WATER USE IN GEORGIA BY COUNTY FOR 1990

By Julia L. Fanning¹/, Glenn A. Doonan¹/, and Lorinda T. Montgomery¹/

ABSTRACT

Water-use estimates for 1990 were tabulated for each county in Georgia, by category, using data obtained from various Federal and State agencies. Water-use categories of offstream use include public supply, domestic, commercial, industrial, mining, irrigation, livestock, and thermoelectric power; and instream use includes hydroelectric power generation.

Total offstream water use from ground- and surface-water sources were estimated at 5.3 billion gallons per day in 1990. Withdrawals for industry and agriculture were mostly from ground-water sources.

Thermoelectric power use was the largest surface-water user in the State. Instream water use for hydroelectric plants in the State were estimated at 52 billion gallons per day. Water-use estimates also are included for the major river basins and principal aquifers in the State.

INTRODUCTION

Georgia receives an average 50 inches of rainfall each year (Carter and Stiles, 1983), and withdraws billions of gallons of water each day for a variety of uses. Increases in population, industrial growth, and agricultural practices have caused concern about the stresses placed on the water resources in Georgia. Consistent and accurate statewide water-use data are essential for the management of the resources by Federal, State, county, and local government officials.

1/U.S. Geological Survey, Atlanta, Ga.

The Georgia Department of Natural Resources (EPD), Environmental Protection Division, Georgia Geologic Survey, entered into a cooperative agreement with the U.S. Geological Survey (USGS) to collect, compile, and disseminate data on the principal water users in the State. Water-use data are stored in a central data base, called the Georgia Water-Use Data System (GWUDS), by the USGS, to provide data needed by water managers, hydrologists, and other scientists in managing and protecting the water resources in Georgia.

Purpose and Scope

The purpose of this report is to present wateruse estimates for Georgia, by county, for 1990 (fig. 1). The data are provided in tabular form, and follow the same general format as previous wateruse reports by the Georgia Water-Use Program for 1980 (Pierce and Barber, 1982); for 1985 (Turlington and others, 1987); and for 1987 (Trent and others, 1990). Water-use estimates also are included by major river basins and ground-water withdrawals, in percent, from principal aquifers in Georgia.

Data Collection

Water-use data were furnished by EPD, and various Federal, State, and local sources; and stored in the GWUDS data base. Sources of data used to estimate water use are listed in table 1. EPD requires cities, industries, and other water users that withdraw more than 100,000 gallons per day (gal/d) to obtain withdrawal permits, and report monthly withdrawals. Withdrawals reported to EPD by permitted users comprise most of the data in this report.

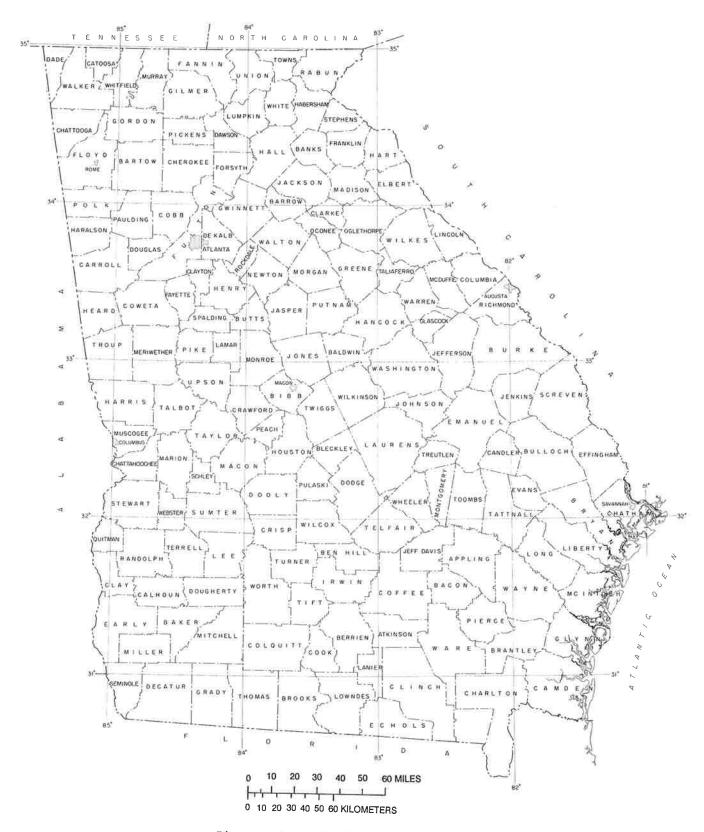

Figure 1.--County location map of Georgia.

Table 1.-Sources of water-use data

[WRMP, Water Resources Management Program; EPD, Environmental Protection Division; <, less than]

Water-use category	Data sources	Type of data
Public supply	permit files, Water Resources Management Program (WRMP), Georgia Environmental Protection Division (EPD)	withdrawals by permitted users
	mail survey of operators of large municipal systems	population served, interconnection of systems
	mail survey operators of small municipal systems	population served, average use, metered/other
	Ground-Water Program, WRMP, EPD	population served, by small public suppliers (subdivisions and mobile home parks)
Domestic	U.S. Bureau of the Census	county and city populations
Commercial	permit files; WRMP; EPD	withdrawals by permitted users
	1986 inventory of small users (<100,000 gal/d) by Ground-Water and Surface-Water Programs; EPD	estimated water use
Industrial	permit files; WRMP; EPD	withdrawals by permitted users
Mining	permit files; WRMP; EPD survey of owners	withdrawals by permitted users, estimated water use
Livestock	Georgia Crop Reporting Service, Georgia Dept. of Agriculture, Cooperative Extension Service, U.S. Bureau of the Census	animal populations by county
Irrigation	Cooperative Extension Service, 1989 Irrigation Survey	crop acreage and inches applied by county
Thermoelectric power generation	permit files; WRMP; EPD	withdrawals by thermoelectric power plants
Hydroelectric power generation	power companies, plant owners	withdrawals by power plants instream use by hydroelectric facilities

Non-permitted water use is estimated by using various data sources and methods. Irrigation water-use estimates are calculated from data obtained from the University of Georgia, Cooperative Extension Service (CES) biannual irrigation survey (CES, written commun, Tifton, Ga., 1990). Water-use estimates for the domestic and livestock categories are calculated by using census populations and an estimate of per capita water-use. Data for instream water use by hydroelectric power plants were furnished by the respective plant managers.

Statewide surfaceand ground-water withdrawals for public supply, domestic and commercial, industry and mining, irrigation, livestock, and thermoelectric are listed in table 2. Ground- and surface-water withdrawals by major standard industrial code (SIC) groups are listed in table 3. Withdrawals by major industrial users were tabulated statewide (table 3). Withdrawal estimates by major river basins (fig. 2) are listed in table 4, and the percent of ground water used, by category, for the principal aquifers in the State (fig. 3) are listed in table 5. Water use, by category, for each county are listed in table 6. Surface- and ground-water withdrawals by major municipal, county, private water system, and major industrial user for each county are listed in table 7 [at the end of this report]. Military bases, small industries, and small water suppliers (subdivisions, mobile home parks, and small towns) are not listed individually in table 7, but the withdrawal for each are included in the county totals.

For additional water-use data, please contact the U.S. Geological Survey, Georgia Water-Use Program, Atlanta, Ga.

WATER USE

In 1990, an estimated 5.3 billion gallons of water per day (Bgal/d) were withdrawn for offstream uses throughout Georgia. Offstream use is water withdrawn or diverted from a ground- or surface-water source, and transported to the place of use. The categories of offstream water use includes public supply, domestic, commercial, industrial, mining, irrigation, livestock, and thermoelectric power. Instream use is water use taking place within the stream channel for such purposes as hydroelectric power generation, navigation, water-quality improvement, fish

propagation, and recreation (Solley and others, 1988).

Hydroelectric power generation is the only instream use compiled for this report. An estimated 52 Bgal/d was used instream to generate hydroelectric power in 1990. Surface-water withdrawals accounted for 81 percent of total withdrawals, of which 70 percent was used for thermoelectric power generation. Ground-water withdrawals were largest for irrigation and industrial uses (table 2).

Water use is totalled for all withdrawals of ground- and surface-water in Georgia, by county (fig. 4). Most of the high-use areas, where withdrawals are 60 million gallons per day (Mgal/d) or greater, are in counties that have thermoelectric plants. DeKalb and Fulton Counties are exceptions where large amounts of water are withdrawn for public supply; and Glynn, Early, and Wayne Counties, where water is withdrawn for industrial supply.

Water-Use Categories

Water use is easier to understand if summarized by categories. Water-use categories discussed in this report include public supply, domestic and commercial, industrial and mining, agricultural (irrigation and livestock), and power generation.

Public Supply

The public-supply category includes water that is withdrawn by public and private water suppliers and delivered to various users. Small communities and subdivisions that furnish water to at least 25 people, or that have a minimum of 15 hookups (water connections), are considered public-supply systems. Public suppliers provide water for a variety of purposes, such as domestic, commercial, and industrial uses.

The EPD, Water Resources Management Program, provides data on the total amount of water withdrawn from ground- and surface-water sources, and these data are included in the GWUDS. A 1990 mail survey of the 74 largest public-water suppliers conducted by the Georgia Water Use Program provided data on the population served and the number of connections. The public suppliers surveyed in 1990 accounted

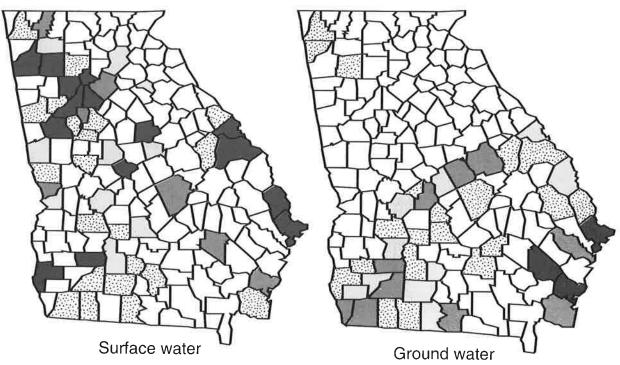

Figure 4.--Water withdrawals, by county, 1990.

for 85 percent of the total public supply in the State. The 1987 withdrawal data for small, non-permitted systems were obtained from a 1988 mail survey by the GWUP. Self-supplied public water suppliers (those water users who withdraw their own water) were contacted for information on water-use estimates as a one-time effort by GWUP, and the information is used in both the 1987 water-use report (Trent and others, 1990) and this report.

Total public-supply water use was estimated at 963.33 Mgal/d in 1990. Surface-water use accounted for about 76 percent, and ground water accounted for about 24 percent. The largest public suppliers are in northern Georgia, where population is greatest.

Domestic and Commercial

Domestic use is defined as water used for household purposes, such as drinking, food preparation, bathing, washing clothes and dishes, flushing toilets, car washing, and watering lawns The number of self-supplied, and gardens. domestic water users was estimated by subtracting estimates of the number of persons served by public systems from population, by county (U.S. Bureau of the Census, 1990). An unpublished 1983 survey conducted by the GWUP of subdivisions in the Athens area, indicate that on the average, each person uses 75 gallons of water per day (gal/d). The estimate of 75 gal/d per person was multiplied by the self-supplied population to obtain the total self-supplied domestic water use in 1990 of 99.51 Small towns that lack public-supply Mgal/d. systems are considered to have 100-percent domestic use. Self-supplied households in Georgia are assumed to use ground water only (from wells and springs).

Commercial users include restaurants, hotels, retail stores, and other businesses; government and military facilities; prisons, schools, hospitals, and other institutions; and recreational facilities. Because only a few commercial users withdraw enough water to require permits from EPD, the reporting of actual commercial use is limited. EPD provided a list of commercial users that produced their own water supply in 1986, and an estimate of commercial withdrawals in 1983. These data were compared, and commercial use was estimated to be 41.84 Mgal/d in 1990.

Self-Supplied Industry and Mining

Industrial water use is water used for industrial purposes, such as fabrication, processing, washing, and cooling. The largest industrial water users in Georgia are paper mills that are concentrated along the coast. Other major users are the textile industries (which may account for the heavy use in northwest Georgia), chemical manufacturers, and the mining and mineral industries. The Standard Industrial Classification (SIC) codes of the major industrial users listed in the tables are described in the appendix.

Self-supplied industries in Georgia withdrew approximately 700.87 Mgal/d of water in 1990, a slight increase from the 684 Mgal/d withdrawn in 1987. As reported in previous years, nearly all the estimated industrial use was compiled from reported (permitted) withdrawals to EPD for 1990.

Mining water use is defined as water used for the extraction of minerals that occur naturally. Granite, clay, marble, and other materials are mined extensively in the State, but the operations do not require large quantities of water. The mining withdrawal data were obtained from the EPD permit files, reports by mining companies, and estimates based on average water requirements for each ton mined. Mining withdrawals in the State are for dewatering or well-operation purposes only, and were estimated to have been 11.56 Mgal/d in 1990.

Agricultural

Estimates of agricultural use includes withdrawals for irrigation and non-irrigation purposes. Water withdrawn for crops, large nurseries, athletic fields, and golf courses is included in the irrigation category. Non-irrigation use, or livestock use, is the water withdrawn for poultry, horses, livestock, and catfish farms.

Estimates of irrigation use are based on a 1989 irrigation survey conducted by the University of Georgia, Cooperative Extension Service (CES, written commun., Tifton, Ga., 1990). The data, supplied by county agents, include crop acreage and inches of water applied by crop for each county in the State. The irrigation survey also estimated

water-source data used to estimate percentages of ground- and surface-water use. The 1989 irrigation survey was the most complete source of data available, and was used to estimate irrigation use for 1990. Some counties experienced major changes in acreage and water use, but these changes are attributed to more intense data collection by county agents. Other factors affecting changes include drought conditions; and possibly, double and triple cropping.

In counties where irrigation is used predominantly for golf courses and athletic fields, water use per acre tends to be high (about 2,000 gal/d per acre). The irrigation estimates are annual averages, but irrigation use during the growing season may be considerably higher.

From 1982 to 1987, Georgia law required owners of any irrigation system(s) that used more than 3 million gallons per month to report irrigation water use to EPD, and the data were maintained in a computer data base as part of the Georgia Water-Use Program (Georgia Irrigation Reporting System), which was the only source of annual site-specific water-use data available for irrigation systems. In 1988, however, the Georgia Legislature enacted a permitting law for all irrigation systems in the State. To date (1992), these data are incomplete and insufficient for calculating statewide irrigation water-use estimates.

In 1987, irrigation withdrawals were about 728 Mgal/d (table 2), a 37-percent increase from 1985. The 1990 estimate of 440.65 Mgal/d represents a decrease of 39 percent in water withdrawals since 1987, and a slight increase in acreage. Irrigation use now accounts for more than half of the consumptive water use in the State. Most irrigation occurs in the Coastal Plain physiographic province, and is especially prevalent in the southwestern part of the State where irrigation comprises more than 95 percent of the total water use in some counties.

Estimates of water withdrawal for livestock were compiled by animal types, (cattle, pigs and hogs, horses, and several kinds of poultry); and catfish farming. Water-use estimates were calculated by multiplying animal populations in each county by the average water requirement for each animal type. The water sources for livestock use are not known; therefore, the proportions of ground- and surface-water withdrawals were estimated from other use categories for each

county. The 1990 estimates for horses and catfish farms were determined using data obtained from surveys made in 1970 and 1984, respectively (Pullin, 1970 and Lewis, 1984).

Power Generation

Thermoelectric power water use is water withdrawn for cooling purposes at thermoelectric power plants. The thermoelectric power category includes withdrawal by all self-supplied fossil fuel and nuclear facilities. The GWUDS data base includes 17 thermoelectric plants that operate on oil, coal, or natural gas, and two nuclear plants. The EPD Water Resources Management Program collects data on the amounts of water treated for potable use and boiler make-up. Information concerning these water withdrawal quantities was obtained directly from plant operators. Power generation data were provided by the monthly power-plant report by the U.S. Department of Energy.

Hydroelectric power water use is water used instream for the generation of electricity. A survey of hydroelectric plant owners, conducted by the GWUP, provided the number of gallons used by each plant to generate one megawatt-hour of electricity. Then, monthly power generation was used to estimate the amount of monthly water-use. The Westinghouse Hanford Laboratories report on hydroelectric power (Westinghouse Hanford Company, 1988) was used to evaluate the accuracy of the data.

Power generation is the largest water-use category in the State. Withdrawals consist of 3,061 Mgal/d for thermoelectric; and 51,678 Mgal/d for instream hydroelectric power generation (table 2). The percentage of water consumed ranges from about 0 percent for the hydroelectric plants to about 100 percent for some thermoelectric plants. About 4 percent of all water withdrawn for power generation is consumed, and not returned to the source.

SUMMARY

Water-use data in Georgia for 1990 was compiled by the Georgia Water-Use Program, a cooperative effort between the U.S. Geological Survey and the Georgia Geologic Survey. The data were compiled by county, major river basins, and principal aquifers. The categories of water use

included in this report are public supply, domestic, commercial, industry, mining, irrigation, livestock, and thermoelectric and hydroelectric power.

In 1990, total offstream water use from ground- and surface-water sources was estimated at 5.3 billons gallons per day (Bgal/d); 19 percent of which was ground water, and 81 percent was surface water. An estimated 52 Bgal/d was used instream to generate hydroelectric power. Offstream water use varies by category; however, thermoelectric power is the largest water user in the State. Excluding the thermoelectric power category, withdrawals for public supply were the largest, followed by industry and mining, agriculture (irrigation and livestock), and domestic and commercial.

Public-supply withdrawals were estimated to be 963.33 million gallons per day (Mgal/d) in 1990, of which 76 percent was from surface-water sources and 24 percent from ground-water sources. Withdrawals for domestic use were considered to be from ground-water sources (wells and springs) and estimated to be 99.51 Mgal/d in 1990. Commercial use was estimated to be 41.84 Mgal/d. Water use for self-supplied industry was 700.87 Mgal/d and mining was 11.56 Mgal/d. Irrigation water use, nearly 60 percent from ground water, was estimated to be 440.65 Mgal/d; livestock withdrawals were mostly from surface-water sources (45.73 Mgal/d). Thermoelectric power withdrawals (3,061.10 Mgal/d) represents 57 percent of total offstream withdrawals in 1990. Water used instream for hydroelectric power generation were estimated at 51,678 Mgal/d.

APPENDIX

Standard Industrial Classification (SIC) Codes

Definitions of SIC Codes

Industrial water use is given by industry type and classified by Standard Industrial Classification (SIC) Code. A brief description of the codes used in this publication is given below.

14--MINING AND QUARRYING OF NONMETALLIC MINERALS, EXCEPT FUELS

This major group includes establishments engaged in mining or quarrying, developing mines, or exploring for nonmetallic minerals, except fuels. Also included are certain well and brine operations, and primary preparation plants, such as those engaged in crushing, grinding, washing, or other concentration.

16--CONSTRUCTION OTHER THAN BUILDING CONSTRUCTION--GENERAL CONTRACTORS

This major group includes general contractors engaged in heavy construction (including new work, additions, improvements, maintenance, and repair) such as highways and streets, bridges, sewers, railroads, irrigation projects, flood control projects and marine construction, and miscellaneous types of construction work other than buildings.

20--FOOD AND KINDRED PRODUCTS

This major group includes establishments manufacturing or processing foods and beverages for human consumption, and certain related products, such as manufactured ice, chewing gum, vegetable and animal fats and oils, and prepared feeds for animals and fowls.

22--TEXTILE MILL PRODUCTS

This major group includes establishments engaged in performing any of the following operations: (1) preparation of fiber and subsequent manufacturing of yarn, thread, braids, twine, and cordage; (2) manufacturing broad woven fabric, narrow woven fabric, knit fabric and carpets and rugs from yarn; (3) dyeing and finishing fiber, yarn, fabric, and knit apparel; (4) coating, waterproofing, or otherwise treating fabric; (5) the integrated manufacture of knit apparel and other finished articles from yarn; and (6) the manufacture of felt goods, lace goods, nonwoven fabrics and miscellaneous textiles.

23--APPAREL AND OTHER FINISHED PRODUCTS MADE FROM FABRICS AND SIMILAR MATERIALS

This major group, known as the cutting-up and needle trades, includes establishments producing clothing and fabricating products by cutting and sewing purchased woven or knit textile fabrics and related materials such as leather, rubberized fabrics, plastics, and furs.

24--LUMBER AND WOOD PRODUCTS, EXCEPT FURNITURE

This major group includes logging camps engaged in cutting timber and pulpwood; merchant sawmills, lathe mills, shingle mills, cooperage stock mills, planing mills, and pulpwood mills and veneer mills engaged in producing lumber and wood basic materials; and establishments engaged in manufacturing finished articles made entirely or mainly of wood or wood substitutes.

26--PAPER AND ALLIED PRODUCTS

This major group includes the manufacture of pulps from wood and other cellulose fibers, and from rags; the manufacture of paper and paperboard; and the manufacture of paper and paperboard into converted products such as paper coated off the paper machine, paper bags, paper boxes, and envelopes.

28--CHEMICALS AND ALLIED PRODUCTS

This major group includes establishments producing basic chemicals, and establishments manufacturing products by predominantly chemical processes. Establishments classified in this major group manufacture three general classes of products: (1) basic chemicals such as acids, alkalies, salts, and organic chemicals; (2) chemical products to be used in further manufacture such as synthetic fibers, plastics materials, dry colors, and pigments; and (3) finished chemical products to be used for ultimate consumption such as drugs, cosmetics, and soaps, or to be used as materials or supplies in other industries, such as paints, fertilizers, and explosives.

29--PETROLEUM REFINING AND RELATED INDUSTRIES

This major group includes establishments primarily engaged in petroleum refining, manufacturing paving and roofing materials, and compounding lubricating oils and greases from purchased materials.

30--RUBBER AND MISCELLANEOUS PLASTICS PRODUCTS

This major group includes establishments manufacturing from natural, synthetic, or reclaimed rubber, gutta percha, balata, or gutta siak, rubber products such as tires, rubber footwear, mechanical rubber goods, heels and soles, flooring, and rubber sundries.

31--LEATHER AND LEATHER PRODUCTS

This major group includes establishments engaged in tanning, currying, and finishing hides and skins, and establishments manufacturing finished leather and artificial leather products and some similar products made of other materials.

32-STONE, CLAY, GLASS, AND CONCRETE PRODUCTS

This major group includes establishments engaged in manufacturing flat glass and other glass products, such as cement, structural clay products, pottery, concrete and gypsum products, cut stone, abrasive and asbestos products, from materials taken principally from the earth in the form of stone, clay, and sand.

33-PRIMARY METAL INDUSTRIES

This major group includes establishments engaged in the smelting and refining of ferrous and nonferrous metals from ore, pig, or scrap; in the rolling, drawing, and alloying of ferrous and nonferrous metals; in the manufacture of castings and other basic products of ferrous and nonferrous metals; and in the manufacture of nails, spikes, and insulated wire and cable.

34--FABRICATED METAL PRODUCTS, EXCEPT MACHINERY AND TRANSPORTATION EQUIPMENT

This major group includes establishments engaged in fabricating ferrous and nonferrous metal products such as metal cans, tinware, hand tools, cutlery, general hardware, nonelectric heating apparatus, fabricated structural metal products, metal forging, metal stamping, ordinance (except vehicles and guided missiles), and a variety of metal and wire products not elsewhere classified.

35--MACHINERY, EXCEPT ELECTRICAL

This major group includes establishments engaged in manufacturing machinery and equipment, other than electrical equipment (Major Group 36) and transportation equipment (Major Group 37).

36--ELECTRICAL AND ELECTRONIC MACHINERY, EQUIPMENT, AND SUPPLIES

This major group includes establishments engaged in manufacturing machinery, apparatus, and supplies for the generation, storage, transmission, transformation, and utilization of electrical energy.

Table 7.--Ground- and surface-water use, by county, 1990

NOTE:

The following tables show ground- and surface-water withdrawals by water-use category. Also, listed are:

- -- major public suppliers,
- -- major industrial groups,
- -- county population,
- -- population served by public supply,
- -- acres irrigated.

APPLING COUNTY

Population: 15,744
Population served by public supply: 5,995
Acres irrigated: 3,960
Hydroelectric use (Mgal/d): 0
