		
9.	Chain of Custody signed, dated, and timed when relinquished and received?	○	○	○		
10.	Sampler name and/or signature on COC?	○	○	○		
11.	Were all samples received within holding time?	○	○	○		
12.	TAT marked on the COC?	○	○	○	If no TAT indicated, proceeded with standard TAT per Terms & Conditions. ☐	

13. Cooler 1 Temperature 0.6 °C Cooler 2 Temperature 0.1 °C Cooler 3 Temperature 0.6 °C Cooler 4 Temperature _____ °C

14. Cooler 5 Temperature _____ °C Cooler 6 Temperature _____ °C Cooler 7 Temperature _____ °C Cooler 8 Temperature _____ °C

15. Comments: _____

I certify that I have completed sections 1-15 (dated initials). MJ 2/15/18

		Yes	No	N/A	Details	Comments
16.	Were sample containers intact upon receipt?	○	○	○		
17.	Custody seals present on sample containers?	○	○	○		
18.	Custody seals intact on sample containers?	○	○	○		
19.	Do sample container labels match the COC?	○	○	○	incomplete info ☐ illegible ☐ no label ☐ other ■	
20.	Are analyses requested indicated on the COC?	○	○	○		
21.	Were all of the samples listed on the COC received?	○	○	○	samples received but not listed on COC ☐ samples listed on COC not received ☐	
22.	Was the sample collection date/time noted?	○	○	○		
23.	Did we receive sufficient sample volume for indicated analyses?	○	○	○		
24.	Were samples received in appropriate containers?	○	○	○		
25.	Were VOA samples received without headspace (< 1/4" bubble)?	○	○	○		
26.	Were trip blanks submitted?	○	○	○	listed on COC ☐ not listed on COC ☐	

27. Comments: _____

I certify that I have completed sections 16-27 (dated initials). TR 2/16/18

This section only applies to samples where pH can be checked at Sample Receipt.

		Yes	No	N/A	Details	Comments
28.	Have containers needing chemical preservation been checked? *	○	○	○		
29.	Containers meet preservation guidelines?	○	○	○		
30.	Was pH adjusted at Sample Receipt?	○	○	○		

* Note: Certain analyses require chemical preservation but must be checked in the laboratory and not upon Sample Receipt such as Coliforms, VOCs and Oil & Grease/TPH.

I certify that I have completed sections 28-30 (dated initials). TR 2/16/18

RE: BFEL Atlanta

Dear Rhonda Quinn: Order No: 1805954

Analytical Environmental Services, Inc. received 11 samples on 5/15/2018 5:15:00 PM for the analyses presented in following report.

No problems were encountered during the analyses. Additionally, all results for the associated Quality Control samples were within EPA and/or AES established limits. Any discrepancies associated with the analyses contained herein will be noted and submitted in the form of a project Case Narrative.
AES's accreditations are as follows:
-NELAP/State of Florida Laboratory ID E87582 for analysis of Non-Potable Water, Solid & Chemical Materials, Air & Emissions Volatile Organics, and Drinking Water Microbiology & Metals, effective 07/01/17-06/30/18.
State of Georgia, Department of Natural Resources ID #800 for analysis of Drinking Water Metals, effective 07/01/17-06/30/18 and Total Coliforms/ E. coli, effective 04/25/17-04/24/20.
-NELAP/Louisiana Agency Interest No. 100818 for or analysis of Non-Potable Water and Solid & Chemical Materials, effective 07/01/17-06/30/18.
-AIHA-LAP, LLC Laboratory ID: 100671 for Industrial Hygiene samples (Organics, Metals, PCM Asbestos, Gravimetric), Environmental Lead (Paint, Soil, Dust Wipes, Air), and Environmental Microbiology (Fungal) Direct Examination, effective until 11/01/19.
These results relate only to the items tested. This report may only be reproduced in full.

If you have any questions regarding these test results, please feel free to call.

Sincerely,

Ioana Pacurar

Ioana Pacurar

Case Narrative

Sample Receiving Non-conformance:

Sample DUP-4 was received but not listed on the Chain of Custody. At the request of Daniel Howard with Wood PLC via phone on 5/16/18, sample was analyzed for Total and Dissolved Metals as the rest of the samples received.

SUMMARY OF ANALYTES DETECTED

Analyses	Result	Qual	MDL	Reporting Limit	Units	BatchID	Dilution Factor

Qualifiers:

*	Value exceeds maximum contaminant level	E	Estimated (value above quantitation range)
BRL	Below reporting limit	S	Spike Recovery outside limits due to matrix
H	Holding times for preparation or analysis exceeded	Narr	See case narrative
N	Analyte not NELAC certified	NC	Not confirmed
B	Analyte detected in the associated method blank	<	Less than Result value
>	Greater than Result value	J	Estimated value detected below Reporting Limit

SAMPLE/COOLER RECEIPT CHECKLIST

1. Client Name: **AMEC Foster Wheeler** AES Work Order Number: **1802E95**

2. Carrier: FedEx ☐ UPS ☐ USPS ☐ Client ■ Courier ☐ Other _____

		Yes	No	N/A	Details	Comments
3.	Shipping container/cooler received in good condition?	○	○	○	damaged ☐ leaking ☐ other ☐	
4.	Custody seals present on shipping container?	○	○	○		
5.	Custody seals intact on shipping container?	○	○	○		
6.	Temperature blanks present?	○	○	○		
7.	Cooler temperature(s) within limits of 0-6°C? [See item 13 and 14 for temperature recordings.]	○	○	○	Cooling initiated for recently collected samples / ice present ☐	
8.	Chain of Custody (COC) present?	○	○	○		
9.	Chain of Custody signed, dated, and timed when relinquished and received?	○	○	○		
10.	Sampler name and/or signature on COC?	○	○	○		
11.	Were all samples received within holding time?	○	○	○		
12.	TAT marked on the COC?	○	○	○	If no TAT indicated, proceeded with standard TAT per Terms & Conditions. ☐	

13. Cooler 1 Temperature 0.6 °C Cooler 2 Temperature 0.1 °C Cooler 3 Temperature 0.6 °C Cooler 4 Temperature _____ °C

14. Cooler 5 Temperature _____ °C Cooler 6 Temperature _____ °C Cooler 7 Temperature _____ °C Cooler 8 Temperature _____ °C

15. Comments: _____

I certify that I have completed sections 1-15 (dated initials). MJ 2/15/18

		Yes	No	N/A	Details	Comments
16.	Were sample containers intact upon receipt?	○	○	○		
17.	Custody seals present on sample containers?	○	○	○		
18.	Custody seals intact on sample containers?	○	○	○		
19.	Do sample container labels match the COC?	○	○	○	incomplete info ☐ illegible ☐ no label ☐ other ■	
20.	Are analyses requested indicated on the COC?	○	○	○		
21.	Were all of the samples listed on the COC received?	○	○	○	samples received but not listed on COC ☐ samples listed on COC not received ☐	
22.	Was the sample collection date/time noted?	○	○	○		
23.	Did we receive sufficient sample volume for indicated analyses?	○	○	○		
24.	Were samples received in appropriate containers?	○	○	○		
25.	Were VOA samples received without headspace (< 1/4" bubble)?	○	○	○		
26.	Were trip blanks submitted?	○	○	○	listed on COC ☐ not listed on COC ☐	

27. Comments: _____

I certify that I have completed sections 16-27 (dated initials). TR 2/16/18

This section only applies to samples where pH can be checked at Sample Receipt.

		Yes	No	N/A	Details	Comments
28.	Have containers needing chemical preservation been checked? *	○	○	○		
29.	Containers meet preservation guidelines?	○	○	○		
30.	Was pH adjusted at Sample Receipt?	○	○	○		

* Note: Certain analyses require chemical preservation but must be checked in the laboratory and not upon Sample Receipt such as Coliforms, VOCs and Oil & Grease/TPH.

I certify that I have completed sections 28-30 (dated initials). TR 2/16/18

SOIL LABORATORY REPORTS

AES

ANALYTICAL ENVIRONMENTAL SERVICES, INC.

February 27, 2018

Rhonda Quinn
AMEC Foster Wheeler

1075 Big Shanty Rd NW
Kennesaw GA 30144

RE: BFEL - Atlanta

Dear Rhonda Quinn: Order No: 1802E95

Analytical Environmental Services, Inc. received 57 samples on 2/15/2018 4:05:00 PM for the analyses presented in following report.

No problems were encountered during the analyses. Additionally, all results for the associated Quality Control samples were within EPA and/or AES established limits. Any discrepancies associated with the analyses contained herein will be noted and submitted in the form of a project Case Narrative.
AES's accreditations are as follows:
-NELAP/State of Florida Laboratory ID E87582 for analysis of Non-Potable Water, Solid & Chemical Materials, Air & Emissions Volatile Organics, and Drinking Water Microbiology & Metals, effective 07/01/17-06/30/18.
State of Georgia, Department of Natural Resources ID #800 for analysis of Drinking Water Metals, effective 07/01/17-06/30/18 and Total Coliforms/ E. coli, effective 04/25/17-04/24/20.
-NELAP/Louisiana Agency Interest No. 100818 for or analysis of Non-Potable Water and Solid & Chemical Materials, effective 07/01/17-06/30/18.
-AIHA-LAP, LLC Laboratory ID: 100671 for Industrial Hygiene samples (Organics, Metals, PCM Asbestos, Gravimetric), Environmental Lead (Paint, Soil, Dust Wipes, Air), and Environmental Microbiology (Fungal) Direct Examination, effective until 11/01/19.
These results relate only to the items tested. This report may only be reproduced in full.

If you have any questions regarding these test results, please feel free to call.

Sincerely,

Ioana Pacurar

Case Narrative

Sample Receiving Non-conformance:

Sample information on the Chain of Custody did not match that on the sample bottle labels for samples C10 (0-1) 021418 and C9 (0-1) 021418. Sample C10 (0-1) 021418 was listed as collected at 13:38PM on the Chain of Custody, whereas on the bottle labels it was listed as collected at 14:25PM. Sample C9 (0-1) 021418 was listed as collected at 14:25PM on the Chain of Custody, whereas on the bottle labels it was listed as collected at 13:38PM. Both samples were logged in according to the information on the Chain of Custody.

Pesticide Analysis by Method 8081B:

The MBLK (Method Blank) and LCS (Laboratory Control Sample) is reported in ug/kg on the Analytical QC Summary Report, while the final results, MS (Matrix Spike) and MSD (Matrix Spike Duplicate) are all reported in mg/kg-dry for Pesticide Analysis by Method 8081B.

Metals Analysis by Method 6020B:

The MBLK (Method Blank) and LCS (Laboratory Control Sample) is reported in ug/kg on the Analytical QC Summary Report, while the final results, MS (Matrix Spike) and MSD (Matrix Spike Duplicate) are all reported in mg/kg-dry for Metals Analysis by Method 6020B.

Qualifiers:

- * Value exceeds maximum contaminant level
- BRL Below reporting limit
- H Holding times for preparation or analysis exceeded
- N Analyte not NELAC certified
- B Analyte detected in the associated method blank
- > Greater than Result value
- E Estimated (value above quantitation range)
- S Spike Recovery outside limits due to matrix
- Narr See case narrative
- NC Not confirmed
- < Less than Result value
- J Estimated value detected below Reporting Limit

SAMPLE/COOLER RECEIPT CHECKLIST

1. Client Name: **AMEC Foster Wheeler** AES Work Order Number: **1802E95**

2. Carrier: FedEx ☐ UPS ☐ USPS ☐ Client ■ Courier ☐ Other _____

		Yes	No	N/A	Details	Comments
3.	Shipping container/cooler received in good condition?	○	○	○	damaged ☐ leaking ☐ other ☐	
4.	Custody seals present on shipping container?	○	○	○		
5.	Custody seals intact on shipping container?	○	○	○		
6.	Temperature blanks present?	○	○	○		
7.	Cooler temperature(s) within limits of 0-6°C? [See item 13 and 14 for temperature recordings.]	○	○	○	Cooling initiated for recently collected samples / ice present ☐	
8.	Chain of Custody (COC) present?	○	○	○		
9.	Chain of Custody signed, dated, and timed when relinquished and received?	○	○	○		
10.	Sampler name and/or signature on COC?	○	○	○		
11.	Were all samples received within holding time?	○	○	○		
12.	TAT marked on the COC?	○	○	○	If no TAT indicated, proceeded with standard TAT per Terms & Conditions. ☐	

13. Cooler 1 Temperature 0.6 °C Cooler 2 Temperature 0.1 °C Cooler 3 Temperature 0.6 °C Cooler 4 Temperature _____ °C

14. Cooler 5 Temperature _____ °C Cooler 6 Temperature _____ °C Cooler 7 Temperature _____ °C Cooler 8 Temperature _____ °C

15. Comments: _____

I certify that I have completed sections 1-15 (dated initials). MJ 2/15/18

		Yes	No	N/A	Details	Comments
16.	Were sample containers intact upon receipt?	○	○	○		
17.	Custody seals present on sample containers?	○	○	○		
18.	Custody seals intact on sample containers?	○	○	○		
19.	Do sample container labels match the COC?	○	○	○	incomplete info ☐ illegible ☐ no label ☐ other ■	
20.	Are analyses requested indicated on the COC?	○	○	○		
21.	Were all of the samples listed on the COC received?	○	○	○	samples received but not listed on COC ☐ samples listed on COC not received ☐	
22.	Was the sample collection date/time noted?	○	○	○		
23.	Did we receive sufficient sample volume for indicated analyses?	○	○	○		
24.	Were samples received in appropriate containers?	○	○	○		
25.	Were VOA samples received without headspace (< 1/4" bubble)?	○	○	○		
26.	Were trip blanks submitted?	○	○	○	listed on COC ☐ not listed on COC ☐	

27. Comments: _____

I certify that I have completed sections 16-27 (dated initials). TR 2/16/18

This section only applies to samples where pH can be checked at Sample Receipt.

		Yes	No	N/A	Details	Comments
28.	Have containers needing chemical preservation been checked? *	○	○	○		
29.	Containers meet preservation guidelines?	○	○	○		
30.	Was pH adjusted at Sample Receipt?	○	○	○		

* Note: Certain analyses require chemical preservation but must be checked in the laboratory and not upon Sample Receipt such as Coliforms, VOCs and Oil & Grease/TPH.

I certify that I have completed sections 28-30 (dated initials). TR 2/16/18

AES

ANALYTICAL ENVIRONMENTAL SERVICES, INC.

February 21, 2018

Rhonda Quinn
AMEC Foster Wheeler

1075 Big Shanty Rd NW
Kennesaw GA 30144

RE: BFEL - Atlanta

Dear Rhonda Quinn: Order No: 1802987

Analytical Environmental Services, Inc. received 89 samples on 2/10/2018 1:10:00 PM for the analyses presented in following report.

No problems were encountered during the analyses. Additionally, all results for the associated Quality Control samples were within EPA and/or AES established limits. Any discrepancies associated with the analyses contained herein will be noted and submitted in the form of a project Case Narrative.
AES's accreditations are as follows:
-NELAP/State of Florida Laboratory ID E87582 for analysis of Non-Potable Water, Solid & Chemical Materials, Air & Emissions Volatile Organics, and Drinking Water Microbiology & Metals, effective 07/01/17-06/30/18.
State of Georgia, Department of Natural Resources ID #800 for analysis of Drinking Water Metals, effective 07/01/17-06/30/18 and Total Coliforms/ E. coli, effective 04/25/17-04/24/20.
-NELAP/Louisiana Agency Interest No. 100818 for or analysis of Non-Potable Water and Solid & Chemical Materials, effective 07/01/17-06/30/18.
-AIHA-LAP, LLC Laboratory ID: 100671 for Industrial Hygiene samples (Organics, Metals, PCM Asbestos, Gravimetric), Environmental Lead (Paint, Soil, Dust Wipes, Air), and Environmental Microbiology (Fungal) Direct Examination, effective until 11/01/19.
These results relate only to the items tested. This report may only be reproduced in full.

If you have any questions regarding these test results, please feel free to call.

Sincerely,

Ioana Pacurar

Case Narrative

Pesticide Analysis by Method 8081B:

Due to sample matrix, all samples in workorder 1802987 required dilution during analysis resulting in elevated reporting limits. Furthermore, the MBLK (Method Blank) and LCS (Laboratory Control Sample) is reported in ug/kg on the Analytical QC Summary Report, while the final results, MS (Matrix Spike) and MSD (Matrix Spike Duplicate) are all reported in mg/kg-dry for Pesticide Analysis by Method 8081B.

Metals Analysis by Method 6020B:

Due to sample matrix, samples 1802987-021A, 25A, 29A, 30A, 32A, and 77A required dilution during preparation and/or analysis resulting in elevated reporting limits. Furthermore, the MBLK (Method Blank) and LCS (Laboratory Control Sample) is reported in ug/kg on the Analytical QC Summary Report, while the final results, MS (Matrix Spike) and MSD (Matrix Spike Duplicate) are all reported in mg/kg-dry for Metals Analysis by Method 6020B.

SAMPLE/COOLER RECEIPT CHECKLIST

1. Client Name: **AMEC Foster Wheeler** AES Work Order Number: **1802E95**

2. Carrier: FedEx ☐ UPS ☐ USPS ☐ Client ■ Courier ☐ Other _____

		Yes	No	N/A	Details	Comments
3.	Shipping container/cooler received in good condition?	○	○	○	damaged ☐ leaking ☐ other ☐	
4.	Custody seals present on shipping container?	○	○	○		
5.	Custody seals intact on shipping container?	○	○	○		
6.	Temperature blanks present?	○	○	○		
7.	Cooler temperature(s) within limits of 0-6°C? [See item 13 and 14 for temperature recordings.]	○	○	○	Cooling initiated for recently collected samples / ice present ☐	
8.	Chain of Custody (COC) present?	○	○	○		
9.	Chain of Custody signed, dated, and timed when relinquished and received?	○	○	○		
10.	Sampler name and/or signature on COC?	○	○	○		
11.	Were all samples received within holding time?	○	○	○		
12.	TAT marked on the COC?	○	○	○	If no TAT indicated, proceeded with standard TAT per Terms & Conditions. ☐	

13. Cooler 1 Temperature 0.6 °C Cooler 2 Temperature 0.1 °C Cooler 3 Temperature 0.6 °C Cooler 4 Temperature _____ °C

14. Cooler 5 Temperature _____ °C Cooler 6 Temperature _____ °C Cooler 7 Temperature _____ °C Cooler 8 Temperature _____ °C

15. Comments: _____

I certify that I have completed sections 1-15 (dated initials). MJ 2/15/18

		Yes	No	N/A	Details	Comments
16.	Were sample containers intact upon receipt?	○	○	○		
17.	Custody seals present on sample containers?	○	○	○		
18.	Custody seals intact on sample containers?	○	○	○		
19.	Do sample container labels match the COC?	○	○	○	incomplete info ☐ illegible ☐ no label ☐ other ■	
20.	Are analyses requested indicated on the COC?	○	○	○		
21.	Were all of the samples listed on the COC received?	○	○	○	samples received but not listed on COC ☐ samples listed on COC not received ☐	
22.	Was the sample collection date/time noted?	○	○	○		
23.	Did we receive sufficient sample volume for indicated analyses?	○	○	○		
24.	Were samples received in appropriate containers?	○	○	○		
25.	Were VOA samples received without headspace (< 1/4" bubble)?	○	○	○		
26.	Were trip blanks submitted?	○	○	○	listed on COC ☐ not listed on COC ☐	

27. Comments: _____

I certify that I have completed sections 16-27 (dated initials). TR 2/16/18

This section only applies to samples where pH can be checked at Sample Receipt.

		Yes	No	N/A	Details	Comments
28.	Have containers needing chemical preservation been checked? *	○	○	○		
29.	Containers meet preservation guidelines?	○	○	○		
30.	Was pH adjusted at Sample Receipt?	○	○	○		

* Note: Certain analyses require chemical preservation but must be checked in the laboratory and not upon Sample Receipt such as Coliforms, VOCs and Oil & Grease/TPH.

I certify that I have completed sections 28-30 (dated initials). TR 2/16/18

APPENDIX B

EVALUATION OF ANNUAL AVERAGE FLOW NORMALIZED CONCENTRATIONS FOR THE UN-NAMED STREAM ON CSX PROPERTY

EVALUATION OF ANNUAL AVERAGE FLOW NORMALIZED CONCENTRATIONS FOR THE UNNAMED STREAM ON CSX PROPERTY

Georgia's Water Use Classifications and Water Quality Standards (391-3-6.03 (5) (e) (iv)) specify not-to-exceed in-stream concentrations applicable under "annual average or higher stream flow conditions" for a select list of chemical constituents. Two of these constituents, alpha-BHC and beta-BHC have been detected in the unnamed tributary to Woodall Creek on CSX property at concentrations exceeding allowable in-stream concentrations. Therefore, Wood (formerly Amec Foster Wheeler) determined the annual average stream flow for Woodall Creek, the receiving stream for the unnamed stream on CSX property. The DeFoors Ferry United States Geological Survey (USGS) Gage number 02336313 was used in normalizing the measured in-stream sampling results to a long-term (30-year) annual average stream flow condition.

Determination of Annual Average Flow for Woodall Creek

The 30-year average flow for Woodall Creek was determined utilizing the USGS continuous stream flow record for Woodall Creek at DeFoors Ferry, which began in 2006, in combination with the nearby Peachtree Creek USGS Gage number 02336300, which began continuous operation in 1958 and can, therefore, be used as a reference or index station for record extension and augmentation of the data available for the Woodall Creek DeFoors Ferry Gage. Based on the below information, the calculated annual average flow for Woodall Creek at DeFoors Ferry Gage is 4.84 cubic feet per second (cfs).

Woodall Creek DeFoors Ferry Gage 2011 – 2017

Sum of the Annual Average Flow – 28.21 cfs
Number of records – 7
Average Annual Flow 28.21 cfs / 7 = 4.03 cfs

Peachtree Creek Gage – 2011 - 2017

Sum of Annual Average Flow – 752.2 cfs
Number of Records – 7
Average Annual Flow 752.2 cfs / 7 = 107.46 cfs

Peachtree Creek Gage 1988 – 2017

Sum of Annual Average Flow – 3,873.5 cfs
Number of Records – 30
Average Annual Flow 3,873.5 cfs / 30 = 129.12 cfs

Information obtained from the USGS Surface Water Annual Statistics is included as **Attachment 1**. The long-term annual average flow for the Woodall Creek Gage adjusted to the 30 year base period for Peachtree Creek Gage is calculated as:

(4.03 / 107.46) * 129.12 = 4.84 cfs

Determination of Surface Water Concentration Normalization Factor

The average stream flow in Woodall Creek, as measured at the DeFoors Ferry Gage at the time of sampling on May 18, 2018 (9:55 am to 12:01 pm) was 1.36 cfs (see **Attachment 1**).

Normalized surface water analytical results for the unnamed stream surface water samples collected on May 18, 2018 were derived by multiplying the actual analytical sample results by the ratio of the concurrent instantaneous stream flow recorded at the Woodall Creek DeFoors Ferry USGS Gage for the specific time of surface water sampling (1.36 cfs) divided by the long-term annual average stream-flow determined for the Woodall Creek Gage based on the above methodology (4.84 cfs). The flow normalized analytical results are presented on **Table B-1** along with measured surface water concentrations. Both the raw results and the flow normalized results from May 18, 2018 exceed allowable in-stream concentrations for alpha and beta-BHC at the eight sample locations.

Notes:

mg/L = milligrams per liter

ug/L = micrograms per liter

JH - Estimated value detected below Reporting Limit (RL), possibly biased high

JQ - Estimated, detected between the Method Detection Limit (MDL) and RL

(1) - Results normalized by multiplying raw result by ratio of instantaneous flow in Woodall Creek at the time of sampling (1.36 cfs) to long-term annual average flow in Woodall Creek (4.84 cfs): 1.36/ 4.84= 0.28 cfs

Bolded results indicate concentrations exceed ecological exposure value as a default and where no value is established compared to human health exposure.

APPENDIX C

RISK REDUCTION STANDARDS PROTECTIVE OF HUMAN HEALTH

Appendix C Surface Soil Investigation and Averaging and Human Health

Table of Contents

List of Tables

List of Figures

List of Attachments

C.1 Risk Reduction Standards Protective of Human Health

RRS were previously calculated for soil and groundwater and approved by EPD (February 2015 Status Report). Site groundwater continues to exceed RRS and the intention is to complete an environmental covenant to control the use of groundwater at the site. There is no direct exposure to groundwater at the site. One potential exposure point is a surface stream, which is downgradient and off-property. A permeable reactive barrier is planned to address the groundwater to surface water migration pathway. Because the groundwater pathway is incomplete and will remain incomplete, soil risk reduction standards (RRS) for Type 2 and 4 are based on direct contact only. Soil Type 1 and Type 3 RRS are calculated per the HSRA Rule.

As stated in the February 2018 VRP Status Report, BFEL has completed an investigation to update surficial soil concentrations for a potential Type 5 RRS closure. The 2018 site investigation was focused on the collection of surface soil using a gridded approach in order to get complete coverage of the Estech property. Updating the surface soil delineation also allows the use of current approved field and analytical techniques and for data validation. Data previously used at the Site was collected starting in the 1980s and the methods used to collect and analyze these older data were not always documented, introducing significant uncertainty. In 2018, surface soil samples were collected at the rate of eight samples per acre to support the calculation of area averaging representative of human and ecological exposure domains (EDs).

For human health, the Estech property was divided into four EDs of approximately 4.5 acres each in size with each including 36 surface soil sampling points (Figure HH1). The shapes of the EDs are based on the distribution of arsenic, one of the prime COPCs, and are grouped to include potential hotspots. The probable future use of the property is mixed use with commercial development and also limited potential for multi-family residential. The potential for Site development is still restricted by limited Site access, i.e., no road access through surrounding properties. A 4.5 acre exposure domain is considered protective of potential future receptors that include industrial/commercial and construction workers (per the approved Site RRS).

Previous investigations of the Site conducted under the HSRA Rules have indicated that some site soils exceed Types 3 and 4 Risk Reduction Standard (RRS) and may require corrective action. Per the VRP statute, the use of exposure domains and area averaging techniques are being used to evaluate the constituents and media that may result in exposure to receptors through a specified exposure pathway. For site workers, this includes incidental ingestion, dermal contact, and inhalation of fugitive dust. Leaching from the soil column to groundwater will be addressed through an environmental covenant restricting the use of groundwater at the site. For the 2018 surface soil investigation, the number of analytes have been reduced to constituents of potential concern and were limited to 4 inorganic compounds (arsenic, lead, copper, and zinc) and 13 pesticides. Previous soil analyses indicated minimal levels of volatile and semivolatile constituents and other inorganic constituents that were in compliance with soil RRS and were not frequently detected.

The U.S. Environmental Protection Agency provides Pro-UCL software to calculate Upper Confidence Limits (UCLs) and Exposure Point Concentrations (EPCs). This software was used to calculate UCLs for 16 constituents. The statistical inputs and outputs are provided in Attachment A. A seventeenth constituent, Methoxychlor, was not detected in any of the soil samples across the Estech property. In addition, alpha-BHC, gamma-BHC, and toxaphene were not detected in Area 4 and delta-BHC was not detected in Area 2. If the number of detections within an area were less than four, the maximum detected concentration was

used as the EPC for that constituent. The representative EPCs for each of the four areas and the 16 constituents detected are listed in Table HH-1.

As a next step, the EPCs for each constituent within each of the 4 EDs, called Areas 1 through Area 4 in this document, were compared to the RRS, which includes both the commercial/industrial worker and the construction worker. Table HH-2 shows the constituents that exceed the highest of the Type 1 through 4 surface soil RRS. These include the following:

- Area 1 – arsenic and lead
- Area 2 – no constituents
- Area 3 – lead and 4,4'-DDT
- Area 4 – arsenic and lead

Based on this comparison, Areas 1, 3, and 4 would require corrective action to be protective of construction workers and additional action to be protective of commercial or industrial workers. Arsenic, lead, and 4,4'-DDT are the three primary human health constituents of concern (COCs).

An additional comparison was completed by comparing the highest of the Type 1 through Type 3 surface soil RRS, which does not include the construction worker, to assess if additional constituents would require remediation in order to be protective of industrial or commercial workers. Based on this comparison, additional human health COCs were identified:

- Area 1 – arsenic, lead, beta-BHC, and 4,4'-DDT
- Area 2 – arsenic, lead, beta-BHC, dieldrin, and heptachlor
- Area 3 – arsenic, lead, beta-BHC, 4,4'-DDT, dieldrin, and heptachlor
- Area 4 – arsenic, lead, 4,4'-DDT, and dieldrin

Based on this comparison, beta-BHC, dieldrin, and heptachlor are secondary human health COCs. However, in some instances, the distribution of these constituents is very limited with only one or two sample points within the ED causing the EPC to exceed the Type 3 RRS.

The third step was to identify the sampling points that were associated with higher concentrations of COCs and were contributing the majority of the risk as assessed by comparison of the EPCs to the RRS. This step was accomplished by sorting the data sets from low to high concentrations. The high concentrations were systematically removed and UCLs (or means for lead) were recalculated repeatedly until the EPC was less than the targeted RRS. This process allows for the identification of the most contaminated sample locations, which can be targeted in a Type 5 soil corrective action.

The following table lists the COCs, Goals for Type 4 (construction) and Type 3 (commercial or industrial), and number of samples associated with the calculated EPC exceedance of RRS for each Area:

Area	COC	EPC Goal for Type 4, mg/kg	Number of Associated Samples	EPC Goal for Type 3, mg/kg	Number of Associated Samples
Area 1	Arsenic	190	5 – F3, D5, D4, E8, E11	38	26 – majority of the area
Area 1	Lead	600	20 samples	400	26 – majority of the area
Area 1	Beta-BHC			5.1	1 - F4
Area 1	4,4'-DDT			27	1 - F4
Area 2	Arsenic			38	4 - E13, D18, F13, D12

Area	COC	EPC Goal for Type 4, mg/kg	Number of Associated Samples	EPC Goal for Type 3, mg/kg	Number of Associated Samples
Area 2	Lead			400	2 - D18, E13
Area 2	Beta-BHC			5.1	1 - D17
Area 2	Dieldrin			0.66	3 – D17, D18, D19
Area 2	Heptachlor			2.0	3 – D17, D18, D19
Area 3	Arsenic			38	11 - E25, F26, F25, D22, E21, D20, C21, C20, C22, C23, E23
Area 3	Lead	600	3 - E25, F26, F25	400	8 - E25, F26, F25, D22, E21, D20, C21, C20
Area 3	4,4'-DDT	310	2 - C20, E25	27	2-C20, E25
Area 3	Beta-BHC			5.1	1-C20
Area 3	Dieldrin			0.66	2-C20, E25
Area 3	Heptachlor			2.0	1-C20
Area 4	Arsenic	190	1 - D26	38	5 – D26, C27, D28, E27, C26
Area 4	Lead	600	3 – E27, D28, D26	400	6 - E27, D28, D26, D27, C27, F28
Area 4	4,4'-DDT			27	1- E33
Area 4	Dieldrin			0.66	2 – F29, E33

CONCLUSIONS

Figure HH2 was prepared that outlines the samples in each Area that should be included in designing the corrective action. In summary, the corrective action will be designed to limit exposure in each Area:

- Area 1 - 26 locations
- Area 2 – 6 locations
- Area 3 – 14 locations
- Area 4 – 11 locations

The UCL calculations were repeated after removing concentrations for the six COCs paired with the target sample locations presented in Figure HH2. These calculations document that the post-corrective action EPCs will be less than the RRS. The post-corrective action UCLs for each Area and for the whole site are presented in Attachment B and C, respectively. Table HH-3 summarizes these data. After corrective action, the surface soil UCL concentrations for 4,4'-DDT, arsenic, beta-BHC, and heptachlor will comply with Type 3 RRS. Surface soil mean concentrations for lead will comply with Type 3 RRS. For Area 2 and 3 EPCs, dieldrin will comply with Type 3 RRS. One sample in Area 1 at a concentration of 2.1 mg/kg and one sample in Area 4 at a concentration of 1.1 mg/kg would exceed the Type 3 RRS for dieldrin of 0.66 mg/kg. However, the site as a whole would have a UCL EPC of 0.22 mg/kg and would comply with Type 3 RRS. Regardless, dieldrin in all areas will comply with a Type 4 RRS of 27 mg/kg.

Notes:

[1] Calculated using ProUCL. Greater than 3 detections required for UCL selection. Lognormal H-UCL not used per notes in the output. No GROS UCLs selected if NDs > 50%. Mean concentrations for lead per USEPA lead exposure modeling.

Highlighted cells indicate that maximum detect concentration was used because there was a limited number of detections (i.e., <4), increasing uncertainty in the UCL.

ND Not Detected

Gamma ROS Statistics using Imputed Non-Detects

GROS may not be used when data set has > 50% NDs with many tied observations at multiple DLs

GROS may not be used when kstar of detects is small such as <1.0, especially when the sample size is small (e.g., <15-20)

For such situations, GROS method may yield incorrect values of UCLs and BTVs

This is especially true when the sample size is small.

For gamma distributed detected data, BTVs and UCLs may be computed using gamma distribution on KM estimates

Minimum	0.01	Mean	0.485

Detected Data appear Approximate Gamma Distributed at 5% Significance Level

Suggested UCL to Use

95% KM Adjusted Gamma UCL	1.239	95% GROS Adjusted Gamma UCL	1.158

When a data set follows an approximate (e.g., normal) distribution passing one of the GOF test
When applicable, it is suggested to use a UCL based upon a distribution (e.g., gamma) passing both GOF tests in ProUCL

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

Gamma ROS Statistics using Imputed Non-Detects

GROS may not be used when data set has > 50% NDs with many tied observations at multiple DLs

GROS may not be used when kstar of detects is small such as <1.0, especially when the sample size is small (e.g., <15-20)

For such situations, GROS method may yield incorrect values of UCLs and BTVs

This is especially true when the sample size is small.

For gamma distributed detected data, BTVs and UCLs may be computed using gamma distribution on KM estimates

Suggested UCL to Use

ma Adjusted KM-UCL (use when k<=1 and 15 < n < 50 but k<=1)	91.9

When a data set follows an approximate (e.g., normal) distribution passing one of the GOF test
When applicable, it is suggested to use a UCL based upon a distribution (e.g., gamma) passing both GOF tests in ProUCL

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

Suggested UCL to Use

95% H-UCL 277.5

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

ProUCL computes and outputs H-statistic based UCLs for historical reasons only.
H-statistic often results in unstable (both high and low) values of UCL95 as shown in examples in the Technical Guide.
It is therefore recommended to avoid the use of H-statistic based 95% UCLs.
Use of nonparametric methods are preferred to compute UCL95 for skewed data sets which do not follow a gamma distribution.

Gamma ROS Statistics using Imputed Non-Detects

GROS may not be used when data set has > 50% NDs with many tied observations at multiple DLs
GROS may not be used when kstar of detects is small such as <1.0, especially when the sample size is small (e.g., <15-20)
For such situations, GROS method may yield incorrect values of UCLs and BTVs
This is especially true when the sample size is small.
For gamma distributed detected data, BTVs and UCLs may be computed using gamma distribution on KM estimates

95% t UCL (Assumes normality)	0.691	95% H-Stat UCL	0.59

DL/2 is not a recommended method, provided for comparisons and historical reasons

Nonparametric Distribution Free UCL Statistics

Detected Data appear Lognormal Distributed at 5% Significance Level

Suggested UCL to Use

KM H-UCL 0.574

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

Gamma ROS Statistics using Imputed Non-Detects

GROS may not be used when data set has > 50% NDs with many tied observations at multiple DLs
GROS may not be used when kstar of detects is small such as <1.0, especially when the sample size is small (e.g., <15-20)
For such situations, GROS method may yield incorrect values of UCLs and BTVs
This is especially true when the sample size is small.
For gamma distributed detected data, BTVs and UCLs may be computed using gamma distribution on KM estimates
