Introduction

Fishing is a popular pastime in Georgia. Whether you go alone to relax and enjoy nature, with your friends to enjoy camaraderie and “fish tales” or with your family to pass on a sport you learned as a child, fishing is a fun and rewarding sport enjoyed by many people.

Not only does fishing give people an excuse to get away from the hustle and bustle of daily life, but it can also put a healthy, satisfying meal on the table. Fish are low in saturated fat, high in protein, and can have substantial health benefits when eaten in place of other high-fat foods. The quality of sport fish caught in Georgia is very good; however, polychlorinated biphenyls (PCBs), mercury, chlordane, DDT residues (DDT/DDE/DDD), toxaphene (and related compounds), and dieldrin have been found in some fish. In most cases, the levels of these chemicals are low. However, to help ensure the good health of Georgians, the Georgia Department of Natural Resources (DNR) has developed guidelines for how often certain species of fish can be safely eaten. These guidelines are based on the best scientific information and procedures available. As more advanced procedures are developed, these guidelines may change.

It is important to keep in mind that the consumption recommendations are based on health-risk calculations for someone eating fish with similar contamination over a period of 30 years or more.

These guidelines are not intended to discourage people from eating fish, but should be used as a guide for choosing which type (species) and size of fish to eat from Georgia waters.

The guidelines are non-binding recommendations EPD determines based on the body of water a fish comes from, the species of fish and the amount of fish a person consumes. The purpose of these guidelines is to provide detailed information in an understandable format for people who eat fish. Waters listed in the fish consumption guidelines are not necessarily assessed as impaired using USEPA guidelines for Section 303(d) of the Clean Water Act.

The river basin where tested sites are located has been identified in the tables. The fourteen major river basins in Georgia are shown on the map provided, preceding the consumption guidance tables. The listings for lakes have been divided into those with a surface area of 500 acres or more, and small lakes and ponds less than 500 acres in size. Georgia rivers have also been divided into freshwater rivers and creeks, and estuarine systems. An index is provided at the back of the booklet for quick page reference to lake, river and estuarine locations that have been tested.

Are Georgia's Fish Safe to Eat?

Yes. The quality of fish in Georgia is good. Fish and seafood are nutritious and can play a role in maintaining a healthy well-balanced diet. This booklet provides you with the guidance and recommendations to use in eating fish in a healthy and informed manner. The Georgia Department of Natural Resources (DNR) has one of the most progressive fish testing programs in the southeast. A variety of different fish species were tested for 43 separate contaminants, including metals, organic chemicals and pesticides. Many of these contaminants did not appear in any fish. However, two contaminants, polychlorinated biphenyls (PCBs), and mercury, were frequently detected in significant amounts in a few species from some bodies of water in Georgia. Four additional contaminants, chlordane, DDT residues (DDT/DDE/DDD), toxaphene-like compounds, and dieldrin were also detected infrequently. This publication provides you with information on those six contaminants: PCBs, mercury, chlordane, DDT/DDE/DDD, toxaphene and dieldrin.

In some areas, fish are contaminated with low concentrations of PCBs. It is now illegal to manufacture PCBs; however, in the past, these synthetic oils were used regularly as fluids for electrical transformers, cutting oils, and carbonless paper. Although they were banned in 1976, they do not break down easily and remain in aquatic sediments for years. Over time, levels of PCBs are decreasing.

Mercury is a naturally occurring metal that does not break down as it cycles between land, water, and air. As mercury cycles through the environment it is absorbed and ingested by plants and animals. Nearly all of the mercury found in fish flesh is an organic form, called methylmercury. Most of the mercury absorbed or ingested will be returned to the environment but some will remain in the plant and animal tissues. It is not known where the mercury in Georgia's fish originated. Mercury may be present in fish because of the mercury content of soils and rocks in the southeast, from municipal and industrial sources, or from fossil fuel use. Scientific evidence is growing that mercury is transported long distances through the upper atmosphere, making its control a global environmental issue. Although mercury has always been present, scientific research shows that the amount of mercury cycling through the environment has increased significantly following the dawn of the Industrial Revolution in the late 1800s.

Chlordane is a man-made pesticide used in the U.S. from the late 1940s to the early 1980s. Historically, chlordane was used as an agricultural pesticide, but in 1978 it was restricted to termite control use only. It is now banned for all uses. Chlordane is persistent in the environment and may remain in aquatic sediments for years.

Fish at only one site (Albany By-Pass Pond, pg.18), had enough DDE/DDD residues to recommend a restriction in consumption. The DDE/DDD contaminants are chemical breakdown products of the pesticide DDT. DDT was first synthesized in 1874 and its insecticidal properties were discovered in 1939. In the United States DDT was used extensively until 1969. The U.S. production of DDT was discontinued in 1969. Residues of DDE and DDD are persistent and break down slowly in the environment.

Striped mullet at only one site (Casey Canal, pg. 27), had enough dieldrin to recommend a restriction in consumption. Dieldrin is another chlorinated pesticide like chlordane and DDT, and has been restricted from use in the United States. It was used to control corn and citrus pests, termites, and in moth proofing. Dieldrin is persistent in the environment because of the slow breakdown rate.

Toxaphene was a chlorinated camphene pesticide used extensively on cotton. In 1982 registration for all uses were cancelled, and a ban on all uses went into effect in 1990. One estuarine area (Terry and Dupree Creeks, and the Back River, page 52), adjacent to a site where toxaphene was once manufactured has remaining residues of toxaphene-like compounds present in some fish. Toxaphene is also persistent in the environment.

Like PCBs, the chlorinated pesticides do not break down easily and remain in aquatic sediments for years. These organic contaminants tend to concentrate in fat and fatty tissues of fish such as the liver and other organs. Over time levels of PCBs and chlorinated pesticides are decreasing.

Some fish in the Savannah River below Augusta contain the radioactive elements cesium-137 and strontium-90. Exposure to large amounts of these elements may increase the risk of developing cancer.

How Do Fish Become Contaminated?

Contaminants get into water as a result of storm water runoff, industrial and municipal discharges, agricultural practices, nonpoint source pollution and other factors. When it rains, chemicals from the land and in the air are washed into the water.

Contaminants are carried downstream by rivers and creeks into lakes, reservoirs, and estuaries. Contaminants can get into fish in a variety of ways. Fish absorb PCBs, chlordane and other pesticides from water, suspended sediments, or their food. These organic chemicals concentrate in the fat of fish tissue and in fatty fish such as carp and catfish. Cleaning and cooking a fish to remove fat will lower the amount of PCBs, chlordane or other pesticides in a fish meal.

Larger, older fish and fish which eat other fish may accumulate more contaminants than smaller, younger fish. Once in the water, mercury is converted to methylmercury by bacteria and other processes. Fish absorb methylmercury from their food and from water as it passes over their gills. Mercury is bound to proteins in fish tissue, including muscle.

Benefits of Eating Fish

Fish has long been recognized as a nutritious “protein food”. It’s nutritional value as a protein source is greater than that for beef, pork, chicken or milk. Additionally, the types and amounts of dietary fats are generally more “heart healthy” than the fats found in other protein foods. Fish is also an important source of the fatty acids that are critical for the development of the brain and nervous system. Fish is an excellent source of several vitamins, and also contributes appreciable amounts of dietary calcium, iron and zinc. These minerals are essential nutrients that tend to be low in people’s diets. Many studies suggest that eating fish regularly may help protect against heart and inflammatory diseases.

These guidelines are based on a range in fish meal size from 4 to 8 ounces (1/4 to 1/2 pound). Where the guidelines recommend only 1 meal per week or month, you may prefer to have two smaller meals over that period.

Risks of Contaminated Fish

These guidelines were designed to protect you from experiencing health problems associated with eating contaminated fish. The consumption advice provided in this booklet is developed in a conservative manner. It is intended to protect both children and adults from cancer and the other potential toxic effects of these chemicals.

PCBs, methylmercury, chlordane, DDT/DDE/DDD, toxaphene and dieldrin build up in your body over time. It may take months or years of regularly eating contaminated fish to accumulate levels that would affect your health. Keep in mind that these guidelines are based on eating fish with similar contamination over a period of 30 years or more. Current statistics indicate that cancer will affect about one in every four people nationally, primarily due to smoking, diet and hereditary risk factors. If you follow Georgia’s consumption guidelines, the contaminants in the fish you eat may not increase your cancer risk at all. At worst, using the USEPA estimates of contaminant potency, your cancer risk from fish consumption should be less than 1 in 10,000.

PCBs, chlordane, DDT/DDD/DDE, toxaphene and dieldrin can cause cancer in laboratory animals exposed to large amounts, and may cause cancer in humans.

Effects other than cancer from these chemicals may include developmental problems in children whose mothers were exposed to them before or during pregnancy. Studies of people who have been exposed to very large quantities of these chemicals (pesticide workers, etc.), have indicated a relationship between high exposures and health effects on the nervous system, digestive system, and the immune system.

Exposure to methylmercury has not been linked to cancer. Methylmercury is a concern because of its potential to damage the nervous system, especially in the developing fetus and young child. This could affect your child’s brain and how your child learns, moves, and behaves.

Special Notice for Pregnant Women, Nursing Mothers and Children

If you are pregnant or a nursing mother, or plan to become pregnant soon, you and children under 6 years of age are sensitive to the effects of contaminants such as mercury. DNR’s guidelines are designed to be protective for these sensitive groups. In early 2001 the USEPA issued a national advisory recommending that these sensitive groups limit consumption of all freshwater fish to one meal per week due to mercury. People may wish to follow USEPA’s recommendation, especially in areas where DNR has not tested fish and offered detailed guidelines. For most other healthy adults, DNR’s recommendations may actually be overly conservative.

Ways to Reduce Risk

- **Keep smaller fish for eating.** Generally, larger, older fish may be more contaminated than younger, smaller fish. You can minimize your health risk by eating smaller fish (within legal size limits) and releasing the larger fish.
- **Vary the kinds of fish you eat.** Contaminants build up in large predators and bottom-feeding fish, like bass and catfish, more rapidly than in other species. By substituting a few meals of panfish, such as bream (e.g. bluegill, redear), and crappie, you can reduce your risk.
- **Eat smaller meals when you eat big fish and eat them less often.** If you catch a big fish, freeze part of the catch (mark container or wrapping with species and location), and space the meals from this fish over a period of time.
- **Clean and cook your fish properly.** How you clean and cook your fish can reduce the level of contaminants by as much as half in some fish. Some chemicals have a tendency to concentrate in the fatty tissues of fish. By removing the fish's skin and trimming fillets according to the following diagram, you can reduce the level of chemicals substantially. Mercury is bound to the meat of the fish, so these precautions will not help reduce this contaminant.
- **Remove the skin from fillets or steaks.** The internal organs (intestines, liver, roe, and so forth), and skin are often high in fat and contaminants.
- **Trim off the fatty areas shown in black on the drawing.** These include the belly fat, side or body fat, and the flesh along the top of the back. Careful trimming can reduce some contaminants by 25 to 50%.
- **Cook fish so fat drips away.** Broil, bake or grill fish and do not use the drippings. Deep-fat frying removes some contaminants, but you should discard and not reuse the oil for cooking. Pan frying removes few, if any, contaminants.

Using These Guidelines

Check the following pages (or *Index*), for the area where you fish. The lakes and rivers on the list are arranged in alphabetical order. If your fish or fishing location is NOT in this booklet, follow the suggestions in *Ways to Reduce Risk*. If your fish or fishing location is in the booklet, it does not necessarily mean that there are contaminants present, but only that the fish have been tested. Meal advice will depend on what contaminant(s) were found and how much was found in different species and sizes of fish. Follow these instructions carefully.

The current *Georgia Sport Fishing Regulations* should be consulted for the legal sizes and creel limits for different species in a water body. Some legal size limit information is provided in the following tables. The regulations also provide detailed information on how to measure fish length, other seafood size measures, and color pictures for identification.

- Measure fish from the tip of the nose to the end of the tail fin.

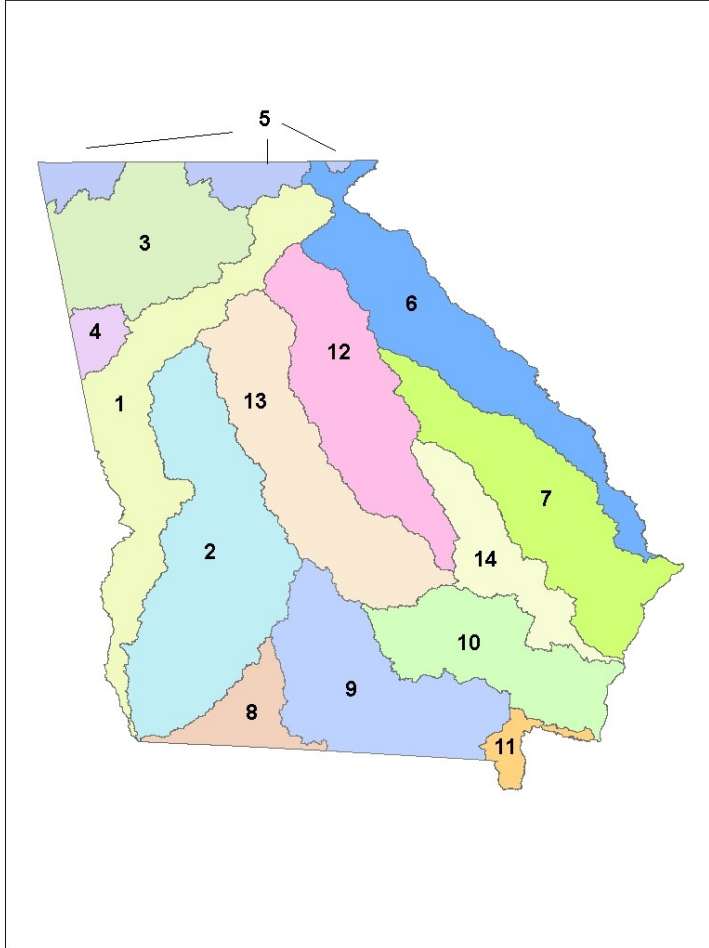

- In the tables find your lake or river and the species and size of fish you caught. If there is no meal frequency listed for a particular size fish, that size has not been tested or is illegal to keep. For rivers, the size that was tested was the common creel size for that species.
- Listed below are the four different recommended meal frequencies that are possible for different species and sizes of fish.

No Restriction
1 meal per week
1 meal per month
Do Not Eat

- For the purposes of these guidelines, one meal is assumed to range from 1/4 to 1/2 pound of fish (4-8 ounces) for a 150 pound person. Subtract or add 1 ounce of fish to the range for every 20 pounds of body weight. For example, one meal is assumed to be 3 – 7 ounces for a 130 pound person and 5 – 9 ounces for a 170 pound person.

RIVER BASINS OF GEORGIA

Fish Consumption Guidelines

The tables for public lakes have been separated into two categories based on size. The first set of lakes is those with a surface area of 500 or more acres. The second listing of public lakes includes those having less than 500 acres in surface area. These include Georgia DNR Public Fishing Areas (PFAs) and State Parks with small lakes and ponds, and municipal or other public fishing impoundments.

These guidelines are based on a range in fish meal size from 4 to 8 ounces (1/4 to 1/2 pound). Where the guidelines recommend only 1 meal per week or month, you may prefer to have two smaller meals over that period.

Georgia Public Lakes 500 Acres or Larger

Lake Allatoona

Coosa River Basin

Species	Less than 12"	12" – 16"	Over 16"	Chemical
Black Crappie	No Restrictions			
Carp	No Restrictions	No Restrictions	No Restrictions	
White Bass	No Restrictions

City of Adairsville Pond *Coosa River Basin*

Species	Less than 12"	12" - 16"	Over 16"	Chemical
Carp		No Restrictions		

Albany By-Pass Pond *Flint River Basin*

Species	Less than 12"	12" - 16"	Over 16"	Chemical
Largemouth Bass		1 meal/week	1 meal/week	DDE/DDD
Catfish		1 meal/week		DDE/DDD
Common Carp			1 meal/month	DDE/DDD
Redear Sunfish	No Restrictions			

Allen Creek Wildlife Management Area, Ponds A and B *Oconee River Basin*

Species	Less than 12"	12" - 16"	Over 16"	Chemical
Largemouth Bass		No Restrictions		
Bluegill Sunfish	No Restrictions			

Antioch Lake (East & West), Rocky Mountain PFA *Coosa River Basin*

Species	Less than 12"	12" - 16"	Over 16"	Chemical
Largemouth Bass		No Restrictions	No Restrictions	
Channel Catfish		No Restrictions	No Restrictions	
Black Crappie	No Restrictions	No Restrictions		
Bluegill Sunfish	No Restrictions			

Lake Bennett (Marben PFA, Charlie Elliot Wildlife Center) *Oconee River Basin*

Species	Less than 12"	12" - 16"	Over 16"	Chemical
Largemouth Bass		No Restrictions	No Restrictions	
Redear Sunfish	No Restrictions			

Big Lazer PFA (Gum Creek Impoundment) *Flint River Basin*

Species	Less than 12"	12" - 16"	Over 16"	Chemical
Largemouth Bass		No Restrictions	1 meal/week	Mercury
Channel Catfish			No Restrictions	

Bowles C. Ford Lake, City of Savannah *Savannah River Basin*

Species	Less than 12"	12" - 16"	Over 16"	Chemical
Largemouth Bass		No Restrictions	No Restrictions	
White Catfish	No Restrictions	No Restrictions		

Brasstown Valley Kids Fishing Pond *Tennessee River Basin*

Species	Less than 12"	12" - 16"	Over 16"	Chemical
Bluegill Sunfish	No Restrictions			

Bush Field Airport, Augusta: Unnamed Pond *Savannah River Basin*

Species	Less than 12"	12" - 16"	Over 16"	Chemical
Largemouth Bass	No Restrictions	1 meal/week		Mercury
Bluegill Sunfish	No Restrictions			

Clayton County Water Authority: Blalock Reservoir *Ocmulgee River Basin*

Species	Less than 12"	12" - 16"	Over 16"	Chemical
Largemouth Bass		No Restrictions		
Black Crappie	No Restrictions			

Clayton County Water Authority: J.W. Smith Reservoir *Flint River Basin*

Species	Less than 12"	12" - 16"	Over 16"	Chemical
Largemouth Bass		No Restrictions		
Redear Sunfish	No Restrictions			

Clayton County Water Authority: Shamrock Reservoir *Ocmulgee River Basin*

Species	Less than 12"	12" - 16"	Over 16"	Chemical
Largemouth Bass		No Restrictions		
Bluegill Sunfish	No Restrictions			

Dodge County PFA (Steve Bell Lake) *Ocmulgee River Basin*

Species	Less than 12"	12" - 16"	Over 16"	Chemical
Largemouth Bass		No Restrictions	No Restrictions	
Channel Catfish		No Restrictions	No Restrictions	

Evans County PFA *Ogeechee River Basin*

Species	Less than 12"	12" - 16"	Over 16"	Chemical
Largemouth Bass		No Restrictions	1 meal/week	Mercury
Channel Catfish			No Restrictions	

Flat Creek PFA (Lonice C. Barrett Lake)

Oconee River Basin

Species	Less than 12"	12" - 16"	Over 16"	Chemical
Largemouth Bass		1 meal/week		Mercury
Bluegill	No Restrictions			
Channel Catfish		1 meal/week		Mercury

Fort Yargo State Park Lake (Marburg Cr. Watershed Proj.)

Oconee River Basin

Species	Less than 12"	12" - 16"	Over 16"	Chemical
Largemouth Bass		No Restrictions	No Restrictions	
Carp	No Restrictions			

Hamburg Millpond, Hamburg State Park

Ogeechee River Basin

Species	Less than 12"	12" - 16"	Over 16"	Chemical
Largemouth Bass		1 meal/week		Mercury
Redear Sunfish	No Restrictions			

Heath Lake, Rocky Mountain PFA

Coosa River Basin

Species	Less than 12"	12" - 16"	Over 16"	Chemical
Largemouth Bass		No Restrictions	No Restrictions	
Black Crappie	No Restrictions	No Restrictions		
Bluegill Sunfish	No Restrictions			

Hugh M. Gillis PFA

Oconee River Basin

Species	Less than 12"	12" - 16"	Over 16"	Chemical
Channel Catfish		No Restrictions	No Restrictions	
Bluegill Sunfish	No Restrictions			
Largemouth Bass		1 meal/week		Mercury

Ken Gardens Lake (Albany, Georgia)

Flint River Basin

Species	Less than 12"	12" - 16"	Over 16"	Chemical
Largemouth Bass		1 meal/week	1 meal/week	Mercury
Channel Catfish	No Restrictions	No Restrictions		
Brown Bullhead	No Restrictions			
Bluegill Sunfish	No Restrictions			

Kolomoki Lake, Kolomoki Mounds State Park

Chattahoochee River Basin

Species	Less than 12"	12" - 16"	Over 16"	Chemical
Largemouth Bass		1 meal/week	1 meal/week	Mercury
Redear Sunfish	No Restrictions			

Little Ocmulgee State Park Lake (Gum Creek Swamp)

Ocmulgee River Basin

Species	Less than 12"	12" - 16"	Over 16"	Chemical
Largemouth Bass			1 meal/month	Mercury
Brown Bullhead		1 meal/week		Mercury

Margery Lake (Marben PFA, Charlie Elliot Wildlife Center)

Oconee River Basin

Species	Less than 12"	12" - 16"	Over 16"	Chemical
Bluegill Sunfish	No Restrictions			
Largemouth Bass*		No Restrictions	No Restrictions	

*Minimum size is 14 inches unless posted otherwise.

Lake Mayer (City of Savannah)

Ogeechee River Basin

Species	Less than 12"	Less than 12"	Over 16"	Chemical
Largemouth Bass				
Redear Sunfish	No Restrictions	No Restrictions		
Bluegill	No Restriction	No Restriction		
Speckled Bullhead			No Restrictions	

McDuffie PFA (East Watershed Ponds)

Savannah River Basin

Species	Less than 12"	12" - 16"	Over 16"	Chemical
Largemouth Bass *		No Restrictions		
Bluegill	No Restrictions			
Channel Catfish		No Restrictions		

*Minimum size is 14 inches unless posted otherwise.

McDuffie PFA (West Watershed Ponds)

Savannah River Basin

Species	Less than 12"	12" - 16"	Over 16"	Chemical
Largemouth Bass *		No Restrictions	No Restrictions	
Channel Catfish		No Restrictions	No Restrictions	

*Minimum size is 14 inches unless posted otherwise.

Nancy Town Lake (Habersham County)

Savannah River Basin

Species	Less than 12"	12" - 16"	Over 16"	Chemical
Bluegill Sunfish	No Restrictions			
Largemouth Bass		No Restrictions		

Lake Olmstead (Richmond County)

Savannah River Basin

Species	Less than 12"	Less than 12"	Over 16"	Chemical
Largemouth Bass				
Spotted Sucker				

Paradise PFA (Horseshoe 4) *Suwannee River Basin*

Species	Less than 12"	12" - 16"	Over 16"	
Channel Catfish			No Restrictions	

Paradise PFA (Lake Patrick) *Suwannee River Basin*

Species	Less than 12"	12" - 16"	Over 16"	Chemical
Largemouth Bass *		No Restrictions	No Restrictions	
Brown Bullhead		No Restrictions	No Restrictions	
Bluegill		No Restrictions		

*Minimum size is 14 inches unless posted otherwise.

Paradise PFA (Lake Bobben) *Suwannee River Basin*

Species	Less than 12"	12" - 16"	Over 16"	Chemical
Largemouth Bass	No Restrictions			

Payton Park Pond, Valdosta *Suwannee River Basin*

Species	Less than 12"	12" - 16"	Over 16"	Chemical
Largemouth Bass		No Restrictions		
Bluegill Sunfish	No Restrictions			

Reed Bingham State Park Lake *Suwannee River Basin*

Species	Less than 12"	12" - 16"	Over 16"	Chemical
Largemouth Bass		1 meal/month	1 meal/month	Mercury
White Catfish			1 meal/month	Mercury

Lake Rutledge (Hard Labor Creek State Park) *Oconee River Basin*

Species	Less than 12"	12" - 16"	Over 16"	Chemical
Largemouth Bass		No Restrictions		
Channel Catfish	No Restrictions	No Restrictions		

Lake Seed *Savannah River Basin*

Species	Less than 12"	12" - 16"	12" - 16"	Chemical
Bluegill Sunfish	No Restrictions			

Shepherd Lake (Marben PFA, Charlie Elliot Wildlife Center) *Oconee River Basin*

Species	Less than 12"	12" - 16"	12" - 16"	Chemical
Largemouth Bass *		No Restrictions	No Restrictions	
Bluegill Sunfish	No Restrictions			

*Minimum size is 14 inches unless posted otherwise.

South Slappy Blvd. Offramp Pond (Albany, Georgia) *Flint River Basin*

Species	Less than 12"	12" - 16"	Over 16"	Chemical
Largemouth Bass		1 meal/week	1 meal/month	Mercury
Bluegill Sunfish	No Restrictions			

Silver Lake WMA *Flint River Basin*

Species	Less than 12"	12" - 16"	Over 16"	Chemical
Largemouth Bass		No Restrictions	No Restrictions	
Bluegill Sunfish	No Restrictions			

Stone Mountain Lake *Ocmulgee River Basin*

Species	Less than 12"	12" - 16 "	Over 16 "	Chemical
Largemouth Bass			1 meal/week	Mercury
Catfish	No Restrictions	No Restrictions		

Tribble Mill Lake, Gwinnett County *Ocmulgee River Basin*

Species	Less than 12"	12" - 16 "	Over 16 "	Chemical
Largemouth Bass	No Restrictions	1 meal/week		Mercury
Black Crappie	No Restrictions			
Bluegill Sunfish	No Restrictions			

Yohola Lake, Kolomoki Mounds State Park *Chattahoochee River Basin*

Species	Less than 12"	12" - 16 "	Over 16 "	Chemical
Largemouth Bass		1 meal/week	1 meal/week	Mercury
Bluegill Sunfish	No Restrictions			

Yonah Lake *Savannah River Basin*

Species	Less than 12"	12" - 16 "	Over 16 "	Chemical
Largemouth Bass		1 meal/week		Mercury
Catfish (mixed sp.)		1 meal/week		Mercury
Bluegill Sunfish	No Restrictions			

GEORGIA FRESHWATER RIVERS AND CREEKS

Please note that the consumption guidelines for Georgia rivers are presented in a different format from the lake tables. Due to the flow of rivers, the site tested is important to the consumption guidelines. Consumption guidelines may vary from one stretch of river to another. The fish tested was the common creel size for the location and species. Freshwater rivers and creeks are tabulated first, followed by listings for Georgia tidal estuarine systems.

Alapaha River (Tifton to Stockton)

Suwannee River Basin

Species	Site Tested	Recommendation	Chemical
Largemouth Bass	U.S.Hwys. 82 to 84	1 meal/month	Mercury
Spotted Sucker	U.S.Hwys. 82 to 84	1 meal/week	Mercury
Redbreast Sunfish	U.S.Hwys. 82 to 84	No Restrictions	

Alapaha River (Near State Line)

Suwannee River Basin

Species	Site Tested	Recommendation	Chemical
Largemouth Bass	Near Statenville	1 meal/month	Mercury
Bullhead	Near Statenville	1 meal/month	Mercury

Alapahoochee River (Near State Line)

Suwannee River Basin

Species	Site Tested	Recommendation	Chemical
Bullhead	Echols County	1 meal/week	Mercury

Alcovy River

Ocmulgee River Basin

Species	Site Tested	Recommendation	Chemical
Spotted Sucker	Arrowhatchee Farms	No Restrictions	
Chain Pickerel	Arrowhatchee Farms	No Restrictions	

Allatoona Creek, Cobb County

Coosa River Basin

Species	Site Tested	Recommendation	Chemical
Spotted Bass	Ga. Hwy. 176	1 meal/week	Mercury
Alabama Hog Sucker	Ga. Hwy. 176	1 meal/week	Mercury

Altamaha River

Altamaha River Basin

Near Baxley (U.S. Hwy 1), and Near Jesup, Ga. (U.S. Hwy.s 25/84)

Species	Site Tested	Recommendation	Chemical
Largemouth Bass	U.S. Hwy 1	1 meal/week	Mercury
Channel Catfish	U.S. Hwy 1	1 meal/week	Mercury
Flathead Catfish	U.S. Hwy 1	1 meal/week	Mercury
Bluegill Sunfish	U.S. Hwy 1	No Restrictions	
Largemouth Bass	U.S. Hwys 25/84	1 meal/week	Mercury
Channel Catfish	U.S. Hwys 25/84	No Restrictions	
Flathead Catfish	U.S. Hwys 25/84	1 meal/week	Mercury
Striped Mullet	Altamaha Park	No Restrictions	

Apalachee River

Oconee River Basin

Species	Site Tested	Recommendation	Chemical
Largemouth Bass	Apalachee Beach	1 meal/week	Mercury
Channel Catfish	Apalachee Beach	No Restrictions	

Beaver Creek (Tributary to Patsiliga Creek)

Flint River Basin

Species	Site Tested	Recommendation	Chemical
Yellow Bullhead	Taylor County	1 meal/month	Mercury

Boen Creek

Savannah River Basin

Species	Site Tested	Recommendation	Chemical
Bluehead Chub	Rabun County	No Restrictions	

Brasstown Creek

Tennessee River Basin

Species	Site Tested	Recommendation	Chemical
Northern Hog Sucker	Towns County	No Restrictions	

Brier Creek (Burke County)

Savannah River Basin

Species	Site Tested	Recommendation	Chemical
Largemouth Bass	Ga. Hwy. 56	1 meal/month	Mercury
Spotted Sucker	Ga. Hwy. 56	1 meal/week	Mercury

Broad River

Savannah River Basin

Species	Site Tested	Recommendation	Chemical
Channel Catfish	Ga. Hwy 17	No Restrictions	
Flathead Catfish	Ga. Hwy 17	No Restrictions	

Buffalo Creek *Tallapoosa River Basin*

Species	Site Tested	Recommendation	Chemical
Bluegill Sunfish	Carroll County	No Restrictions	

Butternut Creek *Tennessee River Basin*

Species	Site Tested	Recommendation	Chemical
Hog Sucker	Union County	No Restrictions	

Cane Creek (Wimpy's Air Field) *Chattahoochee River Basin*

Species	Site Tested	Recommendation	Chemical
Largemouth Bass	Lumpkin County	No Restrictions	

Canoochee River (Hwy 192 to Lotts Cr.) *Ogeechee River Basin*

Species	Site Tested	Recommendation	Chemical
Largemouth Bass	U.S. Hwy. 280	1 meal/month	Mercury
Channel Catfish	U.S. Hwy. 280	1 meal/week	Mercury
Redbreast Sunfish	U.S. Hwy. 280	1 meal/month	Mercury
Snail Bullhead	U.S. Hwy. 280	1 meal/month	Mercury

Canoochee River (Lotts Cr. To Ogeechee River) *Ogeechee River Basin*

Species	Site Tested	Recommendation	Chemical
Largemouth Bass	Below Canoochee Creek (Taylor Creek)	1 meal/month	Mercury
Channel Catfish	Below Canoochee Creek	1 meal/month	Mercury

Casey Canal (Tributary to Hayners Cr. / Vernon River) *Ogeechee River Basin*

Species	Site Tested	Recommendation	Chemical
Largemouth Bass	Eisenhower Dr.	No Restrictions	
Bluegill Sunfish	Eisenhower Dr.	No Restrictions	
Striped Mullet	Eisenhower Dr.	1 meal/week	Dieldrin

Cedar Creek Tributary (Hart County WMA) *Savannah River Basin*

Species	Site Tested	Recommendation	Chemical
Creek Chubsucker	Hart County WMA	No Restrictions	
Redbreast Sunfish	Hart County WMA	No Restrictions	

Chattahoochee River (Near Helen, and Above Lake Lanier) *Chattahoochee River Basin*

Species	Site Tested	Recommendation	Chemical
Redeye Bass	Ga. Hwy 75, Helen	1 meal/week	Mercury
Snail Bullhead	Ga. Hwy 75, Helen	1 meal/week	Mercury
Golden Redhorse	Ga. Hwy 75, Helen	1 meal/week	Mercury
Largemouth Bass	Belton Bridge Road	1 meal/month	Mercury
Spotted/Shoal Bass	Belton Bridge Road	1 meal/week	Mercury
Channel Catfish	Belton Bridge Road	No Restrictions	

Chattahoochee River (Buford Dam to Morgan Falls Dam) *Chattahoochee River Basin*

Species	Site Tested	Recommendation	Chemical
Largemouth Bass	Multiple, Dam to Dam	1 meal/week	Mercury
Common Carp	Multiple, Dam to Dam	No Restrictions	
Brown Trout	Multiple, Dam to Dam	No Restrictions	
Rainbow Trout	Multiple, Dam to Dam	No Restrictions	
Yellow Perch	Above Morgan Falls	No Restrictions	

Chattahoochee River (Morgan Falls Dam to Peachtree Creek) *Chattahoochee River Basin*

Species	Site Tested	Recommendation	Chemical
Largemouth Bass	Below Morgan Falls Dam	No Restrictions	
Common Carp	Below Morgan Falls Dam	1 meal/month	PCBs
Spotted Bass	Below Morgan Falls Dam	No Restrictions	
Shoal Bass	Below Morgan Falls Dam	No Restrictions	
Brown Trout	Below Morgan Falls Dam	No Restrictions	
Rainbow Trout	Below Morgan Falls Dam	No Restrictions	
Jumprock Sucker	Below Morgan Falls Dam	1 meal/week	Mercury
Bluegill Sunfish	Below Morgan Falls Dam	No Restrictions	

Chattahoochee River (Peachtree Creek to Pea Creek) *Chattahoochee River Basin*

Species	Site Tested	Recommendation	Chemical
Common Carp	SR 166 (DNR boat ramp)	1 meal/month	PCBs
Channel Catfish	SR 166 (DNR boat ramp)	No Restrictions	
Bluegill Sunfish	SR 166 (DNR boat ramp)	1 meal/week	PCBs
White Sucker	Peachtree Cr. To I-20	No Restrictions	
Black Bass Spp.	I-285	1 meal/week	Mercury

Chattahoochee River *Chattahoochee River Basin*
(Pea Creek to West Point Lake, below Franklin)

Species	Site Tested	Recommendation	Chemical
Largemouth Bass	U.S. 27/SR16 Whitesburg	1 meal/week	Mercury
Spotted Bass	U.S. 27/SR16 Whitesburg	1 meal/week	Mercury
Channel Catfish	U.S. 27/SR16 Whitesburg	No Restrictions	

Chattahoochee River *Chattahoochee River Basin*
(West Point Dam to Interstate 85)

Species	Site Tested	Recommendation	Chemical
Largemouth Bass	Below Dam	No Restrictions	
Spotted Bass	Below Dam	1 meal/week	Mercury
Flat Bullhead Catfish	Below Dam	No Restrictions	

Chattahoochee River *Chattahoochee River Basin*
(Oliver Dam to Upatoi Creek, Muscogee County)

Species	Site Tested	Recommendation	Chemical
Largemouth Bass	Oliver Dam to Eagle Phoenix Dam	1 meal/month	PCBs
Bullhead Catfish	Oliver Dam to Eagle Phoenix Dam	1 meal/week	PCBs

Chattahoochee River *Chattahoochee River Basin*
(Chattahoochee County to Stewart County; Upatoi Creek to Omaha, Ga.)

Species	Site Tested	Recommendation	Chemical
Largemouth Bass	Oswichee Creek	No Restrictions	
Spotted Sucker	Oswichee Creek	No Restrictions	
Crappie	Oswichee Creek	No Restrictions	
Channel Catfish	Oswichee Creek	No Restrictions	

Chattahoochee River (Early County) *Chattahoochee River Basin*

Species	Site Tested	Recommendation	Chemical
Hybrid Bass	Downstream of Plant Farley	No Restrictions	

Chattanooga Creek *Tennessee River Basin*

Species	Site Tested	Recommendation	Chemical
Bluegill Sunfish	Ga. Hwy 193	No Restrictions	
Northern Hog Sucker	Ga. Hwy 193	No Restrictions	

Chattooga River (Northeast Georgia, Rabun County) *Savannah River Basin*

Species	Site Tested	Recommendation	Chemical
Northern Hog Sucker	Hwy. 24	1 meal/week	Mercury
Silver Redhorse	Above Lake Tugalo	1 meal/week	Mercury

Chattooga River (Northwest Georgia) *Coosa River Basin*

Species	Site Tested	Recommendation	Chemical
Bluegill Sunfish	Chattoogaville	No Restrictions	
Black Crappie	Chattoogaville	No Restrictions	

Chestatee River, Headwaters, Turners Corner *Chattahoochee River Basin*

Species	Site Tested	Recommendation	Chemical
Redeye Bass	Hwy. 19	No Restrictions	
Alabama Hog Sucker	Hwy. 19	No Restrictions	
Bluehead Chub	Hwy. 19	No Restrictions	

Chestatee River, (Tennessee River to Lake Lanier) *Chattahoochee River Basin*

Species	Site Tested	Recommendation	Chemical
Spotted Bass	Downstream Ga. 400	1 meal/week	Mercury
Channel Catfish	Downstream Ga. 400	No Restrictions	
Redbreast Sunfish	Downstream Ga. 400	No Restrictions	

Chickamauga Creek (East and South) *Tennessee River Basin*

Species	Site Tested	Recommendation	Chemical
Rock Bass	Ga. Hwy 2	No Restrictions	
Redbreast Sunfish	Ga. Hwy 2	No Restrictions	

Chickamauga Creek (West) *Tennessee River Basin*

Species	Site Tested	Recommendation	Chemical
Spotted Bass	Ga. Hwy 2	1 meal/week	Mercury
Redbreast Sunfish	Ga. Hwy 2	No Restrictions	

Chickasawhatchee Creek, WMA near Elmodel, Ga. *Flint River Basin*

Species	Site Tested	Recommendation	Chemical
Spotted Sucker	Wildlife Mgm't Area	No Restrictions	

Cohulla Creek (Praters Mill) *Coosa River Basin*

Species	Site Tested	Recommendation	Chemical
Blacktail Redhorse	Ga. Hwy. 2	1 meal/week	Mercury

Coleman River, Near Mouth, Rabun County *Savannah River Basin*

Species	Site Tested	Recommendation	Chemical
Rainbow Trout	Near Tate City Rd.	No Restrictions	

Conasauga River: Headwaters in Cohutta Nat'l Forest *Coosa River Basin*

Species	Site Tested	Recommendation	Chemical
Rainbow Trout	Upstream Rough Cr.	No Restrictions	

Conasauga River: State Line to Hwy 286 (Hwy 2); and, Hwy 286 to Calhoun (Old Tilton Bridge) *Coosa River Basin*

Species	Site Tested	Recommendation	Chemical
Spotted Bass	Ga. Hwy. 2	1 meal/week	Mercury
Smallmouth Buffalo	Ga. Hwy. 2	1 meal/month	PCBs, Mercury
White Bass	Old Tilton Bridge	1 meal/month	PCBs
Smallmouth Buffalo	Old Tilton Bridge	1 meal/month	PCBs, Mercury

Coosa River (River Mile Zero to Hwy 100) *Coosa River Basin*

Species	Site Tested	Recommendation	Chemical
Largemouth Bass	River Mile 2, Rome	1 meal/month	PCBs
Spotted Bass	River Mile 2, Rome	1 meal/week	PCBs, Mercury
Smallmouth Buffalo	River Mile 2, Rome	Do Not Eat	PCBs
Blue Catfish < 18"	River Mile 2 & Hwy. 100	1 meal/week	PCBs
Blue Catfish 18-32"	River Mile 2 & Hwy. 100	1 meal/month	PCBs
Blue Catfish > 32"	River Mile 2 & Hwy. 100	Do Not Eat	PCBs

Coosa River (Hwy 100 to Stateline) *Coosa River Basin*

Species	Site Tested	Recommendation	Chemical
Smallmouth Buffalo	Below Hwy 100 and at Brushy Branch	1 meal/month	PCBs
Largemouth Bass	Below Hwy 100 and at Brushy Branch	1 meal/week	PCBs
Spotted Bass	Below Hwy 100 and at Brushy Branch	No Restrictions	
Channel Catfish	Below Hwy 100 and at Brushy Branch	1 meal/month	PCBs
Black Crappie	Foster Bend	1 meal/week	PCBs
Blue Catfish < 18"	River Mile 2 & Hwy. 100	1 meal/week	PCBs
Blue Catfish 18-32"	River Mile 2 & Hwy. 100	1 meal/month	PCBs
Blue Catfish > 32"	River Mile 2 & Hwy. 100	Do Not Eat	PCBs

Coosa River: Special Striped Bass *Coosa River Basin*

(River mile zero in Rome to Stateline/Lake Weiss)

Species	Site Tested	Recommendation	Chemical
Striped Bass <20"	Multiple sites on Coosa	1 meal/month	PCBs
Striped Bass > 20"	Multiple sites on Coosa	Do Not Eat	PCBs

Note: One population of striped bass migrates annually between Lake Weiss and locations on the Coosa, Etowah (below Thompson-Weinman Dam) and Oostanaula Rivers. Sampled population represents these stretches of river.

Coosawattee River (Below Carters Lake Dam) *Coosa River Basin*

Species	Site Tested	Recommendation	Chemical
Smallmouth Buffalo	Owens Gin Road	1 meal/month	PCBs, Mercury
Bluegill Sunfish	Owens Gin Road	No Restrictions	

Daniels Creek (Dade County) *Tennessee River Basin*

Species	Site Tested	Recommendation	Chemical
Bluegill Sunfish	Cloudland Canyon State Park	No Restrictions	

Dukes Creek (Near Helen) *Chattahoochee River Basin*

Species	Site Tested	Recommendation	Chemical
Rainbow Trout	Near Ga.Hwy. 75	No Restrictions	
Brown Trout	Near Ga.Hwy. 75	No Restrictions	

Note: Trout may not be harvested in Smithgall Woods

Etowah River (Dawson County) *Coosa River Basin*

Species	Site Tested	Recommendation	Chemical
Blacktail Redhorse	Kelly Bridge Road	1 meal/week	Mercury

Etowah River (Above Lake Allatoona, Cherokee County) *Coosa River Basin*

Species	Site Tested	Recommendation	Chemical
Spotted Bass	York Street	1 meal/week	Mercury
Golden Redhorse	York Street	No Restrictions	

Etowah River (Below Lake Allatoona, Bartow/Floyd Counties) *Coosa River Basin*

Species	Site Tested	Recommendation	Chemical
Channel Catfish	U.S. Hwy. 411	No Restrictions	
Largemouth Bass	U.S. Hwy. 411	1 meal/week	Mercury
Striped Bass *	Below Allatoona Dam *	No Restrictions	
Spotted Bass	Below Allatoona Dam	1 meal/week	PCBs, Mercury
Bluegill Sunfish	Below Allatoona Dam	No Restrictions	
Smallmouth Buffalo	Below Allatoona Dam	1 meal/month	PCBs, Mercury

Flint River (Spalding/Fayette Counties)**Flint River Basin**

Species	Site Tested	Recommendation	Chemical
Largemouth Bass	Ga. Hwy. 92	1 meal/week	Mercury
Spotted Sucker	Ga. Hwy. 92	No Restrictions	

Flint River (Meriwether/Pike/Upson Counties)**Flint River Basin**

Species	Site Tested	Recommendation	Chemical
Shoal Bass	Ga. Hwy. 18	1 meal/week	Mercury
Channel Catfish	Ga. Hwy. 18	No Restrictions

Georgia Estuarine Systems

Estuaries and freshwaters in Georgia are included in the watersheds of 14 different river basins, using the United States Geological Survey Hydrologic Unit Code (HUC), cataloging system. Estuarine systems often communicate with adjoining basins due to natural interconnections and manmade structures and actions such as causeways, tidal gates and dredging. Terry Creek, Dupree Creek, the Back River, Academy Creek and the lower Brunswick River are technically in the Satilla River Basin, but because of tidal dynamics, water exchange occurs between them and the Altamaha River system.

SPECIAL MERCURY GUIDANCE ON KING MACKEREL

On March 23, 2000, Georgia joined together with North Carolina, South Carolina and Florida in issuing a joint health advisory for the consumption of large king mackerel caught offshore in the South Atlantic Ocean that have been found to have high mercury concentrations. This advisory was issued to provide guidance on the safe consumption of king mackerel to the general public and sensitive

populations such as pregnant women, nursing mothers and young children. It does not prevent fishermen from landing fish larger than 39 inches.

Georgia DNR officials began working with the other Southeast States to determine levels of mercury in king mackerel in 1998 after learning that Gulf Coast States initiated a similar program. Each State's findings documented consistent levels of mercury over a range of sizes with high levels found in large king

mackerel. This is Georgia's first consumption advisory for ocean waters. The king mackerel is a migratory species with the Atlantic population ranging from South Florida through North Carolina and into the Mid-Atlantic.

King Mackerel: Atlantic Ocean Offshore Georgia Coast *Atlantic Ocean*

Size Range (Fork Length = FL)	Recommendation
24 to Less than 33 inches	No Restrictions
33 to 39 inches (a 33 inch fish weighs approximately 10 pounds)	1 meal per month ** for pregnant women, nursing mothers and children age 12 and younger
	1 meal per week ** for other adults
Over 39 inches (approximately 15 to 17 pounds)	Do Not Eat
King Mackerel are measured in Fork Length (FL), which is from the tip of the snout to the fork of the tail. The minimum legal size in Georgia is 24 inches FL, with a maximum daily creel limit of 3 fish per person. Federally permitted commercial fishermen are limited to 3500 pounds per trip, and a minimum size of 24 inches FL. ** One meal portion in this special guidance is 8 ounces or 1/2 pound.	

King mackerel spawn along the continental shelf of the Atlantic Coast, rapidly growing to approximately 20 inches in length in the first year. Their diet consists almost exclusively of other fish. King mackerel typically have a maximum life span of 15 years, reaching approximately 4 feet in length and 25 to 30 pounds in weight. Most fish landed are considerably smaller. As a fast-growing, long-lived top predator, the king mackerel has a propensity for accumulating high levels of mercury.
