PROFESSIONAL GEOLOGIST CERTIFICATION

“I certify under penalty of law that this report and all attachments were prepared by me or under my direct supervision in accordance with the Voluntary Remediation Program Act (O.C.G.A. Section 12-8-101, et seq.). I am a professional engineer/professional geologist who is registered with the Georgia State Board of Registration for Professional Engineers and Land Surveyors/Georgia State Board of Registration for Professional Geologists and I have the necessary experience and am in charge of the investigation and remediation of this release of regulated substances.

Furthermore, to document my direct oversight of the Voluntary Remediation Plan development, implementation of corrective action, and long term monitoring, I have attached a monthly summary of hours invoiced and description of services provided by me to the Voluntary Remediation Program participant since the previous submittal to the Georgia Environmental Protection Division.

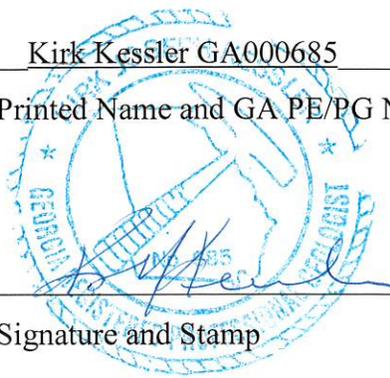

The information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.”

1 INTRODUCTION

1.1 Overview

This Voluntary Remediation Program (“VRP”) Progress Report #3 is submitted on behalf of Capital City Bank (“CCB”) for the Grantville Mill site comprised of two parcels as listed on the Hazardous Site Inventory (“HSI”), Site Number 10912. The Grantville Mill Voluntary Investigation and Remediation Plan (“VIRP”) (EPS, 2015) was approved by the Georgia Environmental Protection Division (“GaEPD”) on July 22, 2015 (GaEPD, 2015a). The purpose of this Progress Report is to describe the activities accomplished during the current reporting period, July 2016 through January 2017, and to discuss planned activities for the next reporting period. It includes activities completed through January 22, 2017 associated with off-Site vapor intrusion (“VI”) assessment, testing of on-Site soil, and further delineation and testing of groundwater for volatile organic compounds (“VOCs”).

Specifically, this Progress Report includes: 1) confirmational indoor air test results for an adjacent off-Site property 2) results of an on-Site soil assessment, 3) results of a comprehensive groundwater monitoring event including new monitoring wells, 4) an update to the Conceptual Site Model (“CSM”) and 5) discussion of the planned activities to be completed for the next Site progress report.

1.2 Site Location and Description

The CCB property is located in the City of Grantville, Georgia, Coweta County (Figure 1). The CCB property is listed as Coweta County Parcel ID G050008008 and totals 13.48 acres, and has the physical address of 41 Industrial Way, Grantville, Georgia. The other parcel comprising HSI Site Number 10912, Coweta County Parcel ID G050008008A, is owned by Grantville Mill, LLC and was brought into the VRP as an additional qualifying property (Figure 2). Together these two property parcels constitute the “Site”.

The Property was first developed in the early 1900s as a cotton mill to make uniforms and canvas during World War I. The mill later became West Point Peppermill’s Grantville Mill, operating into the early 1980s when the mill was closed. Since that time, buildings within the facility have been leased to various companies. One of the tenants, Tropic Formals, Ltd., operated a formals clothing business in one of the former mill buildings, at the southwest portion of the mill complex, between 1980 and 1993. Tropic Formals was a RCRA listed handler of the VOC tetrachloroethene (“PCE”) for the purpose of dry cleaning until it changed its registration status to a non-waste generator on December 31, 1993. The Site is listed on the basis of a documented PCE release to groundwater. The Property is now unoccupied and no intention to occupy the Property or the building previously occupied by Tropic Formals, Ltd. is planned.

Properties bordering the Site and their land use are shown on Figure 2 and include:

- to the Northeast - wooded vacant land (Grantville Mill LLC parcel);
- to the East - CSX rail line and Grantville City Cemetery;
- to the South and Southwest - residences; and
- to the West and Northwest – residences and a City park complex.

2 VRP PROJECT MANAGEMENT

2.1 Professional Geologist Oversight

This Progress Report includes a certification by Kirk Kessler, the Professional Geologist (“PG”) specified in the VRP application. Appendix A contains a monthly summary of hours invoiced by the PG.

2.2 Milestone Schedule

The milestone schedule is included in Appendix B.

3 RECENTLY COMPLETED ACTIVITIES

3.1 Overview

This section discusses activities accomplished during the current reporting period including 1) confirmational indoor air test results for an adjacent off-Site property, 2) results of an on-Site soil assessment for the former maintenance shop, and 3) results of a comprehensive groundwater monitoring event including new monitoring wells.

3.2 Off-Site Indoor Air Vapor Intrusion Assessment

A second assessment of indoor air for the residential property nearest the VOC plume (Parcel G03 0001 037, Figure 2) was performed on November 29-30, 2016. Prior testing of indoor air found no Site-related chemicals (prior testing performed May 18-19, 2016) (EPS, 2016). The indoor air sample was collected from the basement of the residence consistent with prior testing and was collected following EPA Method TO-15 (24-hour interval sample). The laboratory report and field collection information is provided in Appendix E. The residence was occupied by a new tenant at the time of sample collection.

Seven VOCs were detected in the November 2016 indoor air sample as summarized in Table 1, including 2-butanone (1.8 micrograms per cubic meter [$\mu\text{g}/\text{m}^3$]), acetone ($16 \mu\text{g}/\text{m}^3$), benzene ($0.83 \mu\text{g}/\text{m}^3$), chloromethane ($1.6 \mu\text{g}/\text{m}^3$), ethyl acetate ($7.8 \mu\text{g}/\text{m}^3$), propylene ($2.9 \mu\text{g}/\text{m}^3$) and toluene ($1.7 \mu\text{g}/\text{m}^3$). VOC constituents associated with the PCE release and groundwater plume on the Grantville Mill property, specifically PCE and PCE degradation products, were not detected in the off-Site indoor air sample. All detected indoor VOCs with the exception of benzene are below residential screening values (10^{-6} target cancer risk) developed by the EPA for human health protection (U.S. EPA, 2016). Benzene is not detected in on-Site or off-Site groundwater. Based on these facts, it is concluded the Site is not the significant source for the indoor air VOCs at this residence.

3.3 On-Site Soil Assessment

Four soil samples from two locations were collected from the former on-Site maintenance shop (Figure 3) to investigate some locations of stained soil, as requested in prior correspondence by the GaEPD (GaEPD, 2015b). At each location one surface sample (0 to 6 inches below ground surface [in-bgs]) and one subsurface sample (6 to 12 in-bgs) were collected with stainless steel field equipment. Each sample was tested for VOCs, semi-volatile organic compounds (“SVOCs”) and RCRA metals.

Both soil samples exhibited staining from 0 to 3 in-bgs with unstained red/brown micaceous clay extending from approximately 3 to 12 in-bgs. The results of the soil testing are summarized in Table 2. Six metals – arsenic, barium, cadmium, chromium, lead and mercury - were detected in soil. No SVOCs were detected. Thirteen VOCs were detected in soil, and with the exception of two - 2-butanon and acetone – all were limited to the near surface soil samples and non-detect in the 6 to 12 in-bgs soil sample (Table 2).

3.4 On-Site Groundwater Assessment

3.4.1 New Monitoring Wells

Two additional groundwater monitoring wells were installed during the current reporting period to refine the horizontal extent of the VOC plume adjacent to off-Site residential properties. Monitoring well MW-17 was installed west of MW-8 and north of MW-6, to a depth of 60 feet below ground surface (ft-bgs) where auger refusal was encountered (Figure 4). Monitoring well MW-18 was installed north of MW-14 to a depth of 53 ft-bgs where auger refusal was encountered (Figure 4). Boring logs for MW-17 and MW-18 are provided in Appendix C¹.

3.4.2 Groundwater Sampling

All on-Site and off-Site groundwater monitoring wells were sampled on October 31, 2016 to November 1, 2016. Field forms are provided in Appendix D. Each well was sampled following low-flow/low stress purging and sampling protocols to reflect the mobile or dissolved organic constituents transported in the subsurface under ambient conditions and prevent alteration of the groundwater condition from sampling operations. A summary of groundwater quality data is provided in Table 3. All wells were tested for VOCs with EPA Method SW8260B. Laboratory analytical reports are provided in Appendix E.

3.4.3 2016 Groundwater Results

Five VOCs were reported in groundwater for the October/November 2016 sampling including: PCE, trichloroethene (“TCE”), cis-1,2-dichloroethene (“cis-DCE”), Freon-11 and chloroform. The occurrence and concentration of each detected constituent are provided on Table 4 and illustrated on Figure 5. PCE was reported highest in MW-16 at 22,000 micrograms per liter (“µg/L”), located near the suspected PCE release area and consistent with the highest reported concentration from prior groundwater assessment. PCE was also reported in six down-gradient wells: MW-5 (3,300 µg/L), MW-6 (1,800 µg/L), MW-8 (6,600 µg/L), MW-14 (730 µg/L), MW-17 (2,900 µg/L), and MW-2 (28 µg/L). Two PCE degradation products were reported: cis-DCE in MW-8 (200 µg/L) and MW-5 (25 µg/L), and TCE in MW-8 (31 µg/L).

¹ Boring logs for MW-1 through MW-6 as received from Ardaman & Associates, Inc. are included with this report in Appendix C.

Freon-11 is reported in MW-2 at 32 µg/L, consistent with past testing, and is the only detection of Freon-11 in the monitoring well network. Chloroform is only reported in off-Site well MW-1 at 20 µg/L, also consistent with past testing. No other VOC is reported in MW-1 and chloroform is not a PCE degradation product. Chloroform is a groundwater contaminant common to areas serviced with a chlorinated drinking water supply due to intentional (*e.g.*, irrigation) or inadvertent discharge (*e.g.*, leaky water distribution or wastewater sewer lines). It is not related to the Site contamination and indeed, Site-related VOC are not present at the MW-1 location.

An updated depiction of the inferred groundwater VOC plume is provided on Figure 5.

4 RISK ASSESSMENT UPDATE

4.1 On-Site Receptors

All on-Site structures are currently unoccupied and no plans to occupy the property exist.

4.2 Off-Site Receptors

The off-Site residence nearest the VOC plume was reoccupied during the second half of 2016. Upon discovery of the property occupancy, additional indoor air sampling was performed to confirm prior test results (*i.e.* no Site related chemicals were detected). As outlined in Section 3, the confirmational testing of the off-Site property indoor air did not detect chemicals present in the groundwater VOC plume. Other VOCs (not present in the groundwater plume) were detected in the indoor air. Detected VOCs are below residential screening values (10^{-6} target cancer risk) developed by the EPA for human health protection (U.S. EPA, 2016) with the exception of benzene. Benzene is not detected in on-Site or off-Site groundwater.

5 PLANNED ACTIVITIES FOR NEXT REPORTING PERIOD

5.1 Development of Risk Reduction Standards

Characterization of the release (*i.e.* occurrence of detected regulated substances) is complete. Risk Reduction Standards (“RRS”) for soil and groundwater will be developed during the next reporting period and submitted in advance of the next progress report.

5.2 Groundwater Vertical Delineation

Vertical delineation of groundwater VOCs continues to be assessed with well pair MW-5/MW-5D, which is located adjacent to the highest reported saprolite VOC condition (MW-16). The October 2016 sampling reported 3,300 µg/L in MW-5 (shallow well), and reported non-detect for all VOCs in the deeper MW-5D. A non-detect VOCs condition for MW-5D was also confirmed in November 2015.

5.3 On-site Soil Delineation

The status of soil delineation beneath the main Site building associated with the PCE release will be provided in the next progress report.

6 UPDATES TO THE PRELIMINARY CONCEPTUAL SITE MODEL (CSM)

6.1 Overview

The CSM is intended to establish a common knowledge base about the Site and its environmental condition to facilitate the development of remedial action objectives, and to allow an informed decision regarding possible remedial action measures. For this report, a refinement of the Site lithology (*i.e.* boring logs) and updated geologic cross sections have been prepared. In addition, this update to the CSM refines the hydrogeologic model (potentiometric surface) for the Site.

6.2 Groundwater Flow

An update to the Site hydrogeologic model has been performed to improve assessment of groundwater flow direction. New monitoring wells (MW-17 and MW-18) were surveyed by a registered land surveyor to an established datum (*i.e.* mean sea level). Groundwater depths at each monitoring well were assessed on October 31, 2016 and a potentiometric surface map for the Site was developed for the overburden. As illustrated on Figure 6, groundwater from the suspected release area flows northeast approximately 400 ft, before turning more northerly, consistent with Site topography and surface drainage. Groundwater flow is expected to continue in a northerly direction beyond MW-2 following the axis of the valley floor. Depth to groundwater across the monitoring well network ranged from 8.58 ft-bgs (MW-15) to 30.92 ft-bgs (MW-7).

6.3 Hydrogeologic Cross-section

Figures 7A and 7B provide updated hydrogeologic cross sections for the Site. Cross-section A-A' is oriented from southwest to northeast along the direction of groundwater flow across the Site (Figure 4) and cross section B-B' is oriented northwest to southwest spanning the local valley feature immediately northeast of the presumed PCE release. Monitoring well installation details (*i.e.* screened intervals) and VOC detections are shown on the cross sections. In general, PCE concentrations down-gradient of the assumed release area trend higher in monitoring wells set at the point of drill auger refusal, which characteristically marks the onset of partially weathered rock (*e.g.*, MW-18, MW-8 and MW-14), with nearby shallower wells exhibiting lesser concentrations (*e.g.*, MW-6 and MW-2).

6.4 Summary of Regulated Constituents Detected

6.4.1 Groundwater

Past sampling detected six constituents regulated under Georgia's HSRA in groundwater at the Site: (i) PCE, (ii) TCE, (iii) cis-1,2-dichloroethene, (iv) Freon-11, (v) chloroform, and (vi) bromodichloromethane. Sampling performed in 2016 confirmed the occurrence of each constituent except bromodichloromethane.

6.4.2 Soil

Soil sampling during the current reporting period detected metals and VOCs in the former maintenance shop. Detected soil constituents are listed on Table 2.

6.5 Soil and Groundwater COPC for the Site

The 1st Semi-Annual Report identified three VOCs as constituents of potential concern ("COPC") for the Site groundwater including: PCE, TCE and cis-DCE. Groundwater COPCs are conserved for this report. Based on the addition testing for soil during the current reporting period the former maintenance shop is found to exhibit potential COPC distinct from PCE release area including arsenic, lead and benzene.

6.6 Potential Receptors and Exposure Pathways

6.6.1 On-Site Receptors and Exposure Pathways

The receptors and exposure pathways presented in the VIRP are conserved for this submission, however, the Site is currently unoccupied and no plans to occupy the Property exist.

6.6.2 Off-Site Receptors and Exposure Pathways

As presented in the VIRP, the primary potential exposure pathway for off-Site receptors is for VOC vapor intrusion as no drinking water supply wells are known to exist for the presumed down-gradient plume area. The results of the 2015 and 2016 groundwater sampling, which reported higher VOC concentrations than previously found, indicated the potential for off-Site vapor intrusion. The nearest off-Site property was unoccupied for much of 2016, but was reoccupied sometime during the second half of 2016. Accordingly, a second round of indoor air sampling was performed for the nearest off-site property. Indoor air test results (Section 3.2) found no exposure to COPC to potential occupants in the nearest off-Site residence.

APPENDIX E
Groundwater Laboratory Analytical Reports

November 09, 2016

Aaron Williams
Environmental Planning Specialists, Inc.
1050 Crown Pointe Parkway
Atlanta GA 30338

TEL: (404) 315-9113
FAX: (404) 315-8509

RE: Grantville Mill

Dear Aaron Williams:

Order No: 1611141

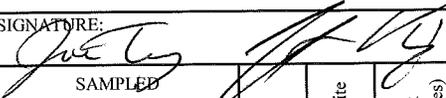

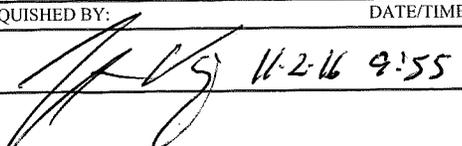

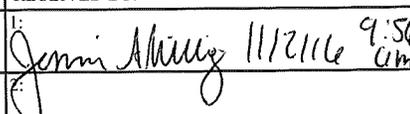

Analytical Environmental Services, Inc. received 21 samples on November 2, 2016 9:56 am for the analyses presented in following report.

No problems were encountered during the analyses. Additionally, all results for the associated Quality Control samples were within EPA and/or AES established limits. Any discrepancies associated with the analyses contained herein will be noted and submitted in the form of a project Case Narrative.

AES's accreditations are as follows:

- NELAC/Florida State Laboratory ID E87582 for analysis of Non-Potable Water, Solid & Chemical Materials, and Drinking Water Microbiology, effective 07/01/16-06/30/17.
- NELAC/Louisiana Agency Interest No. 100818 for or analysis of Non-Potable Water and Solid & Chemical Materials, effective 07/01/16-06/30/17.
- NELAC/Texas Certificate No. T104704509-16-6 for or analysis of Non-Potable Water and Solid & Chemical Materials, effective 03/01/16-02/28/17.
- AIHA-LAP, LLC Laboratory ID: 100671 for Industrial Hygiene samples (Organics, Metals, PCM Asbestos, Gravimetric), Environmental Lead (Paint, Soil, Dust Wipes, Air), and Environmental Microbiology (Fungal) Direct Examination, effective until 09/01/17.

Sample/Cooler Receipt Checklist

Client EPS

Work Order Number 161141

Checklist completed by [Signature] 11/2/16
Signature Date

Carrier name: FedEx UPS Courier Client US Mail Other

Shipping container/cooler in good condition? Yes No Not Present

Custody seals intact on shipping container/cooler? Yes No Not Present

Custody seals intact on sample bottles? Yes No Not Present

Container/Temp Blank temperature in compliance? (0°≤6°C)* Yes No

Cooler #1 4.2° Cooler #2 _____ Cooler #3 _____ Cooler #4 _____ Cooler#5 _____ Cooler #6 _____

Chain of custody present? Yes No

Chain of custody signed when relinquished and received? Yes No

Chain of custody agrees with sample labels? Yes No

Samples in proper container/bottle? Yes No

Sample containers intact? Yes No

Sufficient sample volume for indicated test? Yes No

All samples received within holding time? Yes No

Was TAT marked on the COC? Yes No

Proceed with Standard TAT as per project history? Yes No Not Applicable

Water - VOA vials have zero headspace? No VOA vials submitted Yes No

Water - pH acceptable upon receipt? Yes No Not Applicable

Adjusted? _____ Checked by _____

Sample Condition: Good Other(Explain) _____

(For diffusive samples or AIHA lead) Is a known blank included? Yes No

See Case Narrative for resolution of the Non-Conformance.

* Samples do not have to comply with the given range for certain parameters.

RE: Grantville Mill

Dear Aaron Williams:

Order No: 1611J98

Analytical Environmental Services, Inc. received 5 samples on 11/21/2016 1:00:00 PM for the analyses presented in following report.

No problems were encountered during the analyses. Additionally, all results for the associated Quality Control samples were within EPA and/or AES established limits. Any discrepancies associated with the analyses contained herein will be noted and submitted in the form of a project Case Narrative.

AES's accreditations are as follows:

- NELAC/Florida State Laboratory ID E87582 for analysis of Non-Potable Water, Solid & Chemical Materials, and Drinking Water Microbiology, effective 07/01/16-06/30/17.
- NELAC/Louisiana Agency Interest No. 100818 for or analysis of Non-Potable Water and Solid & Chemical Materials, effective 07/01/16-06/30/17.
- NELAC/Texas Certificate No. T104704509-16-6 for or analysis of Non-Potable Water and Solid & Chemical Materials, effective 03/01/16-02/28/17.
- AIHA-LAP, LLC Laboratory ID: 100671 for Industrial Hygiene samples (Organics, Metals, PCM Asbestos, Gravimetric), Environmental Lead (Paint, Soil, Dust Wipes, Air), and Environmental Microbiology (Fungal) Direct Examination, effective until 09/01/17.

Chris Pafford
Project Manager

Project: Grantville Mill
Lab ID: 1611J98

Case Narrative

Semi-Volatile Organics Analysis by Method 8270D:

Due to sample matrix, sample 1611 J98-001C, -002C and -003C required dilution during preparation and/or analysis resulting in elevated reporting limits.

Volatiles Organic Compounds Analysis by Method 8260B:

Due to sample matrix, samples 1611J98-001A, -002A, & -003A required dilution during preparation and/or analysis resulting in elevated reporting limits. Samples were ran twice and poorly purged both times.

Acetone value for sample 1611J98-004A is "E" qualified indicating an estimated value over linear calibration range. Sample was diluted and reanalyzed using the supplied methanol preserved sample at the minimum dilution allowed resulting in analytes being below reporting limits.

Sample/Cooler Receipt Checklist

Client EPS

Work Order Number 1611598

Checklist completed by [Signature] Date 11/21/16

Carrier name: FedEx UPS Courier Client US Mail Other

Shipping container/cooler in good condition? Yes No Not Present

Custody seals intact on shipping container/cooler? Yes No Not Present

Custody seals intact on sample bottles? Yes No Not Present

Container/Temp Blank temperature in compliance? (0°≤6°C)* Yes No

Cooler #1 2-5 Cooler #2 _____ Cooler #3 _____ Cooler #4 _____ Cooler#5 _____ Cooler #6 _____

Chain of custody present? Yes No

Chain of custody signed when relinquished and received? Yes No

Chain of custody agrees with sample labels? Yes No

Samples in proper container/bottle? Yes No

Sample containers intact? Yes No

Sufficient sample volume for indicated test? Yes No

All samples received within holding time? Yes No

Was TAT marked on the COC? Yes No

Proceed with Standard TAT as per project history? Yes No Not Applicable

Water - VOA vials have zero headspace? No VOA vials submitted Yes No

Water - pH acceptable upon receipt? Yes No Not Applicable

Adjusted? _____ Checked by _____

Sample Condition: Good Other(Explain) _____

(For diffusive samples or AIHA lead) Is a known blank included? Yes No

See Case Narrative for resolution of the Non-Conformance.

* Samples do not have to comply with the given range for certain parameters.

RE: Grantville Mill

Dear Aaron Williams:

Order No: 1612257

Analytical Environmental Services, Inc. received 1 samples on 12/1/2016 8:37:00 AM for the analyses presented in following report.

No problems were encountered during the analyses. Additionally, all results for the associated Quality Control samples were within EPA and/or AES established limits. Any discrepancies associated with the analyses contained herein will be noted and submitted in the form of a project Case Narrative.

AES's accreditations are as follows:

- NELAC/Florida State Laboratory ID E87582 for analysis of Non-Potable Water, Solid & Chemical Materials, and Drinking Water Microbiology, effective 07/01/16-06/30/17.
- NELAC/Louisiana Agency Interest No. 100818 for or analysis of Non-Potable Water and Solid & Chemical Materials, effective 07/01/16-06/30/17.
- NELAC/Texas Certificate No. T104704509-16-6 for or analysis of Non-Potable Water and Solid & Chemical Materials, effective 03/01/16-02/28/17.
- AIHA-LAP, LLC Laboratory ID: 100671 for Industrial Hygiene samples (Organics, Metals, PCM Asbestos, Gravimetric), Environmental Lead (Paint, Soil, Dust Wipes, Air), and Environmental Microbiology (Fungal) Direct Examination, effective until 09/01/17.

Chris Pafford

Calibration Report

Calibration Run Details

Serial Number:	03359
Date:	Friday, November 11, 2016
Start Time:	12:24:34 PM
Stop Time:	12:26:56 PM
Duration:	2 min 22 sec

Method Parameters

Canister Size:	6000cc
Target Vacuum:	3 inHg
Time to Fill:	24 hours
Target Flow Rate:	3.8 cc/min

Calibration Parameters

Atmosphere:	14.7 psia
Elevation:	0 feet
Ballast:	No Ballast
Micro-QT™:	No MicroQT™ valve

Sampling Parameters

Atmosphere:	14.7 psia
Elevation:	0 feet
Temperature:	25 Celsius

Calibration Step Details

Leak Check

Start Time	Stop Time	Duration	Pass	Psid
12:00:00 AM	12:00:00 AM	0 min 0 sec	False	0.00

Calibration

Start Time	Stop Time	Duration	Steps Moved	Initial Flow	Final Flow	Restrictor #
12:24:35 PM	12:25:35 PM	1 min 0 sec	211	4 cc/min	3.8 cc/min	#4

Verification

Start Time	Stop Time	Duration	Flow Pass	Avg. Flow Rate	Restrictor Class
12:25:35 PM	12:00:00 AM	0 min 0 sec	True	3.8 cc/min	N/A
			Decay Pass	Decay Drop Off	Fail Reason
			True	2.1	N/A

Client: Environmental Planning Specialists, Inc.
Project: Grantville Mill
Lab ID: 1612257

Case Narrative

Sample Receiving Nonconformance:

Sample for Work Order 1612257 was not labeled, but logged in for TO-15 analysis by matching the received canister serial number to the Chain of Custody (COC).

Qualifiers:	* Value exceeds maximum contaminant level	E Estimated (value above quantitation range)
	BRL Below reporting limit	S Spike Recovery outside limits due to matrix
	H Holding times for preparation or analysis exceeded	Narr See case narrative
	N Analyte not NELAC certified	NC Not confirmed
	B Analyte detected in the associated method blank	< Less than Result value
	> Greater than Result value	J Estimated value detected below Reporting Limit

Analytical Environmental Services, Inc.

Sample Receipt Checklist for Air Canisters

Client EPS Work Order Number 1612257

Checklist completed by pasmesnd 12/1/16
Signature Date

Carrier name: FedEx UPS Courier Client US Mail Other

Shipping container in good condition? Yes No Not Present
Custody seals intact on shipping container? Yes No Not Present
Chain of custody present? Yes No
Chain of custody signed when relinquished and received? Yes No
Chain of custody agrees with sample labels? Yes No
Field data sheets present? Yes No
Sample containers intact? Yes No

If no, explain: _____

All samples received within holding time? Yes No
Was TAT marked on the COC? Yes No
Proceed with Standard TAT as per project history? Yes No Not Applicable
All canisters received per Bottle Order issued? Yes No

See Case Narrative for resolution of the Non-Conformance.
