

The Response and Remediation Program intends to update its Guidance Manual for the Reportable Quantity Screening Method (RQSM) in April 2016. RQSM is the method provided in the Rules for Hazardous Site Response (Rules) for determining whether a property should be listed on the Hazardous Site Inventory. The update consists of new toxicity values for RQSM scoring, revisions to the notification requirements consistent with the October 2014 changes to the Rules and clarifications to certain scoring issues
