1.0 INTRODUCTION AND BACKGROUND

1.1 INTRODUCTION

PEACHTREE ENVIRONMENTAL (Peachtree) is submitting this Voluntary Investigation and Remediation Plan (VIRP) and Application on behalf of the applicant, **Edspen, LLC** (and/or “Applicant”), for the Silverstein’s Cleaners Property located at 3818 Washington Road, in Martinez, Columbia County, Georgia (the “VIRP Property”); HIS #10875 (the “Site”). The purpose of this VIRP and Application is to provide supporting documentation in completing the State’s March 30, 2010 Voluntary Remediation Program (VRP) Application Form and Checklist. Part of the VRP Application Form and Checklist is to detail a Conceptual Site Model for the property including a preliminary VIRP, a table of delineation standards, supporting text, tables, charts and figures that illustrate the Site’s surface and subsurface setting, sources of contamination, contaminant migration pathways, and potential human and environmental receptors and complete exposure pathways.

1.2 VIRP PROPERTY DESCRIPTION

The VIRP Property consists of a single parcel of land totaling 0.83 acres, which is more fully described as follows:

3818 Washington Road - Parcel ID: 078D046B (0.83 Acres).

The VIRP Property has a latitude coordinate of 33° 30' 46" North and a longitude coordinate of 82° 5' 13" West. A VIRP Property Location / USGS Topographic Map is included as **Figure 1**.

According to State records, the Property was originally developed as a laundromat in 1969 and has been improved with one single-story, block on slab building with approximate size of 2,400 square feet. The total acreage of the Property itself is approximately 0.83 acres. The VIRP Property layout is illustrated in **Figure 2**. The current owner, Edspen, LLC, purchased the Property in 1998 and it is currently operated as a full service, drop-off/pick-up, and dry cleaning facility by the name of Silverstein’s Cleaners. Silverstein’s Cleaners uses chlorinated dry cleaning solvents as part of its dry cleaning activities. The Silverstein Cleaners Property is bounded to the north by Washington Road; to the south by the West Town Shopping Center; to the east by the Autoplex of Augusta used car lot/dealership; and to the west by the First Bank of Columbia County.

2.0 VIRP PROPERTY INVESTIGATION AND CORRECTIVE ACTION HISTORY

Detailed below are annotated descriptions of the findings of past investigations and regulatory correspondence, which were developed as part of the previous environmental assessments conducted for the VIRP Property.

2.1 PROPERTY REGULATORY HISTORY

In 2007, the Silverstein's Cleaners facility was placed on the State of Georgia Hazardous Site Inventory (HSI) as HSI No. 10875, based on the identification of regulated substances in soil and groundwater at a neighboring property. In a **Compliance Status Report Call-In Letter** dated January 16, 2009 from the Georgia Department of Natural Resources, Environmental Protection Division (EPD), Hazardous Site Response Program, the EPD requested that a **Compliance Status Report (CSR)** be submitted documenting the environmental status of the property and compliance status of regulated substances relative to applicable Risk Reduction Standards (RRS) (aka cleanup values). The EPD letter requested that the **CSR** be submitted by July 21, 2009.

On January 14, 2010, in an e-mail message from Mr. David Brownlee of the EPD to Mr. Carl H. Anderson, Jr., of Hawkins & Parnell, EPD requested that a letter or e-mail be prepared and sent to the Georgia EPD by February 5, 2010 indicating Silverstein's intent to submit either a **(CSR)** or a **Corrective Action Plan (CAP)** for the VIRP Property.

In a letter dated February 5, 2010 from Ms. Kimberly D. Stevens of Hawkins & Parnell to Mr. Brownlee, it was indicated that a consultant (Peachtree Environmental, Inc., (Peachtree)) had been retained to assist in the investigation process with the goal of preparing a CSR for the facility. Further, the letter indicated that it would require approximately six (6) weeks for the completion of the initial phases of the **CSR** investigation activities. In a February 12, 2010 response letter from Mr. David Brownlee to Mr. Louis Silverstein, it was stated that the **CSR** must be received by April 29, 2010, or additional enforcement action may be pursued.

2.2 INITIAL PROPERTY INVESTIGATION ACTIVITIES – FEBRUARY 2010

Field investigation of the VIRP Property was initiated by Peachtree in February 2010. The initial field investigation activities were intended to determine if potential source areas were present on the property. To accomplish this objective, Peachtree completed the following:

- ▶ The installation of twenty (20) soil test borings, three (3) of which were converted to temporary 1-inch diameter groundwater monitoring wells, and four (4) of which were converted to permanent, 2-inch diameter groundwater monitoring wells; and
- ▶ Collection and analysis of forty-two (42) soil samples and seven (7) groundwater samples for Volatile Organic Compound (VOC) analysis.

Based on the elevated concentrations of various chlorinated and non-chlorinated VOCs detected in soil and groundwater, a request was made of the Georgia EPD for a meeting to present the preliminary data findings, and present a revised schedule for additional activities moving forward such that the referenced “additional enforcement actions” could be avoided.

A meeting was held on March 17, 2010 between EPD representatives and representatives of Silverstein’s Cleaners to present the initial soil and groundwater investigation data findings, together with a proposed schedule for additional activities. The EPD requested that a letter be prepared with the following components:

- Summary of the results of the February 2010 initial round of soil and groundwater testing activities
- Outline for future activities at the Property
- Proposed schedule for the completion and submittal of a CAP in lieu of a CSR.

The EPD allowed a six (6) month time frame for completion of a CAP. The letter, data summary, and schedule to address the criteria above were submitted to EPD on May 3, 2010.

2.2 PROPERTY INVESTIGATION ACTIVITIES – MAY 2010

A subsequent round of soil and groundwater testing was performed on the VIRP Property in May 2010. As indicated in the May 3, 2010 letter, the supplemental investigation activities were designed to complete the horizontal and vertical delineation of soil source areas on the VIRP Property, as well as to complete the evaluation of the horizontal extent on-property of groundwater impacted by dissolved-phase VOCs. To accomplish this objective, Peachtree completed the following during the supplemental investigation activities:

- ▶ The installation of seventeen (17) soil test borings and five (5) permanent, 2-inch diameter groundwater monitoring wells; and
- ▶ Collection and analysis of thirty-two (32) soil samples and five (5) groundwater samples for VOC analysis.

Information obtained from this supplemental phase of investigation, together with information obtained during the initial phase of investigation was utilized to develop a Corrective Action Plan (CAP) which was submitted in August 2010. Georgia EPD conditional approval of the CAP was granted on May 17, 2012 with response to EPD comments due on August 31, 2012.

2.3 PRELIMINARY REMEDIATION PLAN

2.3.1 Soil Remediation Plan

The August 2010 CAP provided a description of the evaluation process of various remedial technologies for potential selection to restore impacted areas of the VIRP

Property to applicable RRS; a description of those technologies selected for further evaluation; and a description of the proposed remedial alternative pilot testing and evaluation program, as applicable. A combination of soil excavation and in-situ soil vapor extraction were identified as applicable corrective technologies and subsequently approved by Georgia EPD on May 17, 2012. In accordance with the approved CAP, Peachtree intends to perform limited excavation of the source areas. Currently, the source area at the on-site dumpster location is anticipated to be excavated and disposed of off-site. Areas of impact adjacent to the southwest corner of the building will be evaluated for limited excavation due to the proximity to the building. As structural integrity may be compromised in this area during excavation activities, Peachtree has reconsidered utilizing SVE as a form of soil corrective action in these areas.

2.3.2 Groundwater Remediation Plan

The preliminary remediation plan for groundwater will involve an initial enhanced fluid recovery event at the monitoring well MW-9 where PCE has been detected at the highest concentration. In addition, Peachtree proposes performance of a groundwater monitoring event to evaluate current concentrations as soon as the Site is accepted into the VRP (rather than 6 months as dictated by the VRP milestone schedule) as groundwater quality at the Site has not been evaluated since August 2012 and there has been possible significant movement of the groundwater table due to rainfall activity over the past six (6) to nine (9) months. Following completion of the aforementioned activities and evaluation of current groundwater conditions, Peachtree would design and implement a groundwater corrective action plan relying primarily upon in-situ chemical oxidation (ISCO) for areas with highest concentrations of contaminants. Further information gained through the VRP delineation process may suggest an alternative technology such as reductive de-chlorination in selected areas for technical or cost reasons.

2.3.3 Vapor Intrusion Evaluation Plan

The vapor intrusion evaluation plan for groundwater beneath the building on the VRP Property will include the utilization of an EPA-recognized or otherwise peer-reviewed vapor-intrusion model, such as Johnson & Ettinger model or the Vapor Intrusion Screening Level (VISL) model, to assess whether latent soil and groundwater conditions present a pathway to vapor exposure. On-site soil and groundwater concentrations will be utilized for on-site evaluation.

Vapor-intrusion pathway modeling will also potentially be conducted for off-site buildings if warranted after additional off-site data is collected, in accordance with the 2-year VRP milestone schedule for off-site horizontal delineation. Peachtree will utilize an EPA-recognized or otherwise peer-reviewed vapor-intrusion model, such as Johnson & Ettinger model or the Vapor Intrusion Screening Level (VISL) model, for evaluating potential vapor-intrusion pathways within off-site buildings that could be affected.

3.0 PRELIMINARY CONCEPTUAL SITE MODEL

A Preliminary 3-D conceptual site model (CSM) has been developed for the VIRP Property. The CSM will be utilized to:

- Integrate technical data from various sources;
- Support the selection of sample locations;
- Identify data gaps/needs; and
- Evaluate risks to human health and the environment.

The following provides a description of the various factors (surface / sub-surface setting, regulated substances, known or suspected source areas, contaminant migration pathways, and soil and groundwater impacts) considered during the development of the CSM.

3.1 SURFACE AND SUB-SURFACE SETTING

3.1.1 Surface Setting

The surface setting at the VRP Property consists of a single story building constructed of brick, steel beams, and concrete-block situated on a concrete slab. The parking lot and driveway associated with the VIRP property is constructed of asphalt. Grass/landscaped areas are present to the east and west of the parking lot and driveway. The property is designated for commercial-retail use.

3.1.2 Subsurface Setting

The VIRP Property lies within the Washington Slope District which is the southern-most portion of the Piedmont Physiographic Province of Georgia. This district is characterized by broad rolling upland or plateau underlain by a variety of metamorphosed plutonic, volcanic, and sedimentary rocks including gneiss, schist, amphibolite, and diabase and by un-metamorphosed granite plutons and diabase dikes. Regional stresses have warped the rocks into numerous folds and the sequence has been extensively faulted. The VIRP Property is situated in an area where the rock unit consists of undifferentiated granitic gneiss that may retain distinctive layering when weathered.

Rock units in this physiographic province generally range in thickness from less than 1,000 feet to possibly more than 10,000 feet. Bedrock in the area is generally covered by unconsolidated material composed of saprolite, alluvium, and soil, collectively referred to as regolith. This material ranges in depth from 0 to approximately 200 feet. These soils are relatively porous and, depending on the thickness and topographic setting, have the potential to absorb and store large quantities of precipitation.

According to the Georgia Geological Survey Bulletin 96 titled Geology of the Greater Atlanta Region, the base rock in this area of the Southern Piedmont is a lithologic unit

described as a fine to coarse-grained blastoporphyratic to nonporphyritic gneiss composed of muscovite, biotite, oligoclase, quartz and microcline.

The Fall Line is located just south of the VIRP Property and is the exposed contact between the Cretaceous sedimentary strata of the Coastal Plain Physiographic Province and the older crystalline rocks of the Piedmont Province. The Fall Line trends from northeast-to-southwest south of the VIRP Property area. The crystalline rocks of the Piedmont form a “basement” complex underneath the Coastal Plain sedimentary rocks in the area, and are an extension of the crystalline rocks exposed at the surface north and west of the Fall Line. The “basement” rocks are present at a depth of approximately 85 to 110 feet below land surface (BLS) in the area. Strata composed of sand, clay, and silt overlay this basement complex and are exposed at the surface in the area.

Groundwater in the Piedmont province occupies joints, fractures, and other secondary openings in the bedrock and pore spaces in the overlying regolith. Unweathered and unfractured bedrock in the area has very low porosity. Thus, the quantity of water that a rock unit can store and transmit to wells is determined by the number, capacity, and interconnection of the secondary openings. Shallow unconfined water table conditions are present throughout the Piedmont physiographic province. Recharge to the groundwater occurs from precipitation. Soils within the area consist predominantly of sandy and clayey silts and silty sands that allow rapid percolation of the rainfall. Typically, the infiltration of precipitation through the soil to the groundwater occurs within a few days after rainfall.

The shallow surficial aquifer beneath the VIRP Property generally consists of the following: sandy silt and silty fine sand to a depth of 10 to 15 feet, underlain by finer-grained sediments consisting of clayey, slightly sandy silt, organic silt, and silty clay to depths ranging between 15 to 30 feet BLS. Groundwater occurs under water table (unconfined) conditions within the shallow aquifer with depths to groundwater as measured from the surveyed top of well casings ranging between 15.20 to 25.15 feet BLS. Groundwater elevations collected May 2010 and July 2012 are summarized on **Table 1**. A Potentiometric Surface Map utilizing groundwater elevation data collected on July 31, 2012 is included as **Figure 3**.

3.2 REGULATED SUBSTANCES

As previously discussed, Peachtree has conducted soil and groundwater investigations at the VIRP Property in February and May 2010. A recent groundwater monitoring event was conducted in July 2012. Based on the soil and groundwater data, current COCs include the following:

- ▶ 1,1,1-Trichloroethane (1,1,1,-TCA - CAS No. 71556); - Soil/Groundwater;
- ▶ 1,1-Dichloroethene (1,1-DCE - CAS No. 75354); - Soil/Groundwater;
- ▶ 1,2-Dichloropropane (1,2-DCP - CAS No. 78875); - Groundwater;
- ▶ Acetone (CAS No. 67641); - Soil;

- ▶ Chloroform (CAS No. 67663); - Groundwater;
- ▶ cis-1,2-Dichloroethene (cis-1,2-DCE - CAS No. 156592); - Soil/Groundwater;
- ▶ Ethylbenzene (CAS No. 100414); - Soil;
- ▶ Isopropylbenzene (CAS No. 98828); - Soil;
- ▶ Tetrachloroethene (PCE - CAS No.127184); - Soil/Groundwater;
- ▶ Toluene (CAS No. 108883); - Soil;
- ▶ trans-1,2-Dichloroethene (trans-1,2-DCE - CAS No. 156605); - Groundwater;
- ▶ Trichloroethene (TCE - CAS No. 79016); - Soil/Groundwater; and
- ▶ Xylenes (CAS No. 1330207); - Soil

3.3 KNOWN OR SUSPECTED SOURCE AREAS

Information obtained from the investigation indicated that the source of the release is the dry cleaning operations that have occupied the Silverstein property since around 1969. Considering past and present dry cleaning activities, detected impacts can be attributed to the use of chlorinated solvents in the dry cleaning process. The first potential soil source area is the area under the slab of the dry cleaner. Soil and groundwater sampling and analysis from beneath the concrete building slab have confirmed that releases of dry cleaning solvents have occurred. The second area of impacted soil appears to be outside the southwest portion of the current building, where dry cleaning fluids may have been stored and/or filters associated with dry cleaning operations placed after use. Soil investigations also revealed a third possible soil source area in/around the current waste dumpster. This area is located on the south-central portion of the VIRP Property. The known or suspected source areas are depicted on the property layout map (Figure 2).

3.4 CONTAMINANT MIGRATION PATHWAYS

A preliminary evaluation of the contaminant migration pathway has been completed and includes the following:

- Vertical migration of PCE from beneath the dry cleaning equipment, through the concrete floor to the soils below;
- Horizontal and vertical migration of PCE the southwest portion of the current building, along and through the asphalt driveway/parking to the soils below;
- Horizontal and vertical migration of PCE from the waste dumpster, along and through the concrete slab to the soils below;
- Horizontal and vertical migration through soils from each of these areas to the shallow water table;
- Potential vapor intrusion pathway from soil and groundwater;
- Horizontal and vertical migration within and through the shallow water table, based on hydraulic properties and flow direction.

A final evaluation of the contaminant migration pathways will be performed during the implementation of the Preliminary Remediation Plan and included in the VRP CSR.

3.5 SOIL AND GROUNDWATER IMPACTS

3.5.1 Soil Impacts

Based on the analytical results of Peachtree's February and May 2010 soil investigation activities, ten (10) constituents of concern (COCs) were detected above laboratory reporting limits in soil. The soil sample locations are illustrated on **Figure 4**. The February and May 2010 soil sampling analytical testing results are summarized in **Table 1**. The extent of PCE detected in soil at depth intervals of 0-2 feet (i.e., surficial soils) and >2 feet are included as **Figure 5A** and **Figure 5B**, respectively. Other VOCs detected in soils are not graphically displayed on figures as PCE appears to be the driving COC at the Property based on analytical testing data. A complete copy of the analytical testing results is provided in **Appendix B**.

3.5.2 Groundwater Impacts

Based on the analytical results of Peachtree's February 2010, May 2010, and recent July 2012 groundwater investigation activities, eight (8) constituents of concern (COCs) were detected above laboratory reporting limits in groundwater. Twelve (12) groundwater samples were collected in 2010, including three (3) temporary monitoring wells which are no longer present at the VIRP Property. Seven (7) groundwater samples were collected in 2012 as two (2) monitoring wells (MW-3 and MW-12) were observed to be dry. The groundwater sample locations are depicted on **Figure 6**. The 2010 and 2012 groundwater sampling analytical testing results are summarized in **Table 2**. The extent of PCE detected groundwater during the February / May 2010 and July 2012 investigations is depicted on **Figure 7** and **Figure 8**, respectively. A complete copy of the analytical testing results is provided in **Appendix B**.

3.5.3 Point of Demonstration Monitoring for Groundwater

The Georgia Voluntary Remediation Program Act specifies in Section 12-8-108(4) that concentration of regulated constituents detected on a VIRP Property shall be measured and evaluated at a "point of demonstration" (POD) well. The purpose of the POD well is to demonstrate that groundwater concentration are protective of any established downgradient point of exposure. Peachtree intends on utilizing a hypothetical point of drinking water exposure located at a distance 1,000 feet downgradient from the delineated site contamination of which the horizontal extent is to be determined.

A Preliminary 3-D conceptual site model (CSM) incorporating the site specific surface / sub-surface setting, contaminant migration pathways, and soil and groundwater impacts is included as **Figure 9**.

4.0 VRP COMPLIANCE STATUS REPORT PREPARATION

The following activities are planned to be completed at the VIRP Property with the results to be provided in a final VRP CSR.

4.1 CONTAMINANT MIGRATION PATHWAYS

A review of potential human health and ecological receptors will be evaluated to determine if any complete or potentially complete pathways are present at the VIRP Property. A description of these pathways will be presented in the VRP CSR, if applicable.

4.2 EXPOSURE PATHWAY MODELING

Based on the results of the receptor survey, exposure pathway monitoring may be conducted to determine whether potentially completed pathways may cause exposure at a receptor. The results of any modeling, along with supporting backup, will be incorporated into the VRP, if applicable.

4.3 RECALCULATION OF RISK BASED CLEANUP STANDARDS

The development of revised Risk Reduction Standards (RRS) will be completed based on the results of the receptor survey and the exposure pathway modeling. These revised RRS will be presented in the VRP CSR, if applicable.

4.4 CONFIRMATION SOIL ANALYSES

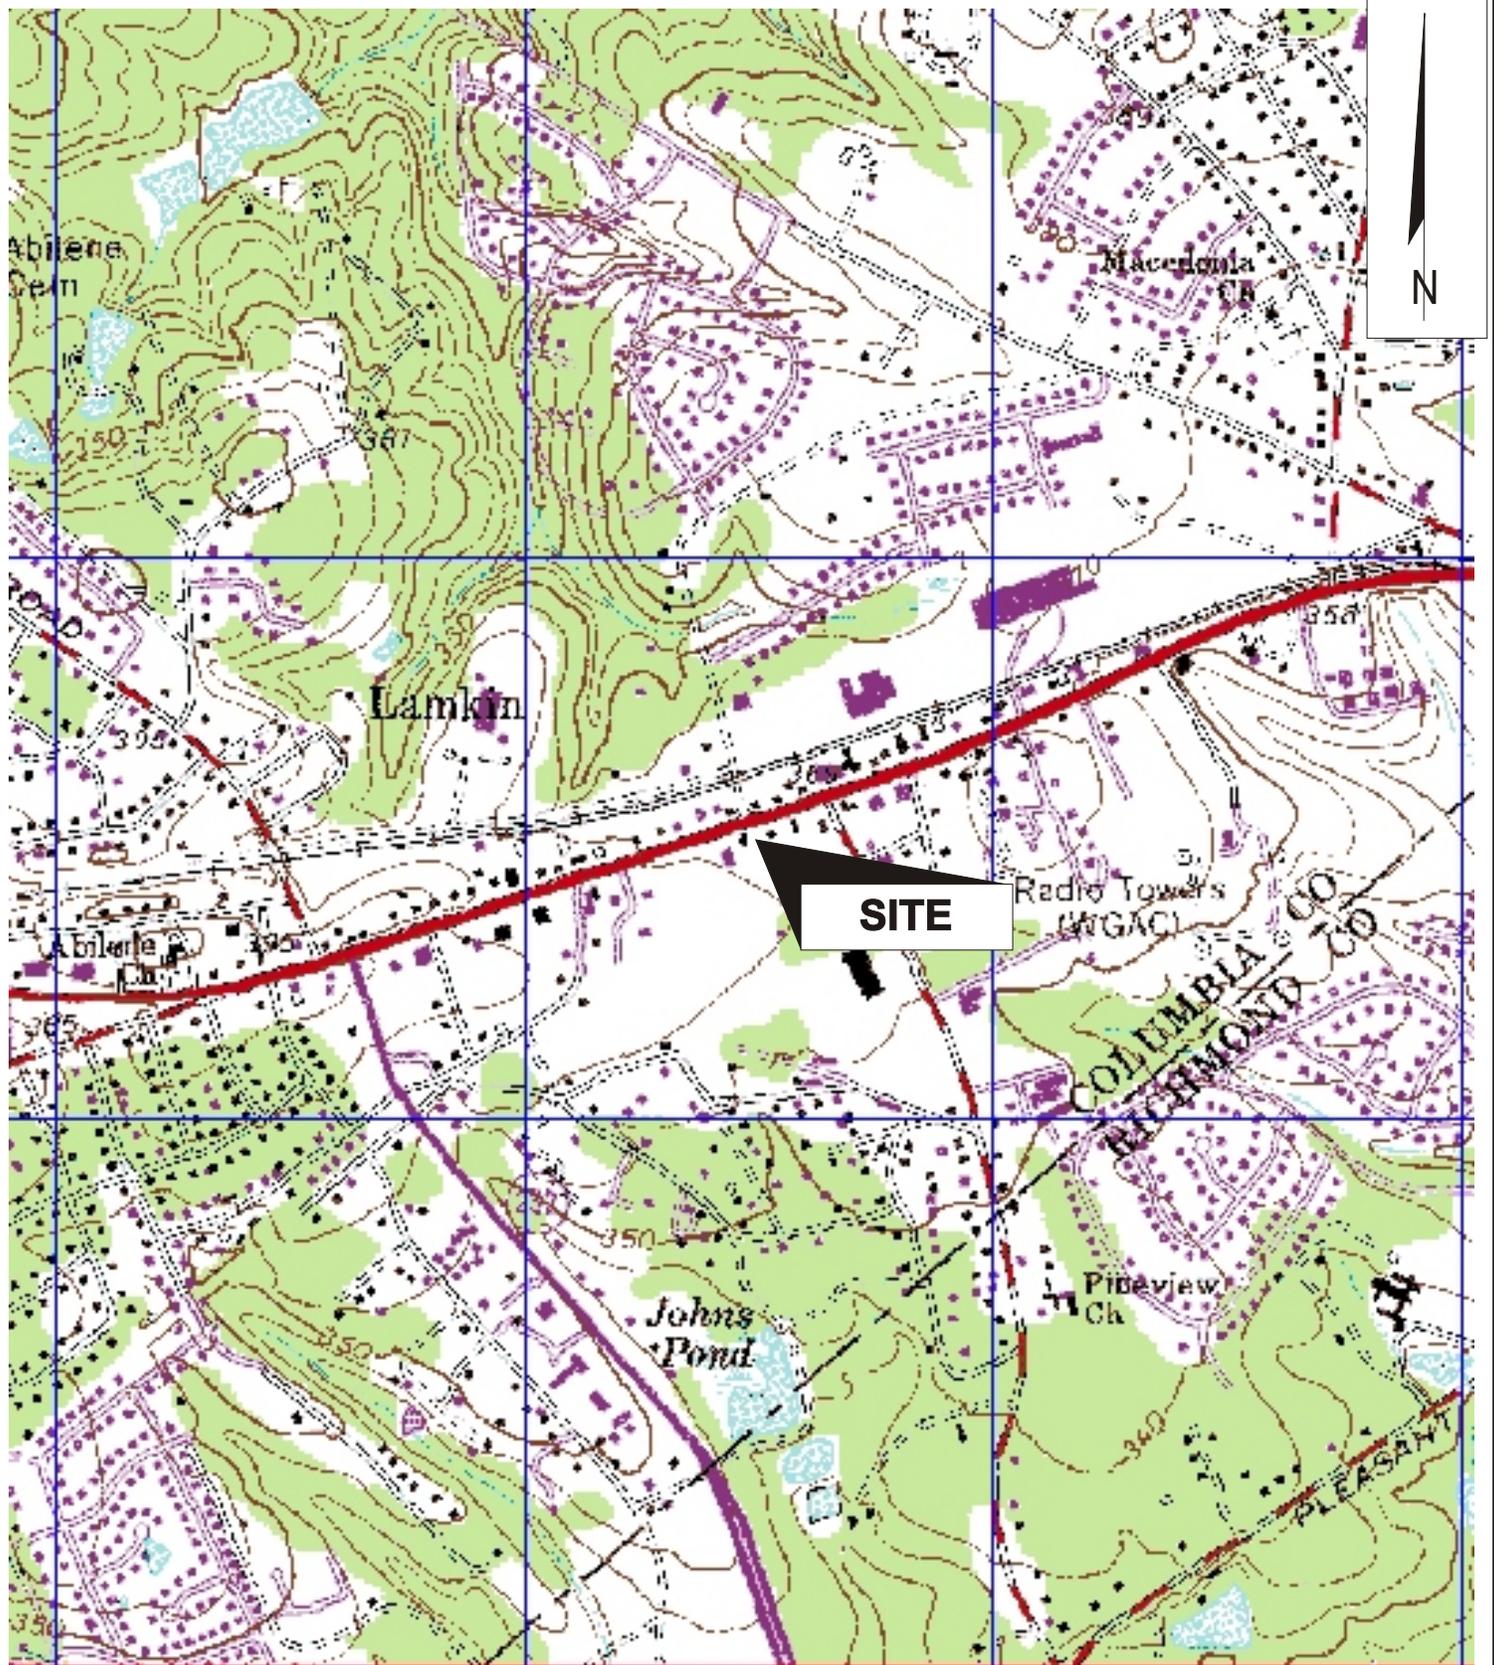

Confirmation soil sampling will be completed at the VIRP Property to confirm that on-site soils meet current RRS following remediation activities. This data will be provided in the VRP CSR.

NOTES:

1. Top of casing elevation for MW-1 arbitrarily set at 100.00 feet and all remaining top of casings elevations surveyed relative to the TOC elevation of MW-1.
2. Temporary monitoring wells TMW-5, TMW-6, and TMW-7 were installed, surveyed and sampled as part of the preliminary site investigation activities in February 2010. These wells were temporary in nature and were removed following the initial installation and sampling and therefore no longer exist.

Case Narrative

VOCs were listed as the analysis requested on page 3 of the Chain of Custody (COC); however, all samples were not marked for analysis. All samples on page 3 of the COC were analyzed for VOCs.

Volatile Organic Compounds Analysis by Method 8260B:

Tetrachloroethene values for samples 1002839-012A and -030A are "E" qualified indicating an estimated value over linear calibration range. Samples were diluted and reanalyzed with the analyte being below reporting limit due to the level of dilution required.

Tetrachloroethene value for sample 1002839-029A is "E" qualified indicating an estimated value over linear calibration range. Sample could not be diluted and reanalyzed due insufficient vials received by laboratory.

cis-1,2-Dichloroethene value for sample 1002839-045A is "E" qualified indicating an estimated value over linear calibration range. The sample was diluted and reanalyzed with the analyte being below reporting limit due to the level of dilution required for other compounds.

Toluene value for sample 1002839-027A is "E" qualified indicating an estimated value over linear calibration range. The sample was diluted and reanalyzed with the analyte being below reporting limit due to the level of dilution required for other compounds.

Acetone value for sample 1002839-031A is "E" qualified indicating an estimated value over linear calibration range. The sample was diluted and reanalyzed with the analyte being below reporting limit due to the level of dilution required for other compounds.

1,1,1-Trichloroethane, 1,1-Dichloroethene, cis-1,2-Dichloroethene, and Trichloroethene values for sample 1002839-049A are "E" qualified indicating estimated values over linear calibration range. The sample was diluted and reanalyzed with the analyte being below reporting limit due to the level of dilution required for other compounds.

Percent recoveries for the internal standard compound 1,4-Dichlorobenzene-d4 on samples 1002839-010A, -019A, -027A and -015A were outside control limits biased low due to suspected matrix interference.

Percent recoveries for the internal standard compounds Pentafluorobenzene, 1,4-Difluorobenzene, Chlorobenzene-d5, and 1,4-Dichlorobenzene-d4 on sample 1002839-001AMS/MSD were outside control limits biased high due to suspected matrix interference.

Percent recoveries for the internal standard compounds Pentafluorobenzene and 1,4-Dichlorobenzene-d4 on samples 1002839-023A, -024, -029A and -030A were outside control limits biased low due to suspected matrix interference.

Percent recoveries for the internal standard compounds Pentafluorobenzene, 1,4-Difluorobenzene, and 1,4-Dichlorobenzene-d4 on samples 1002839-033A, -034A and -035A were outside control limits biased low due to suspected matrix interference.

Percent recoveries for the internal standard compounds Pentafluorobenzene, Chlorobenzene-d5, and 1,4-Dichlorobenzene-d4 on sample 1002839-049A were outside control limits biased low due to suspected matrix interference.

Percent recoveries for the internal standard compound 1,4-Difluorobenzene on sample 1002839-025A and -026A were outside control limits biased high due to suspected matrix interference.

Percent recoveries for the internal standard compounds Pentafluorobenzene, 1,4-Difluorobenzene, and Chlorobenzene-d5 on sample 1002839-040AMS/MSD were outside control limits biased high due to suspected matrix interference.

Percent recoveries for the internal standard compounds Pentafluorobenzene, 1,4-Difluorobenzene, and 1,4-Dichlorobenzene-d4 on sample 1002839-018AMS/MSD were outside control limits biased low due to suspected matrix interference.

Percent recoveries for the internal standard compounds Pentafluorobenzene, 1,4-Difluorobenzene, Chlorobenzene-d5, and 1,4-Dichlorobenzene-d4 on sample 1002839-037A were outside control limits biased low due to suspected matrix interference.

Case Narrative

Volatile Organic Compounds Analysis by Method 8260B:

Percent recovery for the internal standard compound 1,4-Dichlorobenzene-d4 on sample 1005A97-003A was outside control limits biased low due to suspected matrix interference.

Due to sample matrix, samples 1005A97-014A and -012A required dilution during preparation and/or analysis resulting in elevated reporting limits.

Trichloroethene value for sample 1005A97-014A is "E" qualified indicating an estimated value over linear calibration range. Sample was diluted and reanalyzed with analyte being below reporting limit due to the level of dilution required for other compounds.
