

## **2.10 Secondary Brass and Bronze Ingot Production Plants**

### **2.10.1 Applicability and Designation of Affected Facility**

The provisions of this source category are applicable to those secondary brass or bronze ingot production plants which are subject to Section 1.1 of the general provisions of this text.

### **2.10.2 Test Methods and Procedures**

- (a) In conducting performance tests required in Section 1.2, the owner or operator shall use as reference methods and procedures the test methods in Appendix A of this part or other methods and procedures as specified in this section, except as provided in Section 1.2(b).
- (b) The owner or operator shall determine compliance with the particulate matter standards as follows:
  - (1) Method 5 shall be used to determine the particulate matter concentration during representative periods of charging and refining, but not during pouring of part of the production cycle. The sampling time and sample volume for each run shall be at least 120 minutes and 1.80 dscm (63.6 dscf).
  - (2) Method 9 and the procedures in Section 1.3 shall be used to determine opacity.
