## INTRODUCTION

Accelerated demands for water are creating competition among current and potential water users in areas where the available water supply is not adequate to meet the anticipated demands. As the demand for fresh water continues to climb, the likelihood of water shortages increases, no matter how plentiful water now seems. The collection of water-use data in Georgia can minimize the potential for future conflicts by giving hydrologists the information they need to predict those areas where competition could occur. Water resource managers can then steer new large water users to those areas having more abundant water supplies.

Since 1950, the U.S. Geological Survey has been preparing national estimates of water use every five years. In 1970, the U.S. Geological Survey performed a survey of water use in Georgia, the results of which were published in 1974 as the Georgia Geologic Survey's Hydrologic Report 2. The 1970 study used data from the files of several state and federal agencies, and also from a questionnaire sent to a selected sample of municipalities and industries. Figures reported through the questionnaires were then extrapolated to obtain an estimate of water use in the State. For the 1975 U.S. Geological Survey publication, anticipated growth rates were applied to the 1970 numbers to produce new State totals.

In 1978, the Water-Use Data Collection Project was begun to make a comprehensive inventory of the major water users in Georgia. The project was a joint venture of the Georgia Geologic Survey and the U.S. Geological Survey, and was structured to be compatible with the U.S. Geological Survey's National Water-Use Data System. The primary objective of the Georgia project was to develop a computerized file of the State's major water users. Each entry is located by latitude and longitude for each withdrawal and discharge, contains amounts of

withdrawal and discharge, and is coded by county, river basin, user type, and water source (name of river, aquifer, etc.). When this data base of water users is finalized (by July of 1982), the computer will be able to generate water-use information on request for any of the coded categories. For example, a print-out could be produced showing all municipal water-supply withdrawals in a certain river basin.

A preliminary report giving general water-use information was published by the Georgia Geologic Survey in early 1981 as Circular 4. The water-use amounts for the major categories in that report were extrapolated from those used in the 1970 and 1975 reports based on anticipated growth rates in the demand for water. Totals in this report, however, vary significantly from those in the 1981 version of Circular 4 due to errors in the assumptions on which those extrapolations were based. For example, the rate of growth in municipal and industrial water demand slowed significantly in the last decade because of water conservation. Figures in this report for self-supplied industry and public supply water withdrawals are totalled from an inventory of all water users, not extrapolated from data gained from a selected sample.

#### DATA SOURCES

##### PUBLIC SUPPLY

The Environmental Protection Division's (EPD) Water Protection Branch monitors water use and water quality for public water supply systems. Information on each monitored system was aggregated into a Public Water Supply Data Base which is now used to provide information for Environmental Protection Agency grant programs. The value included in this file for average daily water use was taken as a beginning amount for the water-use study after checking against the "population served" for probability. When the amount of water per day per person was less than 50 gallons or more than 300, the public water system

was contacted directly to get an accurate water-use figure. Public systems supply residential, commercial, and industrial users, but no breakdown of the total figure into these categories is available.

#### SELF-SUPPLIED INDUSTRY

All entities (except those related to agriculture and poultry processing) using in excess of 100,000 gallons per day of water are required to have a withdrawal permit and to report their actual water use. These permits are also monitored by EPD's Water Protection Branch. For large industrial ground-water users (those using in excess of 1 million gallons per day), this publication reports the actual use amount; for those permitted for less than 1 mgd, the figure used is the permit amount. Permit figures are usually greater than average daily use, ranging from 10 percent under to as much as 200 to 300 percent over the daily average. Industries using surface water are reported at their permitted amount, as no actual use numbers were available when this report was prepared.

Self-supplied industries also were identified from the 1970 water-use survey done by the U.S. Geological Survey, as well as from a listing of U.S. Army Corps of Engineers discharge permits for 1970. The Georgia Manufacturing Directory was used to determine if the industries mentioned in these ten-year-old records were still in business, and any suspect water-use amounts were checked by contacting the industry. The Manufacturing Directory also was searched for possible self-supplied industries, and calls were made to these firms to determine the amount of water withdrawn, if any.

#### RURAL

DOMESTIC -- This category includes all those people not supplied through a public water system. These figures were estimated using 1980 Census figures

for the population in each county and subtracting from this the population served by the public systems in that county. The difference was multiplied by a per-person water-use figure of 100 gallons per day to get the total rural domestic water use. This amount is assumed to be exclusively ground water.

LIVESTOCK--Livestock water-use numbers were estimated using the various population estimates and water needs shown in Table 1. Information on counties not covered by these sources came from the 1978 Census of Agriculture conducted by the U.S. Census Bureau. Due to the varying geologic conditions in the State's major physiographic divisions (creating water availability differences), relative amounts of surface and ground water were calculated for each livestock type based on the physiographic province in which the county is located.

#### IRRIGATION

The Cooperative Extension Service of the University of Georgia annually publishes a survey of irrigation aggregated by county which gives total irrigated acres of major crops. Water-use amounts were extrapolated from this survey using the crop acreage and an estimate of the amount of water applied to that crop as given by certain Cooperative Extension Service county agents. Acreage totals were checked against values derived from a Soil Conservation Service (SCS) irrigation survey which was performed under contract to the U.S. Geological Survey. The SCS survey covered 62 counties in the Coastal Plain. For this survey, agents in each county made a field inventory of irrigated lands, plotting each field and water source on a 7½-minute topographic map and completing a form with information on the irrigation equipment, water sources, and the amount of water applied to that field in 1979.

TABLE 1  
LIVESTOCK WATER-USE ESTIMATES

Livestock Type	Water Use (gallons/day/head)	Source of Population Estimate
Cattle	8	Georgia Crop Reporting Service
Hogs	2.5	Georgia Crop Reporting Service
Horses	7	Georgia Department of Agriculture
Poultry		Cooperative Extension Service, University of Georgia
Layers	0.050	
Broilers	0.056	
Pullets	0.045	
Breeder Hens	0.064	
Turkeys	0.140	

## POWER GENERATION

THERMOELECTRIC--Water treated for potable use and for boiler makeup water at power plants is monitored by EPD's Water Supply Section, and so is recorded in the Public Water Supply Data Base. The majority of water used at these plants is for cooling, and is not accounted for in the data base. Amounts of water used for cooling were obtained from the withdrawal permit files of EPD, and by direct queries of the utility companies.

HYDROELECTRIC--Figures given for hydroelectric power plant water use are the volumes of water used to generate power at that plant. For pump-storage facilities the number given is for base-level streamflow through the plant, not the total amount of water used to generate power. Information on flow through the plants came from the plant operators.

APPENDIX

## SIC CODES

Industrial water use is given by industry type, classified by Standard Industrial Classification (SIC) Code. A brief description of the codes used in this publication is given below.

### 02--AGRICULTURAL PRODUCTION--LIVESTOCK

This major group includes establishments (farms, ranches, dairies, feed-lots, egg production facilities, broiler facilities, poultry hatcheries, etc.) primarily engaged in the keeping, grazing, or feeding of livestock for the sale of livestock or livestock products, for livestock increase, or for value increase.

### 09--FISHING, HUNTING, AND TRAPPING

This major group includes establishments primarily engaged in commercial fishing and the operation of fish hatcheries, fish and game preserves, in commercial hunting and trapping, and in game propagation.

### 14--MINING AND QUARRYING OF NONMETALLIC MINERALS, EXCEPT FUELS

This major group includes establishments primarily engaged in mining or quarrying, developing mines, or exploring for nonmetallic minerals, except fuels. Also included are certain well and brine operations, and primary preparation plants, such as those engaged in crushing, grinding, washing, or other concentration.

### 20--FOOD AND KINDRED PRODUCTS

This major group includes establishments manufacturing or processing foods and beverages for human consumption, and certain related products, such as manufactured ice, chewing gum, vegetable and animal fats and oils, and prepared feeds for animals and fowls.

### 22--TEXTILE MILL PRODUCTS

This major group includes establishments engaged in performing any of the following operations: (1) preparation of fiber and subsequent manufacturing of yarn, thread, braids, twine, and cordage; (2) manufacturing broad woven fabric, narrow woven fabric, knit fabric and carpets and rugs from yarn; (3) dyeing and finishing fiber, yarn, fabric, and knit apparel; (4) coating, waterproofing, or otherwise treating fabric; (5) the integrated manufacture of knit apparel and other finished articles from yarn; and (6) the manufacture of felt goods, lace goods, nonwoven fabrics, and miscellaneous textiles.

## 23--APPAREL AND OTHER FINISHED PRODUCTS MADE FROM FABRICS AND SIMILAR MATERIALS

This major group, known as the cutting-up and needle trades, includes establishments producing clothing and fabricating products by cutting and sewing purchased woven or knit textile fabrics and related materials such as leather, rubberized fabrics, plastics, and furs.

## 24--LUMBER AND WOOD PRODUCTS, EXCEPT FURNITURE

This major group includes logging camps engaged in cutting timber and pulp-wood; merchant sawmills, lathe mills, shingle mills, cooperage stock mills, planing mills, and plywood mills and veneer mills engaged in producing lumber and wood basic materials; and establishments engaged in manufacturing finished articles made entirely or mainly of wood or wood substitutes.

## 26--PAPER AND ALLIED PRODUCTS

This major group includes the manufacture of pulps from wood and other cellulose fibers, and from rags; the manufacture of paper and paperboard; and the manufacture of paper and paperboard into converted products such as paper coated off the paper machine, paper bags, paper boxes, and envelopes.

## 28--CHEMICALS AND ALLIED PRODUCTS

This major group includes establishments producing basic chemicals, and establishments manufacturing products by predominantly chemical processes. Establishments classified in this major group manufacture three general classes of products: (1) basic chemicals such as acids, alkalies, salts, and organic chemicals; (2) chemical products to be used in further manufacture such as synthetic fibers, plastics materials, dry colors, and pigments; (3) finished chemical products to be used for ultimate consumption such as drugs, cosmetics, and soaps, or to be used as materials or supplies in other industries such as paints, fertilizers, and explosives.

## 29--PETROLEUM REFINING AND RELATED INDUSTRIES

This major group includes establishments primarily engaged in petroleum refining, manufacturing paving and roofing materials, and compounding lubricating oils and greases from purchased materials.

## 30--RUBBER AND MISCELLANEOUS PLASTICS PRODUCTS

This major group includes establishments manufacturing from natural, synthetic, or reclaimed rubber, gutta percha, balata, or gutta siak, rubber products such as tires, rubber footwear, mechanical rubber goods, heels, and soles, flooring, and rubber sundries.

### 31--LEATHER AND LEATHER PRODUCTS

This major group includes establishments engaged in tanning, currying, and finishing hides and skins, and establishments manufacturing finished leather and artificial leather products and some similar products made of other materials.

### 32--STONE, CLAY, GLASS, AND CONCRETE PRODUCTS

This major group includes establishments engaged in manufacturing flat glass and other glass products, cement, structural clay products, pottery, concrete and gypsum products, cut stone, abrasive and asbestos products, etc., from materials taken principally from the earth in the form of stone, clay, and sand.

### 33--PRIMARY METAL INDUSTRIES

This major group includes establishments engaged in the smelting and refining of ferrous and nonferrous metals from ore, pig, or scrap; in the rolling, drawing, and alloying of ferrous and nonferrous metals; in the manufacture of castings and other basic products of ferrous and nonferrous metals; and in the manufacture of nails, spikes, and insulated wire and cable.

### 34--FABRICATED METAL PRODUCTS, EXCEPT MACHINERY AND TRANSPORTATION EQUIPMENT

This major group includes establishments engaged in fabricating ferrous and nonferrous metal products such as metal cans, tinware, hand tools, cutlery, general hardware, nonelectric heating apparatus, fabricated structural metal products, metal forging, metal stamping, ordnance (except vehicles and guided missiles), and a variety of metal and wire products not elsewhere classified.

### 35--MACHINERY, EXCEPT ELECTRICAL

This major group includes establishments engaged in manufacturing machinery and equipment, other than electrical equipment (Major Group 36) and transportation equipment (Major Group 37).

### 36--ELECTRICAL AND ELECTRONIC MACHINERY, EQUIPMENT, AND SUPPLIES

This major group includes establishments engaged in manufacturing machinery, apparatus, and supplies for the generation, storage, transmission, transformation, and utilization of electrical energy.

### 40--RAILROAD TRANSPORTATION

This major group includes establishments furnishing transportation by line-haul railroad, as well as REA Express, and switching and terminal establishments.

#### 45--TRANSPORTATION BY AIR

This major group includes establishments engaged in furnishing domestic and foreign transportation by air and also those operating airports and flying fields and furnishing terminal services.

#### 49--ELECTRICAL, GAS, AND SANITARY SERVICES

This major group includes establishments engaged in the generation, transmission and/or distribution of electricity or gas or steam.

#### 51--WHOLESALE TRADE - NONDURABLE GOODS

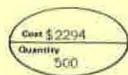

5171 Petroleum Bulk Stations and Terminals

Establishments primarily engaged in wholesaling petroleum products, including liquefied petroleum gas, from bulk liquid storage facilities.

#### 55--AUTOMOTIVE DEALERS AND GASOLINE SERVICE STATIONS

This major group includes retail dealers selling new and used automobiles, boats, recreational and utility trailers, and motorcycles; those selling new automobile parts and accessories; and gasoline service stations.

The Department of Natural Resources is an equal opportunity employer and offers all persons the opportunity to compete and participate in each area of DNR employment regardless of race, color, religion, sex, national origin, age, handicap, or other non-merit factors.
