

**2.103 Cotton Gins**

2.103.1 Applicability and Designation of Affected Facility

The provisions of this source category are applicable to each cotton ginning operation, which is the affected facility.

2.103.2 Test Methods and Procedures

- (a) The reference methods in Appendix A of this text, except as provided for in paragraph 2 of Section 1.2 of this text, shall be used to determine compliance with the applicable regulations or standards prescribed as follows:
  - (1) Method 5 for the concentration of particulate matter and its associated moisture content;
  - (2) Method 1 for sampling and velocity traverse;
  - (3) Method 2 for velocity and volumetric flow rate; and
  - (4) Method 3 for gas analysis.
- (b) For Method 5, the sampling time for each run shall be at least 60 minutes and the sampling rate shall be at least 0.9 dscm/hr (0.53 dscf/min.), except that shorter sampling times when necessitated by process variables or other factors may be approved by the Director.
- (c) Testing of representative stacks or emission points may be approved by the Director if it is shown that they are similar in design and nature of emissions.
